

SERVICE FOR CONSULTANTS - 1987 No. 3A

Date: 12/30/87

This publication is intended for use by those members of the data processing community who need this information in their work as consultants in the field of data processing and/or for those who directly or indirectly assist the users of IBM data processing systems in the installation and application of such systems.

The material contained in this manual and the supplements thereto has been prepared primarily for the general guidance of consultants and technical personnel. It includes technical information relative to IBM equipment and programs, but is not designed to be all-inclusive or to necessarily represent the exact status of equipment or programs, at any point in time.

Machines which are shown in this manual as withdrawn are no longer available from IBM. Data concerning these machines is provided for information purposes only. If available, certain features may be ordered for withdrawn machines. A Request for Price Quotation (RPQ) is required before such a feature can be ordered.

Scheduled release and/or distribution dates, or time schedules stated, are for information purposes only and are subject to change without prior notice.

References to RPQs and PRPQs are for information purposes only; prior availability of such items should not be considered an indication that they will be available in the future.

References to internal IBM procedures and departments are for the guidance of IBM personnel; users of the Service For Consultants manual should make all contacts with IBM through the marketing representative assigned to the account which they represent.

It is the subscriber's responsibility to maintain the current status of his manual by incorporating the updated material as received from IBM. Subscribers are requested to contact the appropriate IBM branch office prior to incorporating material from this reference manual in their evaluation or recommendations since, of necessity, the material may not be complete.

Publishers who may wish to quote from this manual are invited to contact IBM Canada Ltd. Legal Department at 3500 Steeles Ave. East., Markham, Ontario L3R 2Z1, for review of all such material prior to publication.

FILING INSTRUCTIONS

Machines (M) ... Replace entire section.

From: Consultants Programs
Department 290
105 Moatfield, North York

The format used throughout the "Machines" section of the manual has been designed to give the reader, in highlight form, as much information in as few words as possible. A change bar to the right of any entry indicates a change or addition. A study of the points covered in this typical machine description will show where and how various types of information are covered.

This manual contains information on machine types, models and features that are not announced in Canada. This information does not mean that the unannounced machine types, models and features will be announced in Canada.

Because not all information on unannounced machine types, models and features is highlighted by notations like "Except Canada" or "Japan Only", your IBM marketing representative should be contacted to confirm availability in Canada.

Purpose — a brief description of the machine's major functions.

Models — a brief description of major differences in available models.

Highlights — brief comments on functional operations.

Limitation(s) — only those which apply to the machine itself ... limitations for Special Features appear in "Special Features" descriptions.

Prerequisite(s) — other machines, special features, or "Specify" items required for installation of the machine ... usually related to system components.

Bibliography — base number only. Consult the current appropriate system bibliography for listing of all available manuals pertaining to the machine.

Specify — this section lists items which will be furnished at no additional charge when specified on initial machine order for plant installation at time of manufacture. Each item is identified by a name and a four-digit (9XXX or 8XXX) number preceded by a number sign (#). 9XXX or 8XXX numbers are also used as detailed specifications for certain special features listed in "Special Features" descriptions. For charges to field install, remove or change a Specify Feature on a purchased machine, contact IBM.

Special Features — listed here are descriptions of the special features which can be added to the base machine ... briefly describes the additional function(s) supplied by the feature.

Installation — there are three categories for installation of special features. Field Installable, Not Recommended for Field Installation, or Available at Time of Manufacture Only.

Prerequisite(s) — other machines, special features, or "Specify" items required for installation of the feature.

Terms and Conditions

Plan Offering — the plan under which the lease and rental machine is offered.

Additional Use Charge — for Plan "A" rental machines, the entry 10% or 30% indicates that hours of additional billable time are charged at an hourly rate of 1/176th of 10% or 30% of the MRC/MAC.

Model Conversion/Feature Add'l Charge — additional charge applies to rental features and model conversion upgrades installed on Plan "A" lease machines.

Initial Period of Maintenance Service — for Plan "D" lease and rental machines ... the number of months during which IBM provides 24 hour 7 days per week maintenance service at no additional charge.

Non-field Installable Feat/Mdl Conversions — indicates whether machine type has any features or model conversions that are classified as other than "Field Installable." See list of non-field installable special features/model conversions starting on page M 10 and see individual machine page.

Customer Set-Up (CSU) — customer set up allowance will be specified for each CSU machine.

Repair Center Service — warranty and maintenance service provided at an IBM Repair Center.

Central Facility Maintenance Service — warranty and maintenance service provided at customer's Central Facility.

Deferred Central Facility Maintenance Service — maintenance service option at customer's Central Facility.

Upper Limit Percent — applies to the price protection provisions for IBM lease machines.

Termination Charge Percent/Months — applies to termination of lease contract periods for installed lease machines.

Processor Complex Unit — IBM lease and rental processor complex units require 3 months discontinuance notice from customer.

Purchase Option — the percentage of the monthly lease and rental charges which is credited against the purchase price when a customer purchases an installed machine. See "Purchase Plans" in GI section for limitations and additional information.

Base Term — length of lease contract period for lease machines.

Educational Allowance

Testing Allowance (Pre-Installation)

Pilot Test Plan — machine eligibility for pilot test plan.

Warranty — Category "A" is 12 months — Category "B" is 3 months warranty.

Machine Group — indicates the machine group to be used when calculating the additional charge for maintenance for optional periods of maintenance service availability for purchased maintenance agreement service machines and Plan "D" lease and rental machines.

Per Call — the class of rates applicable to a machine when it is subject to hourly service charges.

Metering — indicates the type of meter on a Plan Offering "A" machine.

Model Conversions — there are three categories: Field Installable, Not Recommended for Field Installation, or Available at Time of Manufacture Only.

1255 - MAGNETIC CHARACTER READER

PURPOSE

Sorts documents, used in banking and other applications, meeting specifications under "Highlights" below. Available as a stand-alone sorter, or with an appropriate attachment feature, reads magnetic character data into a System/3 model 6, 8, 10, 12 or 15, a System/32, a System/34, a System/36 into a 2770 system in home or line mode, into a S/360 model 22, 25, 30, 40, 50, a S/370 model 115 through 158, 3031 Processor, or 4300 processor.

MODELS

- Model 001 (NO LONGER AVAILABLE):** Reads and/or sorts up to 500 6-inch documents per minute into six stackers.
- Model 002 (NO LONGER AVAILABLE):** Reads and/or sorts up to 750 6-inch documents per minute into six stackers.
- Model 003:** Reads and/or sorts up to 750 6-inch documents per minute into 12 stackers.
- Model 021 (NO LONGER AVAILABLE):** Reads and/or sorts up to 500 6-inch documents per minute into six stackers.
- Model 022 (NO LONGER AVAILABLE):** Reads and/or sorts up to 750 6-inch documents per minute into six stackers.

Model 023: Reads and/or sorts up to 750 6-inch documents per minute into 12 stackers.

Mdls 1, 2 and 3 read the E13B type font. The characters, print quality, and codeline arrangement must meet, or be equivalent to, the recommendation of one of the following national associations of bankers: The Committee of London Clearing Banks - Requirements for Automatic Check Handling; The Canadian Bankers Association - Cheque Standards and Specification for Magnetic Ink Encoding; Australian Bank's Automation Research Committee - The Common Machine Language.

The 1255 mdls 21, 22 and 23 are similar to mdls 1, 2 and 3 and read magnetic character data into a System/3 mdl 10, 12 or 15, S/360 mdl 22, 25, 30, 40, 50, a 370 mdl 115 through 158, a 3031 Processor, or a 4300 processor.

Mdls 21, 22 and 23 read the CMC7 type font (coded magnetic characters with seven bars). The characters and print quality must meet the specifications recommended by ECMA (European Computer Manufacturers Association) or ISO (International Standards Organization). The codeline is flexible (see "Specify" below).

Prerequisites: For 1255 -- all documents must be mechanically jogged prior to each pass through the machine -- jiggers are available from commercial sources. A sorting tray is recommended.

For System/3 -- one 1255 mdl 1, 2, 3 can be attached to a mdl 6. One 1255 mdl 4, 2, 3, 21, 22 or 23 can be attached to a mdl 8, 10, 12 or 15. Serial I/O Channel (#7081) is required on the 5406, 5408, 5410, 5412 or 5415 -- System/3/32/34 Adapter (#6303) is required on the 1255 itself. See "Special Features" for additional information, also see "Specify". Limitations: The 1255 utility program (5702-UT2 for both the mdl 8 and mdl 10 disk systems, and 5703-UT2 for the mdl 6) requires at least 12K bytes of main storage. The 1255 support for the mdl 12 and mdl 15 requires a minimum system. IBM's ability to service a mdl 10 card system with a 1255 attached may be impaired with an effect on system availability.

For System/32 -- one 1255 mdls 1, 2 or 3 can be attached. System/3/32/34 Adapter (#6303) is required on the 1255. 1255 Attachment (#1100) is required on the 5320. See "Special Features" for additional information, also see "Specify".

For System/34 -- one 1255 mdls 1, 2 or 3 System/3/32/34 Adapter (#6303) is required on the 1255. 1255 Attachment (#1100) is required

on the 5340. See "Special Features" for additional information, also see "Specify".

For System/36 -- one 1255 mdls 1, 2 or 3 System/3/32/34 Adapter (#6303) is required on the 1255. 1255 Attachment (#1100) is required on the 5360. See "Special Features" for additional information, also see "Specify". For 2770 -- one 1255 can be attached to a 2770 system. 1255 Attachment (#9755) and Buffer Expansion (#1490) are required on the 2772 -- 2772 Adapter (#7850) is required on the 1255 itself. See "Special Features". For audit, maintenance, error recovery and application procedures, the 2770 system must include a printer.

For S/360 mdl 22, 30, 40, 50, or S/370 mdl 115 through 158, 3031 Processor, or a 4300 processor -- one 1255 can be attached to a system -- requires a channel control unit position -- a byte multiplexer channel is recommended. The 1255 should normally be the highest priority device on the channel. S/360/370 Adapter (#6360) is required on the 1255 -- see "Special Features". Direct Control (#3274) or External Interrupt (#3895) is required on the processing unit. There are no special features required on the 4361 or 4381 Processor to attach the 1255. External Signal (#3898) is required on the 3115, 3125 and the 4331 Processor. RPQ SU0044 is required on the 3115 Byte Multiplexer Channel (#5248).

S/360 mdl 25 -- multiplexer channel (special feature), or selector channel (special feature).

S/360 mdl 22, 30, 40, 50 -- multiplexer channel (standard), selector channels (special features, except on 2022 one selector channel is standard).

S/370 mdl 115, 125 -- byte multiplexer channel (special feature), External Signal (#3898) -- see M3115, 3125 pages. On a 3115-0, #9336 is required.

S/370 mdl 135 -- multiplexer channel (standard), selector channels (special features) -- M3135 pages.

S/370 mdl 135-3 -- byte multiplexer channel (standard), block multiplexer channels (special feature) -- see M3135-3 pages.

S/370 mdl 138 -- byte multiplexer channel (standard), block multiplexer channels (standard) -- see M3138 pages.

S/370 mdl 145 -- multiplexer channel (standard), selector channels -- see M3145 pages.

S/370 mdl 145-3 -- byte multiplexer channel (standard), block multiplexer channels -- see M3145-3 pages.

S/370 mdl 148 -- byte multiplexer channel (standard), block multiplexer channels (standard) -- see M3148 pages.

S/370 mdl 155, 158 -- multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) -- see M3155, 3158 pages.

3031 Processor -- byte multiplexer channel (one is standard), block multiplexer channels (five are standard) -- see M3031 pages.

4300 processor -- byte multiplexer channel, block multiplexer channel.

Limitations: For S/360, S/370 or 4300 Processors -- the 1255 is not supported by any 1400 or 7000 series compatibility features. The 1255 is not supported by the Mdl 20 Compatibility Feature (#7520) on the 3115, 3125.

HIGHLIGHTS

Actual sorting and processing speeds dependent on length of document, paper quality, atmospheric conditions, and/or 2772 terminal and transmission limitations, or host system variations. Reads all fields and sorts on any field.

Uses a lower cost, single-gap MICR reading technique, providing MICR capabilities for smaller volume operations. Reading performance may differ from other reader sorters. Pre-installation runs of actual documents are strongly recommended to determine expected performance. The input hopper holds 139.7mm (5-1/2") of documents in a gravity feed, permitting non-stop feeding. Mdl's 1, 2, 21 and 22 each have six horizontal stackers in one vertical bay, while mdl's 3 and 23 have 12 horizontal stackers arranged in two vertical bays of six stackers each. Individual stackers have a document capacity of 63.5mm (2-1/2"). The transport mechanism opens for access to the document path. An operator-resettable document counter is provided.

The unit is designed for ease of operation and operator training. The operator panel, feed hopper and stackers are in a compact area for operator convenience and minimum space requirements.

In addition to performing the basic Modulus 10 or 11 checking function, the Self-Checking Number/Improved Recognition feature, when installed and operative, is integrated with the MICR reading circuitry to reduce account number rejects and substitutions. This field is especially subject to folds, banding, and print specification deviations. Rejects and character substitutions will be reduced in proportion to the severity of document degradations, thus reducing customer reconciliation expense.

Sorting: For mdl's 1, 2, 21 and 22, offline sorting uses five sort stackers and one reject stacker for a 2-phase digital sort. Phase 1 sorts even digits, rejecting odd digits which are sorted in phase 2. This conforms to the sort pattern of other 6-stacker sorters and permits the start of phase 2 sorting without removing phase 1 documents from the stacker. If Alternate Sort Pattern (#9301) is specified, digits 0-4 sort in phase 1 and digits 5-9 sort in phase 2.

For mdl's 3 and 23, 1-phase sorting on digits 0-9 with rejects directed to stacker "R" at top of first bay. Stacker "A" at top of second bay is used to select items when the High Order Zero and Blank Column Selection feature is installed.

Online 2770 system operation suspends sorting, automatically alternating between two stackers on a stacker-full condition, with the rejecting of invalid documents.

Stacker selection is under program control when operating online to a computer system.

Mdl's 1, 2 and 3 can read/sort on up to ten positions in five fields. Mdl's 21, 22 and 23 can read/sort on up to twenty positions in seven fields.

Field Lengths: (Mdl's 1, 2, 3) The amount field and transit-routing (bank and branch) field are fixed-length -- the process control (transaction code) field and serial number (auxiliary on-us) field are variable-length -- the account number field may be fixed- or variable-length. See "Specify" below. For mdl's 21, 22 and 23, see "Specify" below.

Checking: Readability of each magnetic character and special symbol, and the field-length check on fixed-length fields, are checked on all fields designated by the operator for reading into the system or terminal in the online mode, or on all fields designated for checking in the offline mode. When attached to the 2770 system, error documents are automatically rejected by the 1255 and data is not transferred to the 2772 buffer.

Documents: Intermixed paper and card documents (including traveler's checks) within the following specifications can be processed:

Width -- 64 to 108mm (2.5" to 4.25")

Length -- 146 to 225mm (5.75" to 8.875")

Thickness -- 0.076 to 0.178mm (0.003" to 0.007")

Paper Stock -- 75 to 165g/sq.m (20 lb. to 44 lb) (card stock)

Carrier documents, enclosing a non-processable item, up to 0.33mm (0.013") in thickness may be processed.

Document Evaluation: Documents must be evaluated at least six months prior to installation to determine whether the level of print quality is acceptable to the customer, with time for corrective action if necessary. Sub-standard E13B quality may cause excessive rejects and character substitutions.

Transmission: When used with the 2770 system, the 1255 reads into the two 2772 buffers, automatically stopping and alternating between buffers on a specified number of documents. Buffer Expansion (#1490) is required on the 2772. The number of records (documents) held by the buffer is determined by the maximum record length for the fields selected for reading. The records/buffer is set at 4, 6, 8, 10 or 12. The records/buffer may be changed by the CE, but is not subject to customer control. In online transmission and pre-transmission verification operations, reading characters in excess of the maximum record length specified causes an error condition. The following options are available:

Maximum Record Length (including special symbols)	Records/buffer
53	4
41	6
30	8
24	10
20	12

Balance-List (#1470) facilitates pre-transmission balancing to batch total tickets of stacked batches. In Mode A, operating under 1255 speed limitations, the feature totals the Amount Field on good items and prints the good item total, batch ticket total, and derived difference on the 2770 system printer. In Mode B, under 2770 system printer speed limitations, good items are detail listed with the same total cycles as Mode A. Documents are listed with limited print editing and limited columnar formatting.

Paper Quality: The paper characteristics should comply with the characteristics described in the paper brochure, GH212-9639, except that the document dimensions are those detailed in "Documents" above.

Publications: System/3 -- GC20-8080 -- System/32 -- GC20-0032 -- System/34 -- GH30-0231 -- System/36 -- GC21-9015 -- 2770 -- GA24-3089 -- S/360 -- GC20-0360 -- S/370, 4300 -- GC20-0001

SPECIFY

● Power (AC, 1-phase):

50 Hz	60 Hz
100V #2804	100V #2730
110V #2805	115V #9901
123.5V #2811	200V #2732
200V #2806	208V #9902
220V #2813	230V #9904
235V #2814	

Must be consistent with system voltage -- specify code consistent with system/voltage for pre-system 1255 installation.

- Color: #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray.
- Alternate Sort Pattern: #9301, if desired. Replaces the standard even/odd pattern with the 0-4/5-9 pattern. See "Sorting" above. May be changed in the field by no-charge MES.
- Account Number Field Length: (mdl's 1, 2, 3) Specify #9210 for 5 digits -- #9211 for 6 digits -- #9212 for 7 digits -- #9213 for 8 digits -- #9214 for 9 digits -- #9215 for 10 digits -- #9219 for variable-length. A fixed-field length assures maximum processing accuracy. However, a variable-field length may be specified in lieu of a fixed-field length. Length of the account number field may be changed in the field by no-charge MES.

- Superior Reading Performance: Self-Checking Number/Improved Recognition (#7060) is recommended -- see "Highlights" above and "Special Features" below.
- Use With System/3, System/32 or System/34: System/32/34 Adapter (#6303) is required -- see "Special Features" below.
- Use with 2770: Transmission Code -- #9761 for EBCDIC, #9762 for ASCII -- must be consistent with 2772 code. May be changed in the field by no-charge MES. Prerequisites: #7850 -- see "Special Features".
- Use with S/360 mdls 22, 25, 30, 40, 50, S/370 mdls 115 through 158, a 3031 Processor, or a 4300 processor: S/360/370 Adapter (#6360) is required -- see "Special Features".
- Non-PCB Components: Specify #2888 for shipment to Japan or other countries requiring non-polychlorinated biphenyl components. Amount Field Length: (Mdl 1, 2, 3) Amount field length #2743 for 11 digits, #2744 for 10 digits, bracketed by the Amount symbol. May be changed in the field by no-charge MES.
- Transit (banks and branch) Field: (mdls 1, 2, 3) #2745 for 6-digit length with the transit (bank and branch symbol) on the right and the on-us symbol on the left. -- #2746 for 8-digit length, bracketed by the transit symbol. May be changed in the field by no-charge MES.
- Codeline Configuration: (Mdl 21, 22, 23) Use Customer Codeline Specification Sheet, Z112-6182, for specifying codeline configuration.
- Machine Nomenclature: #2927 for English UK, #2928 for France, #2930 for Japan, #2931 for Spain, #2932 for Italy.
- Kickstrips: #9431, if desired. Field Installation: Yes. Note: When installed, the open area under the machine is enclosed. This reduces the amount of "toe-room" for the operator and may be inconvenient to the customer if the power outlet is located under the machine.

SPECIAL FEATURES

(NO LONGER AVAILABLE FOR MDLS 1, 2, 21, AND 22)

Balance-List (#1470): (For use on 2770 system only) For pre-transmission balancing of stacked document batches. Accumulates the total of good items, with or without detail listing -- a batch total ticket initiates terminal printing of the good item total, batch ticket total, and net difference. Invalid items are rejected. In totaling mode, documents are checked for the maximum characters per document specified for transmission. In listing mode, a different number of characters per document may be specified on installation. In listing mode, selected fields are printed in document order with limited print editing -- the amount field is right justified with decimal insertion and high order zero suppression -- other fields are left justified in columns tabulated on the terminal printer -- special symbols, except dashes and the right amount field symbol, are indicated with substitute printer symbols. Selected fields, other than the process control field, missing from the document causes fields to print in alternate columns. Limitations: The feature is not operative during line transmission or fine sorting operations. Field Installation: Yes. Prerequisites: #7850 -- the 2770 system must include a printer or display unit.

Dash Symbol Transmission (#3215): Transmits the E13B dash symbol from transit field to storage. With symbol in storage, the program can distinguish between duplicate foreign and U.S. transit numbers. Limitations: Not available for mdls 21, 22 and 23. Field Installation: Yes.

51-Column Card Sorting (#4380): Mdl s 1, 21 -- for reading and sorting 51-column card documents. When installed, machine speed is reduced to approximately 405 dpm for 6-inch documents. For

51-column cards, speed is approximately 500 dpm. Mdl s 2, 3, 22, 23 -- when installed, machine speed is reduced to approximately 605 dpm for 6-inch documents. For 51-column cards, speed is approximately 750 dpm. Note: For optimum performance on all mdls, card documents should be separated out from standard size documents on first pass operations. Field Installation: Yes.

High-Order Zero and Blank Selection (#4520): Permits selection to pocket "A" of documents during a digit sort having only blanks or zeros in the sort position and in all higher order positions of the field. Limitations: Available on mdl s 3 and 23 only -- operates off-line only. Field Installation: Yes.

System/3/32/34/36 Adapter (#6303): To attach the 1255 to the Serial I/O Channel (#7081) on the 5406, 5408, 5410, 5412, 5415, or to the 1255 Attachment Feature (#1100) on the 5320, 5340, and 5360. Limitations: Mdl s 21, 22 and 23 may not be attached to System/3 mdl 6, System/32, System/34 or System/36. Field Installation: Yes. Specify: #9791 for use with 5406, or #9792 for use with 5408, 5410, 5412, 5415, 5320, 5340, or 5360. #9791 can be changed in the field to #9792, or vice versa.

S/360/370 Adapter (#6360): To attach the 1255 to the Byte Multiplexer Channel. Field Installation: Yes.

Self-Checking Number/Improved Recognition (#7060): For reducing rejects and substitutions caused by defects in the account number field and for checking Modulus 10 or 11 self-check digit account numbers up to 10 positions long, including the self-check digit and dashes. SLT pluggable card wiring determines the modulus calculated and weighting factor for each digit. SLT card is removed and inserted by the CE for customer wiring. An operator panel on/off switch is the only customer control of the feature. The self-check digit may be in any position, always using a weighting factor of 1. Modulus 10 will check any weighting factor 0 through 9, summing the product digits, and checking for an even multiple of 10. Modulus 11 will check any weighting factor, summing the products and checking for either an even multiple of 11, or for a constant remainder of 4.

This feature, when installed and operative, replaces the basic character substitution checking circuitry with the more accurate Modulus 10 or 11 checking circuitry while the account number field is being read. Documents with marginal printing that might normally be rejected as potential substitutions will be processed if all characters pass the self-checking digit test, thus reducing the chances of a reject. All account numbers that fail the self-checking digit test will cause the document to reject, thus reducing the chances of a substitution. Since the account number field is frequently subject to folds, banding, mutilation and print specification deviations, rejects and substitutions will be reduced in proportion to the severity of document degradation. Field Installation: Yes.

2772 Adapter (#7850): To attach the 1255 to a 2772 Control Unit. A switch (adjacent to the self-checking number switch) is provided which permits listing documents previously rejected to determine which field and which character caused the reject. Field Installation: Yes.

MODEL CONVERSIONS

(NO LONGER AVAILABLE)

Field installable only between model 1 and model 2, or model 21 and model 22.

ACCESSORIES (NONE)

SUPPLIES (NONE)

1270 OPTICAL READER SORTER
PURPOSE

OCR Document Input Unit for a S/360 models 22 through 50, S/370 models 115 through 155, all 4300 Processors and S/3. Reads and sorts documents with numeric code lines printed in either OCR-A font size I, or in OCR-B font size I. This is compatible with the OCR-A font and OCR-B font published in ISO Recommendations R1073, first edition, dated May, 1969, or with the OCR-B font published by the European Computer Manufacturers Association in the Standard ECMA-11 for optical recognition, second edition, dated October, 1971. Documents can be printed by a wide variety of devices, including 1403, 3203, 3211 printers and 3800.

For possible use with S/3 and S/360 mdl 20, see appropriate Machines pages in the sales manual.

MODELS

Model 1	001	Reads OCR-A font size 1-6 stackers
Model 2	002	Reads OCR-A font size 1-12 stackers
Model 3	003	Reads OCR-B font size 1-6 stackers
Model 4	004	Reads OCR-B font size 1-12 stackers

All mdls are for reading data into a S/360 mdls 22, 25, 30, 40, 50, S/370 mdls 115, 125, 135, 135-3, 138, 145, 145-3, 148, 155, 158, and all 4300 processors. Can be used also for offline sorting.

Limitations: For codeline position restrictions, see "Codeline Layout".

Prerequisites

For 1270: S/360 models 22, 25, 30, 40, 50, S/370 Models 115 through 155, or any 4300 Processor, attachment #2809 is required. All documents must be mechanically jogged prior to each pass through the machine. Jogglers are available from commercial sources.

For S/370 mdls 115, 125: External Signals (#3898) is required on the processing unit. S/360 attachment (#2809) is required on the 1270. Up to six 1270s can be attached to a system, depending on the system configuration and application. **Limitations:** For S/370 mdls 115, 125, the 1270 is not supported by the Mdl 20 Compatibility (#7520).

For 4331 Processor: External Signals (#3898) is required on the processor.

S/360 Attachment (#2809) is required on the 1270. Up to six 1270s can be attached to a system, depending on the system configuration and application. The 1270 attaches to the byte multiplexer channel (optional).

For 4300 Processor: S/360 Attachment (#2809) is required on the 1270. Up to six 1270s can be attached to a system, depending on the system configuration and application. The 1270 attaches to the byte multiplexer channel.

For S/370 mdls 135, 135-3, 138, 145, 145-3, 148, 155: Direct Control (#3274) is required on the processing unit. S/360 Attachment (#2809) is required on the 1270. Up to six 1270s can be attached to a system, depending on system configuration and application.

For S/360 mdls 22, 25, 30, 40, 50: Direct Control (#3274) or External Interrupt (#3895) is required on the processing unit. S/360 Attachment (#2809) is required on the 1270. Up to six 1270s can be attached to a system, depending on system configuration and application.

For S/360 mdl 25 and S/370 models 115, 125: A Multiplexer Channel (#5248) is required. See M3115, 3125 pages.

For S/360 mdls 22, 30, 40, 50, or for S/370 mdls 135, 135-3, 138, 145, 145-3, 148, or 155 : The channel is the standard multiplexer channel. A Multiplexer Channel (#5248) is required.

HIGHLIGHTS

A job-oriented machine for reading and sorting of single-line documents printed with size I of the OCR-A font or OCR-B font.

Mdls 1 and 2 read the ten digits and three special symbols: hook, fork, and chair, of the OCR-A font. Mdls 3 and 4 read the ten digits and three special symbols: plus, less than, and greater than, of the OCR-B font. In addition, a preprinted vertical ruling | may also be used as a special symbol on all mdls.

152mm (6 in.) documents are read at a rate of 750 per minute. Actual speed depends upon document length and paper characteristics.

Mdls 1 and 3 use six pockets (five sort stackers, plus one reject stacker) for a two-phase digital sort. Standard arrangement is: first-phase

sort, even digits and reject; second-phase sort, odd digits and reject. (For sort option, see "Specify".)

Mdls 2 and 4 have twelve pockets (ten sort stackers, one reject stacker and one A-stacker for Multiple Column Control or High Order Zero and Blank Selection).

Pocket selection may be controlled either by 1270 (offline mode) or by the system program (online mode).

Document dimensions: All mdls process intermixed paper documents with the following dimensions:

Width: 64 to 108mm (2.5 to 4.25 in.)

Length: 146 to 222mm (5.75 to 8.75 in.)

Thickness: 0.09 to 0.14mm (.0035 to .0055 in.) and card stock: 0.18mm (.007 in.)*

Paper Stock: 75 to 120gr per square meter (20 to 32 pounds card stock)

* Applicable only for 80-column IBM punch card or equivalent

Paper Quality: The paper should comply with the characteristics described in *Paper and Print Quality Requirements for IBM 1270 and IBM 1275 Optical Reader Sorters*, GA19-0036. Papers and print samples to be used must be evaluated by the IBM Document Evaluation Center, Sindelfingen, Germany -- approval to be obtained 120 days before shipment. Based on our experience in developing paper document handling equipment, IBM has developed a positive and comprehensive analysis procedure designed not to "accept" or "reject" paper, but only to report what is observed. Consult the Document Handling Coordinator in your country for details of the testing procedure.

Printing: For recommended ribbons, etc., see *IBM System/360 Component Description - IBM 1270 Optical Reader Sorter*, GA19-0035. For recommended printing on the 3800 printer, see *Reference Manual for IBM 3800 Printing Subsystem - OCR Document Preparation*, GA26-1646 and M3800 pages.

Codeline Layout: The codeline must be located between 8.5mm (16/48 in.) and 71mm (134/48 in.) from the bottom reference edge of the document.

The codeline can contain up to seven fields, each opened by a special symbol. Fields may be fixed in length (up to 20 positions), or variable. In a variable-length field, the 21st and higher-order positions cannot be used for sorting.

Special symbol sequences and field lengths are set to customer specifications during manufacturing, and can be altered by an IBM Customer Engineer on sales order. (See GA19-0036 for full specifications.)

Checking: The readability of all characters, including special symbols used as field separators, can be verified each time a document is read and/or sorted. A field-length check is made on all fixed-length fields being processed, to assure that all digits in the field have been read. If a document does not satisfy the checking conditions, it is rejected (when the 1270 is in the offline mode) or the error condition is presented for interrogation by the user program (when the 1270 is in the online mode).

Standard Features: All mdls include (1) hopper fed by gravity and providing maximum operator access; (2) indicating switches, displaying operating status of machine; (3) Movable Read Head permitting the operator to position the read head manually, to read (on separate passes) codelines which are located at different positions on the documents. Codelines (ideal print center lines) must be located between 8.5mm (16/48 in.) and 8.5mm (134/48 in.) from the bottom (reference) edge of the document.

Programming Support: See Programming Section *DOS/360 MICROCS*, 360N-10-477, for S/360 models 22, 25, 30, 40, 50, S/370 models 115 through 155, and all 4300 processors.

Cable Length: See GC19-0001.

Bibliography: *1270 Component Description*, GA19-0035; *S/360 Bibliography*, GA22-6522.

MACHINES
1270 Optical Reader Sorter (cont'd)
SPECIFY

- Power: (AC, 3-phase, 50 and 60 Hz): See "Power Requirements", GI Section 12 for voltage specify feature numbers.)
- Sort Option: **#9301** -- mds 1 and 3 only: first-phase sort, 0 to 4; second-phase sort, 5 to 9. **#2742** is required for the standard sort arrangement, mds 1 and 3 only. May be changed in the field by no-charge MES.
- Codeline Layout: Use Customer Codeline Specification Sheet, Z111-6654, for specifying codeline configuration. This form must be submitted to the plant at least 60 days before scheduled shipment.
- Language Groups: **#2927** for English, **#2929** for German, **#2930** for Japanese
- Color accent: **#9041** for red, **#9042** for yellow, **#9043** for blue, **#9045** for gray, **#9046** for white.
- Kickstrips: **#9431**, if desired. Plant- or field-installed, no charge. Note: When kickstrips are installed, the open area under the machine is enclosed.
- Shipping instructions for all models: A vacuum cleaner is needed in every customer location for cleaning of 1270s and 1275s. Therefore, for the first Optical Reader Sorter of either type in a customer location, specify **#9030**. For second and subsequent units, do not specify **#9030**. Ensure that the order has the Branch CE Manager's approval and cross-refer to the serial or order number of the first 1270 or 1275 in the same location. Changes in location (even for the same customer) of a 1270 or 1275 require the Branch CE Manager's approval and may require ordering of **#9030**.

SPECIAL FEATURES

Multiple Column Control (#2779): This permits selection to pocket A of documents with specific numbers (in six or less consecutive columns) in any field. The other documents will be sorted normally. **Limitations:** Available on mds 002 and 004 only. Operates offline only. Cannot operate simultaneously with High Order Zero.

High Order Zero and Blank Selection (#2780): This permits, during a digit sort, selection to pocket A of documents having no digits except zero in the sort position and all higher order positions of the sort field. **Limitations:** Available on mds 002 and 004 only. Operates in offline mode only. Cannot operate simultaneously with Multiple Column Control.

S/360 Attachment (#2809): Required for attachment of the 1270 to S/360 mds 22, 25, 30, 40, 50, S/370 mds 115 through 155, and all 4300 processors.

Mark Read (#2900): Permits reading of marked information into a system. Marked and OCR information can be read from the same and from successive documents in one pass. A mark-read column contains ten mark positions corresponding to the digit-punch positions of an 80-column punched card. Blank positions are transmitted as blanks and multiple marks in one column are transmitted as unreadable characters. A timing mark is required for each mark-read column. Mark-read and OCR information cannot be placed on the same area of the document. The mark-read field substitutes a field in the OCR codeline. OCR information within 31.75mm (1-1/4 in.) left of a mark-read field cannot be read. The information should be recorded with a black HB pencil (equals #2) or other writing implement providing an equivalent output signal. The minimum document height which can be processed by machines equipped with this feature is equal to the 80-column punch card height, i.e., 82.5mm (3.25 in.). For more detailed information concerning paper parameters, mark dimensions, background colors, etc., refer to *Paper and Print Quality Requirements for IBM 1270 and 1275 Optical Reader Sorters*, GA19-0036.

Note: A throughput decrease of up to 10% may be encountered.

Note: All 1270 proposals must be reviewed by the Document Handling Coordinator before submission to prospect or customer.

Self Checking Number Modulus 11 Technique (#7062): A self-checking number consists of two parts: the basic identifying number and its check digit. The check digit, derived from the basic identifying number by one of two techniques, is always the units digit of a self-checking number. The feature assures that all digits in a self-checking number have been correctly recorded. The field is verified as it is read during any pass; and if it fails to satisfy the check, the document is routed to pocket R for mds 001 and 003, to pocket A for mds 002 and 004. If the Multiple Column Control (#2779) or High Order Zero (#2780) feature is also active, self-check error documents

are routed to the reject pocket. Maximum length of field is ten digits, including check digit. Weighting factors are 7, 6, 5, 4, 3, 2. When the self-checking number is greater than six digits, weighting factors are repeated. In some instances, random-type errors will not be detected. A basic number requiring a check-digit of 10 cannot be used.

Machine Group: C	Pre-Installation Test Allowance: None

MODEL CONVERSIONS (None)

Available at time of manufacture only

ACCESSORIES (None)
SUPPLIES (None)

1416 INTERCHANGEABLE TRAIN CARTRIDGE

PURPOSE

A cartridge and print train which provides interchangeability of type font for the 1403 Printer model 3 or N1, and 3203 Printer (all models).

MODELS

Model 1 001

Prerequisites: The 1416 functions only when mounted in a 1403 mdl 3 or N1, or a 3203 (all mdls). At least one 1416 is required with each 1403 mdl 3 or N1 or 3203 (all mdls).

HIGHLIGHTS

Interchangeability: When multiple 1416s are available, they may be interchanged by the operator, providing flexibility for printing different type fonts, type styles, or character arrangements. This flexibility opens new application areas with unique printing requirements such as form-letter writing, engineering and scientific data, chemical abstracts, and text printing.

Publications: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001, 1410/7010 -- GA22-6826, 1440 -- GA24-3005, 1460 -- GA24-1495, 7070/7074 -- GA28-6288

SPECIFY

- Print Train Arrangement: See "Type Catalog" for characters in each available arrangement and feature numbers to be specified.
- A rental 1416 must be capacity replaced (unless customer desires to order an additional 1416) when the following are to be field installed: [1] Preferred Character Set Feature (#5523) on 1403 mdl 3 in 1400 series system ... [2] Universal Character Set Feature (#8640) on 1403 mdl 3 or N1 in S/360, S/370, 4300 processors ... [3] Any UCS train arrangement to replace AN or AH arrangement on a 3203 (all mdls), or a 1403 mdl 3 or N1 already equipped with Universal Character Set Feature (#8640) ... [4] A change in type size or style. If a purchased 1416 is involved, contact IBM, unless customer desires to order an additional 1416.
- When a Voltage Adapter (#9709) is field installed on a 1403 mdl 3, the standard configuration train previously used will be modified to an AN or HN arrangement; a PCS-A arrangement will be modified to a PCS-AN; or PCS-H will be modified to PCS-HN. Any of these changes is restricted to the same type size (style). See "Type Catalog - S/360, S/370 and 4300 Processors - 1403 and 1404 Printers" for feature number to which train is to be modified. Submit MES on 1416, specifying "Change installed train # _____ to # _____".
- Except as stated above, order type slug substitutions whenever changes between the following train arrangements are to be made in the field: A and H ... AN and HN ... PCS-A and PCS-H ... PCS-AN and PCS-HN. See "Type Catalog".
- A separate 1416 is required for each print train.
- Depending upon the system involved, see appropriate section of "Type Catalog" for feature numbers of desired OCR arrangements and associated sales manual "Reader" description pages to assure compatibility of printer/reader recognition ability. Note: The ribbons used on the 1403 and 3203 must be capable of producing printed characters suitable for recognition by the optical reader used. Recommended ribbons and document specifications are referenced in the optical reader "Machines" pages.
- Language Groups: #2927 for English, #2928 for French, #2929 for German.
- Katakana (Japanese characters), if desired: #2921 for 107-character Katakana, #2873 for 127-character Katakana.

Inspection: Field inspection of damaged 1416s will be at no charge (except for travel time and expense, if applicable).

Repair: Purchased 1416s which become damaged or inoperable may be returned to the IBM plant (Järfälla, Sweden) for repair. Transportation charges to and from the plant are to be paid by the customer. The following repairs will be performed per 1416:

- Disassemble, inspect, test, clean, replace idler gear and drive gear, and reassemble ††
- Replace cams on original base plate assembly
- Replace base plate assembly (856186)
- Replace standard type slugs †

† When a character is replaced, all identical characters should be replaced to ensure consistent print-out of identical characters. Unless otherwise specified, the plant will replace these slugs at the stated price per type slug. See "Type Catalog".

When replacement of special characters (special slugs) is required, the original charges (excluding artwork and matrix charges) for those special characters will apply for this replacement.

During the fourth through twelfth month of the warranty period, contact @SS@IBM for charges. There will be no charge for replacement of defective parts during this period. After the twelfth month when the warranty has expired, contact @SS@IBM for charges.

In the event a 1416 is damaged to the point where, in the opinion of IBM, repair is not possible, the 1416 will be returned to the customer. In this case, none of the prices will apply.

Note: An emergency replacement procedure for damaged 1416s is available.

1416s for temporary installation are available at a daily rental based on the regular monthly charge, until the repaired 1416 is returned. Shipping charges for the temporary 1416 will be charged to the customer.

IBM will bear the transportation and repair charges when the damage to a purchased 1416 is categorized as "IBM responsibility" by the branch manager, e.g., 1416 received in damaged condition, IBM employee drops a 1416, etc. In cases of IBM responsibility, a temporary replacement 1416 will be supplied at no charge.

IBM guarantees that the repaired 1416 will be returned to the customer in operable condition.

1419 MAGNETIC CHARACTER READER

PURPOSE

Reads magnetically inscribed data from card and paper documents into a 1401, 1410, 1460, System/3 model 12 or 15, S/360 model 22, 25, 30, 40, 50, 65, 67, any S/370 processor (except 3081, 3083 3084, or 3090), or a 4300 Processor. Can be used for offline sorting.

MODELS

Model 1 001 E13B type font, codeline arrangement as designated by the American Bankers Association Technical Committee on Mechanization of Check Handling. Intermixed paper and card documents within the following specifications can be processed:

Width: 2-3/4 in. to 3-2/3 in.
Length: 6 in. to 8-3/4 in.
Thickness: 0.003 in. to 0.007 in.
Paper Stock: 20 lb. short grain to 44 lb. card stock

Fifty one column card stock can be fed at a rate of approximately 1,960 cards a minute.

Note: For sorting 51-column cards, see 51-column Card Sorting (#4380) under "Special Features".

Model 031 E13B type font, codeline arrangement as model 1, but handles documents with the following specifications:

Width: 70 to 105mm (2.75 in. to 4.134 in.)
Length: 148 to 222mm (5.83 in. to 8.75 in.)
Thickness: 0.09 to 0.14mm (0.0035 in. to 0.0055 in.)
Paper Stock: 85 to 120gr/sq.m (22 lb. short and long grain to 32 lb.).

Model 032 CMC-7 type font (coded magnetic character with 7 bars), expanded codeline feature is standard, handles documents with specifications and paper stock like mdl 31. Type font according to ECMA specifications.

Prerequisites

System/3 mdls 12 and 15: One 1419 can be attached. It requires the Mdl 20 Attachment (#9710) and RPQs WB1253 and S00382. All mdls of the System/3 must be equipped with a Serial I/O Channel (#7081).

Note: RPQ WB1253 only must be approved by Special Product Marketing in Rochester. RPQ S00382 is required to process checks with 9-digit routing/transit number.

S/360 mdl 22, 25, 30, 40, 50, 65, 67, any S/370 (except 3081, 3083 or 3084), or 4300 processor: Up to six 1419s can be attached to a system. Each 1419 requires a S/360 Single Address Adapter (#7720) or S/360 Dual Address Adapter (#7730 or #2996); see "Special Features" below. Each 1419 requires a channel control unit position. RPQ SU0044 is required on the 3115 Byte Multiplexer Channel (#5248).

- S/360 mdl 25: Special feature on 2025: Multiplexer channel, or selector channel.
- S/360 mdl 22, 30, 40, 50: Multiplexer channel (standard), selector channels (special features, except on 2022 one selector channel is standard).
- S/360 mdl 65, 67: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on a 2870; see M2860, 2870 pages.
- S/370 mdl 115, 125: Byte multiplexer channel (special feature), External Signal (#3898); See M3115, 3125 pages. On a 3115-0, #9336 is required.
- S/370 mdl 135: Multiplexer channel (standard), selector channels (special features); see M3135 pages.

- S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features); see M3135-3 pages.
- S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard); see M3138 pages.
- S/370 mdl 145: Multiplexer channel (standard), selector channels; see M3145 pages.
- S/370 mdl 145-3: Byte multiplexer channel (standard), block multiplexer channels; see M3145-3 pages.
- S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard); see M3148 pages.
- S/370 mdl 155, 158: Multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard); see M3155, 3158 pages.
- S/370 mdl 165, 168: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) on 2870; see M2860, 2870 pages.
- 3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard); see M3031 or 3032 pages.
- 3033 Processor: Byte multiplexer channels, block multiplexer channels; see M3033 pages.
- 4300 Processor: Byte multiplexer channel, block multiplexer channel (optional), External Signals (#3898); required on 4331.

Note: Before ordering, read descriptions of #7720 and #7730 and #2996 under "Special Features" below for further prerequisites and limitations.

1401/1460: One 1419 can be attached. A Serial I/O Adapter (#7080) is required on the 1401 or 1441 Processing Unit.

Note: For optimum operation, Processing Overlap (#5730) is recommended on the 1401 or 1461 I/O Control. Without it, a maximum of 9.5 milliseconds are available for processing of data from the 1419. Limitations: A 1419 cannot be installed with 1401 A, G or H mdls; on a 1401, diagnostic programs require a minimum of 4,000 positions of storage.

1410: One 1419 can be attached to each channel; simultaneous use of two 1419s increases the number of documents converted up to 90 percent, exclusive of operator handling time. A Magnetic Character Reader Adapter (#4900, #4902, #4903) is required on the 1411 Processing Unit. Limitations: Can be installed only on 1411 mdls A1 through A5.

Limitations

- S/360 mdl 25, 30: Operation of 1419s is not included under 1401/1440/1460 Compatibility features.
- S/360 mdl 40: Operation of 1419s is not included under 1401/1460 Compatibility (#4457) or 1410/7010 Compatibility (#4478).
- S/360 mdl 50: Operation of 1419s is not included under 1410/7010 Compatibility (#4478).
- S/360 mdl 67: Only when operating in mdl 65 mode.
- S/370 mdl 115: Operation of 1419s is not included under S/360 Mdl 20 Compatibility (#7520).
- S/370 mdl 125: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#4457) or S/360 Mdl 20 Compatibility (#7520).
- S/370 mdl 135, 135-3, 138: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#4457).

- S/370 mdl 145, 145-3, 148: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#4457) or 1401/1440/1460, 1410/7010 Compatibility (#4458).
- S/370 mdl 155, 158: Operation of 1419s is not included under 1401/1440/1460, 1410/7010 Compatibility (#3950).
- 4331 Processor: Operation of 1419s is not included under 1401/1440/1460 Compatibility (#3950).

HIGHLIGHTS

Documents read at a maximum rate of 1,600 documents a minute. Actual speed depends upon length of document and stored program. Pocket selection may be controlled by the 1419 or system's program. Feeding is controlled by the system. Can also be used for offline sorting. Processing Overlap (#5730) is required on the 1401 or 1461 (1460) to take full advantage of the 1419's speed. Individual fields can be processed immediately after they are read. Document reading can be overlapped with processing. Minimum processing time, including pocket selection, is 32.2 milliseconds; more than ample for sophisticated applications.

Checking: Readability of each magnetic character, including special symbols, in each field processed can be verified each time a document is read and/or sorted. A field length check may be made on all fixed-length fields being processed in offline mode to assure that all numeric digits in the field have been encoded. When the 1419 is under control of the system's program, the 1419 sends control signals to the processor so that the program may determine document distribution. Documents not satisfying checking conditions may be rejected. Fixed-field lengths provide a powerful technique for controlling accuracy of processing.

Paper Quality: The paper characteristics should comply with the characteristics described in the paper brochure, G212-9639. It is suggested that papers be tested in the IBM Paper and Printing Laboratory. Based on our experience in developing paper document handling equipment, IBM has developed a positive and comprehensive analysis procedure designed not to "accept" or "reject" paper, but only to report what is observed. We strongly recommend that our sales force sell this IBM service to interested customers or prospects. Consult Special Engineering for details of testing procedure.

Programming Compatibility: Reprogramming is required whenever: (1) A 1419 replaces a 1412 in an existing 1400 series installation; (2) a S/360, S/370, or 4300 processor replaces a 1400 series installation; (3) a S/360 mdl 22, 25, 30, 40, 50, 65, any S/370 (except 3081, 3083 or 3084), or 4300 processor replaces a S/360 mdl 20; (4) a conversion is made from one programming system to another.

Publications: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001, 1401/1460 -- GA24-1495, 1410 -- GA22-6826; "IBM 1419 Magnetic Character Reader Reference Manual", GA24-1499; "IBM System/3 1255 and 1419 Magnetic Character Readers Reference and Program Logic Manual", GC21-5132

SPECIFY

- Power (AC):

50 Hz (3-phase)	60 Hz (1-phase)
200V #2807	208V #9902
220V #2815	230V #9904
235V #2818	
380V #2816	
408V #2819	

- Color: Color Accent -- #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray. Extended Color -- #9031 for red, #9032 for yellow, #9033 for blue.

Field Lengths: Specify two feature numbers, one for Account Number, one for Process Control; see table below. Fixed-field lengths assure maximum processing accuracy. Variable-length fields may be specified in lieu of fixed lengths. Field lengths on installed machines may be changed by no-charge MES. Limitations: Not available for mdl 32.

Fixed-Field Length (position)	Account Number	Process Control
1	----	#9190
2	----	#9191
3	----	#9192
4	----	#9193
5	#9210	#9194
6	#9211	#9195
7	#9212	----
8	#9213	----
9	#9214	----
10	#9215	----
Variable-Field Length	#9219	#9189

For mdl 32 with Expanded Codeline, use Customer Codeline Specification Sheet, Z112-6182, for specifying codeline configuration.

- Shipping Instructions: #9691 for stackers assembled (sorter section 76.27cm/35-3/4 in. deep), #9692 for stackers disassembled (sorter section approximately 81.28cm/32 in. deep).
- S/360 Mdl 20 Attachment: #9710, if desired. Required to attach the 1419 to a System/3 and must be modified by RQs W B1253 and S00382. For field installation, the 1419 must have EC 127384 or above; can be removed in the field.
- With #9710 installed, the 1419 cannot be used interchangeably with a 1400 series processor or a S/360 mdl 22, 25, 30, 40, 50, 65 or 67, any S/370 processor or any 4300 processor.
- Kickstrips: #9431, if desired; also available on no-charge MES. When kickstrips are installed, the open area under the machine is enclosed. This reduces the amount of "toe-room" for the operator and may be inconvenient to the customer if the power outlet is located under the machine.
- Isolation Feature: May be required on units shipped prior to December 29, 1967 for attachment to a S/360; see "Special Features".
- Non-PCB Components: #2888 for shipment to Japan or other countries requiring non-polychlorinated biphenyl.

SPECIAL FEATURES

Batch Numbering (#1445): Provides an automatic means of advancing a batch number document identification under program control. Consists of a 6-position impact printer which prints up to 999,999. The five low-order digits are advanced under processor control; the high-order digit is set manually. The batch number can be printed in any one of six locations on the back of the document. Limitations:

1. Batch number advance instructions given more often than once in a given 3-second period will cause suspension of feeding for the remainder of the period. Minimum batch size that can be processed without restriction is influenced by those factors affecting throughput. Refer to Reference Manual.
2. Legibility of batch numbers is influenced by the quantity of reverse side printing, the color and density of the ink used in reverse side printing, and surface irregularities caused by the printing process used. A typical example of documents with one or more surface irregularities is Traveler's Cheques. Customers must be advised that on these types of documents reduced ribbon life can be expected.

3. When 51-column cards are processed, print location 6 cannot be used.
4. This feature is not available for use in 1410 systems.
5. Cannot be installed with Endorser (#3791). Uses purple ribbon (413193), or equivalent. See GA24-3342 for details. Prerequisites: For field installation, 1419 mdls 1 and 31 must have EC 127244 or above and mdl 32 must have EC 126623 or above.

Dash Symbol Transmission (#3215): Transmits the E13B dash symbol from transit field to storage. With symbol in storage, program can distinguish between duplicate Canadian and U.S. transit numbers. Maximum: One. Limitations: Not available for mdl 32.

Electronic Accumulator and Sequence Checking (#3610): (Plant installation only) Accumulating -- amounts read from documents and accumulated total printed on paper tape. Maximum accumulation is ten digits. Rejected documents not accumulated. Sequence Checking -- selected positions in a field compared with same positions in preceding documents to assure that all documents are in proper order. Maximum of ten positions can be sequence checked in single pass. Limitations: This feature does not function when the 1419 operates in online mode with any S/360, S/370 or 4300 processor.

Note: This feature is a separate unit, cable connected to 1419; 43cm (17") x 52cm (20-1/2") x 98cm (38-1/2"); weight 48kg (105 lbs). Prerequisites: #5201 or #2779.

Endorser (#3791): (Plant installation only) (mdl 1, 60 Hz only) Imprints full endorsement at speed of 1419. Operator can select one of six endorsing positions in accordance with ABA specifications. With this feature, documents can be endorsed with date, identification number and bank's legal endorsement. The Endorser Plate is made to the customer's specifications. See "Accessories" below. A Blank Endorser Plate is also available if only partial endorsements are required. Limitations: Cannot be installed with Batch Numbering (#1445).

Endorse Only (#3795): (Plant installation only; if Endorser (#3791) is installed, it can be changed in the field to #3795.) Imprints full endorsement at speed of 1419. Vertical location of endorsement is specified by customer and set at plant. A left or right printing position can be selected by operator. Identification number printing is not provided. The date printing unit is at trailing end of endorsing device. With this feature, documents can be endorsed with date, identification number and bank's legal endorsement. The Endorser Plate is made to the customer's specifications. See "Accessories" below. A Blank Endorser Plate is also available if only partial endorsements are required. Specify: #9167 for endorsement at top, #9168 for center or #9169 for bottom. Limitations: Cannot be installed with Endorser (#3791).

Expanded Capability (#3800): Provides a command for operation under OS. When in OS mode, stacker select time available using the Dual Address Adapter (#7730) is reduced by 2 ms. Exposure to data overruns caused by 1419s interfering with other 1419s operating on the same channel is eliminated. Overrun exposure and maximum number of 1419s per channel are configuration- and application-dependent; refer to GC21-5006. Compatibility with DOS Dual Address Support is provided for conversion to OS. OS or DOS mode of operation is established by a field modification to the feature by CE. Prerequisites: Each 1419 requires #7730 or #2996; EC259399 is required on a S/360 mdl 50, and EC 712822 is required on a 2870 for operation on a S/360 mdl 65 or S/370 mdl 165.

251-Column Card Sorting (#4380): (mdl 1) For sorting 51-column card documents offline, which may be intermixed with documents and cards within the specifications listed under "Models" above. When installed, machine speed is reduced. Formula for calculating feeding rate is:

$$15,720 + (L + 0.725L)$$

where L is document length in inches.

For 51-column cards, speed is approximately 1,875 documents/minute; for 6-inch documents, approximately 1,515

documents/minute. Decks containing 51-column cards must be mechanically joggled prior to each pass.

Isolation Control Unit (#4700): (Field installation on units shipped prior to December 29, 1967 only; standard on units shipped after that.) To turn power on or off the 1419 without generating spurious signals. Thus, a processor program, if it can be logically disconnected from the system before power is turned off, can continue operating. Prerequisites: #7720 or #7730 or #2996; since in all cases there are compatible EC level requirements, the concurrence of the Branch CE Manager is required for any order for this feature.

Multiple Column Control (#2779, #5201): Permits selection of documents with a specific number in any field. With #2779, a specific number in six or less columns can be selected. With #5201, a specific number can be selected in four or less columns in any field. Limitations: Mdl 1 and 31 -- #5201 only, mdl 32 -- #2779 only.

Program Control for Pocket Lights (#5739): To facilitate control of output batches in the transit application. On 1419s attached to a System/3, S/360, S/370, 4300 processor, 1401 or 1460, the program stops the 1419 when a predetermined number of documents has entered one of six pockets designated by the program and turns on the appropriate pocket light(s) (A-3). Limitations: Not available for use in a 1410 system.

Program Control for Pocket Lights 7-12 (#5741): Facilitates control of output batches in the transit application when more than six pockets are being filled. Provides lights for pockets 4-9, enabling program to turn on a light(s) for any of the first 12 pockets designated. Limitations: Not available for use in a 1410 system. Prerequisites: #5739, plus EC 125358A, or, for field conversion, FBM 488231.

Self-Checking Number (#7061, #7062): A self-checking number consists of two parts, the basic identifying number and its check digit. The check digit, derived from the basic identifying number by one of two techniques, is always the units digit of a self-checking number. The feature assures that all digits in a self-checking number have been correctly recorded. The field is verified as it is read during any pass. Limitations: Self-checking numbers for Modulus 10 (#7061) are not compatible with those for Modulus 11 (#7062).

- #7061 - Modulus 10: Has weighting factor of 1, 2, 1, 2, 1, 2. Will not detect the following types of errors: 09 or 90 transpositions; interchange of digits between alternate columns, e.g., 32647 for 34627; substitution of one self-checking number for another; in some instances, transpositions having the formula "BAB" for "ABA", e.g., 121 for 212; in some instances, random errors, e.g., 23 printed as 56.
- #7062 - Modulus 11: Has weighting factor of 7, 6, 5, 4, 3, 2; when self-checking number is greater than six digits, weighting factor is repeated. In some instances, random type errors will not be detected, nor can a basic number requiring a digit of 10 be used.

Split Field (#7440): (mdl 1, 31) The first ABA dash symbol following a digit (e.g., a dash in units position of a field is ignored) will separate any field into two elements. Each of the elements may vary in length. With this feature, either element can be treated as a separate field. Specify: First Element (#9180) - required when Self-checking Number (#7061, #7062) is ordered and is to operate only on the first element of the split field. Limitations: Not available for mdl 32.

S/360 ADAPTER (#7220 for Single Address, #7730 for Dual Address): One of these adapters is required on each 1419 attached to a S/360 mdl 22, 25, 30, 40, 50, 65 or 67, any S/370 processor or any 4300 processor. Limitations: Once #7720 or #7730 has been installed, the 1419 cannot be used with a 1400 series processor without submission of an RPQ. Maximum: One per 1419, #7720 or one #7730.

- S/360 Adapter - Single Address (#7720): Up to six 1419s attached to a system are supported by DOS; exposure to late stacker selects should be considered in determining the maximum number of 1419s that may effectively operate on a system, in addition to those factors outlined under DOS in

"Programming". Limitations: Programming support precludes concurrent operation of 1419s equipped with #7720 and those equipped with #7730. Prerequisites: In order to operate with DOS or BPS, #3274 or #3895 is required on the processing unit.

Note: Intersystem attachment via Direct Control is limited when the 1419 uses external interrupt lines. Signal-in lines used by 1419s cannot be shared with the second processing unit. To operate with DOS, the 1419 must have EC 131182. When equipped with #7720, it is recommended that 1419s be attached to a multiplexer channel and they should normally be the highest priority devices on the channel.

- S/360 Adapter - Dual Address (#7730 and #2996): With this feature more stacker select time is available than with #7720. #7730 for mdl 1 and 31 only, #2996 for mdl 32 only. Available stacker select time with #7730 is based on the last field selected for reading; account number -- 27 ms, transit number -- 21 ms, serial number -- 15 ms. In order for these times to be valid, document field placement must be within the standards and specifications of the ABA Common Machine Language Specifications, Canadian Bankers Association, Australian Banks Automation Committee or the London Clearing Bankers Committee.
- Feature #2996: To accommodate the flexibility of the Expanded Codeline feature, three read command termination times are provided. Only one time will be operative during any processing run as determined by the last field selected for transmission. Each termination time is adjustable and their assignment to fields selected for transmission is program-wired in the 1419 (i.e., one customer may use field 3 to select a termination time, while another customer will use field 4).

The termination times will be adjusted and field assignments will be made at installation to conform to the customer's codeline and application.

The termination times are adjustable as follows:

First Termination Time (T1) -- 19 ms to 26 ms after the document arrives at the read head.

Second Termination Time (T2) -- 2 ms to 9 ms after T1.

Third Termination Time (T3) -- 2 ms to 9 ms after T2.

The available stacker select time for a particular processing run depends upon which termination time is operative during the run. The stacker select time is calculated by subtracting the termination time from 45 ms.

The following example will illustrate the calculations:

Assume T1 = 19 ms
 T2 = T1 + 9 ms = 28 ms
 T3 = T2 + 4 ms = 32 ms

Run #1 With T1 operative Stacker
 Select time = 45 ms - T1 =
 45 ms - 19 ms = 26 ms

Run #2 With T2 operative Stacker
 Select Time = 45 ms - T2 =
 45 ms - 28 ms = 17 ms

Run #3 With T3 operative Stacker
 Select Time = 45 ms - T3 =
 45 ms - 32 ms = 13 ms

Both features include two distinct control units; each with a separate address, its own set of executable commands, status and sense indicators. Each 1419 requires only one system control unit position. Prerequisites: If the 1419 is attached to a 2022 or 2030 multiplexer channel via #7730 or #2996, #9185 must be specified on the 2022 or 2030. If #7720 is changed to #7730 or #2996 by MES, #9185 must be added to the 2022 or 2030.

DOS

Up to six 1419s attached to a system are supported by DOS. The limiting factors concerning the number of 1419s that may be attached to a system are stacker select time requirements and channel capacity. Since these factors are application- and configuration-dependent, consult the appropriate channel loading and DOS SRLs to determine the maximum number that may be operated effectively. Limitations: DOS support precludes concurrent operation of 1419s equipped with #7730 or #2996 and those equipped with #7720; 1419s equipped with #7730 or #2996 can be attached only to a multiplexer channel and should normally be the highest priority devices on the channel. Prerequisites: #3274 or #3895 or #3898 is required on the processing unit (except the 4361 and 4381 Processor).

Note: Intersystem attachment via Direct Control is limited when the 1419 uses the external interrupt lines. Signal-in lines used by 1419s cannot be shared with the second processing unit. For field installation of #7730, the 1419 must have EC 131196 or above. For field installation of #2996, the 1419 must have EC 133483 or above.

OS

Limitations: 1419s equipped with #7730 or #2996 (required for OS) can be attached only to a multiplexer channel, must be physically cabled last on the channel, and should be the highest priority devices on the channel. Prerequisites: For operation under OS, each 1419 must be equipped with #3800.

Note: All proposals must be reviewed by the Document Handling Organization before submission to prospect or customer.

MODEL CONVERSIONS (NONE)

ACCESSORIES

The following items are available on a purchase-only basis. For shipment with machine, order the desired feature number indicated.

Endorser Plate (#3792): Made to customer's specifications; for use with #3791 or #3795. Documents can be endorsed with date, identification number, and bank's legal endorsement. For further information, see Endorser Plate Specification Sheets, Z120-0563. It is recommended that the customer stock at least one spare endorser plate for each group of machines with identical plates, since plates cannot be immediately replaced. When ordering #3792 for shipment with a machine, specify color of ink to be used: #9145 for black. **Note:** 1419 endorser plates are not interchangeable with other machine types. An additional charge will be made for an endorser plate that requires art and layout work which cannot be accomplished by straight-line typesetting. This additional charge applies to single plate orders and the first plate of multiple plate orders. Art and layout work, if required, additional, specify #3796. The endorser plate on a displaced machine is to be left with the machine, but defaced and rendered unusable. The normal plate charge will apply whenever replacement of a worn or damaged plate is required. Charges for art and layout work are to be added, if applicable. Field Installation: Order #3792. In all cases, if art and layout work is required for #3792, also order #3796. A completed Endorser Plate Specification Sheet (Z120-0563) must be forwarded to the plant for each machine. If available, a sample endorsement should be attached to each Spec Sheet.

Blank Endorser Plate (#3793): For use with #3791 or #3795. Documents can be endorsed with date, identification number, and bank's legal endorsement. For further information, see Endorser Plate Specification Sheets, Z120-0563. When ordering #3793 for shipment with a machine, specify color of ink to be used: #9145 for black, #9146 for green, #9147 for purple, or #9148 for red. **Note:** 1419 endorser plates are not interchangeable with other machine types. The endorser plate on a displaced machine is to be left with the

machine, but defaced and rendered unusable. The normal plate charge will apply whenever replacement of a worn or damaged plate is required. Field Installation: Order #3793. A completed Endorser Plate Specification Sheet (Z120-0563) must be forwarded to the plant for each machine.

Endorser Plate for Mechanical or Replacement Machine (#9140): 1419 replaced by 1419; made to customer's specifications; for use with #3791 or #3795. A replacement endorser plate will be shipped with each replacement machine at no charge when the machine being replaced has an endorser. If any change in plate design is desired, there is a charge only for art and layout work (#3796), if applicable. Attach sample endorsement to the Endorser Plate Specification Sheet (Z120-0563) and forward to the plant. For further information, see Endorser Plate Spec Sheet. When ordering #9140 for shipment with a machine, specify color of ink to be used: #9145

for black, #9146 for green, #9147 for purple, or #9148 for red. Note: 1419 endorser plates are not interchangeable with other machine types. An additional charge will be made for an endorser plate that requires art and layout work which cannot be accomplished by straight-line typesetting. The endorser plate on a displaced machine is to be left with the machine, but defaced and rendered unusable. Field Installation: Order #9140. In all cases, if art and layout work is required for #3792, also order #3796. A completed Endorser Plate Specification Sheet (Z120-0563) must be forwarded to the plant for each machine. If available, a sample endorsement should be attached to each Spec Sheet.

I Ink Container: P/N 424856 - Black

MACHINES

1442 CARD READER MDLS 3, 4

[NO LONGER AVAILABLE]

PURPOSE

Punched card input unit for a 1240, 1410, 1440 or 7010 system.

MODELS

Model 3 003 For 1410 or 7010 ... has one stacker.

Model 4 004 For 1240 or 1440 ... has two stackers.

Maximum: Up to two 1442 mdl 3s can be attached to a 1410 or 7010 system, one on channel 1 and one on channel 2 ... up to two 1442 mdl 4s can be attached to a 1240 or 1440 system.

Limitations: On a 1240 or 1440, if a 1442 mdl 1 or 2 or a 1444 is used, only one 1442 mdl 4 can be installed ... if two 1442 mdl 1s and 2s in any combination or both a 1442 mdl 1 or 2 and a 1444 are used, a 1442 mdl 4 cannot be installed.

Prerequisites

For 1410 or 7010: #4659 or #4660 on the 1411 or 7114 (#4660 requires a 1411 mdl A1-A5).

For 1240 or 1440: The first 1442 (mdl 1, 2 or 4) attached must have #1632 ... see "Special Features".

HIGHLIGHTS

Provides high-speed, low-cost punched card input. Cards are read by a light-sensing unit at speeds up to 400 cards/minute. The 64 codes of the BCD Code can be read. Invalid codes and mispositioned cards are detected. The light-sensing mechanism is checked for proper functioning in every read cycle. Has a 1,200-card capacity hopper. Mdl 3 has one 1,300-card capacity radial stacker ... mdl 4 has two.

Card Limitations: Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores (before separation) -- S-1, ID-1, ID-2, and for a maximum of three passes, M-4 and M-5.

External Scores (after separation) -- column 1 end: OM-2, M-3, M-4, M-5, M-7, M-11 (with round corners), CF-4 and CF-11 (with round corners) ... column 80 end: M-3, M-6, M-7, M-11 (with round corners), CF-11 (with round corners), and for a maximum of three passes, M-5, OM-2, CF-4.

All other scores may result in unsatisfactory performance. For possible use of Port-A-Punch® or Micro-Processing cards, consult IBM. Aqua cards and C-4 corner cut cards cannot be used.

Bibliography: 1240/1440 -- GA22-3005, 1410/7010 -- GA11-6826

SPECIFY

The following specify features can be changed in the field.

• Power (AC):

Mdl 3 (1-phase):

50 Hz	60 Hz
100V #2804	208V #9902
110V #2805	230V #9904
123.5V #2811	
200V #2806	
220V #2813	
235V #2814	

Mdl 4 (3-phase):

50 Hz	60 Hz
200V #2807	208V #9903
220V #2815	230V #9905
235V #2818	
380V #2816	
408V #2819	

Must be consistent with system voltage.

- Color: #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray.
- Interconnection with Non-IBM Equipment: #9995 for process line by other manufacturer, #9996 for no-process line.

SPECIAL FEATURES

The following features, as appropriate, are on an "as available" basis for field installation.

Card Image (#1531): [Mdl 4] To convert binary coded cards into BCD codes ... also permits processing of cards with multiple punching in a single card column. Approved scored cards can be read without suspending validity checking in other than the scored columns. When reading in card image mode, the validity check is suspended because all characters are considered valid. Cards with interspersed conventional punching codes and binary coded data can be read. When installed on the first 1442 attached to a system, this feature also functions on a second 1442 in the system. **Prerequisites:** #9035 on the 1241 or 1441.

Card Read Punch Adapter (#1632): [Mdl 4] Required on the first 1442 attached to a system ... the second 1442 does not require this feature. When a 1442 mdl 1 or 2 and a 1442 mdl 4 are both attached to a system, the 1442 mdl 1 or 2 must be the first unit attached and must be equipped with this feature.

Input/Output Adapter (#4661): [Mdl 3] To attach a 1414 I/O Synchronizer mdl 5 or 8 with the teleprocessing units or printer it controls to the 1442 mdl 3.

1442 CARD PUNCH MDL N2

PURPOSE

Punched card output unit for a S/360 model 22 through 75, any S/370 processor (except 3081, 3083 or 3084), or 4300 Processor ... punches cards at a rated speed of 160 columns/second.

MODELS

Model N2 N02 [NO LONGER AVAILABLE]

Maximum: The number of mdl N2s that can be attached depends upon the number of available system channel control unit positions.

Prerequisites: An available control unit position on a system channel.

S/360 mdl 25: Special feature of 2025: Multiplexer or selector channel.

S/360 mdl 22, 30, 40, 50: Multiplexer channel (standard), or selector channels (special features, except on 2022 one selector channel is standard).

S/360 mdl 44: Special features on 2044: Multiplexer channel, high speed multiplexer channels, or add'l high speed multiplexer subchannels.

S/360 mdl 65, 67, 75: Selector channel of 2860, basic multiplexer channel of 2870, or selector subchannels (special features) on 2870 ... see M2860, 2870 pages.

S/370 mdl 115, 125: Multiplexer channel (special feature) ... see M3115, 3125 pages.

S/370 mdl 135: Multiplexer channel (standard), selector channels or block multiplexer channels (special features) ... see M3135 pages.

S/370 mdl 135-3: Byte multiplexer channel (standard), block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145: Multiplexer channel (standard), selector channels ... see M3145 pages.

S/370 mdl 3145-3: Byte multiplexer channel (standard), block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148: Byte multiplexer channel (standard), block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158: Multiplexer channel (standard), 2nd byte multiplexer channel (special feature), block multiplexer channels (first two are standard) ... see M3155, 3158 pages.

S/370 mdl 165, 168: Selector channel of 2860, basic multiplexer channel of 2870, selector subchannels (special features) of 2870, or the shared subchannel of 2880 ... see M2860, 2870, 2880 pages.

3031, 3032 Processor: Byte multiplexer channel (one is standard), block multiplexer channels (five are standard) ... see M3031, 3032 pages.

3033 Processor: Byte multiplexer channels, block multiplexer channels ... see M3033 pages.

4300 Processor: Byte multiplexer channel, block multiplexer channel.

HIGHLIGHTS

Format control and analysis are performed by the system's processing unit. Blank or prepunched cards are punched serially. Actual speed depends upon the number of columns punched, including interspersed blank columns. Rated speed for punching columns 1-10 is 265 cards/minute ... for punching columns 1-80 is 91 cards/minute. Punching is checked. The unit has a 1,200-card capacity hopper and a 1,300-card capacity stacker. The Extended BCD Interchange Code (256 codes) is punched. Card Image (#1531) is required to punch binary codes ... see "Special Features".

Card Limitations: Generally, scored cards require careful handling and a favorable environment. Use of the following scores has been approved:

Internal Scores (before separation): M-4, M-5, S-1, ID-1.

External Scores (after separation): M-7, M-11 (with round corners), CF-11 (with round corners) on either end, M-3 on column 80 end only.

All other scores may result in unsatisfactory performance. For possible use of Port-A-Punch® or Micro-Processing cards, consult IBM. Aqua cards and C-4 corner cut cards cannot be used.

Bibliography: S/360 -- GC20-0360, S/370, 4300 -- GC20-0001

SPECIFY

- Power (AC):

50 Hz (3-phase)	60 Hz (1-phase)

220V #2815	230V #9904
235V #2818	
380V #2816	
408V #2819	

Must be consistent with system voltage.

- Color: #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray, #9046 for white.
- Isolation, Control Unit: May be required on units shipped prior to December 29, 1967 for mdls 44, 65, 67 and 75; January 28, 1968 for mdls 30, 40 and 50 ... see "Special Features".
- Interconnection with Non-IBM Equipment: #9995 for process line by other manufacturer, #9996 for no-process line.
- Language Groups: #2927 for English, #2928 for French, #2929 for German.
- Dust Cover: #2776.

SPECIAL FEATURES

Card Image (#1531): Permits punching of cards with multiple punching in a single column.

Isolation, Control Unit (#4700): [For field installation on units shipped prior to December 29, 1967 for mdls 44, 65, 67 and 75; January 28, 1968 for mdls 30, 40 and 50 ... standard on unit shipped after that] To turn power on or off the 1442 mdl N2 without generating spurious signals. Thus, a processor program, if it can be logically disconnected from the system before power is turned off, can continue operating. **Prerequisites:** Since in all case there are compatible EC level requirements, the concurrence of the Branch CE Manager is required for any order for this feature.

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

1520 HAND-HELD SCANNER**PURPOSE**

A hand-held optical reader which attaches to the 3683 mdls 001, 002, and 003 and the 3684 mdls 001 and 002 in the 3650 and 3680 Programmable Store System and the 4683 mdls 001 and 002 in the 4680 Store System. It is particularly adaptable to all modes of checkout and it accommodates both standing and seated operators.

MODELS

Model A01: For use with the 3650 and 3680 Programmable Store Systems. For use with the 4680 Store System via the Feature Cards B, C, or D.

Model A02: For use with the 4680 Store System.

Maximum: One per 3683, 3684, or 4683 Point of Sale Terminal

Prerequisites: On the 3683: special features #5422 Non-IBM Hand-Held OCR Reader Adapter and either #3880 Expansion Feature-I or #3881 Expansion Feature-II and user written application code. On the 3684: special features #5422 Non-IBM Hand-Held OCR Reader and #3890 Expansion Feature on the mdl 1 and user written application code.

On the 4683: If 1520-A01 is installed on the 4683 mdls 1 or 2, then Feature Cards B, C, or D (#4001, #4002, or #4003 respectively) and the OCR Hand-Held Reader Cable (#4024) are required. In addition customer written application code is required to convert the OCR formatted data received from the 1520 back to UPC data. If the 1520-A02 is installed on the 4683, there are no additional feature cards or programming required; however, the Distributed Keyboard Cable (#3326) is required.

Customer Setup (CSU): The 1520 is a customer setup unit. Detailed setup instructions are included with each unit.

Patches Required to Support 1520-A01 on 3683 or 3684: Select from the following the microcode patches required to install OLT 75 on your system.

EC 320502: SFO4286 and SFO4304

EC 320503: SFO5286 and SFO5304

EC 320560: SFO6286 and SFO6304

EC 320561: SFO7286 and SFO7304

EC 320562: SFO8286 and SFO8304

HIGHLIGHTS

The 1520 consists of three units: (1) a power supply with a 1.83m (6 ft.) connecting cable to a (2) control unit/interface box and (3) a hand-held laser scanner which is 200mm (8 in.) long, 54mm (2.1 in.) wide and 180mm (7.1 in.) high. The hand-held scanner connects to the control unit/interface box via a 1.83m (6 ft.) curled cord. The 1520 mdl A01 scanner reads UPC regular (Version "A"), UPC zero suppression (Version "E"), EAN-13 and EAN-8 bar code symbols. The 1520 mdl A02 reads UPC regular (Version "A"), UPC zero suppression (Version "E"), EAN-13 and EAN-8, Code 39, and Interleaved Two-of-Five bar code symbols. The Hand-Held Scanner has a scan rate of approximately 36 scans per second and has an extended depth of field of up to 200mm (8.0 in.).

The 1520 is a Class IIa laser product which complies with the safety standards of the United States Department of Health, Education, and Human Services (Performance Standard for Laser Products - 21 CFR Subchapter J 1040.10).

The product reads the Universal Product Code (UPC) which has been adopted in the United States as an industry specification for supermarket item identification. It also reads the European Numbering (EAN) symbol which has been adopted in World Trade countries as an industry specification for merchandise identification. In addition to these codes, the 1520-A02 is also capable of reading Code 39 and Interleaved Two-of-Five bar codes used in receiving/carton marking.

Customer Responsibilities: The customer is responsible for:

- Unpacking, placement, setup, and checkout of the 1520 at time of delivery or when relocating the 1520.
- Using and following the 1520 Problem Determination Procedures.

Requirements: The customer is required to return the hand-held reader, control unit, and power supply when maintenance service is to be performed. It is recommended that the customer maintain an adequate level of spare units in order to ensure continual system operation.

Copies of the UPC Symbol Specifications and the UPC Guidelines are available at a charge from the UPC Council to obtain copies, the customer should write to:

Uniform Product Code Council, Inc.
7061 Corporate Way, Suite 106
Dayton, Ohio 45459
513-435-3870

For copies of the General Specifications for the Article Symbol Marking (EAN), the customer should write to:

Secrétaire General, E.A.N.
Rue Des Colonies 54, BTE 8
1000 Bruxelles, Belgique

For copies of the specifications for the Code 39 and Interleaved Two-of-Five bar codes, the customer should write to

The Material Handling Institute, Inc.
1326 Freeport Road
Pittsburgh, Pa. 15238

2314 DIRECT ACCESS STORAGE FACILITY - MDL 1

[NO LONGER AVAILABLE]

PURPOSE

Large capacity high-speed direct access storage and control for a S/360 mdl 30, 40, 50, 65, 75, 85, 195, or any S/370 processor except 3115, 3125, 3081, 3083, 3084, or 3090.

MODELS

Model 1 001

Limitations:

S/360 mdl 30 -- the 2314 requires a 1.5 microsecond 2030 and can be attached only to the first selector channel. Further, when the 2314 is attached, the second channel is restricted as to devices that may be attached ... see "Channel Control Capabilities" in M2030 pages. When a 2841 Control Unit and a 2314 are both attached to a 2030, both must be attached to the first selector channel. Because of the high data rate of the 2314 and the cycle-stealing concept of the selector channel, available program processing time is reduced during 2314 operations. This is of particular concern when handling time-dependent I/O devices, i.e., 1412, 1418, 1419, 1428. To determine the 2314 loading effect, refer to SRL, *S/360 Model 30 Channel Characteristics and Functional Evaluations* (GA24-3411).

S/360 mdl 40 -- the 2314 may be attached to either the first or second selector channel. However, 2314s may not be attached to both selector channels.

S/360 mdl 50 -- if the 2314 is to be used with a 2050 having 1410/7010 Compatibility (#4478), consult

Prerequisites: A control unit position on a system channel.

S/360 mdl 30, 40, 50 -- a special feature, selector channel ... see M2030, 2040, 2050 pages.

S/360 mdl 65, 75 -- a selector channel of 2860 ... see M2860 pages.

S/360 mdl 85, 195 or S/370 mdl 165, 168, 195 -- a selector channel of 2860, or a shared subchannel of a 2880 ... see M2860, 2880 pages.

S/370 mdl 135 -- selector channel (special feature) ... see M3135 pages.

S/370 mdl 135-3 -- block multiplexer channels (special features) ... see M3135-3 pages.

S/370 mdl 138 -- block multiplexer channels (standard) ... see M3138 pages.

S/370 mdl 145 -- selector channel (standard) ... see M3145 pages.

S/370 mdl 145-3 -- block multiplexer channels ... see M3145-3 pages.

S/370 mdl 148 -- block multiplexer channels (standard) ... see M3148 pages.

S/370 mdl 155, 158 -- block multiplexer channels ... see M3155, M3158 pages.

3031 or 3032 Processor -- block multiplexer channels (five are standard) ... see M3031 or 3032 pages.

3033 Processor -- block multiplexer channels (ten are standard) ... see M3033 pages.

Each disk storage module requires a 2316 Disk Pack ... these must be ordered separately ... see "Supplies".

HIGHLIGHTS

Has eight independent modules, each storing up to 29.17 million 8-bit bytes or 58.35 million packed decimal digits in a 2316 Disk Pack.

The eight removable and interchangeable 2316s provide a total of 233.4 million bytes of online storage and virtually unlimited offline storage. Minimum access is 25 milliseconds; average is 75 milliseconds; maximum is 135 milliseconds.

Standard features include:

File Scan -- for performing a comparison on selected bytes of file organization.

Record Overflow -- for greater utilization of storage. Enhanced system reliability and performance are achieved by provision of a ninth "spare" module for customer use should one of the eight normally addressed modules become inoperable.

Cylinder Concept: Retained in the 2314. One cylinder has 20 tracks. Up to 7,294 bytes (or 14,588 packed decimal digits) on each track,

provide 145,880 bytes (or 291,760 packed decimal digits) per cylinder, available under each of the eight access mechanisms.

Data transmission is at the rate of 312,000 bytes/second ... with packed decimal, the rate is 624,000 digits/second.

An advanced method of utilizing disk storage. Self-formatting tracks allow variable length identifiers and records to be easily handled.

Command Chaining: Multiple records within a cylinder can be read/written by a sequence of channel commands without rotational delays between records ... permits index and directory searches without processor intervention. The command structure is optimized to yield efficient random or sequential processing with either randomly or sequentially organized data files. The ability to protect "logical" files is provided by the combination of commands in the 2314 and checks within the control programs servicing the file system. Cyclic code and bit count checking are used to assure the integrity of stored data. The controls necessary to attach the unit to a system channel are included in the 2314.

Publications: Bibliographies; S/360 (GC20-0360), S/370 (GC20-0001)

SPECIFY

- Each 2314 DASF mdl 1 is to be specified on a DPMO as follows: [1] One 2314 mdl 001, [2] One 2312 mdl 001, and [3] Two 2313 mdl 001s ... on one of the 2313s also specify #9140 (to indicate the 2313 at the end of the 2314 DASF).

Note: The 2312 and 2313 type numbers and their associated feature codes are to be specified at no charge and are to be used only for internal IBM ordering and control purposes. List each type and mdl (2314, 2312, 2313) separately with all its associated feature codes. The 2312 and 2313 type numbers should never appear on any agreement.

- Power (AC, 3-phase):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
235V #2818	230V #9905
380V #2816	
408V #2819	

- Color: [2314 only] #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray.
- Additional Codes: On the 2312 and 2313s, additional codes are required depending upon special features on the 2314 and 2844 Auxiliary Storage Control ... see "Special Features" below.
- 2316 Disk Packs: 2316s are required and must be ordered separately ... see M2316 pages.
- Isolation Feature: May be required on units shipped prior to December 29, 1967 ... see "Special Features".
- Language Groups: Specify #2927 for English, #2928 for French, #2929 for German.

SPECIAL FEATURES

The following special features are on an "as available" basis for field installation.

Isolation, Control Unit (#4700): [For field installation on units shipped prior to December 29, 1967 ... standard on units shipped after that] To turn power on or off the 2314 without generating spurious signals. Thus, if the 2314 can be logically disconnected from the system, the CPU program can continue operating. **Prerequisites:** Because in all cases there are compatible EC level requirements, the concurrence of the branch CE manager is required for any order for this feature.

Remote Switch Attachment (#6148): To attach the Two Channel Switch (#8170) to a 2167 Configuration Control Unit in a S/360 mdl 67-2, or to a S/360 mdl 65MP which has the Configuration Control Panel (#1505) installed, or to a S/370 mdl 158MP or 168MP. **Prerequisites:** Specify #9500 on the 2312. #9500 can be field installed.

2844 Attachment (#7949): To attach a 2844 Auxiliary Storage Control. **Note:** Order this feature only when a 2844 is to be attached. Installation of the feature without concurrent installation of the 2844 renders the 2314 inoperative. **Maximum:** One. **Prerequisites:** Specify #9750 on the 2312 and each 2313 ... if the 2844 has a Two Channel Switch

**2314 Direct Access Storage
Facility - MDL 1 (cont'd)**

(#8171), also specify #9765 on the 2312 ... if the 2844 has a Remote Switch Attachment (#6150) also specify #9510 on the 2312. #9750, #9765 and #9510 can be field installed.

Two Channel Switch (#8170): To attach the 2314 to a second channel. Switching is under program control. Includes partitioning. **Prerequisites:** Specify #9760 on the 2312 ... #9760 can be field installed. If the two channel switch is routed through the Configuration Control Panel (#1505) of a multiprocessing S/360 mdl 65, #6148 is required. Also, in a S/360 mdl 67-2, a S/370 mdl 158MP or 168MP, #6148 is required. See #6148 above.

Disk Packs: Contact IBM. See M2316 pages.

2700 GENERAL

TERMINOLOGY

In these pages, the term "Data Terminal Equipment" and its abbreviation "DTE" will mean any business machine which has a telecommunications capability, be it a terminal, a multiplexer or a processor with an integrated communications adapter.

Also, the term "Data Circuit-terminating Equipment" and its abbreviation "DCE" will mean any equipment whose function it is to convert DTE signals into a form suitable for transmission over a communication facility, and to convert signals received from a communications facility into a form suitable for transfer to a DTE. This DCE may be a modem (a MODulator/DEModulator), a telegraph line adapter or another type of signal conversion equipment.

Finally, the term "Automatic Calling Equipment" and its abbreviation "ACE" will mean that equipment which will accept dial digits from a DTE and present them to the telephone central office for the purpose of effecting a switched network connection.

ORGANIZATION

These pages are organized into intercommunication charts, which are:

- Chart 1 - IBM Start/Stop DTE Intercommunication Capability Table
- Chart 2 - IBM Binary Synchronous DTE Intercommunication Capability Table
- Chart 3 - IBM Synchronous Data Link Control DTE Intercommunication Capability Table

And there are communication facility charts:

- Chart A - Nonswitched Telegraph Lines
- Chart C - The Public Switched Telephone Network
- Chart D - Nonswitched Voice Grade Lines
- Chart E - Nonswitched Wideband Channels
- Chart G - Nonswitched Limited Distance Baseband Channels (including Customer-Owned and Maintained, COAM, lines)
- Chart K - Public Switched Data Networks Providing a "V" Series Interface
- Chart L - Public Switched Data Networks Providing an "X" Series Interface
- Chart M - Nonswitched Data Networks Providing a "V" Series Interface
- Chart N - Nonswitched Data Networks Providing an "X" Series Interface
- Chart P - Public Packet Switched Networks Providing a CCITT X.21bis (Canada only > (EIA RS-232-C) <) (Except Canada > (CCITT V.24/V.28 or V.35) <) Interface
- Chart Q - Public Packet Switched Networks Providing a CCITT X.21 Interface

USE

To use these pages:

Refer to the appropriate intercommunication chart to find the desired DTEs and to determine if they are capable of intercommunication. If they are so capable, read the alphabetic designations for the classes of facility over which they may communicate.

Refer to the charts for the facility classes indicated to find the particular facility and the required feature codes for the DTEs that will allow their intercommunication.

Refer to the individual machine pages for the DTEs to determine prerequisites, restrictions, etc.

For example, assume that communication between a 3101 and a 3705-II is desired. Since this would be in start/stop mode, the first reference would be to Chart 1. In Chart 1, the 3101 entry shows that communication between a 3101 and a 3705-II is possible over Facility classes C and D. The 3705-II entry confirms that communication with a 3101 over these facility classes is possible.

Reference to the C and D Facility Charts shows that, since feature codes are entered for both the 3101 and the 3705-II, communication between them is possible over Facilities (Canada only > C1M, C2M, D1M, D2M and D3M. <) (Except Canada > C1, D1, D2 and D3. <)

Further, the C and D Facility Charts show, for both the 3101 and the 3705-II, the feature codes required on each to allow this intercommunication.

Finally, reference should be made to the M3101 and 3705 pages to assure that any restrictions, prerequisites, etc., to the installation of the indicated features are satisfied.

STANDALONE DCEs

The only standalone DCEs listed in the Facility Charts are:

- the IBM standard product line modems available, and those (Canada only > Common Carrier services in which the use of a Common Carrier <) (Except Canada > PTT services in which the use of a PTT <) provided modem is mandatory.

Standalone DCEs other than these may be attached to IBM DTEs, but such attachment (other than that of the IBM Special Product Modems) is always under the provisions of the IBM Multiple Supplier Systems Policy (see the GI Section for information on this Policy).

CUSTOMER RESPONSIBILITIES

The customer must be advised in writing that the customer's responsibilities include:

- Making arrangements for price quotations, installation and initial and recurring costs of the (Canada only > Common Carrier <) (Except Canada > PTT <) supplied communication facility/service appropriate to his desired speed of operation.
- When operation is planned on the public switched telephone network, obtaining, prior to the processing of the machine orders, assurance from the (Canada only > Common Carrier <) (Except Canada > PTT <) that facilities of the proper quality to support data transmission will be available between the proposed locations.
- Toll charges incurred in the installation and maintenance of the IBM equipment.
- Relinquishing the system for service in those cases in which servicing aids and/or available error printouts do not permit localization of the malfunction to the communication facility or terminal location.
- The DTE/DCE compatibility and the DTE/ACE compatibility when the DCE and/or ACE is not specifically listed as supported in the Facility Charts.
- When using IBM Modems, Line Adapters or Integrated Modems, it is recommended that the customer investigate the

economics of providing alternate voice service to facilitate installation and maintenance.

- Performing the setup procedures for customer setup products. On these products, the customer is also responsible for following the problem determination procedures and recovery routines furnished by IBM should a problem arise in the setup.
- The security of customer data is a customer responsibility. The customer is responsible for the selection, implementation, and adequacy of these products in the protection of his data. For applications in which sensitive data is sent over external communication facilities, the customer may wish to apply cryptography.
- Because of the characteristics of the teleprocessing environment, it is possible that in some very unusual circumstances the throughput anticipated on a specific network configuration will not be achieved. The probability is more likely at the higher transmission rates. Actions which the customer may initiate if the anticipated throughput is not achieved are:
 - Addition of line conditioning by the telecommunications common carrier.
 - Redialing the connection if operating on the public switched telephone network.
 - Adjusting, where possible, the block size to optimize throughput, based on the error characteristics of the particular channel.
 - Requesting the (Canada only > Common Carrier <) (Except Canada > PTT <) to provide alternate routing or line improvements. This is normally provided at extra cost. The (Canada only > Common Carrier <) (Except Canada > PTT <) should be contacted for further details.

However, it is possible that, at a particular location, only lower speed operation is obtainable.

The customer should be informed that his local IBM representative is available to assist him in analyzing and planning for these alternatives.

- Finally, the Marketing Representative must have the customer obtain a firm installation date for the start of transmission service prior to processing the OC card.

MULTIPOINT OPERATION

Duplex communication facilities are required for multipoint systems in which:

- The DCE at the control station is a 1200 bps integrated modem, or
- It is desired that a continuous carrier be maintained from the control station to eliminate the control station "Ready For Sending" delays.

The use of duplex facilities and operation in the continuous carrier mode is strongly recommended, since operation in a non-continuous carrier mode (by the control station) will subject the system to inordinate delays, particularly in the polling and addressing sequences.

IBM DATA TERMINAL AND DATA CIRCUIT-TERMINATING EQUIPMENT

The following is a list, by machine type number, of the IBM DTEs and DCEs covered in these pages. This list includes, for the DTEs, a reference to the applicable Intercommunication Chart (1, 2 or 3), and, for both the DTEs and DCEs, a reference to the responsible Marketing divisions.

2701 Data Adapter Unit: Charts 1, 2, Mktd by ISG, E/ME/A, AG-A/PG.

3101 Display Terminal: Chart 1, Mktd by ISG, E/ME/A, AG-A/PG.

3843 Loop Control Unit: Chart 3, Mktd by ISG, E/ME/A, AG-A/PG.

3845 Data Encryption Device: Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

3846 Data Encryption Device: Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

3863 Modem: Charts C, D, Mktd by ISG, E/ME/A, AG-A/PG.

3864 Modem: Charts C, D, Mktd by ISG, E/ME/A, AG-A/PG.

3865 Modem: Chart D, Mktd by ISG, E/ME/A, AG-A/PG.

3868-1,2 Rack-Mounted Modem: Chart D, Mktd by ISG, E/ME/A, AG-A/PG.

3868-3,4 Rack-Mounted Modem: Chart D, Mktd by ISG, E/ME/A, AG-A/PG.

3872 Modem: Charts C, D, Mktd by ISG, E/ME/A, AG-A/PG.

3874 Modem: Charts C, D, Mktd by ISG, E/ME/A, AG-A/PG.

3945 Telegraph Line Termination: Chart A, Mktd by E/ME/A, AG-A/PG.

3976 Modem: Charts C, D, Mktd by E/ME/A, AG-A/PG.

3977 Modem: Chart D, Mktd by E/ME/A, AG-A/PG.

4331 Processor: Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4361 Processor: Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4701-1, 2, 3 Finance Communication Controller: Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4702 Branch Automation Processor: Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4730 Personal Banking Machine: Charts 2,3, Mktd by ISG, AG-A/PG.

4736 Personal Banking Machine: Chart 3, Mktd by ISG, E/ME/A, AG-A/PG.

4952 Processor (Series/1): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4954 Processor (Series/1): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4955 Processor (Series/1): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4956 Processor (Series/1): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4959 Input/Output Expansion Unit (Series/1): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4965 Diskette Drive and I/O Expansion Unit (Series/1): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

4975-1R, 2R Printer (Series/1): Charts 1, 2, Mktd by ISG, E/ME/A, AG-A/PG.

4987 Programmable Communication Subsystem (Series/1): Charts 1, 2, Mktd by ISG, E/ME/A, AG-A/PG.

5110 Computer: Charts 1, 2, Mktd by ISG, E/ME/A, AG-A/PG.

(Canada only > 5150/5160 IBM Personal Computer: Chart 3, Mktd by ISG, E/ME/A, AG-A/PG. <)

5208-001 ASCII-5250 Link Protocol Converter: Chart 1, Mktd by ISG, E/ME/A, AG-A/PG.

5231 Controller (5230 Data Collection System): Chart 2, Mktd by ISG, E/ME/A, AG-A/PG.

5251 Display Station: Chart 3, Mktd by ISG, E/ME/A, AG-A/PG.

5265 Point Of Sale Terminal: Chart 2, Mktd by ISG, E/ME/A, AG-A/PG.

5285 Programmable Data Station (5280 Distributed Data System): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

5288 Programmable Control Unit (5280 Distributed Data System): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

5294 Remote Control Unit: Chart 3, Mktd by ISG, E/ME/A, AG-A/PG.

5340 System Unit (System/34): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

5360 System Unit (System/36): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

5362 System Unit (System/36): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

5364 System Unit (System/36): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

5381/5382 System Unit (System/38): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

5525 System Unit (5520 Administrative System): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

6360 Diskette Unit (Displaywriter): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

6580 Display Station (Displaywriter): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

6670 Information Distributor: Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

(Canada only > 6733 Typewriter Communication Module: Chart 1, Mktd by ISG, AG-A/PG. <)

7426 Terminal Interface Unit: Charts 1, 3, Mktd by ISG, E/ME/A, AG-A/PG.

8101 Storage and I/O Unit (8100 Information System): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

8130 Processor (8100 Information System): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

8140 Processor (8100 Information System): Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

8150 Processor (8100 Information System): Charts 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

MACHINES

8550 System Unit (Personal System/2): Charts 1, 3, Mktd by ISG, E/ME/A, AG-A/PG

8560 System Unit (Personal System/2): Charts 1, 3, Mktd by ISG, E/ME/A, AG-A/PG

8580 System Unit (Personal System/2): Charts 1, 3, Mktd by ISG, E/ME/A, AG-A/PG

8775 Display Terminal: Chart 3, Mktd by ISG, E/ME/A, AG-A/PG.

8815 Scanmaster I: Chart 3, Mktd by ISG, E/ME/A, AG-A/PG.

9373 Processor: Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

9375 Processor: Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

9377 Processor: Charts 1, 2, 3, Mktd by ISG, E/ME/A, AG-A/PG.

MACHINES

CHART 1 - START/STOP INTERCOMMUNICATIONS

For each machine type, the machine types that it will communicate with are shown, as well as the facility classes over which the communication can occur are shown.

(Except Canada > 2701:

- 4952, 4954, 4955, 4956, 4959, 4965, 4987, 6360, 6580

C, D

- TTY

A

3101:

MACHINES

CHART 3 - SNA/SDLC INTERCOMMUNICATIONS

For each machine type, the machine types that it will communicate with are shown, as well as the facility classes over which the communication can occur are shown.

(Except Japan > 3232-1:

- 3704, 3705-II, 80, 3720, 3721, 3725-1, 2, 3726, 4331, 4361
C, D, G
- 8101, 8130, 8140, 8150
D, G <)

(Except Canada > 3174-1R:

- 9373, 9375, 9377
D, E, G, M, N, P

3174-51R:

- 9373, 9375, 9377
C, D, G, K, M, N, P

3274-1C:

- 3704
D, E, G, M
- 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726, 4331, 4361, 9373, 9375, 9377
D, E, G, M, N, P

3274-21C, 31C:

- 3704, 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726, 4331, 4361, 9373, 9375, 9377
D, E, G, M, N

3274-51C:

- 3704
C, D, G, K, M
- 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726
C, D, G, K, L, M, N, P
- 4331, 4361, 9373, 9375, 9377
C, D, G, K, M, N, P
- 8101, 8130, 8140, 8150
D, G, M, N

3274-52C:

- 3704
D, G, M
- 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726, 4331, 4361, 8101, 8130, 8140, 8150, 9373, 9375, 9377
D, G, M, N

3276-1, 2, 3, 4:

- 3704
C, D, G, K, M
- 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726, 4331, 4361, 9373, 9375, 9377

C, D, G, K, M, P

- 3791
D, G, M
- 8101, 8130, 8140, 8150
D, G, M

3276-11, 12, 13, 14:

- 3704
C, D, G, K, M
- 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726
C, D, G, K, L, M, N, P
- 3791
D, G, M
- 4331, 4361, 9373, 9375, 9377
C, D, G, K, M, N, P
- 8101, 8130, 8140, 8150
D, G, M, N

3602:

- 3603*
D, G
- 3624*
D, G, M
- 3704
C, D, G, K, M
- 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726
C, D, G, K, L, M, N, P
- 4321, 4331, 4361, 9373, 9375, 9377
C, D, G, K, M, N, P
- 8101, 8130, 8140, 8150
D, G, M, N

* This communication is not SNA/SDLC, but via a "B-Loop"

3603:

- 3602*, 4701-1, 2*, 3, 4702
D, G

* This communication is not SNA/SDLC, but via a Banking Loop

3624:

- 3602*, 3704, 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726, 4331, 4361, 4701-1, 2*, 3, 4702, 9373, 9375, 9377
D, G, M

* This communication is not SNA/SDLC, but via a Banking Loop

3631, 3632:

- 3704, 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726, 4331, 4361, 9373, 9375, 9377
C, D, G, K, M

MACHINES

- 3843
D, G
- 8101, 8130, 8140, 8150
D, G, M

3651-25:

- 3704
C, D, G, K, M
- 3705-II, 80, 3710, 3720, 3721, 3725-1, 2, 3726, 4331, 4361, 9373, 9375, 9377
C, D, G, K, M, P
- 8101, 8130, 8140, 8150
D, G, M

3651-50:

2700 CHART C - THE PUBLIC SWITCHED TELEPHONE NETWORK (PSTN)

CHART C - THE PUBLIC SWITCHED TELEPHONE NETWORK (PSTN)

For each machine type, the special features required for attachment are shown.

FACILITY CA1

Start/stop operation at 300 bps on the PSTN via an integrated modem.(1, 2)

--(Canada only > 3704, 3705-II: #4782 and #9612 or, for Interrupt, #4786 and #9612 <)

--4987: #4746 or #4747

(EXCEPT CANADA > FACILITY C1

Start/stop operation at 134.5, 200 or 300 bps on the PSTN via a 3976 model 2 Modem or a PTT-mandatory modem complying with CCITT Recommendations V.24, V.25 and V.28 and ISO Standard 2110 <) (1, 2)

--(Except Canada > 2701: #4640, #9581 and #2910 (at 134.5 bps only) <)

--(Except Canada > 3101: (5)

--3138: #4640 and #9721 (3) <)

--(Except Canada > 3161, 3163: (5) <)

--(Except Canada > 3704, 3705-II: #4711 or #4714 and #9606 (at 134.5 bps), #2717 (at 200 bps) or #9612 (at 300 bps) (18)

--3705-80: No special feature required at 134.5 bps, #1412 (at 200 bps) or #1413 (at 300 bps)

--3708: No special feature required. <)

--(Except Canada > 3725-1, 2, 3726: #4911 and #4666 (25)

--3792: #3701 (at 134.5 bps only)

--3845, 3846: (5, 15) <)

--(Except Canada > 4331, 4361: #1601, #3701, #4696 and #968X (4) (at 134.5 or 300 bps only)

--4952, 4954, 4955, 4956, 4959, 4965: #1610 or #2092 or #2096

--4987: #4730

--5110: #1525 (at 134.5 or 300 bps only)

--6360: #3704 or #3705 or #3707

--6580: #3705

--9373, 9375, 9377: #6030, #6031 (134.5, 300, bps only) <)

(CANADA ONLY > FACILITY C1M

Start/stop operation at 134.5 or 300 bps on the PSTN via a stand-alone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy.(2)

--2701: #4640 and #9581 (at 134.5 bps only)

--3101: (5)

--3138: #4640 and #9721 (3)

--3161, 3163: (5) <)

--(Canada only > 3704, 3705-II: #4711 or #4714 and #9606 (at 134.5 bps) or #9612 (at 300 bps)

--3705-80: No special feature required (at 134.5 bps), #1413 (at 300 bps)

--3708: No special feature required.

--3725-1, 2, 3726: #4911 and #4666 (25)

--3792: #3701 (at 134.5 bps only)

--3845, 3846: (5, 15) <)

--(Canada only > 4331, 4361: #1601, #3701, #4696 and #968X (4)

--Notes for Chart C:

1. (Except Canada>Not all country public switched telephone networks perform equally well, and reliable transmission at 300 bps, 1200 bps, 2400 bps or 4800 bps cannot be assumed. Your teleprocessing coordinator can advise you further in this matter. Prior to a proposal to a customer, Country Systems Assurance must make the final judgement as to the speed or speeds which can be safely proposed. Review Section 4, "Teleprocessing Marketing Practices", for compliance before making any proposal for operation on the public switched telephone network.<) (Canada only> Attachment of these modems to the public switched telephone network will be via a telephone company supplied CBS Data Coupler (for automatic or manual answering) or CDT Data Access Arrangement (for manual only answering). It will be the customer's responsibility to assure that the telephone line is terminated in the proper coupler/data access arrangement for the mode of operation he desires.<)
2. Contact IBM for more information on attachable DCEs, services, etc.

3. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.
4. Specify codes #967X, #968X and #969X on the 4331 or 4361 stipulate in which protocol the 4331 or 4361 is to communicate and to which line position on the 4331 or 4361 that protocol is to be assigned, with the "X" in each case being the line position. See M4331 or 4361 pages for details. Note: On the 4361, specify codes #967X and #969X are not required.
5. No special feature is required to attach this DTE to this facility.
6. 3791 switched network operation is supported at the 3704, 3705 or 3725-1, 2, 3726 nonswitched programming. Special procedures are required to establish and disconnect the link. Refer to VTAM and 3790 operation instructions for the appropriate procedures.
7. The 2701 feature code listed is for the attachment of a single synchronous communication line. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second line may be attached.
8. The 3602 will operate on this facility at 1200 bps only. The operational speed of the other DTEs on this facility is determined by:
 - A customer-accessible switch on the 2701, 3138, 3274, 3276, 3651, 3684, 3741, 3771, 3774, 3775, 4952, 4955, 4959, 4987, 5110, 5251, 5265, and 5340.
 - The installation of a "Speed specify" on the 3704, 3705, 5381, 8101, 8130 and 8140.
 - A customer-initiated keyboard request on the 3791, 4331, 4361 or 5231.
 - An Operator Command Language (OCL) instruction on the 6670.
 - The options chosen at the generation of the control program of the 3725-1, 2.
9. A 3705, equipped with the "Remote Program Loader" feature, may serve as a "Remote" and communicate with a "Local" 3704 or 3705. Their primary communication link must be a non-switched line, and, therefore, communication over this facility between a "Remote" and a "Local" 3704 or 3705 can only be as a secondary, alternate, path to the primary nonswitched communication link.
10. The listed 5340 feature codes are for the attachment of a single communication line. A second line may be attached to a 5340 equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.
11. These feature codes are for the attachment of a modem which does not provide its own clocking. (Except Canada>The 3976 model 3 Modem is such a modem and, therefore, requires these feature codes.<) This class of modem should always be used on international connections.
12. These feature codes are for the attachment of a modem which does provide its own clocking. This class of modem may only be used on intranational connections.
13. (Canada only>There are two types of 2400 bps Integrated Modems that are not compatible with each other. The first type, #4761 and #5610 are line compatible and suitable for communication with each other and with a 3872 Modem equipped with #7941 or #7942. The second type, #5641, is line compatible and suitable for communication with another #5641 or with a 3863 model 2 Modem.<) (Except Canada>The 2400 bps Integrated Modem #5641 is line compatible and suitable for communication with a 3863 model 2 Modem.<)
14. CCITT V.23 modems providing modem clocking and CCITT V.26 modems using Alternative B coding are not truly data transparent, in that the transmission of a long string of zeros can cause the receiving modem to lose synchronization. Therefore, unless the PTT can assure that the modems will not lose synchronization during the transmission of zeros for up to one second, NRZI coding must be used in the SDLC proto-

col, and transparent mode may not be used in the BSC protocol. See your PTT coordinator for details.

15. The 3845 and 3846 are data encryption/decryption devices inserted between the DTE and the DCE. The DCE must satisfy the requirements of (Canada only > EIA RS-232-C <) (Except Canada > CCITT Recommendations V.24 and V.28 <) to allow this insertion.
16. The 4800 bps Integrated Modems, #536X and #5741, are line compatible and suitable for communication with each other, and with the 3864 model 2 Modem. The "X" in the #536X feature code is the line position on the 5340 in which this modem will be mounted. See the M5340 pages for details. (Canada only > The 3689 provides a 4800 bps integrated modem as part of the basic machine. This modem is line compatible and suitable for communication with another 3689 or with an 3864 model 2 Modem. <)
17. Ignore this note.
18. (Except Canada > The 1200 bps Integrated Modem is line compatible and suitable for communication at 1200 bps with a 3976 model 3 Modem. A 3767 with a 1200 bps integrated modem may also communicate in start/stop mode at 300 bps with a 3704, 3705, 3725-1, 2, or 3726 attaching a 3976 model 3 Modem. <) (Canada only > Ignore this note. <)
19. Ignore this note.
20. Ignore this note.
21. Note number not used.
22. For communication in SNA/SDLC protocol, no special feature is required on the 4701, 4702. For communication in BSC protocol, #1422 is required. In either protocol, the 4701/4702 require that clocking be provided by the attached stand-alone DCE. (Except Canada > The 4701 and 4702 do NOT, therefore, support attachment of the 3976 model 3 Modem. <)
23. Note number not used.
24. A 3725-1, 2 or 3726 may serve as a "Remote" and communicate with a "Local" 3704, 3705, 3725-1, 2, or 3726. Their primary communication link must be a nonswitched line and, therefore, communication over this facility between a "Remote" and a "Local" 3704, 3705 or 3725-1, 2, 3726 can only be as a secondary, alternate path to the primary nonswitched communication link.
25. This feature is only required for the 3725-1 and the 3726, not for the 3725-2.

2700 CHART D - NONSWITCHED VOICE GRADE LINES

CHART D - NONSWITCHED VOICE GRADE LINES

For each machine type, the special features required for attachment are shown.

FACILITY DA1

Point-to-point or multipoint start/stop operation at 134.5, 200, or 300 bps on a half-duplex (Except Canada > nonswitched voice grade line <) (Canada only > Schedule 4, Type 4 Data Channel (or equivalent) <) via an integrated modem. (1, 2)

--3704, 3705-II: #4742 (on 2 wires) or #4743 (on 4 wires) and #9606 (at 134.5 bps only) or #4781 or #4785 and #9612 (at 300 bps only)

--3792: #5400 (at 134.5 bps only)

--(Except Canada > 4331, 4361: #1601, #2832, #4696 and #968X (4) (at 300 bps only) <)

(EXCEPT CANADA > FACILITY D1

Point-to-point or multipoint start/stop operation at 134.5, 200 or 300 bps on a half-duplex voice grade line via a 3976 model 1 Modem (at 134.5 or 200 bps), a 3976 model 3 Modem (at 300 bps on 4 wire lines) or a PTT mandatory modem complying with CCITT Recommendations V.21, V.24 and V.28 and ISO Standard 2110. (1) <)

--(Except Canada > 2701: #4640, #9581 and #2910 (at 134.5 bps only) <)

--(Except Canada > 3101: (6)

--3138: #4640 and #9721 (3) <)

--(Except Canada > 3161, 3163: (6) <)

--(Except Canada > 3704, 3705-II: #4711 or #4714 and #9606 (at 134.5 bps), #2717 (at 200 bps) or #9612 (at 300 bps)

--3705-80: No special feature required at 134.5 bps, #1412 (at 200 bps) or #1413 (at 300 bps)

--3708: No special feature required

--3710 <): (Except Canada > #7001 or #7015 (point-to-point only). <)

--(Except Canada > 3725-1, 2, 3726: #4911 and #4666 (35)

--3792: #3701 (at 134.5 bps only)

--3845, 3846: (6, 16) <)

--(Except Canada > 4331, 4361: #1601, #3701, #4696 and #968X (4) (at 134.5 or 300 bps only)

--4952, 4954, 4955, 4956, 4959, 4965: #1610 or #2092 or #2096

--4987: #4730

--5110: #1525 (at 134.5 or 300 bps, point-to-point only)

--5208: No special feature required (300 bps only)

--6360: #3704 or #3705 or #3707 (point-to-point only)

--6580: #3705 (point-to-point only)

--8101, 8130 A, 8140 A, B: #1603 and #3701 (at 134.5 or 300 bps, point-to-point only) <)

--8130 B: #1603 and #3701 (point-to-point only)

--(Except Canada > 9373, 9375, 9377: #6030, #6031 (134.5 or 300 bps only) <)

(CANADA ONLY > FACILITY D1M

Point-to-point or multipoint start/stop operation at 134.5 or 300 bps on a nonswitched line via a stand-alone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy. (1)

--2701: #4640 and #9581 (at 134.5 bps only)

--3101: (6)

FACILITY D9

Point-to-point or multipoint synchronous operation at 14,400 bps on a 4-wire channel (Except Canada>nonswitched grade line<)(Canada only>Schedule 4, Type 4 data channel (or equivalent)<) via a 5866-001 modem or a 5868-061 rack-mounted modem (Except Canada>or via a PTT mandatory modem complying with CCITT Recommendations V.24, V.28, V.33 and ISO Standard 2110.<)

- 9373, 9375, 9377: #6030, #6031

(CANADA AND JAPAN ONLY> FACILITY D9M

Point-to-point or multipoint synchronous operation at 14,400 bps on a nonswitched line via a standalone DCE attached under the provisions of the IBM Multiplier Systems Policy. (1)

- 5294-1, K01, 5362: #3701
- 8550, 8560, 8580: #3042 (P/N 6450348) (40)
- 9373, 9375, 9377: #6030, #6031

FACILITY D10M

Point-to-point or multipoint synchronous operation at speeds of greater than 14,400 bps up to and including 20,000 bps on a nonswitched line via a standalone DCE attached under the provisions of the IBM Multiple Supplier System Policy. (1)

- 5294-1, K01, 5362: #3701
- 9373, 9375, 9377: #6030, #6031<)
- Notes for Chart D:

1. Contact IBM for more information on attachable DCEs, services, etc.
2. Integrated modems perform the modulation/demodulation function on a communication facility at speeds up to 4800 bps.

When they are used, stand-alone DCEs are not required. GA24-3435 provides descriptions of these modems and definitions of the communication facilities on which they may be used.

(Except Canada>As these integrated modems do not necessarily conform to the CCITT Recommendations, refer to the GI Section and to the appropriate machine pages for special applications, prerequisites and the required procedures for meeting the PTT's regulations is advised.<)

3. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.
4. Specify codes #967X, #968X and #969X stipulate in which protocol the 4331 or 4361 is to communicate, and to which line position this protocol will be assigned, with the "X" in each case denoting the line position. See M4331 or 4361 pages for details. Note: On the 4361, specify codes #967X and #969X are not required.
5. The 3603 model 1 and the 3624, when equipped with #8001, will communicate with a 3602 over a normal "3600 System Loop". When more than one 3603 and/or 3624 are on the loop, point-to-point, half-duplex, 2-wire terminated links are required from the 3602 to the first station on the loop, between successive stations on the loop, and from the last station on the loop back to the 3602. When there is only one 3603 or 3624 on the loop, a point-to-point, duplex, 4-wire terminated link is required between that station and the 3602.

The 3602 and 3624, when equipped with either #3701 or #5500, will communicate over a nonswitched voice grade line with a 3704, 3705, 3725-1, 2, or 3726 in either point-to-point or multipoint mode.

6. No special feature is required to attach this DTE to this facility.
7. The 3602 and 3624 will operate on this facility at 1200 bps only. The operational speed of the other DTEs on the facility is determined by:
 - A customer-accessible switch on the 2701, 3138, 3274, 3276, 3624, 3631, 3632, 3651, 3741, 3771, 3774, 3775, 5110, 5251, 5265, 5340, and 5381.
 - The installation of a speed specify on the 3704, 3705, 8101, 8130, 8140 and 8775. (Please note that, in Emulation mode, the reassignment of a line on the 3704 or 3705 to a different speed will require the re-IPL of the 3704/3705. In NCP mode, this reassignment can be accomplished through a customer-initiated message to the access method.)
 - A customer-accessible switch on the 3767 when #2834 is installed, otherwise, through the installation of a speed specify.
 - A customer-initiated keyboard request on the 3791, 4331 or 4361.
 - A customer-initiated console request on the 4952, 4955, 4959, 4987 and 5231.
 - An Operator Control Language (OCL) instruction on the 6670.
 - The options chosen at the generation of the control program of the 3725-1, 2. (Please note that in Emulation mode, the reassignment of a line on the 3725-1, 2, 3726 to a different speed will require the re-IPL of the 3725-1, 2. In NCP mode, this reassignment can be accomplished through a customer-initiated message to the access method.)
8. The listed feature code is for the attachment of a single synchronous communication line to the 2701. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second synchronous line may be attached.
9. The 3276 may be attached as a tributary station on a multipoint nonswitched line where the control station is a 3791 equipped with the Data Link Adapter #3210 or #3211. All stations on such a link must operate at the same line speed and use the

- same clocking source, i.e., either DTE clock or modem clock, but not a mixture of these two.
10. The 3631, 3632, 8101, 8130 and 8140 support communication with down line 3843 Loop Control Units. The 3843 provides an EIA/CCITT interface to a stand-alone DCE and can be utilized with any synchronous modem at a speed of 2400, 4800 or 9600 bps.
 11. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.
 12. These feature codes are for the attachment of a modem which does NOT provide its own clocking. (Except Canada > The 3976 model 3 Modem is such a modem, and, therefore, requires these feature codes. <) This class of modem should always be used where the network is international.
 13. These feature codes are for the attachment of a modem which DOES provide its own clocking. This class of modem should only be used on an intranational network.
 14. The 3274 models 1C and 51C, 3276 models 11 through 14, 3602, 3624, 3631, 3632, 3651, 3684, 3694, 3771, 3774, 3775, 3776, 3777, 3791, 4701, 4702, 4730, 4736, 4952, 4954, 4955, 4956, 4959, 4965, 4987, 5285, 5288, 5340, 5360, 5362, 5364, 5381, 6670, 8101, 8130, 8140, 8150 and 8815 may communicate as tributary stations on a multipoint network with a control station 3704 or 3705 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires duplex communication facilities and a 3704, 3705, 3725-1, 2, or 3726 equipped with:
 - #4784 for communication with tributary stations with 1200 bps integrated modems.
 - #4755 for communication with tributary stations with 2400 bps integrated modems (#5602) or attaching 3872 Modems.
 - #4718 for communication with tributary stations via stand-alone DCEs.
 or a 3725-1, 2, 3726 equipped with:
 - #4911 for communication with tributary stations via stand-alone DCEs.
 15. When equipped with #4718, the 3704 or 3705 can communicate in data-full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 model 3, 3776 model 4 or 3777 model 3. This type communication requires full-duplex communication facilities.
 16. The 3845 and 3846 are data encryption/decryption devices, installed between the DTE and the DCE. They will operate at speeds of up to 1200 bps with start/stop DTEs, and at speeds of up to 19.2K bps with synchronous DTEs. The DCEs involved must meet the requirements of (Canada only > EIA RS-232-C. <) (Except Canada > CCITT Recommendations V.24 and V.28. <)
 17. 3704/3705 "Remotes" may communicate with 3704/3705 "Locals" over this facility as their primary communication link. #4714, #4751 and #4781 will support the normal data-half-duplex mode of operation on half-duplex or duplex communication facilities. #4718, #4754 and #4784 will support a data-full-duplex operation (i.e., simultaneous data transmission in both directions) on duplex communication facilities.
 18. There are two types of 2400 bps integrated modems that are NOT compatible with each other. The first type, #4751, #4752, #4754, #4755, #5600 and #5602 are line compatible and suitable for communication with each other and with a properly equipped 3872 Modem. The second type, #5640, is line compatible and suitable for communication with another #5640 or with a 3863 model 1 Modem or with a 3868 mdl 1 Rack-Mounted Modem.
 19. CCITT V.23 modems that provide modem clocking and CCITT V.26 modems that use Alternative B coding are not truly data transparent, in that transmission of a long string of zeros can cause the receiving modem to lose synchronization. Therefore, unless the PTT can assure that the modems will not lose synchronization during the transmission of zeros for up to one second, NRZI encoding should be used in SDLC (when the 3845 or 3846 are NOT to be installed), and transparent mode should NOT be used in BSC. See your PTT coordinator for details.
 20. On switched network backup facilities, the IBM stand-alone or integrated modem must be equipped as shown for operation on the backup link. However, a control station may elect to operate on this type service via two separate ports, one of which is dedicated to the primary nonswitched link, and the other of which is dedicated to the backup switched link. Each of these ports must be equipped with a modem compatible with the stand-alone or integrated modem with which it is to communicate.
 21. There are two types of 4800 bps integrated modems that are NOT compatible with each other. The first type, #5700 and #5702, is line compatible and suitable for communication with each other and with a properly equipped 3874 Modem. The second type, #5740, is line compatible and suitable for communication with another #5740 and with a 3864 model 1 Modem or 3868 model 2 Rack-Mounted Modem.
 22. The 3651 will communicate over this facility with a 3704, 3705, 3725-1, 2 or 3726 at the host system, or with a 3659 at a remote store site. See the M3651 pages for the appropriate feature codes for both type communications. See the M3659 pages for the requirements on that unit for the remote store communications.
 23. Refer to the M3863, 3864 and 3865 pages for the DTE attachment codes required for each attaching DTE.
 24. (Except Canada > The IBM 1200 bps integrated modem is line compatible and suitable for communication with a 3976 model 3 Modem. <) (Canada only > Ignore this note. <)
 25. (Except Canada > The 3977 model 2 Modem is in an "As Available" ordering status. <) (Canada only > Ignore this note. <)
 26. Ignore this note.
 27. The 8101 can only be attached to an 8140.
 28. Ignore this note.
 29. Ignore this note.
 30. Ignore this note.
 31. For communication in the SNA/SDLC protocol, no special feature is required on the 4701 or 4702. For communication in the BSC protocol, "which is limited to a speed of no greater than 4800 bps", #1422 is required. Communication in either protocol requires that clocking be provided by the attached DCE. (Except Canada > (The 4701 or 4702 do not, therefore, support the attachment of the 3976 model 3 Modem.) <)
 32. The 8815 mdl 4 provides a 4800-bps integrated modem as part of the basic machine. This modem is line compatible and suitable for communication with another 8815-4 or with a 8815-1 equipped with a 3864 mdl 1.
 33. 3725-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. #4911 will support the normal data half-duplex operational mode on half-duplex or duplex communication facilities or a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode on duplex communication facilities.
 34. The 3725-1, 2, 3726 equipped with #4911 can communicate in a data full-duplex mode (i.e., data transmission in both directions simultaneously) with a 3776 mdl 3 or 4, or a 3777 mdl

MACHINES

- | | |
|---|---|
| 3. This type of communication requires full-duplex communication facilities. | 38. For the 5364, not for use with Binary Synchronous Communications when the directly-attached IBM Personal Computer is a 5150 (Personal Computer) or a 5160 (Personal Computer XT). |
| 35. This feature is only required for the 3725-1 and the 3726, not for the 3725-2. | |
| 36. The 5294 supports operation on this facility only when the attached modem is not dependent on a DTE signal (select-standby) for selection of switched network backup mode; that is, SNBU must be selectable by a modem operator switch. | 39. Requires Mainframe Communication Assistant Program (Canada Only > (P/N 6024452) point-to-point only <) (Except Canada > (P/N 67X6480) <) |
| 37. The 5364 uses IBM Personal Computer communications facilities. | 40. Requires either PC 3270 Emulation Program (P/N 59X9969) or Advanced Program to Program Communications Program (P/N 75X1047) |

2700 CHART E - NONSWITCHED WIDEBAND CHANNELS

CHART E - NONSWITCHED WIDEBAND CHANNELS

For each machine type, the special features required for attachment are shown.

FACILITY E1

Point-to-point synchronous operation at (Canada only > 19.2K bps on a Type 8803 Service <) (Except Canada > 20.4 or 24K bps via a 5979-L21 Modem <) (1)

(Canada only > 2701: #7697 (4)

3704: #4717

3705-II: #4717 or #4725 (2, 3)

3705-80: #6713

3708: No special features required. <)

3710: #7001 or #7005

(Canada only > 3725-1, 2, 3726: #4921 (8, 9)

3776-3, 4, 3777-3 4: #4501 (3)

3777-1, 2: #1481 and #4501

4952, 4954, 4955, 4956, 4959, 4965: #2075

5340: #5401 or #5402 or #5403 or #5404 <)

(Except Canada > 3274-1C, 21C, 31C: #1550 and #6303

3704: #2944 or #4717 (2)

3705-II: #2944 or #4717 or #4725 or #4726 (2, 3)

3705-80: #6712 or #6713

3725-1, 2, 3726: #4921 or #4931 (8, 9)

3776-3, 4, 3777-3, 4: #2911 or #4501 (3) (at 20.4K bps only)

3777-1, 2: #1481 and #2911 or #4501 (at 20.4K bps only)

4331: #1601, #4695, #4720 and #967X or #969X (4)

4952, 4954, 4955, 4956, 4959, 4965: #2075

5360: #5401 or #4556

8101, 8130 B, 8140 A, B: #1550 and #1602 (6)

8140 C: #1614

8150: #1742 or #1745 <)

I 9373, 9375, 9377: #6030, #6031

FACILITY E2

Point-to-point synchronous operation at (Canada only > 40.8K bps on a Type 8801 Service (1) <) (Except Canada > 48K bps via a 5979-L21B Modem or a PTT-mandatory modem complying with CCITT Recommendation V.35 and ISO Standard 2593 (1, 7) <)

(Canada only > 2701: #7697 (4) <)

(Except Canada > 3274-1C, 21C, 31C: #1550 and #6303 <)

3704: #4717 (Canada only > (2) <) (Except Canada > or #2944 (2, 5) <)

3705-II: #4717 or #4725 (Canada only > (2) <) (Except Canada > or #2944 or #4726 (2, 5) <)

(Canada only > 3705-80: #6713 <)

(Except Canada > 3705-80: #6712 or #6713 <)

3710: #7005

(Except Canada > 3725-1, 2, 3726: #4921 (8, 9) <)

(Except Canada > 4331, 4361: #1601, #4695, #4720 and #967X or #969X (4) <)

4952, 4954, 4955, 4956, 4959, 4965: #2075

(Canada only > 5340: #5401 or #5402 or #5403 or #5404 <)

(Except Canada > 5360: #5401 or #4556

5362: #2930

8101, 8130 B, 8140 A, B: #1550 (6)

8140 C: #1614

8150: #1742 or #1745 <)

I 9373, 9375, 9377: #6030, #6031

FACILITY E3

Point-to-point synchronous operation at (Canada only > 50K bps on a Type 8801 Service <) (Except Canada > 56K or 64K bps via a 5979-L21 Modem <) (1)

(Canada only > 2701: #7697 (4)

3704: #4717 (2)

3705-II: #4717 or #4725 (2)

3705-80 <)

3710: #7005

(Canada only > 3725-1, 2, 3726: #4921 (8, 9)

4952, 4954, 4955, 4956, 4959, 4965: #2075

5340: #5401 or #5402 or #5403 or #5404 <)

(Except Canada > 3274-1C, 21C, 31C: #1550 and #6303 (at 56K bps only)

3704: #2944 or #4717 (2)

3705-II: #2944 or #4717 or #4725 or #4726 (2)

3705-80: #6712 or #6713

3725-1, 2, 3726: #4921 or #4931 (8) <)

(Except Canada > 4331, 4361: #1601, #4695, #4720 and #967X or #969X (5)

4952, 4954, 4955, 4956, 4959, 4965: #2075

5360: #5401 or #4556

5362: #2930

8101, 8130 B, 8140 A, B: #1550 and #1602 (6)

8140 C: #1614

8150: #1742 or #1745 <)

9373, 9375, 9377: #6030, #6031

(CANADA ONLY > FACILITY E4

Point-to-point synchronous operation at 230.4K bps on a Type 8751 Service (1)

2701: #7697 (4)

3705-II: #4722 or #4723 (2)

3725-1, 2, 3726: #4921 (8) <)

Notes for Chart E:

1. Contact IBM for more information on attachable DCEs, services, etc.
2. 3704/3705 "Remotes" may communicate over this facility with 3704/3705 "Locals" as their primary communication link. (Canada only > #4717 and #4722 <) (Except Canada > #2944 and #4717 <) will support the normal data-half-duplex operational mode, while #4725 (Except Canada > or #4726 <) will support a data-full-duplex (i.e., simultaneous data transmission in both directions) operational mode.
3. The 3705, using (Canada only > #4725 <) (Except Canada > #4725 or #4726 <) can communicate in a data-full-duplex mode (i.e., data transmission in both di-

rections simultaneously) with a 3776 Model 3, 3776 Model 4 or a 3777 Model 3.

4. (Canada only > This feature code is for the attachment of a single communication line. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second line may be attached. <) (Except Canada > Specify codes #967X and #969X on the 4331 or 4361 stipulate in which protocol the 4331 or 4361 is to communicate, and to which line position on the 4331 or 4361 that protocol is to be assigned, with the "X" in each case being the line position. See the M4331 or 4361 pages for details. Note: On the 4361, specify codes #967X and #969X are not required. <)
5. (Canada only > A communication line attached to the ICA via this feature presents a 100% load factor to the ICA, and must not be operated simultaneously with any other line on the ICA. <) (Except Canada > This DTE supports attachment to the 5979-L21 Modem only. <)
6. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or with an 8140 C without #1610-#1614 or with an 8150 without ports 1-4 and 9-12.
7. IBM DTEs normally provide cables terminating with #16 pins. In those countries where #20 pins are required, an adapter cable is available. This is supplied as Cable Group #1393 on the 3704 and 3705, and as specify #2723 on the 4952, 4955, 4959, 4987, 8101 and 8140.
8. 3725-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. (Canada only > #4921 <) (Except Canada > #4931 <) will support the normal data half-duplex operational mode and a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode.
9. The 3725-1, 2, 3726 using (Canada only > #4921 <) (Except Canada > #4931 <) can communicate in a data full-duplex mode (i.e., data transmission in both directions simultaneously) with a 3776 mdl 3 or 4, or a 3777 mdl 3.

2700 CHART G - NONSWITCHED BASEBAND LINES

CHART G - NONSWITCHED BASEBAND LINES

For each machine type, the special features required for attachment are shown.

FACILITY G1

Point-to-point or multipoint start/stop operation at 134.5 bps via an integrated Type 1A (half-duplex) or Type 1B (duplex) limited distance line adapter.(1)

3704, 3705-II: #9606 and #4731 (Type 1A) or #4732 (Type 1B)

FACILITY G2

Point-to-point or multipoint start/stop operation at 134.5 or 600 bps via an integrated Type 2A (half-duplex) or Type 2B (duplex) limited distance line adapter (1)

2701: #4636 (Type 2A) or #4637 (Type 2B)

3704, 3705-II: #4741 and #9606 (at 134.5 bps) or #9607 (at 600 bps)

(EXCEPT CANADA > FACILITY G3

Point-to-point or multipoint synchronous operation at 2400, 4800 or 9600 bps via a 5979-L41 Modem or a PTT-mandatory modem complying with CCITT Recommendations V.24 and V.28 and ISO Standard 2110. (2) <)

(Except Canada > **2701:** #2899 (3)

3138: #4640, #9609 and #9649 (3, 4) <)

(Except Canada > **3232-1:** (5) <)

(Except Canada > **3274-1C, 21C, 31C:** #3701 and #6302 or #6303 (6)

3274-51C: #3701 and #6302 or #6303 (6)

3276-1, 4: #3701, #6302 and #9491 (3)

3276-11, 14: #3701, #6302 and #9491 (6)

3602: #3701 and #6302 (3, 6) or #3701 and #4502 (6)

3603-2: 2400 bps, point-to-point only (5) <)

(Except Canada > **3624:** #3701 and #1422 or #6302 (3, 6) <)

(Except Canada > **3631, 3632:** #3701 and #4502 or #6302

3651-25, 50: #2897 and #2825 or #2826 (6, 7) or #2846 and #2727 or #2728 (6, 8)

3651-75: #2897 and #2825 or #2826 (6, 7) or #2846 and #2727 or #2728 and/or #2725 and #6185 (7)

3684: #3701 and #9822 (6, 7) or #3701 and #9823 (6, 8) <)

(Except Canada > **3694:** #3701 or #3701 and #4502 (6) <)

(Except Canada > **3704, 3705-II:** #4714 or #4718 (6, 9, 10)

3705-80: No special feature required

3708: No special features required. <)

4952, 4954, 4955, 4956, 4959, 4965: #2075

8101, 8130 B, 8140 A, B: #1550 and #1602 (14)

8140 C: #1614

8150: #1742 or #1745

I 9373, 9375, 9377: #6030, #6031 (48,000 bps only) <)

Notes for Chart G:

1. The Limited Distance Line Adapters, Types 1A and 1B, are limited to a link of no more than 7.65km (4.75 miles). The Limited Distance Line Adapters, Types 2A and 2B, are limited to a link of no more than 13.25km (8 miles). See GA24-3435 for detailed descriptions of these adapters and the communication links over which they may operate.
2. Contact IBM for more information on attachable DCEs, services, etc.
3. These feature codes will support communication on this facility at 2400 or 4800 bps only.
4. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.
5. No special feature is required to attach this DTE to this facility.
6. The 3274 models 1C and 51C, 3276 models 11 thru 14, 3602, 3624, 3631, 3632, 3651, 3684, 3771, 3774, 3775, 3776, 3777, 3791, 4701, 4702, 4730, 4736, 4952, 4954, 4955, 4956, 4959, 4965, 4987, 5285, 5288, 5340, 5360, 5362, 5364, 5381, 6670, 8101, 8130, 8140, 8150 and 8815 may communicate as tributary stations on a multipoint network with a control station 3704, 3705, 3725-1, 2 or 3726 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires duplex communication facilities and a 3704/3705 equipped with #4718 or a 3725-1, 2, 3726 equipped with #4911. SDLC also supports the normal data-half-duplex mode of operation over half-duplex or duplex facilities.
7. These feature codes will support communication on this facility at 2400 bps only.
8. These feature codes will support communication on this facility at 4800 bps only.
9. 3704/3705 "Remotes" may communicate with 3704/3705 "Locals" over this facility as their primary communication link. #4714 will support the normal data-half-duplex mode of operation on half-duplex or duplex facilities. #4718 will support a data-full-duplex (i.e., simultaneous data transmission in both directions) on duplex communication lines.

10. When equipped with #4718, the 3704 or 3705 can communicate in data-full-duplex (i.e., simultaneous data transmission in both directions) mode with a 3776 model 3, 3776 model 4 or 3777 model 3. This mode of operation requires duplex communication facilities.
11. The 3276 may be attached as a tributary station on a multipoint line where the control station is a 3791 equipped with the Data Link Adapter, #3211.
12. Specify codes #967X and #969X on the 4331 stipulate in which protocol the 4331 is to communicate, and to which line position on the 4331 that protocol is to be assigned, with the "X" in each case denoting the line position. See the M4331 pages for details.
13. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.
14. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or 8140 C without #1610-1614 or an 8150 without ports 1-4 and 9-12.
15. Ignore this note.
16. Communication in the SNA/SDLC protocol requires no special feature on the 4701. Communication in the BSC protocol, "which is limited to a speed no greater than 4800 bps," requires #1422
17. 3725-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. #4911 will support the normal data half-duplex operational mode on half-duplex or duplex facilities or a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode on duplex communication lines.
18. The 3725-1, 2, 3726, equipped with #4911 can communicate in data full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 mdl 3 or 4, or a 3777 mdl 3. This type of communication requires full-duplex communication facilities.
19. The 5364 uses IBM Personal Computer communications facilities. For speeds greater than 4800 bps, not for use with BSC when the directly-attached IBM Personal Computer is a 5150 (Personal Computer) or a 5160 (Personal Computer XT).

2700 CHART K - PUBLIC SWITCHED DATA NETWORKS (PSDNs)**CHART K - PUBLIC SWITCHED DATA NETWORKS (PSDNs)**

Note: This chart is for Public Switched Data Networks providing (Japan only > a CCITT "V" or "X.bis" interface. <) (Canada only > an EIA RS-232-C or CCITT V.35 interface. <)

For each machine type, the special features required for attachment are shown.

(CANADA ONLY > FACILITY K1M)

Start/Stop operation at 134.5 or 300 bps on a PSDN via a stand-alone DCE attached under the provisions of the IBM Multiple Supplier Systems Policy (1)

--2701: #4640 and #9581 (at 134.5 bps only)

--3138: #4640 and #9721 (2)

--3704, 3705-II: #4711 or #4714 and #9606 (at 134.5 bps) or #9612 (at 300 bps)

--3705-80: No special feature required at 134.5 bps or #1413 (at 300 bps)

--3708: No special feature required.

--3710: #7001 or #7005

--3725-1, 2, 3726: #4911 and #4666 (19)

--3792: #3701 (at 134.5 bps only)

--3845, 3846: (4, 9)

--4331, 4361: #1601, #3701, #4696 and #968X (3)

--4952, 4954, 4955, 4956, 4959, 4965: #1610 or #2092 or #2096

--4987: #4730

--5110: #1525 (at 134.5 bps only)

| --9373, 9375, 9377: #6030, #6031 <)

(JAPAN ONLY > FACILITY K3)

Synchronous operation at 2400 bps on the NTT DDX Network in Japan. (1, 10)

--3138: #4640, #9609 and #9649 (2)

--3274-51C: #3701, #9112 and #6302 or #6303 (SDLC only)

--3276-11, 14: #3701, #6302 and #9490 (SDLC only)

--3602: #3701 and #4502 or #6302

--3631, 3632: #3701 and #4502 or #6302

--3651-25, 50: #2822 and #2891 or #2897

--Notes for Chart K

1. Contact IBM for information on these facilities, including attachable DCEs.
2. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.
3. Specify codes #967X, #968X and #969X on the 4331 or 4361 stipulate in which protocol the 4331 or 4361 is to communicate, and to which line position on the 4331 or 4361 that protocol is to be assigned, with the "X" in each case being the line position. See the M4331 or 4361 pages for details. Note: On the 4361, specify codes #967X and #969X are not required.
4. No special feature is required to attach this DTE to this facility.
5. 3791 switched network operation is supported at the 3704, 3705, 3725-1, 2, or 3726 by nonswitched programming. Special procedures are required to establish and disconnect the link. Refer to the VTAM and 3790 operation instructions for the appropriate procedures.
6. The 2701 feature code listed is for the attachment of a single synchronous communication line. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second line may be attached.
7. A 3705, equipped with the "Remote Program Loader" feature, #6261, may serve as a "Remote" and communicate with a "Local" 3705-II or 3705-80. Their primary communication link must be a nonswitched line and, therefore, communication over this facility between a "Remote" and a "Local" 3705-II or 3705-80 can only be as a secondary, alternate, path to the primary nonswitched communication link.
8. The listed 5340 feature codes are for the attachment of a single communication line. A second line may be attached to a 5340 equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.

9. The 3845 and 3846 are data encryption/decryption devices inserted between the DTE and the DCE. The DCE must satisfy the requirements of (Japan only > CCITT Recommendations V.24 and V.28 <) (Canada only > EIA RS-232-C <) to allow this insertion.
10. When attached to this Network via the CCITT X.21bis interface (as noted), these DTEs will communicate with DTEs attached to this Network via the CCITT X.21 interface. See facilities L3, L4 and L5 in Chart L for information on the DTEs attachable to this Network via a CCITT X.21 interface.
11. (Japan only > These DTEs will operate on the NTT's DDX Network in Japan in Manual Calling, Manual Answering modes only. <)
12. Ignore this note.
13. Communication in the SNA/SDLC protocol does not require any special feature on the 4701. Communication in the BSC protocol, which is limited to a speed of no greater than 4800 bps, requires #1422.
14. Ignore this note.
15. The 3274, 5294, 5340, 5360, 5362, and 5525 support the following network facilities:
 - Manual address call
 - Manual direct call
 - Automatic answering
16. Ignore this note.
17. Ignore this note.
18. A 3725-1, 2 or 3726 may serve as a "Remote" and communicate with a "Local" 3704, 3705, 3725-1, 2, or 3726. Their primary communication link must be a nonswitched line and, therefore, communication over this facility between a "Remote" and a "Local" 3704, 3705 or 3725-1, 2, 3726 can only be as a secondary, alternate path to the primary nonswitched communication link.
19. This feature is only required for the 3725-1 and the 3726, not for the 3725-2.
20. The 5364 uses IBM Personal Computer communications facilities.
21. For the 5364, not for use with BSC when the directly-attached IBM Personal Computer is a 5150 (Personal Computer) or a 5160 (Personal Computer XT).

2700 CHART L - CIRCUIT SWITCHED PUBLIC DATA NETWORKS

CHART L - CIRCUIT SWITCHED PUBLIC DATA NETWORKS

Note: This chart is for Circuit Switched Public Data Networks providing a CCITT "X" series interface.

For each machine type, the special features required for attachment are shown.

FACILITY L3

Synchronous operation at 2400 bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in GA27-3287. (Japan only> Includes the D-221 DCE on the NTT's DDX Network in Japan.<) (1)

- 3274-51C: #5656, #6303 and #9112 (2, 5)
- 3274-61C: #5656 and #6303 (2, 5)
- 3276-11, 14: #1068, #5656 and #6302 (2, 5)
- 3602: #5656 and #4502 (2, 5)
- 3705-II: #5656 and #9840 (2, 3,)
- 3705-81, 3705-82: #5657 and #9775 (2, 3,)
- 3705-84: No special feature required (2, 3, 8) (optional features #5657 and #9775)
- 3725-1, 2, 3726: #4941 (2, 8)
- 4701-1, 2, 3: #5656 (2, 5)
- 4702: #5656 (2, 5)
- 5294-1(Except Canada>, K01<): #5655 and #5656 (2, 7)
- 5340: #5371 or #5372 or #5373 or #5374 (2)
- 5360: #5655 or #4554 (2)
- 5362: #2954 (2)
- 8101 A2X, 8130, 8140 B: #1602 and #5656 (2)
- 8140 C: #1612 (2)
- 8150: #1752 or #1755 (2)
- 9373, 9375, 9377: #6030, #6031

FACILITY L4

Synchronous operation at 4800 bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in GA27-3287. (Japan only> Includes the D-221 DCE on the NTT's DDX Network in Japan.<)(1)

- 3274-51C: #5656, #6303 and #9112 (2, 5)
- 3274-61C: #5656 and #6303 (2, 5)
- 3276-11, 14: #1068, #5656 and #6302 (2, 5)
- 3705-II: #5656 and #9840 (2, 3, 8)
- 3705-81, 3705-82: #5657 and #9775 (2, 3, 8)
- 3705-84: No special feature required (2, 3, 8) (optional features #5657 and #9775)

- 3725-1, 2, 3726: #4941 (2, 8)
- 4701-1, 2, 3: #5656 (2, 5)
- 4702: #5656 (2, 5)
- 5294-1(Except Canada>, K01<): #5655 and #5656 (2, 7)
- 5340: #5371 or #5372 or #5373 or #5374 (2)
- 5360: #5655 or #4554 (2)
- 5362: #2954 (2)
- 8101 A2X, 8130, 8140 B: #1602 and #5656 (2)
- 8140 C: #1612 (2)
- 8150: #1752 or #1755 (2)
- 9373, 9375, 9377: #6030, #6031

FACILITY L5

Synchronous operation at 9600 bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in GA27-3287. (Japan only> Includes the D-221 DCE on the NTT's DDX Network in Japan.<) (1)

- 3274-51C: #5656, #6303 and #9112 (2, 5)
- 3274-61C: #5656 and #6303 (2, 5)
- 3276-11, 14: #1068, #5656 and #6302 (2, 5)
- 3602: #5656 and #4502 (2, 5)
- 3705-II: #5656 and #9840 (2, 3, 8)
- 3705-81, 3705-82: #5657 and #9775 (2, 3, 8)
- 3725-1, 2, 3726: #4941 (2, 8)
- 4701-1, 2, 3: #5656 (2, 5)
- 4702: #5656 (2, 5)
- 5294-1(Except Canada>, K01<): #5655 and #5656 (2, 7)
- 5340: #5371 or #5372 or #5373 or #5374 (2)
- 5360: #5655 or #4554 (2)
- 5362: #2954 (2)
- 8101 A2X, 8130, 8140 B: #1602 and #5656 (2)
- 8140 C: #1612 (2)
- 8150: #1752 or #1755 (2)
- 9373, 9375, 9377: #6030, #6031

FACILITY L6

Synchronous operation at 48K bps on a public switched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in GA27-3287(Japan only>, including the D-231 DCE on the NTT's DDX Network in Japan.<).

--3274-51C: #5656, #6303 and #9112

--3705-II: #5656 and #9841 (3)

--3705-81, 3705-82: #5658 and #9776 (3)

--3705-84: No special feature required (3)

--3725-1, 2, 3726: #4942

--5294-1(Except Canada >, K01 <): #5655 and #5656 (2, 7)

--5340: #5371 or #5372 or #5373 or #5374 (2)

--5360: #5655 or #4554 (2)

--5362: #2954 (2)

--8101 A2X, 8130 B, 8140 B: #1602 and #5656 (2, 4)

--8140 C: #1612 (2)

--8150: #1752 or #1755 (2)

| --9373, 9375, 9377: #6030, #6031

--Notes for Chart L

1. Contact IBM for more information on attachable DCEs, services, etc.
2. When attached to a Network via the CCITT X.21 interface feature (as noted), these DTEs may communicate with other DTEs attached to this network via a CCITT X.21bis interface. (Except Canada > See Facilities K3, K4 and K5 in Chart K for information on DCEs attachable via a CCITT X.21bis interface. <)
3. 3705-II X.21 switched operation requires the use of a Type 2 Communication Scanner. Switched X.21 operation on the 3705-II and the 3705-80 is supported by ACF/NCP/VS Release 3, ACF/VTAM Release 3 and ACF/TCAM Version 2 Release 3. User Facilities as defined in CCITT Recommendation X.2 are supported as follows:
 - Automatic Answering.
 - Address Calling and Abbreviated Address Calling Only address blocks, consisting of a single address signal are

supported, and abbreviated address calling is supported on a per-call basis only.

- Direct Call is supported on a contractual or a per-call basis.
- Closed User Groups are supported on a contractual basis only, with both Preferred and Nonpreferred Groups included. The Facility Request Block used to select the Closed User Group (CUG) may only consist of a single Facility Request Signal, to be followed by an Address Block as described under Address Calling above. Please note that the Facility Request Codes for a CUG may vary from country to country. Your local teleprocessing coordinator should be contacted for details.
- Call Progress Signalling is reported via an operator message containing the Call Progress Signal (CPS) code and a brief message of its significance. Those CPSs defined in Annex 6 of Recommendation X.21 are recognized, with the exception of CPSs 82 and 83, which are related to a currently unsupported user facility. Any unrecognized CPS that is received is reported via an operator message that states that this is an "Unrecognized CPS".

4. The 8101 A2X cannot attach to an 8130 or 8140 C containing #1610-#1614 or to an 8150 without ports 1-4 and 9-12.

5. The 3274, 3276, 3602 and 4701 X.21 switched interface features will support the following network facilities as defined in CCITT Recommendation X.2:

- Abbreviated address call
 - Direct call
 - Call progress signalling
 - Closed user groups
- Ignore this note.

6. The 5294 with the X.21 Switched Interface feature will support the following network facilities as defined in CCITT Recommendation X.2:

- Address call
- Abbreviated address call
- Direct call
- Auto answer
- Call progress signaling
- Closed user groups

7. The 3705 and 3725/26 do not support the TELEX-DATI network in Italy.

2700 CHART M - NONSWITCHED DATA NETWORKS

CHART M - NONSWITCHED PUBLIC DATA NETWORKS

Note: This chart is for Nonswitched Public Data Networks providing (Canada only > an EIA RS-232-C or CCITT V.35 interface. <) (Except Canada > a CCITT "V" or "X.bis" interface. <)

For each machine type, the special features required for attachment are shown.

(CANADA ONLY > FACILITY M1)

Point-to-point or multipoint start/stop operation at 134.5 or 300 bps on the CN/CPT INFODAT Network via a GDC108 DCE or on the TCTS DATAROUTE Network via an LDDS611 or a Characterplexer DCE. (1)

--Notes for Chart M:

1. Contact IBM for more information on these facilities, including attachable DCEs, required options, etc.
2. The listed 3138 feature codes are for the attachment of the first communication line. See the M3138 pages for additional line attachment feature codes.

3. Specify codes #967X, #968X and #969X stipulate in which protocol the 4331 or 4361 is to communicate, and to which line position this protocol will be assigned, with the "X" in each case denoting the line position. See the M4331 or 4361 pages for details. Note: On the 4361, specify codes #967X and #969X are not required.
4. No special feature is required to attach this DTE to this facility.
5. The listed feature code is for the attachment of a single synchronous communication line to the 2701. See the description of the "Dual Communications Interface" feature in the M2701 pages for the conditions under which a second synchronous line may be attached.
6. The 3276 may be attached as a tributary station on a multipoint nonswitched line where the control station is a 3791 equipped with the Data Link Adapter, #3210 or #3211. All stations on such a line must operate at the same line speed and use the same type clocking source, i.e., either DTE clock or modem clock, but not a mixture of these two.
7. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 and equipped with #3500. Second, third and fourth lines may be attached to a 5340 equipped with #4500. See the M5340 pages for details.
8. The 3274 models 1C and 51C, 3276 models 11 through 14, 3602, 3624, 3631, 3632, 3651, 3684, 3694, 3771, 3774, 3775, 3776, 3777, 3791, 4701, 4702, 4730, 4736, 4952, 4954, 4955, 4956, 4959, 4965, 4987, 5285, 5288, 5340, 5360, 5362, 5364, 5381, 5382, 6670, 8101, 8130, 8140, 8150 and 8815 may communicate as tributary stations on a multipoint network with a control station 3704, 3705, 3725-1, 2, or 3726 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires duplex communication facilities, and a 3704/3705 equipped with #4718 or a 3725-1, 2, 3726 equipped with #4911.
9. When equipped with #4718, the 3704 or 3705 can communicate in data-full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 model 3, 3776 model 4 or 3777 model 3. This type communication requires duplex communication facilities.
10. The 3845 and 3846 are data encryption/decryption devices, installed between the DTE and the DCE. They will operate at speeds of up to 1200 bps with start/stop DTEs and at speeds of up to 19.2K bps with synchronous DTEs. The DCEs involved must meet the requirements of (Canada only > EIA RS-232-C. <) (Except Canada > CCITT Recommendations V.24 and V.28 or X.21bis. <)
11. 3704/3705 "Remotes" may communicate with 3704/3705 "Locals" over this facility as their primary communication link. #4714 will support the normal data-half-duplex mode of operation on half-duplex or duplex communication facilities. #4718 will support a data-full-duplex operation (i.e., simultaneous data transmission in both directions) on duplex communication facilities.
12. The 3651 will communicate over this facility with a 3704, 3705, 3725-1, 2, or 3726 at the host system, or with a 3659 at a remote store site. See the M3651 pages for the appropriate feature codes for both communications types. See the M3659 pages for the requirements on that unit for the remote store communications.
13. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or 8140 C without #1610-#1614 or with an 8150 without ports 1-4 and 9-12.
14. (Except Canada > These DTEs do NOT support attachment to the TRANSDATA Network in Brazil. <) (Canada only > ignore this note. <)
15. Communication in the SNA/SDLC protocol requires no special feature on the 4701/4702. Communication in the BSC protocol,

which is limited to a speed no greater than 4800 bps, requires #1422.

16. 3525-1, 2, 3726 "Remotes" may communicate over this facility with 3704, 3705 or 3725-1, 2, 3726 "Locals" as their primary communication link. #4911 will support the normal data half-duplex operational mode on half-duplex or duplex communication facilities and a data full-duplex (i.e., simultaneous data transmission in both directions) operational mode on duplex communication facilities.
17. The 3525-1, 2, 3726 equipped with #4911 can communicate in data full-duplex mode (i.e., simultaneous data transmission in both directions) with a 3776 mdl 3 or 4, or a 3777 mdl 3. This

type of communication requires full-duplex communication facilities.

18. For 3725-1 or 3726, feature #4666 or #4667 will be required. After July 1, 1985, #4666 is no longer available. For 3725-2, feature #4667 is not required on a base machine.
19. The 5364 uses IBM Personal Computer communications facilities. For speeds of greater than 4800 bps, not for use with BSC when the directly-attached IBM Personal Computer is a 5150 (Personal Computer) or a 5160 (Personal Computer XT).
20. For the 3720, 3721, 3725 and 3726, the communications link must be defined as a "Full Duplex" facility in the NCP generation.

2700 CHART N - NONSWITCHED DATA NETWORKS**CHART N - NONSWITCHED PUBLIC DATA NETWORKS**

Note: This chart is for Nonswitched Public Data Networks providing a CCITT "X" series interface.

For each machine type, the special features required for attachment are shown.

FACILITY N3

Point-to-point or multipoint synchronous operation at 2400 bps on a public nonswitched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in GA27-3287 (Japan only > , including the D-121 DCE on the NTT's DDC Network in Japan. <)

- (Japan only > 3274-1C: #5655 and #6302 (2) <)
- 3274-21C, 31C, 41C, 51C, 61C: #5655 and #6302 (2)
- (Japan only > 3274-52C: #5655 and #6302 (2) <)
- 3276-11, 14: #5655 and #6302 (2, 7)
- (Japan only > 3602: #5655 and #4502 or #6302 (2) <)
- 3705-II: #5655 and #9842 (2, 7)
- 3705-81, 82: #5657 and #9777 (2, 7)
- 3705-84: No special feature required (2, 7)
- 3710: #7010 (5)
- 3725-1, 2, 3726: #4941 (2, 8)
- (Japan only > 3771, 3774, 3775: #1470, #1481, #5655 and #9822 (2)
- 3776-1, 2: #1470, #1481, #5655 and #9822 (2, 7)

- 8775: #5655 and #9825 (2)
- 8815-1: #5655 (2, 6, 7)
- 9373, 9375, 9377: #6030, #6031

FACILITY N6

Point-to-point or multipoint synchronous operation at 48K bps on a public nonswitched data network via a stand-alone DCE complying with CCITT Recommendation X.21 as it is delineated in GA27-3287 (Japan only >, including the D-121 DCE on the NTT's DDC Network in Japan. <)

- (Japan only > 3274-1C: #5655 and #6302 <)
- 3274-21C, 31C, 51C: #5655 and #6303
- 3705-II: #5655 and #9843 (7)
- 3705-81, 82: #5658 and #9778 (7)
- 3705-84: No special feature required (7)
- 3710: #7010 (5)
- 3725-1, 2, 3726: #4942 (8)
- 4331: #1601, #4695, #5655 and #969X (3, 7)
- 4361: #1601, #4695, #5655 and #969X (3)
- 4952, 4954, 4955, 4956, 4959, 4965: #2080
- 5294-1: #5655
- 5340: #5371 or #5372 or #5373 or #5374
- 5360: #5655 or #4554
- 5362: #2954
- 8101, 8130 B, 8140 A, B: #1602 and #5655 (4, 7)
- 8140 C: #1613 (7)
- 8150: #1752 or #1755 (7)
- 9373, 9375, 9377: #6030, #6031

Notes for Chart N

1. Contact IBM for more information on attachable DCEs, services, etc.
2. The 3274, 3276, (Canada only > 3602, 3771, 3774, 3775, 3776, 3777, <) (Except Canada > 4701, <) 8101, 8130, 8140, 8150, 8775 and 8815 will communicate as tributary stations with a control station 3705-II or 3725-1, 2, 3726, or 4331 using Synchronous Data Link Control (SDLC). In a multipoint network, SDLC allows the control station to receive from one tributary station while it is transmitting to another tributary station. Operation in this mode requires a control station equipped for "data-full-duplex" operation. SDLC also supports the normal "data-half-duplex" mode of operation.

The 8101, 8130 or 8140 will communicate as a control station to 3274-51C, 3276, (Canada only > 3602, <) (Except Canada > 4701, <) and 8775 tributary stations in "data-half-duplex" mode.

Finally, these SDLC DTEs, when attached to a network via the CCITT X.21 interface (as noted), will communicate with other SDLC DTEs attached to the same network via a CCITT X.21bis (Canada only > (EIA RS-232-C) <) (Except Canada > (V.24/V.28) <) interface feature. See facilities M3, M4 and M5 in Chart M for information on DTEs attachable via a CCITT X.21bis interface feature.
3. The "X" in the #969X specify code denotes the line position on the 4331 or 4361 to which the SDLC protocol will be assigned. See the M4331 or 4361 pages for details. Note: On the 4361, specify codes #967X and #969X are not required.
4. The 8101 will operate at this speed only when it is installed in conjunction with an 8140 A or B or when the 8140 C does not contain #1610-#1614 or with an 8150 without ports 1-4 and 9-12.
5. The 3710 will attach to the following networks via Support N.
Australia: DDS
Japan: DDC
6. The 8815 does not support the DATEX-L network in Austria.

7. The 3276-11, 14, 3705-II, 3705-81, 82, 84, 3776-1, 2, 3, 4, 3777-1, 3, 4, 4331, 6360, 6580, 8101, 8130, 8140A, B, C, 8150 and the 8815-1 do not support the KILOSTREAM service in the UK.
8. The 3725 and 3726 attachment to KILOSTREAM is allowed under the following conditions:
 - 3725 microcode level EC873053 or higher
 - KILOSTREAM line is declared a "FULL DUPLEX" facility in the NCP generation
 - X.21 interface circuit C must be tied to I by using an IBM stub cable, P/N 9993274, available from IBM Direct. For additional information refer to the appropriate UK CEPP bulletin.

2700 CHART P - PUBLIC PACKET SWITCHED NETWORKS

CHART P - PUBLIC PACKET SWITCHED NETWORKS

Note: This chart is for Public Packet Switched Networks providing a CCITT X.21bis (Canada only) (EIA RS-232-C or CCITT V.35) < (Except Canada) (CCITT V.24/V.28 or V.35) < interface. Note: See Chart P1 for list of country networks supported.

For each machine type, the special features required for attachment are shown.

FACILITY P3

Synchronous operation at 2400 bps on a public packet switched network via a CCITT X.21bis stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in GA27-3345. (1)

- 3274-1C, 31C, 41C, 51C, 61C: #3701 and #6302 (2) or #6303 (7)
- 3274-21C: #3701 and #6302 or #6303 (2)
- 3276-1, 4: #3701, #6302 and #6315 (2)
- 3276-11, 14: #3701, #6302 and #9491 or #9490 (2)
- 3602: #3701 and #4502 or #6302 (2)
- 3651-25, 50, 75: #9121 or #9122 (2)
- 3651-60: No special feature required (2)
- 3684: #3701 and #9822 (2)
- 3705-II: #4714 (3)
- 3705-80: No special feature required (3)
- 3710: #7001 (18) or #7005 (18)
- 3725-1, 2, 3726: #4911 (3)
- 3771, 3774, 3775: #1481 and #3701 (2)
- 3776-1, 2, 3777-1, 2: #1481 and #3701 (2)
- 3776-3, 4, 3777-3, 4: #3701 (2)
- 4331, 4361: #1601, #3701, #4695 and #969X (4, 13)
- 4701-1, 2, 3: No special feature required (9)
- 4702: No special feature required (9)
- 4952, 4954, 4955, 4956: #2090 (10)
- 5251-2: #3701 (2)
- 5251-12: #3701 (11)
- 5285, 5288: #3701, #9753 and #9482 (2)
- 5294-1: #3701 and #5680
- 5340: #2500 and #3701 (2, 5)
- 5360: #3701, #4500, #4501, and #5680; or #4550 and #4552 (14)
- 5362: #2915 and #2920
- 5364: #6060, #6051 and #6057
- 5381, 5382: #1521 and #56XY and/or #56XY, and #96XX and/or #96XX (16, 17)

- I -- 8101, 8130, 8140, 8150: #3701 and #1602 (18)

- 9373, 9375, 9377: #6030, #6031

FACILITY P4

Synchronous operation at 4800 bps on a public packet switched network via a CCITT X.21bis stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in GA27-3345. (1)

- 3274-1C, 31C, 41C, 51C, 61C: #3701 and #6302 (2) or #6303 (7)
- 3274-21C: #3701 and #6302 or #6303 (2)
- 3276-1, 4: #3701, #6302 and #6315 (2)
- 3276-11, 14: #3701, #6302 and #9491 or #9490 (2)
- 3602: #3701 and #4502 or #6302 (2)
- 3651-25, 50, 75: #9124 or #9125 (2)
- 3651-60: No special feature required (2)
- 3684: #3701 and #9823 (2)
- 3705-II: #4714 (3)
- 3705-80: No special feature required (3)
- 3710: #7001 (18) or #7005 (18)
- 3725-1, 2, 3726: #4911 (3)
- 3771, 3774, 3775: #1481 and #3701 (2)
- 3776-1, 2, 3777-1, 2: #1481 and #3701 (2)
- 3776-3, 4, 3777-3, 4: #3701 (2)
- 4331, 4361: #1601, #3701, #4695 and #969X (4, 13)
- 4701-1, 2, 3: No special feature required (9)
- 4702: No special feature required (9)
- 4952, 4954, 4955, 4956: #2090 (10)
- 5251-2: #3701 (2)
- 5251-12: #3701 (11)
- 5285, 5288: #3701, #9754, and #9482 (2)
- 5294-1: #3701 and #5680
- 5340: #2500 and #3701 (2, 5)
- 5360: #3701, #4500, #4501, and #5680; or #4550 and #4552 (14)
- 5362: #2915 and #2920
- 5364: #6050, #6051 and #6057
- 5381, 5382: #1521 and #56XY and/or #56XY, and #96XX and/or #96XX (16, 17)
- I -- 8101, 8130, 8140, 8150: #3701 and #1602 (18)
- 9373, 9375, 9377: #6030, #6031

FACILITY P5

Synchronous operation at 9600 bps on a public packet switched network via a CCITT X.21bis stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in GA27-3345. (1)

- 3274-1C, 31C, 41C, 51C, 61C: #3701 and #6302 (2) or #6303 (7)
- 3274-21C: #3701 and #6302 or #6303 (2)
- 3276-1, 4: #3701, #6302 and #6315 (2)
- 3276-11, 14: #3701, #6302 and #9491 or #9490 (2)
- 3602: #3701 and #4502 (2)
- 3705-II: #4714 (3)
- 3705-80: No special feature required (3)
- 3710: #7001 (18) or #7005 (18)
- 3725-1, 2, 3726: #4911 (3)
- 3776-1, 2, 3777-1, 2: #1481 and #3701 (2)
- 3776-3, 4, 3777-3, 4: #3701 (2)
- 4331, 4361: #1601, #3701, #4695 and #969X (4, 13)
- 4701-1, 2, 3: No special feature required (9)
- 4702: No special feature required (9)
- 4952, 4954, 4955, 4956: #2090 (10)
- 5251-2: #3701 (2)
- 5251-12: #3701 (11)
- 5294-1: #3701 and #5680
- 5340: #2500 and #3701 (2, 5)
- 5360: #3701, #4500, #4501, and #5680; or #4550 and #4552 (14)
- 5362: #2915 and #2920
- 5364: #6050, #6051 and #6057
- 5381, 5382: #1521 and #56XY and/or #56XY, and #96XX and/or #96XX (16, 17)
- 8101, 8130, 8140, 8150: #3701 and #1602 (18)
- 9373, 9375, 9377: #6030, #6031

FACILITY P6

Synchronous operation at speeds (Canada only) up to 56K bps < (Except Canada) up to 48K bps <) on a public packet switched network via a CCITT X.21bis stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in GA27-3345. (1)

- 3705-II: #4726 (8)
- 3705-80: #6712 and #9713 (8)
- 3710: #7005 (18)
- 3725-1, 2, 3726: #4931 (8)
- 4952, 4954, 4955, 4956: #2080 (12)

-- Notes for Chart P

1. Contact IBM for more information on these facilities, including attachable DCEs, required options, etc.
2. Attachment of these DTEs to this facility is via a 5973-L02 Network Interface Adapter. For more information on this adapter, see RPQ Y96635.
3. The 3705-II, the 3705-80, and the 3725-1, 2, 3726 require either the Program Product 5668-981 or the 5973-L02 Network Interface Adapter for operation on this facility.
4. The "X" in the specify code #969X specifies in which line position on the 4321 or 4331 this protocol is to be installed. See the M4321 or 4331 pages for details.
5. The listed feature codes are for the attachment of a single communication line to the 5340. A second line may be attached to a 5340 equipped with #3500. See the M5340 pages for details.
6. The "X" in the 5381 specify code denotes the line position to which this speed will be assigned. See the M5381 pages for details.
7. The 3274-1C, 31C, 41C, 51C and 61C require either Configuration Support P or Configuration Support D, Release level 50.1 or 63.1, for operation on this facility; or attachment may be via the 5973-L02 Network Interface Adapter.
8. The 3705-II, 3705-80, 3725-1, 2 and 3726 require Program Product 5668-981 for operation on this facility. The 3705-II with CBS2 and the 3705-80 support speeds up to 20.4K bps only.
9. The 4701-1 and 2 require either the X.25 feature or the 5973-L02 Network Interface Adapter for operation on this facility.
10. The 4956 requires either Program Product 5719-HD2 or the 5973-L02 Network Interface Adapter for operation on this facility. The 4954, 4955, 4956, 4959 and 4965 require either Program Product 5719-HD1, Program Product 5719-HD2 or the 5973-L02 Network Interface Adapter for operation on this facility. Two 2090 features are required per attachment to the network. The 2090 feature may be installed in the 4959 or 4965 expansion unit. Note: In Chart P1 only the 4956 is shown but all the above machines types are supported.
11. The 5251 M12 requires either RPQ 8D0072 or the 5973-L02 Network Interface Adapter for operation on this facility.
12. The 4956 requires program product 5719-HD2 for operation on this facility. The 4954, 4955 and 4956 require either Program Product 5719-HD1 or Program Product 5719-HD2 for operation on this facility. One 2080 feature is required per attachment to the network. The 2080 feature may be installed in the 4959 or 4965 expansion unit. Note: In Chart P1 only the 4956 is shown but all the above machine types are supported.
13. The 4361 requires either ACF/VTAM Version 2 Release 1 or the 5973-L02 Network Interface Adapter for operation on this facility. The 4331 support is by the 5973 L02 Network Interface Adapter.
14. The #92XX specify code designates the second line used for X.25 (see M5360 pages for details on specify codes).
15. Ignore this note.
16. The X in the #56XY feature code specifies whether the line connector cable is V.24 (or EIA equivalent), V.35, or V.21 type. The Y in the #56XY feature code specifies line position.

The XX in the #96XX feature code specifies the length of the external cables. See M5381/5382 pages for details.
17. The 5381/5382 may also be attached to this facility via a 5973 L02 network interface adapter. Special features required for attachment are #3701 and #922X. See notes 2 and 6.

The 3710 is supported for attachment to the following networks:

Argentina - ARPAC
Australia - AUSTPAC
Brazil - RENPAC
Canada - DATAPAC
Korea - DATACOM-NET
Mexico - TELEPAC
New Zealand - NZPO
Singapore - TELEPAC

Taiwan - PACNET

18. The 8101, 8130, 8140 and 8150 attachment is by Program Product DPPX Release 3 (5660-281) or the 5973 L02 Network Interface Adapter.

Chart P1: The following chart presents the countries in which each product is supported.

Country- Network	3	3	3	3	3	3	4	4	4	9	4	5	5	5	5	5	5	8

Y = Attachment is supported by the product

N = Attachment is NOT supported by the product

-- Notes:

1. The 5360, 5362, 5381, 5382, and 5294 require the use of the ELLC protocols when attached to the DDX-P network in Japan. This does not apply to DDX-P (1980).

2. The 5294 support of the DDX-P network in Japan is for Permanent Virtual Circuits only. This does not apply to DDX-P (1980).

3. Program Product (5668-981) support for the DDX-P network in Japan Releases 2.0, 3.0, 3.1 and 4.0 and requires a Small Programming Enhancement (SPE). Releases 3.2, 4.1 and 4.2 do not require the SPE.

- 4. For 8100 availability for support of DDX-P (1980) contact the IBM Telecommunication Representative.

2700 CHART Q - PUBLIC PACKET SWITCHED NETWORKS

CHART Q - PUBLIC PACKET SWITCHED NETWORKS

Note: This chart is for Public Packet Switched Networks providing a CCITT X.21 interface.

For each machine type, the special features required for attachment are shown.

See Table A for country networks supported.

5360: #4500, #4501, #5655, and #5680, or #4550 and #4554 (4)

5362: #2915, #2954

5381, 5382: #1521, #562X, and #961X (9)

9373, 9375, 9377: #6030, #6031

FACILITY Q3

Synchronous operation at 2400 bps on a public packet switched network via a CCITT X.21 stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in GA27-3345. (1)

3274-1C, 31C, 41C, 51C, 61C: #6303 and #5655 (8)

3705-II: #5655 and #9842 (2)

3705-81, 82: #5657 and #9777 (2)

(Except Canada > **3705-84:** (2, 3) <)

3710: #7010 (10)

3725-1, 2, 3726: #4941 (2)

5294-1: #5655 and #5680

5360: #4500, #4501, #5655, and #5680, or #4550 and #4554 (4)

5362: #2915, #2954

5381, 5382: #1521, #562X, and #961X (9)

9373, 9375, 9377: #6030, #6031

(EXCEPT CANADA > FACILITY Q6

Synchronous operation at speeds up to 48K bps on a public packet switched network via a CCITT X.21 stand-alone DCE complying with CCITT Recommendation X.25 as it is delineated in GA27-3345. (1)

3705-II: #5655 and #9843 (2)

3705-81, 82: #5658 and #9778 (2)

3705-84: (2, 3)

3710 <): #7010 (10)

(Except Canada > **3725-1, 2, 3726:** #4942 (2)

4952, 4954, 4955, 4956: #2080 (7)

5381, 5382: #1521, #562X, and #961X (9)

5294-1: #5655 and #5680 <)

Notes for Chart Q:

- Contact IBM for more information on attachable DCEs, services, etc.
- The 3705 and the 3725-1, 2, 3726 require program product 5668-981 for operation on this facility. A 3705 or a 3725-1, 2, 3726 attached to a network via a CCITT X.21 interface (as

- noted) may communicate with other DTEs attached to the same network via a CCITT X.21bis interface. See facilities P3, P4, P5 and P6 in Chart P for information on the attachment of DTEs to a network via the CCITT X.21bis interface.
3. No special feature is required. Specify #9777 for nonswitched operation at 2400 bps, 4800 bps or 9600 bps. Specify #9778 for nonswitched operation at 48K bps.
 4. The #92XX specify code designates the line on which X.25 is installed (see M5360 pages for details on specify codes).
 5. The "X" in the specify code 969X specifies in which line position on the 4331 this protocol is to be installed. See the M4331 pages for details.

The 4331 models 2 and 11 and 4361 require ACF/VTAM Version 2 Release 1 (5666-280). The 4331 also requires RPQ 7B0756.
 6. Ignore this note.
 7. The 4956 requires Program Product 5719-HD2 for operation on this facility. The 4954, 4955, and 4956 require either Program Product 5719-HD1 or Program Product 5719-HD2 for operation on this facility. One 2080 feature is required per attachment to the network. The 2080 feature may be installed in the 4959 or 4965 expansion unit. In Table A only the 4956 is shown but all the above machine types are supported.

8. The 3274 models 1C, 31C, 41C, 51C, and 61C require either Configuration Support P or Configuration Support D, Release Level 50.1 or 63.1 for operation on this facility.

9. The X in the #562X feature code specifies line position and the X in the #961X feature code specifies cable length. See M5381/5382 pages for details. X means this network is supported by the product.

Table A	3	3	3	4	4	4	4	5	5	5
	2	7	7	3	3	7	9	2	3	3
	7	0	2	3	6	0	5	9	6	6

-----	-	-	-	-	-	-	-	-	-	-
Japan-DDX-P							X			

10. The 3710 is supported for attachment to the following networks.

Argentina - ARPAC
Australia - AUSTPAC
Brazil - RENPAC
Canada - DATAPAC
Korea - DATACOM-NET
Mexico - TELEPAC
New Zealand - NZPO
Singapore - TELEPAC
Taiwan - PACNET

3044 FIBER OPTIC CHANNEL EXTENDER LINK

PURPOSE

Provides for the extension of the allowable channel cable length for low-to-medium speed I/O control units, up to additional 2km (6,600 ft) with fiber optic cables.

MODELS

Model C01: Link - Channel Unit

Model D01: Link - Downstream Unit

Limitations: Remote power sequencing is not implemented through the 3044.

Attachment to block multiplexer channels is preferred. (See "IBM 3044 Fiber Optic Channel Extender Link Product Description", GA22-7097, for channel considerations.)

Warranted Specifications: The 3044 is designed according to "IBM S/360 and S/370 I/O Interface Channel to Control Unit (OEMI)", GA22-6974, except as set forth in "IBM 3044 Fiber Optic Channel Extender Link Product Description", GA22-7097.

Maximum Configuration: Multiple C01 units are permitted on a channel and up to 8 control units can be added to each D01 unit. The C01 unit does not have a control unit address associated with it, but electrically occupies the equivalent of one control unit and must be taken into account when configuring the system. (See "IBM 3044 Product Description", GA22-7097, for any limitations that may apply).

Prerequisites: Link units must be interconnected by fiber optic cable (pairs) provided and installed by the customer in accordance with IBM specifications.

ECs #212267 (hardware) and #213219 (microcode) will be required for 3088 MCCUs utilizing the 3044 in data-streaming mode.

EC #331258 is required for 3800 mdl 3 printers utilizing the 3044 in data streaming mode.

Additional S/370 System I/O Interface bus and tag cables will be required for the installation of the 3044 and must be acquired by the customer.

HIGHLIGHTS

The C01 and D01 units serialize and de-serialize the parallel data received from the channel and downstream devices via bus and tag cables.

Serialized data is processed between the C01 and D01 units via a dual fiber optic cable up to 2km (6,600 ft) apart.

No modifications of operating system or user programs are required when introducing the 3044 into the system.

Data streaming rates up to 1.250M bytes/sec or DC Interlock rates up to 43K bytes/sec are attainable at 2km (6,600 ft).

The 3044 supports two devices in data streaming mode: the 3088 with EC #212267 and EC #213219, at 1.125M bps and the 3800 mdl 3 printer with EC #331258, at 1.25M bps.

In conjunction with an IBM 3088 Multisystem Channel Communication Unit mdls 1 or 2 and a Processor Concentrator (e.g., 43XX), unique and versatile terminal installations are possible.

System Attachment: The 3044 is attachable to 4331, 4341, 4361, 4381, 3031, 3032, 3033, 3042 Attached Processor mdl 2, 3081, 3083, 3084, 3090, 9370 processors. Limitations: The 9370 supports only the 4381 CTC Adapter via the 3044.

SPECIFY

- (Canada only) > Voltage (120V AC, 1-phase, 3-wire, 60 Hz): 3.0m (10 ft) power cable, nonlocking plug (no specify code required). <)
- (Except Canada) > Power (AC, 1-phase, 3-wire): 3.0m (10 ft) power cable.

50 or 60 Hz
110 - 127V #0802
200 - 240V #0801<)

The 3-digit country code is used to select a power cord, plug, and safety labels which meet the requirements of that country.

- Language Groups:

Canadian	
French #2935	German #2929
English #2924	Spanish #2931
French #2928	

If one of the above is not specified, the language group will be in English.

- Color: The standard color for this unit is pearl white.

SPECIAL FEATURES (NONE)**MODEL CONVERSIONS (NONE)****ACCESSORIES (PURCHASE ONLY)**

Jumper Cables (P/N 5454624): IBM 3044 Fiber Optic Channel Extender Jumper Cables (or equivalent) are required for product attachment either alone or in conjunction with an installed fiber optic network trunk installation (to IBM specifications). Jumper cables can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cables and associated accessories. Refer to "IBM 3044 Fiber Optic Channel Extender Link - Fiber Optic Cable Planning and Installation Guide", GC22-7073, for installation requirements and details.

Standard Length Jumper Cables (Assembly P/N 5454624) factory-connected. Standard lengths available: 20, 40, 75, 100, 150, 200, 250, 300 and 350 ft. Indicate cable length on order.

Custom Length Jumper Cables (Assembly P/N 5454624) Factory-connected. Available in 5 ft increments from 5 ft to 1,650 ft. Indicate cable length on order.

Order the above items via MES from Poughkeepsie. Specify Assembly P/N and length of jumper cable. Allow a lead time of 8 weeks for standard length and 12 weeks for customer length.!

Notes:

1. Standard jumper cable lengths are off-the-shelf. Custom jumper cable lengths require additional lead times.
2. If the order specifies a length other than a standard length, a custom length will be provided.
3. Refer to AAS GSLM file for price information.
4. MMC not applicable for jumper cables.

SUPPLIES (NONE)

3081 PROCESSOR UNIT

PURPOSE

Provides arithmetic, logic and control function through two integrated central processors and houses shared central storage and channels for a 3081 Processor Complex.

MODELS

Models		Bytes of Central Storage
D16	G16*	16,777,216
D24	G24*	25,165,824
D32	G32*	33,554,432
	G48*	50,331,648
	G64*	67,108,864
	K16*	
	K24*	
	K32*	
	K48*	
	K64*	

* Model Group G and K are no longer available. Features, Model Conversions, RPQs and Accessories are available.

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 32KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. A maximum of 4080 devices is possible.

Limitations: In 370 mode, address translation is limited to 64K byte segments and 4K byte page size (except mdl D16, which translate 2K or 4K byte page size.) In 370 mode, mdl D16 uses 2K storage protect keys, while all other models use 4K storage protect keys.

Prerequisites: Each 3081 Processor Unit requires:

1. One 3082 Processor Controller,
2. One 3087 Coolant Distribution Unit,
3. One 3278-2A Display Console as the system console, and
4. One 3089 Power Unit or other appropriate 400 Hz power source.

Note: Depending upon the 3081 mdl, #9491, #9492, or #9493 must be specified on the 3082 Processor Controller. See "Specify" in M3082 pages.

Those customers using the 3087 mdl 1 CDU to cool their systems, must supply chilled water. See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

HIGHLIGHTS

Depending upon the mdl, contains up to 67,108,864 bytes of monolithic central storage ... 312 nanosecond storage access cycle ... two integrated central processors having a cycle time of 26 nanoseconds ... eight byte data flow between each processor and storage ... each processor has its own high-speed buffer ... buffer storage is transparent to a program and significantly reduces the effective access time of storage ... integrated byte and block multiplexer channels ... extensive use of LSI logic circuitry ... has the ability to operate in S/370 mode or 370-XA mode ... 370 XA mode extends addressing to 2 GB and for hardware controlled channel pathing to an I/O device ... distributed microcode logic and control stores ... microcode assists for both MVS and VM/SP High Performance Option ... extensive data checking.

Standard Features: S/370 mode ... 370-XA mode ... Universal Instruction Set ... S/370 Extended Facility ... 3033 Extension Feature ... extended addressing ... extended control mode ... PSW key handling ... conditional swapping ... set prefix ... store prefix ... signal processor ... store CPU address ... extended precision floating point ... processor checkpoint retry ... time-of-day clock ... clock comparator ... CPU timer ... interval timer ... byte oriented operand feature ... key controlled storage page protection ... tracing protection ... storage error checking and correction ... configuration control ... dynamic address translation ... program event recording ... store status ... program reset ... set system-mask suppression ... integrated channels ... channel set switching ... data streaming ... start I/O fast release ... clear I/O ... Virtual Machine Assist ... Preferred Machine Assist ... Start Interpretive Execution (SIE) Assist (not available on model D) ... S/370-XA Sorting Assists.

Channels: The External Data Controller (EXDC) is an integrated I/O processor containing 16 channels organized in two groups of eight. An additional group of eight channels is available as an optional feature. Channels are configurable as either byte or block multiplexer channels.

A maximum of four byte multiplexer channels are permitted and are assignable only within the first two physical channel groups. Byte multiplexer channels can operate only with unshared devices. Where byte multiplexer channels are not needed, block multiplexer channels may be substituted. All block multiplexer channels are capable of data streaming and are capable of operating at data rates up to three million bytes/second across a 1-byte interface. Each channel can address up to 256 I/O devices and may physically attach up to eight control units.

In S/370 mode, channels may be grouped into two logical channel sets, with up to 16 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, physical channels may be given any valid logical designation.

In 370-XA mode, either central processor may initiate an operation with any I/O device and process any I/O interruption, using any of the 24 channel paths to which the device is attached.

Bibliography: GC20-0001.

SPECIFY

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4 or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.
- Power: When 400 Hz power source is other than the 3089 Power Unit, specify #9491.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame S are 945mm wide by 1,778mm long by 1,875mm high (37.2" x 70" x 73.8"). Should these dimensions need reduction, the side covers may be removed, reducing external dimension to 858mm wide by 1,778mm long (33.8" x 70"). This reduction may be obtained by specifying #9571. Further reduction may be achieved by splitting Frame S into two subframes, the largest of which has external dimensions of 778mm by 1,778mm long (30.6" x 70"). This reduction may be obtained by specifying #9572. Specify either #9571 or #9572 as required. For additional information, see *IBM System/370 Installation Manual - Physical Planning*, GC22-7004, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some older elevators may have weight limitations of 1,136kg/2500 lbs and may require partial depopulation of 3081 frames to frames to satisfy this limitation. Specify #9581 to reduce frame weights to less than 1,136kg/2,500 lbs.
- RETAIN: The capability of using the RETAIN remote service/logout analysis is standard and provided by the 3082 Processor Controller.
- Machine Nomenclature: #2924 for English US, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.

SPECIAL FEATURES

Channel Group Add'l (#1550): Provides an add'l group of eight block multiplexer channels. **Prerequisites:** Every #1550 requires support from a 3082 Processor Controller mdl 24. **Limitations:** #1550 may be configured only as block multiplexer channels. **Maximum:** One. **Field Installation:** Yes.

Performance Feature (#4010): Improves performance by reducing the cycle time to 24.5 nanoseconds. **Limitations:** Not available on Model D. **Field Installation:** Yes. **Prerequisites:** #4020 on the 3082 Processor Controller. **Note:** Customer Purchase Agreement Supplement must show, "Installation of this feature involves removal of parts which become the property of IBM."

MODEL CONVERSIONS

Model upgrades from model Ds and Gs to model Ks or model upgrades increasing storage capacity are field installable and the parts removed or replaced become the property of IBM and must be returned. Model downgrade from model Ks to model Ds are not available. Model

3081 Processor Unit (cont'd)

downgrade from a 3081 model G or K to a 3083 is not recommended. Model conversion from 3081 to 3081 Improved Models is not available. **Note:** Any 3081-K upgrades to a 3084-Q requires installation of feature #1550 (Channel Group Add'l) on the 3081-K as a prerequisite to upgrading. Model upgrades combining performance and storage increases should be ordered as a single MES where possible. Feature additions should be ordered separately from any model upgrade MES. See M3084 pages for 3081-K to 3084-Q upgrade.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3081 Processor Complex.

Console Table, 308X Processor Complex (#1560): Provides an operator workstation with a durable melamine working surface for up to two operators and their display consoles. The table has a color-accented front modesty panel, internal cable channels for routing phone lines and display cables and is designed for a raised floor environment. A raised accessory panel designed to accommodate wall mountable equipment such as tackboards, telephones or intercoms is attached to either one end or the other of the console table. The table measures 1,780mm x 815mm and the end accessory panel is 265mm higher than the 720mm table height. Specify end attachment of accessory panel and color of modesty panel.

Right end attachment	#9441	Sunrise Yellow	#9163
Left end attachment	#9442	Classic Blue	#9164
		Charcoal Brown	#9165
Willow Green	#9161	Pebble Gray	#9166
Garnet Rose	#9162	Pearl White	#9167

SUPPLIES (None)

MACHINES
3081 PROCESSOR UNIT (IMPROVED MDLS)
PURPOSE

Provides arithmetic, logic and control function through two integrated central processors and houses shared central storage and channels for a 3081 Processor Complex.

MODELS

Models	Bytes of Central Storage
GX1 KX1	16,777,216
GX2 KX2	25,165,824
GX3 KX3	33,554,432
GX4 KX4	50,331,648
GX6 KX6	67,108,864

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 64KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. A maximum of 4080 devices is possible.

Limitations: In 370 mode, address translation is limited to 64K byte segments and 4K byte page size. In 370 mode, all models use 4K storage protect keys.

Prerequisites: Each 3081 Processor Unit Improved Models requires:

1. One 3082 Processor Controller Improved Mdl.
2. One 3087 Coolant Distribution Unit.
3. One 3278-2A Display Console as the system console, and
4. One 3089 Power Unit or other appropriate 400 Hz power source.

Note: Depending upon the 3081 Improved Mdl, #9491, #9492, or #9493 must be specified on the 3082 Processor Controller Improved Mdl. See "Specify" under 3082 Improved Mdl.

Those customers using the 3087 mdl 1 CDU to cool their systems, must supply chilled water. See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

Garnet Rose	#9162	Pearl White	#9167

SUPPLIES (None)

MACHINES
3082 PROCESSOR CONTROLLER
PURPOSE

Provides the controlling mechanism for monitoring and supervising either the 3081, 3083, or 3084 Processor Complex and houses the interface adapter elements for each channel. It also contains the adapters for attaching the 3278-2A Display Console, an optional 3287 Printer and an optional 3268-2, a 3230-2 or a 3278-2 Display Station (programming support console). **Note:** The 3082 model Q48 is not orderable from the plant and can only be achieved by upgrading a 3082 model 24.

MODELS

Model 8	008	[NO LONGER AVAILABLE]* Supports 3083 Processor Units with 8 channels.
Model 16	016	Supports 3081 or 3083 Processor Units with 16 channels.
Model 24	024	Supports 3081 or 3083 Processor Units with 24 channels.
Model Q48	Q48	Supports a 3084 having 24 channels per side. (Available by MES only.)

* Features, Model Conversions, RPOs and Accessories are not affected.

HIGHLIGHTS

The 3082 provides the machine to human interface for either the 3081, 3083, or 3084 Processor Complex and performs the following: Provides the control unit function for the system console ... provides the control unit function for an integrated service support console ... provides the control unit function for an optional printer and a programming support console ... houses the interface logic and control for each channel ... houses basic switches, lights and indicators ... houses the remote service facility modem used in remote servicing ... contains a diskette drive for maintenance data interchange ... contains fixed media direct access storage for processor data ... monitors power levels and coolant flow ... controls usage configurations and effects reconfiguration ... at initial microcode load, controls microcode loading of distributed control stores ... assist the Processor Unit in error recovery ... provides access to RETAIN for a 3278 Model 2 Display Station with or without Switch Control Unit feature (#1720) ... performs basic diagnostic and failure isolation on a time sharing basis with the above functions and operates concurrently to the processor unit to which it attaches.

One 3082 is required for each 3081, 3083, or 3084 Processor Unit. Each side of a 3082 Model Q48 has the functional attributes of model 24 plus the ability to function in a multiprocessor configuration.

3084 Operation: A 3082-Q48 is required to support any 3084 Processor Complex and contains two Monitoring and System Support Facilities (MSSF). Like the 3084 with which it functions, the 3082-Q48 duplicates most hardware, including two MSSFs. In a single image configuration, one MSSF supervises the 3084 Processor Complex. The second MSSF is capable of automatically assuming supervision of a 3084 Processor Complex for most failures of the primary MSSF.

At the failure of any critical hardware element, the MSSF performs its normal identification of failing componentry but also continues to supervise non-failing elements. This permits the operator to vary-off failing elements and to establish a maintenance configuration so that the failing hardware may be repaired. Using the intercommunication capability between the MSSF and the control program, pages are relocated where necessary and fencing is established between the maintenance configuration and the continuing customer's configuration. Upon verification of repair, the maintenance configuration is eliminated, the operator may vary-on the now repaired hardware and return it to continuing configuration.

When the 3084 is partitioned into two configurations, each side of the processor complex functions independently under the supervision of a dedicated MSSF.

Limitations: Natively attached programming support consoles (3278-2) must have installed a 75-key EBCDIC typewriter keyboard #4621 and specify feature #2956 (English US keyboard language).

SPECIFY

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4 or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800

400V #2825
415V #2826

240V #9915

- Processor Unit Attachment:

3081

any Model D = #9491
any Model K = #9492
any Model G = #9493

3083

any Model E = #9497
any Model B = #9498
any Model J = #9499

- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.

- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame E and L are 945mm wide by 1778mm long by 1790mm high (37.2" x 70" x 70.5"). Should shipping dimensions need reduction, the side covers may be removed, reducing external dimensions to 858mm wide by 1778mm long (33.8" x 70"). This reduction may be obtained by specifying #9571. Further reduction may be achieved by additionally removing a frame extension which reduces external dimensions to 858mm x 1550mm (33.8" x 61") and is obtainable by specifying #9573. Specify #9571 and #9573 as required. For additional information, see *IBM System/370 Installation Manual Physical Planning*, GC22-7004, and/or your Installation Planning Representative.

- Remote Servicing: A customer supplied data communication line with an exclusion key telephone (Canada only) of the WE503 or 2503 type (or equivalent) and a manual answer Data Protective Coupler (CDT type or equivalent) is necessary in order that higher level support may be received from the Field Support Center. These same facilities may also be used with RETAIN. The capability of using the RETAIN remote service/logout analysis is standard.

An integrated remote service facility modem (Except Canada+ or alternatively, an interface to an external modem +) is standard on 3082 and (except for Canada and Japan) will be provided for automatically by country code at the time of order. For Japan, specify #2948 and #2943 to obtain an internal modem with test connectors, or #3701 for an external modem (CCITT V.24). Connection of the IBM provided telephone interface cable to the telephone network must be arranged for by the customer. Each side of the 3082-Q48 has a remote service facility modem. When ordering Q upgrades, above specify codes must be shown where required.

- Machine Nomenclature: #2924 for English US, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.
- Remote 3278-2A Display Console: The standard cable for interconnecting the 3082 and the 3278-2A (system console) is a fixed length, 15 meter (49 feet) cable. Cables greater than 15 meters (49 feet), up to the maximum length of 1,500 meters (4,921 feet), may be obtained by RPO 8P0891 (refer to HONE for description and order information).

SPECIAL FEATURES

Channel To Channel Adapter (#1850 For First, #1851 For Second): Provides the controlling element to interconnect two processors via their channels (either S/360 or S/370 or 4300). Only one of the interconnected processors needs this feature. Uses one control unit position on each of the connected channels. On Model Q48, the feature is located on the A-side. **Maximum:** Two, one #1850 and one #1851. **Field Installation:** Yes. **Prerequisites:** #1851 requires #1850.

B-side CTC Adapter (#1852 for third, #1853 for fourth): [Mdl Q48] Provides the controlling element to interconnect two processors via their channels (either S/360, S/370 or 4300). Only one of the interconnected processors needs this feature. Uses one control unit position on each of the connected channels. Feature is located on the B-side of the 3082. **Limitations:** Mdl Q48 only. **Maximum:** Two, one #1852 and one #1853. **Field Installation:** Yes. **Prerequisites:** #1853 requires #1852.

Performance Feature (#4020): Improves performance by reducing the cycle time to 24.5 nanoseconds. (On a Q48, the feature is located on the A-side.) **Field Installation:** Yes. **Prerequisites:** #4021 on a 3082-Q48. #4010 on the associated 3081/3083 Processor Unit. #4010 and #4011 on the associated 3084 Processor. **Note:** Customer Purchase Agreement Supplement must show, "Installation of this feature involves removal of parts which become the property of IBM."

3082 Processor Controller (cont'd)

Performance Feature (#4021): [Mdl Q48] Improves performance by reducing the cycle time to 24.5 nanoseconds. Feature is located on the B-side of a mdl Q48. **Limitations:** Mdl Q48 only. **Field Installation:** Yes. **Prerequisites:** #4020 on the 3082 A-side, #4010 and #4011 on the 3084. **Note:** Customer Purchase Agreement Supplement must show, "Installation of this feature involves removal of parts which become the property of IBM."

I/O Power Sequence Control (#4650): The 3082 has a standard capability of associating up to 32 control units to a 3081, 3083, or the A-side of a 3084 Processor Complex for power-on/power-off control purposes. When requirements exceed these 32 power control relays, #4650 provides for power-on/power-off control for the 33rd through 64th control unit. **Maximum:** One. **Field Installation:** Yes.

B-side I/O Power Sequence Control (#4651): [Mdl Q48] The B-side of 3082-Q48 has a standard capability of associating up to 32 control units to the B-side of the 3084 for power sequence purposes. When requirements exceed these 32 power-control relays, #4651 provides for power-on/power-off control for the 33rd through 64th control unit attached to the B-side. **Limitations:** Available only on mdl Q48. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

Model upgrades are field installable. Upgrade to a model Q48 may only take place from a model 24. Model downgrade from a model Q48 to any other model is not recommended. Model upgrades, or conversions from 3082 to 3082 Improved Models are not available.

ACCESSORIES (None)**SUPPLIES (None)**

MACHINES
3082 PROC. CTRL. (IMPROVED MDLS)
PURPOSE

Provides the controlling mechanism for monitoring and supervising either the 3081 Improved Models, 3083 Improved Models, or 3084 Improved Models Processor Complex and houses the interface adapter elements for each channel. It also contains the adapters for attaching the 3278-2A Display Console, an optional 3287 Printer and an optional 3268-2, a 3230-2 or a 3278-2 Display Station (programming support console).

MODELS

Model X08	X08	Supports 3083 Improved Model processor units with 8 channels.
Model X16	X16	Supports 3081 Improved Model or 3083 Improved Model processor units with 16 channels.
Model X24	X24	Supports 3081 Improved Model or 3083 Improved Model processor units with 24 channels.
Model X48	X48	Supports a 3084 Improved Model processor unit with 24 channels per side.

HIGHLIGHTS

The 3082 Improved Model provides the machine to human interface for either the 3081 Improved Model, 3083 Improved Model, or the 3084 Improved Model Processor Complex and performs the following: Provides the control unit function for the system console ... provides the control unit function for an integrated service support console ... provides the control unit function for an optional printer and a programming support console ... houses the interface logic and control for each channel ... houses basic switches, lights and indicators ... houses the remote service facility modem used in remote servicing ... contains a diskette drive for maintenance data interchange ... contains fixed media direct access storage for processor data ... monitors power levels and coolant flow ... controls usage configurations and effects reconfiguration ... at initial microcode load, controls microcode loading of distributed control stores ... assist the Processor Unit in error recovery ... provides access to RETAIN for a 3278 Model 2 Display Station with or without Switch Control Unit feature (#1720) ... performs basic diagnostic and failure isolation on a time sharing basis with the above functions and operates concurrently to the processor unit to which it attaches.

One 3082 Improved Model is required for each 3081 Improved Model, 3083 Improved Model, or 3084 Improved Model Processor Unit. Each side of a 3082 Model X48 has the functional attributes of model X24 plus the ability to function in a multiprocessor configuration.

3084 Operation: A 3082-X48 is required to support any 3084 Improved Models Processor Complex and contains two Monitoring and System Support Facilities (MSSF). Like the 3084 with which it functions, the 3082-X48 duplicates most hardware, including two MSSFs. In a single image configuration, one MSSF supervises the 3084 Improved Model Processor Complex. The second MSSF is capable of automatically assuming supervision of a 3084 Improved Mdl Processor Complex for most failures of the primary MSSF.

At the failure of any critical hardware element, the MSSF performs its normal identification of failing componentry but also continues to supervise non-failing elements. This permits the operator to vary-off failing elements and to establish a maintenance configuration so that the failing hardware may be repaired. Using the intercommunication capability between the MSSF and the control program, pages are relocated where necessary and fencing is established between the maintenance configuration and the continuing customer's configuration. Upon verification of repair, the maintenance configuration is eliminated, the operator may vary-on the now repaired hardware and return it to continuing configuration.

When the 3084 Improved Mdl is partitioned into two configurations, each side of the processor complex functions independently under the supervision of a dedicated MSSF.

Limitations: Natively attached programming support consoles (3278-2) must have installed a 75-key EBCDIC typewriter keyboard #4621 and specify feature #2956 (US English keyboard language).

SPECIFY

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4 or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

- Processor Unit Attachment:

3081

any mdl KX = #9492
any mdl GX = #9493

3083

any mdl CX = #9496
any mdl EX = #9497
any mdl BX = #9498
any mdl JX = #9499

- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame E and L are 945mm wide by 1778mm long by 1790mm high (37.2" x 70" x 70.5"). Should shipping dimensions need reduction, the side covers may be removed, reducing external dimensions to 858mm wide by 1778mm long (33.8" x 70"). This reduction may be obtained by specifying #9571. Further reduction may be achieved by additionally removing a frame extension which reduces external dimensions to 858mm x 1550mm (33.8" x 61") and is obtainable by specifying #9573. Specify #9571 and #9573 as required. For additional information, see *IBM System/370 Installation Manual Physical Planning*, GC22-7004, and/or your Installation Planning Representative.
- Remote Servicing: A customer supplied data communication line with an exclusion key telephone (Canada only) of the WE503 or 2503 type (or equivalent) and a manual answer Data Protective Coupler (CDT type or equivalent) is necessary in order that higher level support may be received from the Field Support Center. These same facilities may also be used with RETAIN. The capability of using the RETAIN remote service/logout analysis is standard.

An integrated remote service facility modem (Except Canada+ or alternatively, an interface to an external modem +) is standard on 3082 and (except for Canada and Japan) will be provided for automatically by country code at the time of order. For Japan, specify #2948 and #2943 to obtain an internal modem with test connectors, or #3701 for an external modem (CCITT V.24). Connection of the IBM provided telephone interface cable to the telephone network must be arranged for by the customer. Each side of the 3082-X48 has a remote service facility modem. When ordering QX upgrade above specify codes must be shown where required.

- Machine Nomenclature: #2924 for English US, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.
- Remote 3278-2A Display Console: The standard cable for interconnecting the 3082 and the 3278-2A (system console) is a fixed length, 15 meter (49 feet) cable. Cables greater than 15 meters (49 feet), up to the maximum length of 1,500 meters (4,921 feet), may be obtained by RPQ 8P0891. Refer to HONE for description and order information.

SPECIAL FEATURES

Channel To Channel Adapter (#1850 For First, #1851 For Second): Provides the controlling element to interconnect two processors via their channels (either S/360 or S/370 or 4300). Only one of the interconnected processors needs this feature. Uses one control unit position on each of the connected channels. On mdl X48, the feature is located on the A-side. **Maximum:** Two, one #1850 and one #1851. **Field Installation:** Yes. **Prerequisites:** #1851 requires #1850.

B-side CTC Adapter (#1852 for third, #1853 for fourth): [Mdl X48] Provides the controlling element to interconnect two processors via their channels (either S/360, S/370 or 4300). Only one of the interconnected processors needs this feature. Uses one control unit position on each of the connected channels. Feature is located on the B-side of the 3082. **Limitations:** Mdl X48 only. **Maximum:** Two, one #1852 and one #1853. **Field Installation:** Yes. **Prerequisites:** #1853 requires #1852.

I/O Power Sequence Control (#4650): The 3082 Improved Models have a capability of associating up to 32 control units to a 3081 Improved Model, 3083 Improved Model, or the A-side of 3084

MACHINES**3082 Proc. Cntrl. (Improved Mdls) (cont'd)**

Improved Model Processor Complex for power-on/power-off control purposes. When requirements exceed these 32 power control relays, #4650 provides for power-on/power-off control for the 33rd through 64th control unit. **Maximum:** One. **Field Installation:** Yes.

B-side I/O Power Sequence Control (#4651): [Mdl X48] The B-side of 3082-X48 has a standard capability of associating up to 32 control units to the B-side of the 3084 Improved Model for power sequence purposes. When requirements exceed these 32 power-control relays, #4651 provides for power-on/power-off control for the 33rd through 64th control unit attached to the B-side. **Limitations:** Available only on mdl X48. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS

Model upgrades are field installable. Upgrade to a model X48 may only take place from a model X24. Model downgrade from a model X48 to any other model is not available. 3082 Improved Models can not be converted to 3082.

ACCESSORIES (None)**SUPPLIES (None)**

3083 PROCESSOR UNIT

PURPOSE

Provides arithmetic, logic and control function through a single central processor and houses shared central storage and channels for a 3083 Processor Complex.

MODELS B - J*

Models			Bytes of Central Storage
E8	B8	J8	8,388,608
E16	B16	J16	16,777,216
E24	B24	J24	25,165,824
E32	B32	J32	33,554,432

* (NO LONGER AVAILABLE -- model conversion, features, RPQs, and accessories are available.)

MODELS BX, CX, EX, JX

Models				Bytes of Central Storage
CX0	EX0	BX0	JX0	8,388,608
CX1	EX1	BX1	JX1	16,777,216
CX2	EX2	BX2	JX2	25,165,824
CX3	EX3	BX3	JX3	33,554,432

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 64KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. If required, an additional 512K bytes system area is available.

Model Differences: The various models of 3083 Improved Models are identical in function but vary in instruction execution rate (ranging from the slowest model E to the fastest model J and from the slowest model CX to the fastest model JX).

Prerequisites: Each 3083 Processor Unit Improved Model requires:

1. One 3082 Improved Mdl Processor Controller,
2. One 3087 Coolant Distribution Unit,
3. One 3278-2A Display Console as the system console, and
4. One 3089 Power Unit or other appropriate 400 Hz power source.

Note: See "Specify" under the M3082 Improved Model for appropriate Processor Unit Attachment Code.

Those customers using the 3087-1 CDU to cool their system must supply chilled water. See "S/370 Installation Manual - Physical Planning", GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

HIGHLIGHTS

- Depending upon the model, contains up to 33,554,432 bytes of monolithic central storage.
- 312 nanosecond storage access cycle.
- 24 nanosecond central processor cycle.

- 8-byte data flow between the central processor and storage.
- A high speed buffer in the central processor.
- Buffer storage is transparent to a program and significantly reduces the effective access time of storage.
- Integrated byte and block multiplexer channels.
- Extensive use of LSI logic circuitry.
- Has the ability to operate in S/370 mode or 370-XA mode.
- 370 XA mode extends addressing to 2 GB and provides for hardware controlled channel pathing to an I/O device.
- Distributed microcode logic and control stores.
- Microcode assists for both MVS and VM/SP High-Performance Option.
- Extensive data checking.

Standard Features:

- S/370 mode
- 370-XA mode
- Universal Instruction Set
- S/370 Extended Facility
- 3033 Extension Feature
- Extended addressing
- extended control mode
- PSW key handling
- Conditional swapping
- Set prefix
- Store prefix
- Signal processor
- Store CPU address
- Extended precision floating point
- Processor checkpoint retry
- Time-of-day clock
- Clock comparator
- CPU timer
- Interval timer
- Byte oriented operand feature
- Key controlled storage page protection
- Tracing protection
- Storage error checking and correction
- Storage configuration and control
- Dynamic address translation
- Program event recording
- Store status
- Program reset
- Set system-mask suppression
- Integrated channels
- Channel set switching
- Data streaming
- Start I/O fast release
- Clear I/O
- Virtual Machine Assist
- Preferred Machine Assist
- Start Interpretive Execution (SIE) Assist
- S/370-XA Sorting Assists.

Channels: The External Data Controller (EXDC) is an integrated I/O processor containing eight channels as basic. One optional channel group is available on mdls E, CX and EX. Two optional channel groups are available on mdls B, J, BX and JX. Channels are configurable as either byte or block multiplexer channels. A maximum of four byte multiplexer channels are permitted, and are assignable only within the first two physical channel groups. Byte multiplexer channels can operate only with unshared devices. Where byte multiplexer channels are not needed, block multiplexer channels may be substituted. All block multiplexer channels are capable of data streaming and are capable of operating at data rates up to three million bytes/second across a 1-byte interface.

Each channel can address up to 256 I/O devices and may physically attach up to eight control units. In S/370 mode, physical channels may be given any valid logical designation. In 370-XA mode, the central processor may initiate an operation with any I/O device and process any I/O interruption, using any of the channel paths to which the device is attached.

Limitations: In S/370 mode, address translation of page sizes is limited to 4K bytes and segment sizes to 64K bytes. Only 4K storage protect keys are used.

Bibliography: GC20-0001.

SPECIFY

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4-wire or 5-wire, 50 Hz):

50 Hz		60 Hz	
200V	#2807	200V	#2733
220V	#2815	208V	#9903
380V	#2816	220V	#2800
400V	#2825	240V	#9915
415V	#2826		
- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.
- Power: When 400 Hz power source is other than the 3089 Power Unit, specify #9491.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame S are 945mm wide by 1,778mm long by 1,875mm high (37.2 in. x 70 in. x 73.8 in.). Should these dimensions need reduction, the side covers may be removed, reducing external dimension to 858mm wide by 1,778mm long (33.8 in. x 70 in.). This reduction may be obtained by specifying #9571. Further reduction may be achieved by splitting Frame S into two subframes, the largest of which has external dimensions of 778mm by 1,778mm long (30.6 in. x 70 in.). This reduction may be obtained by specifying #9572. Specify either #9571 or #9572 as required. For additional information, see "IBM System/370 Installation Manual - Physical Planning", GC22-7004, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some older elevators have weight limitations of 1,136kg/2,500 lb and may require partial depopulation of 3083 Improved Mdl frames to satisfy this limitation. Specify #9581 to reduce frame weights to less than 1,136kg/2,500 lb.
- RETAIN: The capability of using the RETAIN remote service/logout analysis is standard and provided by the 3082 Improved Mdl Processor Controller.
- Machine Nomenclature: #2924 for English US, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.

SPECIAL FEATURES

Channel Group, First Add'l (#1545): Provides the first add'l group of eight channels for any 3083. Maximum: One. Field Installable: Yes. Prerequisites: Every #1545 requires support from the appropriate mdl of a 3082 Processor Controller.

Channel Group, Second Add'l (#1550): Provides the second add'l group of eight channels for any mdl B, J, BX or JX. Prerequisites: Every #1550 also requires a #1545. Every #1550 requires support from a 3082 Processor Controller mdl X24. Limitations: Not available on mdls E, CX and EX. Maximum: One. Field Installable: Yes.

Performance Feature (#4010): (Not for X-series models) Improves performance by reducing the cycle time to 24.5 nanoseconds. Field Installation: Yes. Prerequisites: #4020 on the 3082 Processor Controller. Note: Customer Purchase Agreement Supplement must show, "Installation of this feature involves removal of parts which become the property of IBM".

MODEL CONVERSIONS

(For Models B-J) Model upgrade from one 3083 to another is field installable. Parts removed or replaced become the property of IBM and must be returned. Model downgrade from model J to B, or from a model B to E, or from a 3081-K to a 3083-J, or from a 3081-G to a 3083-B, is not recommended. Model upgrade from a 3083-J to a 3081-K, from a 3083-B to a 3081-G, or from 3083-B to a 3081-K, is field installable. Parts removed or replaced become the property of IBM and must be returned. Any of the above upgrades require installation of feature #1545 (Channel Group First Add'l) on the 3083 as a prerequisite. Model conversion from 3083 to 3083 Improved Models is not available. Model upgrades combining performance and storage increases should be ordered as a single MES where possible. Feature additions should be ordered separately from any model upgrade MES.

(For Models BX, CX, EX, JX) Model upgrade from one 3083 Improved Model to another is field installable. Parts removed or replaced become the property of IBM and must be returned. Model downgrade from model JX to BX, or from a model BX to EX, or from a model EX to CX, or from a 3081 Improved Model to a 3083 Improved Model is available. Model conversion from 3983 Improved Models to a 3083, or 3081 is not available. Model upgrade from a 3083-JX to a 3081-KX, or 3083-BX to a 3081-GX, or 3083-EX to BX, or 3083-EX to BX, or 3083-BX to JX, is field installable. Parts removed or replaced become the property of IBM and must be returned. Any 3083-JX upgrading to a 3081-KX, or any 3083-BX upgrading to a 3081-GX, requires installation of feature #1545 (Channel Group First Add'l) on the 3083 as a prerequisite action. Model upgrades combining performance and storage increases should be ordered as a single MES where possible. Feature additions should be ordered separately from any model upgrade MES.

ACCESSORIES

The following is available on a purchase only basis for shipment with the 3083 Processor Complex.

Console Table, 308X Processor Complex (#1560): Provides an operator workstation with a durable melamine working surface for up to two operators and their display consoles. The table has a color-accented front modesty panel, internal cable channels for routing phone lines and display cables and is designed for a raised floor environment. A raised accessory panel designed to accommodate wall mountable equipment such as tackboards, telephones or intercoms is attached to either one end or the other of the console table. The table measures 1,780mm x 815mm and the end accessory panel is 265mm higher than the 720mm table height. Specify end attachment of accessory panel and color of modesty panel.

Right end attachment	#9441
Left end attachment	#9442
Willow Green	#9161
Garnet Rose	#9162
Sunrise Yellow	#9163
Classic Blue	#9164
Charcoal Brown	#9165
Pebble Gray	#9166
Pearl White	#9167

SUPPLIES (NONE)

MACHINES
3084 PROCESSOR UNIT
PURPOSE

Provides arithmetic, logic and control function through four integrated central processors and houses shared central storage and channels for a 3084 Processor Complex. The processor unit may be partitioned and run as two independent dyadic configurations. The 3084 Processor is not orderable from the plant and can only be achieved by upgrading a 3081-K Processor. Model upgrade from a 3081-KX Processor Processor is not available.

MODELS

Models	Bytes of Central Storage
Q32	33,554,432
Q48	50,331,648
Q64	67,108,864
Q96	100,663,296
QC8	134,217,728

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 32KB or 64KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. If required, an additional 512K byte system area is available. A maximum of 4,080 devices is possible.

Limitations: In 370 mode, address translation is limited to 64K byte segments and 4K byte page sizes. Only 4K storage protect keys are used.

Prerequisites: Each 3084 Processor Unit requires:

1. One 3082 mdl Q Processor Controller,
2. Two 3087 mdl 1s or mdl 2s Coolant Distribution Unit,
3. Two 3278 mdl 2A Display Console as the system console, and
4. Two 3089 Power Unit or other appropriate 400 Hz power source.

Those customers using the 3087 mdl 1 CDU to cool their systems must supply chilled water. See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004 for model upgrade requirements.

HIGHLIGHTS

Depending upon the mdl, contains up to 134,217,728 bytes of monolithic central storage ... 312 nanosecond storage access cycle ... four integrated central processors having a cycle time of 26 nanoseconds ... 8-byte data flow between each processor and storage ... each processor has its own high-speed buffer ... buffer storage is transparent to a program and significantly reduces the effective access time of storage ... concurrent repair of hardware is the normal maintenance procedure ... may operate as a single multiprocessor or partitioned into two dyadic configurations of an A-side and a B-side ... complete duplication of all critical functional elements ... integrated byte and block multiplexer channels ... extensive use of LSI logic circuitry ... has the ability to operate in S/370 mode or 370-XA mode ... 370-XA mode extends addressing to 2 GB and for hardware controlled channel pathing to an I/O device ... distributed microcode logic and control stores ... microcode assists for both MVS and VM/SP High-Performance Option ... extensive data checking.

Standard Features: S/370 mode ... 370-XA mode ... Universal Instruction Set ... S/370 Extended Facility ... 3033 Extension Feature ... extended addressing ... extended control mode ... PSW key handling ... conditional swapping ... set prefix ... store prefix ... signal processor ... store CPU address ... extended precision floating point ... processor checkpoint retry ... time-of-day clock ... clock comparator ... CPU timer ... interval timer ... byte oriented operand feature ... key controlled storage page protection ... tracing protection ... storage error checking and correction ... configuration control ... dynamic address translation ... program event recording ... store status ... program reset ... set system-mask suppression ... integrated channels ... channel set switching ... data streaming ... start I/O fast release ... clear I/O ... Virtual Machine Assist ... Preferred Machine Assist ... Start Interpretive Execution (SIE) Assist ... S/370-XA Sorting Assists.

Channels: The External Data Controller (EXDC) is an integrated I/O processor containing 24 channels organized in three groups of eight. Two EXDC are integral to each 3084, one per side. Channels are configurable as either byte or block multiplexer channels. A maximum of four byte multiplexer channels are permitted and are assignable only within the first two physical channel groups. Byte multiplexer channels can operate only with unshared devices. Where byte multiplexer channels are not needed, block multiplexer channels may be substituted. All block multiplexer channels are capable of data streaming and are capable of operating at data rates up to three million bytes/second across a 1-byte interface. Each channel can address up to 256 I/O devices and may physically attach up to eight control units.

In S/370 mode, channels may be grouped into two logical channel sets, with up to 16 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, physical channels may be given any valid logical designation.

In 370-XA mode, any central processor may initiate an operation with any I/O device and process any I/O interruption, using any of the 48 channel paths to which the device is attached.

3084 Tightly Coupled Multiprocessing: The 3084 duplicates all critical function elements (4 Central Processors, 2 External Data Controllers, 2 System Controllers) and is supported by two of each type of support unit. Its normal method of operation is in 370-XA mode under the control of a single control program through a single operational interface and provides the greatest computational capability of any 308X Processor Complex. Concurrent repair is the normal mode of maintenance.

The operator has the ability to reconfigure processor elements from the functioning configuration, create a maintenance subsystem, effect concurrent repair and return the repaired subsystem to the continuing configuration without requirement for IPL or IML. The continuing subsystem may consist of either half of the 3084. This provides very high availability of the surviving portion of the processor complex. When run as a 4-way tightly coupled multiprocessor, 3084 may operate only in 370-XA mode.

The 3084 may also be partitioned into two independent dyadic processors. The resultant dyadic configurations may be operated independently of each other in either 370-XA or S/370 mode.

Bibliography: GC20-0001.

SPECIFY

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4 or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.
- Power: When 400 Hz power source is other than the 3089 Power Unit, specify #9491 for the A-side capability and #9591 for the B-side capability.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) The standard external dimensions of Frame S and Frame T are 945mm wide by 1,778mm long by 1,875mm high (37.2" x 70" x 73.8"). Should these dimensions need reduction, the side covers may be removed, reducing external dimension to 858mm wide by 1,778mm long (33.8" x 70"). This reduction may be obtained by specifying #9571. Further reduction may be achieved by splitting Frame S and Frame T into two subframes, the largest of which has external dimensions of 778mm by 1,778mm long (30.6" x 70"). This reduction may be obtained by specifying #9572. Specify either #9571 or #9572 as required. For additional information, see *IBM System/370 Installation Manual - Physical Planning*, GC22-7004, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some older elevators may have weight limitations of 1,136kg/2,500 lbs and may require partial depopulation of 3084 frames to satisfy this limitation. Specify #9581 to reduce frame weights to less than 1,136kg/2,500 lbs.

3084 Processor Unit (cont'd)

- **RETAIN:** The capability of using the RETAIN remote service/logout analysis is standard and provided by the 3082 Processor Controller.
- **Machine Nomenclature:** #2924 for English US, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.

SPECIAL FEATURES

Performance Feature (#4010): [A-side] Improves performance by reducing cycle time to 24.5 nanoseconds. **Limitations:** A-side only. **Field Installation:** Yes. **Prerequisites:** #4011 on B-side. #4020 and #4021 on the 3082-Q48. **Note:** Customer Purchase Agreement Supplement must show, "Installation of this feature involves removal of parts which become the property of IBM."

Performance Feature (#4011): [B-side] Improves performance by reducing cycle time to 24.5 nanoseconds. **Limitations:** B-side only. **Field Installation:** Yes. **Prerequisites:** #4010 on A-side. #4020 and #4021 on the 3082-Q48. **Note:** Customer Purchase Agreement Supplement must show, "Installation of this feature involves removal of parts which become the property of IBM."

MODEL CONVERSIONS

Model upgrades from 3081-K to a 3084-Q and storage upgrades within 3084-Q are field installable. Parts removed or replaced become the property of IBM and must be returned. **Upgrade Prerequisites:** Prior to model upgrading any 3081-K to a 3084-Q, the 3081-K must have installed feature #1550 and one-half of the storage capacity of 3084-Q. Only symmetrical upgrades are allowed. Model downgrade from 3084-Q to a 3081-K is not recommended. Model conversion from a 3084 to 3084 Improved Models is not available.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3084 Processor Complex.

Console Table, 308X Processor Complex (#1560): Provides an operator workstation with a durable melamine working surface for up to two operators and their display consoles. The table has a color-accented front modesty panel, internal cable channels for routing phone lines and display cables and is designed for a raised floor environment. A raised accessory panel designed to accommodate wall mountable equipment such as tackboards, telephones or intercoms is attached to either one end or the other of the console table. The table measures 1,780mm x 815mm and the end accessory panel is 265mm higher than the 720mm table height. Specify end attachment of accessory panel and color of modesty panel.

Right end attachment	#9441	Sunrise Yellow	#9163
Left end attachment	#9442	Classic Blue	#9164
		Charcoal Brown	#9165
Willow Green	#9161	Pebble Gray	#9166
Garnet Rose	#9162	Pearl White	#9167

SUPPLIES (None)

3084 PROCESSOR UNIT (IMPROVED MODELS)

PURPOSE

Provides arithmetic, logic and control function through four integrated central processors and houses shared central storage and channels for a 3084 Processor Complex. The processor unit may be partitioned and run as two independent dyadic configurations. The 3084 Processor is orderable from the plant and or can be achieved by upgrading a 3081-KX Processor in the field.

MODELS

Models	Bytes of Central Storage
QX3	33,554,432
QX4	50,331,648
QX6	67,108,864
QX9	100,663,296
QXC	134,217,728

Note: At initial microcode load time, a minimum of 327,680 bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon channel attachment needs for configurations requiring greater than 512 UCWs, additional system area assignments are required. Expansion of the system area occurs automatically in 32KB or 64KB increments (up to 589,824 bytes) as determined by the size of the I/O configuration. If required, an additional 512K byte system area is available. A maximum of 4,080 devices is possible.

Limitations: In 370 mode, address translation is limited to 64K byte segments and 4K byte page sizes. Only 4K storage protect keys are used.

Prerequisites: Each 3084 Processor Unit Improved Model requires:

1. One 3082 mdl X48 Processor Controller,
2. Two 3087 mdl 1s or mdl 2s Coolant Distribution Unit,
3. Two 3278 mdl 2A Display Console as the system console, and
4. Two 3089 Power Unit or other appropriate 400 Hz power source.

Those customers using the 3087 mdl 1 CDU to cool their systems must supply chilled water. See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004. In addition, the System Control Program will require an appropriate operator console in addition to the system console. Access to a 3274 mdl X1B or X1D, or availability of an operator console is required to satisfy the minimum service configuration.

See *IBM System/370 Installation Manual - Physical Planning*, GC22-7004 for model upgrade requirements.

HIGHLIGHTS

Depending upon the mdl, contains up to 134,217,728 bytes of monolithic central storage ... 312 nanosecond storage access cycle ... four integrated central processors having a cycle time of 24 nanoseconds ... 8-byte data flow between each processor and storage ... each processor has its own high-speed buffer ... buffer storage is transparent to a program and significantly reduces the effective access time of storage ... concurrent repair of hardware is the normal maintenance procedure ... may operate as a single multiprocessor or partitioned into two dyadic configurations of an A-side and a B-side ... complete duplication of all critical functional elements ... integrated byte and block multiplexer channels ... extensive use of LSI logic circuitry ... has the ability to operate in S/370 mode or 370-XA mode ... 370-XA mode extends addressing to 2 GB and for hardware controlled channel pathing to an I/O device ... distributed microcode logic and control stores ... microcode assists for both MVS and VM/SP High-Performance Option ... extensive data checking.

Standard Features: S/370 mode ... 370-XA mode ... Universal Instruction Set ... S/370 Extended Facility ... 3033 Extension Feature ... extended addressing ... extended control mode ... PSW key handling ... conditional swapping ... set prefix ... store prefix ... signal processor ... store CPU address ... extended precision floating point ... processor checkpoint retry ... time-of-day clock ... clock comparator ... CPU timer ... interval timer ... byte oriented operand feature ... key controlled storage page protection ... tracing protection ... storage error checking and correction ... configuration control ... dynamic address translation ... program event recording ... store status ... program reset ... set system-mask suppression ... integrated channels ... channel set switching ... data streaming ... start I/O fast release ... clear I/O ... Virtual Machine Assist ... Preferred Machine Assist ... Start Interpretive Execution (SIE) Assist ... S/370-XA Sorting Assists.

Channels: The External Data Controller (EXDC) is an integrated I/O processor containing 24 channels organized in three groups of eight.

Two EXDC are integral to each 3084 Improved Model, one per side. Channels are configurable as either byte or block multiplexer channels. A maximum of four byte multiplexer channels are permitted and are assignable only within the first two physical channel groups. Byte multiplexer channels can operate only with unshared devices. Where byte multiplexer channels are not needed, block multiplexer channels may be substituted. All block multiplexer channels are capable of data streaming and are capable of operating at data rates up to three million bytes/second across a 1-byte interface. Each channel can address up to 256 I/O devices and may physically attach up to eight control units.

In S/370 mode, channels may be grouped into two logical channel sets, with up to 16 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, physical channels may be given any valid logical designation.

In 370-XA mode, any central processor may initiate an operation with any I/O device and process any I/O interruption, using any of the 48 channel paths to which the device is attached.

3084 Improved Model Tightly Coupled Multiprocessing: The 3084 Improved Model duplicates all critical function elements (4 Central Processors, 2 External Data Controllers, 2 System Controllers) and is supported by two of each type of support unit. Its normal method of operation is in 370-XA mode under the control of a single control program through a single operational interface and provides the greatest computational capability of any 308X Processor Complex. Concurrent repair is the normal mode of maintenance.

The operator has the ability to reconfigure processor elements from the functioning configuration, create a maintenance subsystem, effect concurrent repair and return the repaired subsystem to the continuing configuration without requirement for IPL or IML. The continuing subsystem may consist of either half of the 3084 Improved Model. This provides very high availability of the surviving portion of the processor complex. When run as a 4-way tightly coupled multiprocessor, 3084 Improved Model may operate only in 370-XA mode.

The 3084 Improved Model may also be partitioned into two independent dyadic processors. The resultant dyadic configurations may be operated independently of each other in either 370-XA or S/370 mode.

3087 COOLANT DISTRIBUTION UNIT

PURPOSE

Provides the coolant distribution required by a 3081, 3083, or 3084 Processor Unit.

MODELS

Model 1 001
Model 2 002

HIGHLIGHTS

Contains the heat exchanger, pumps and controls necessary to cool the liquid cooled portion of the 3081, 3083 or 3084 Processor Unit. The 3087-1 uses the efficiency of water cooling and evacuates its heat to chilled water, while the 3087-2 evacuates its heat to the air of the computer room.

The 3087 supports a 3081, 3083 or 3084 Processor Unit. Two 3087 mdl 1s or two 3087 mdl 2s are required to support a 3084 Processor Unit. They cannot be intermixed.

Note: If mdls are switched in the field, a new M01 diskette is required for the 3081, 3083, or 3084 Processor Unit. Show serial number of CPU on the MES when ordered. Serial number of processor being attached-too must be shown on machine order.

Bibliography: GC20-0001.

SPECIAL FEATURES (None)

MODEL CONVERSIONS (None)

ACCESSORIES (None)

SUPPLIES (None)

3088 MULTISYSTEM CHANNEL COMM. UNIT MODELS A1, 1, 2

PURPOSE

Provides for inter-processor communications over block, multiplexer channels.

MODELS

Model A1 0A1: Interconnects up to two processors.

Model 1 001: Interconnects up to four processors.

Model 2 002: Interconnects up to eight processors.

Prerequisites: An available control unit position on a block multiplexer channel for each processor connected. A block of modulo 32 or 64 addresses is required on each channel to which the 3088 is attached. Refer to the specific configuration requirements in the "IBM 3088 Multisystem Channel Communication Unit Product Description Manual", GA22-7081.

HIGHLIGHTS

The 3088 is a stand-alone I/O control unit using a multiple address architecture which operates in a manner similar to current channel-to-channel adapters (CTCA). The Model A1 supports up to 63 logical CTCAs distributed across two CPU interfaces. The Model 1 supports up to 126 logical CTCAs distributed across four CPU interfaces. The Model 2 supports up to 252 logical CTCAs distributed across eight interfaces. The 3088 is attached to block multiplexer channels with or without data streaming. Data transfers can be active between two separate pairs of channels in either high-speed transfer mode between 0.7 and 2.1M bps or in data streaming mode at 1.125M bps, 3.0M bps, or at 4.5M bps (4.5M bps operation requires both EC A50442 and Reduced Diameter Channel cables, channel group 0815, between the 3088 and the channel operating at 4.5M bps), but will operate at the speed of the slower of the two connected channels.

Where the 3088 is attached to a low priority block multiplex channel, and where the I/O interface cable lengths are very short (6.1m; 20 ft), certain configurations may experience DASD overrun problems with the higher priority block multiplexer channels. In such cases, the 3088 may be configured by service personnel at installation time so that the high-speed transfer mode data rate does not exceed 1.2M bps.

The early disconnect feature of the 3088 makes possible its coexistence on a channel with other control units through the use of channel command retry. Like the S/370 CTCA feature, each of the 3088 CTCA links can operate in either S/360 compatibility mode or in S/370 extended mode, selectable under program control.

The cable length from the 3088 to the channel can be up to 400 ft, (up to 800 ft of cable between channels) allowing greater configuration flexibility. However, for the maximum distance, the 3088 must be the only control unit on the I/O interface. The number and type of other devices sharing the I/O interface are among the factors which limit the maximum cable length.

System Attachments: The following processor attachments are supported: 4331-2, 4341, 4361, 4381, 3031, 3032, 3033, 3042 Attached Processor Model 2, 3081, 3083, 3084 and 3090 Processor Complexes.

Publications: "IBM 3088 Multisystem Channel Communication Unit Product Description Manual", (GA22-7081).

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS

Model A1 to Model 1, Model A1 to Model 2, and Model 1 to Model 2 conversion.

ACCESSORIES

Cables: Cables to attach 3088 may be purchased from IBM or from a customer-selected source. See "Installation Manual-Physical Planning", GC22-7064, for specifications.

All cables must be ordered. Two sets, up to 23m (75 ft) each, may be ordered without charge at initial installation of the Model A1; four sets, up to 23m (75 ft) each, may be ordered without charge at initial installation of the Model 1 and eight sets, up to 31m (100 ft) each, at initial installation of the Model 2. Unused allowances will not be credited for future use, or added to the allowed length of another cable set. For field upgrades from the Model A1 to the Model 1, two sets, up to 23m (75 ft) each, may be ordered without charge. For field upgrades from the Model A1 to the Model 2, eight sets, up to 31m (100 ft) each, may be ordered without charge. For field upgrades from the Model 1 to the Model 2, eight sets, up to 31m (100 ft) each may be ordered without charge. Other cable lengths over that provided will be charged for on a per foot basis. For example, if a 125 ft cable is ordered for the Model 1, the customer is charged for the 50 ft of cable over the 23m (75 ft) allowance. This is the only applicable charge for cable lengths beyond the lengths provided. Order cables within the allowance via normal cable ordering procedures. Order cables longer than the allowance via MES.

Assembled cables may be purchased from IBM. Specify cable assembly number.

Item	Number	Description	Max Length

SUPPLIES (NONE)

3089 POWER UNIT

PURPOSE

- Provides 400 Hz power for a 3081/3083/3084 Processor Complex and 3090 Processor Complex.

MODELS

Model 1 001

Model 3 003

Limitations: A 3089 model 1 cannot be used with 3081 or 3083 Processor Units equipped with specify feature #9491, or 3084 Processor Units equipped with specify features #9491 and #9591. A 3089 model 3 cannot be used with 3097 Power and Coolant Distribution Units equipped with specify feature #9488, #9491 or #9496.

HIGHLIGHTS

- The 3089 model 1 Power Unit is designed to be the standard source of power for the 3081/3083/3084 Processor Complex.
- One 3089 model 1 is required to support a 3083 or 3081 Processor Complex if the 3089 is chosen as the power source.
- Two 3089 model 1s are required to support a 3084 Processor Complex if the 3089 is chosen as the power source.
- One 3089 model 3 is required to support a 3090 model 120E, 150 or 3090 model 150E Processor Complex if the 3089 is chosen as the power source.
- One 3089 model 3 is required to support a 3090 model 180 or 3090 model 180E Processor Complex except for a configuration consisting of a Vector Facility and greater than 128MB of expanded storage, which requires two if the 3089 is chosen as the power source.
- Two 3089 model 3s are required to support a 3090 model 200, 3090 model 200E or 3090 model 300E Processor Complex if the 3089 is chosen as the power source.
- Four 3089 model 3s are required to support a 3090 model 400, 3090 model 400E or 3090 model 600E Processor Complex if the 3089 is chosen to be the power source.
- The unit has the same color coordinated covers as other units in the central complex, meets IBM machine room environmental standards and is suitable for locating within the machine room.

Publications: GC20-0001.

SPECIFY

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	380V #2824
- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.

- Shipping Instructions: (Use of this specify option will increase installation time. Use only when required.) Should the standard external dimensions of the 3089, 815mm wide by 1,640mm long (32 in. x 64.5 in.), require reduction to 750mm wide by 1,525mm long (29.5 in. x 60 in.), specify #9572. Specify code #9572 reduces the length of 3089 by removal of covers/ hardware. For additional information, see "IBM System/370 Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Machine Nomenclature: #2924 for English US, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.
- Cables: The standard cables provided with the 3089 model 1 are 15.2m (50 ft) long and with the 3089 model 3 are 10.6m (35 ft) long. Cables may be ordered in lengths of up to 38.1m (125 ft). For longer cable lengths, contact Special Product Marketing. Specify #9988 if cables other than the standard length are being installed. By contacting Special Product Marketing, a sales representative will be able to get the necessary RPQ information on the 50 and 75 foot cables that are available on the 3089 Mdl 3.

To ensure that the proper external cables are provided for the 3089 model 3, specify one of the following for each 3089 model 3 that is being ordered:

- #9489 - First 3089 model 3 to be used with a model 120E, 150, 150E, 180, 180E, 200, 200E, 300E, or with the A-side of a model 400, 400E or 600E Processor Unit.
- #9493 - Second 3089 model 3 to be used with a model 180, 180E, 200, 200E, 300E or with the A-side of a model 400, 400E or 600E.
- #9497 - First 3089 model 3 to be used with the B-side of a model 400, 400E or 600E Processor Unit.
- #9498 - Second 3089 model 3 to be used with the B-side of a model 400, 400E or 600E Processor Unit.

In addition, specify #9925 or #9926 depending on which of the following processor groups the 3089 model 3 is to be used with. If the 3089 is for attachment to an installed model 400 B-side 3097 the serial number used for selection of the second device code should be that of frame 12 on the B-side.

Specify #9925 if the 3089 model 3 is for use with a 3097 model 1 or 2 attached to:

- A new system shipped from the plant
- An installed system at or above serial number 70820
- An installed system from the following serial number set:
 - 51040202, 51040205, 51040206
 - 51040231 through 51040236
 - 51040249 through 51040252
 - 51040254 or above
- An installed system at or above serial number 97080144

Specify #9926 if the 3089 model 3 is for use with a 3097 model 1 or 2 attached to:

- An installed system with serial number 70819 or lower
- An installed system with serial numbers:
 - 51040201 or lower
 - 51040203, 51040204
 - 51040207 through 51040230
 - 51040237 through 51040248
 - 51040253
- An installed system with serial number 97080143 or lower

- Line Cord: The 3089 model 3 draws over 125 amperes. If, as a result, local electrical codes require that the line cord be hardwired, specify #9987.

(Canada only > Note: Hardwiring is mandatory in Canada. <)

MODEL CONVERSIONS

SUPPLIES (NONE)

Model upgrades from 3089 model 1 to 3089 model 3 are not available. Model downgrades from 3089 model 3 to 3089 model 1 are not recommended.

3090 PROCESSOR UNIT

THIS PRODUCT HAS MORE THAN ONE MODEL DESCRIPTION

3090 PROCESSOR UNIT MODEL 200

PURPOSE

Provides arithmetic, logic and control function through two integrated central processors with optional Vector Facilities and houses shared central storage, expanded storage, and channels for a 3090 Model 200 Processor Complex.

MODEL 200

Model 200: 67,108,864 (bytes) Central Storage

Note: At initial microcode load time, a minimum of 200K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 200 Processor Unit requires:

- One 3092 Model 1 Processor Controller,
- One 3097 Model 1 Power and Coolant Distribution Unit,
- Two 3089 Model 3 Power Units or other appropriate 400 Hz power source,
- Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150),
- Two 3180 Model 140 Display Stations.
- A 4800 bps switched network modem supporting an autocall/autoanswer feature.
- Access to a path of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Model 1 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

The system control program requires an appropriate operator station in addition to the 3180 system and service support display stations. Access to a 3274 Model X1B or X1D, or the availability of an operator console is required to satisfy the minimum service configuration. Access to a tape drive is also required for installation and certain maintenance functions.

HIGHLIGHTS

Contains 67,108,864 bytes of monolithic central storage -- two integrated central processors, each having a cycle time of 18.5 nanoseconds -- eight-byte data flow between each processor and storage -- each processor has its own 65,536 byte high-speed buffer

(buffer storage is transparent to a program and significantly reduces the effective access time of central storage) -- optional integrated expanded storage for high-speed paging -- optional vector facilities for greatly increasing the processor's engineering and scientific processing capabilities -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for hardware controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- S/370 mode provides for up to 32 channels per channel set -- Start Interpretive Execution (SIE) assist.

Standard Features: S/370 mode -- 370-XA mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high-speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- Sort Assist.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments of 64Mb up to a maximum of 256MB.

Vector Facility: The Vector Facility, optionally available for each of the central processors, enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum each cycle.

Channels: A total of 32 channels are standard. Two additional groups of eight block multiplexer channels each are optional, providing for a total of up to 48 channels. Up to four channels may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In S/370 mode, channels may be grouped into two logical channel sets, with up to 32 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, channels may be given any valid logical designation.

In 370-XA mode, any processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 48 channel paths. The 3090 Complex can use up to a maximum of four different logical paths to a single device.

Publication: GC20-0001

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):

MACHINES

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	380V #2824

- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.
- Tape Drive: Specify #9201 if the tape drive being used by the 3092 Model 1 Processor Controller attached to this 3090 Processor Unit is a 3420 Model 4, 6 or 8 or equivalent, or #9202 if the tape drive is a 3480 Model B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3,865mm wide by 1,795mm long (34 in. x 70.5 in.), the longest frame, require reduction in length, specify #9573. Specify code #9573 reduces frame 3 length to 1,590mm (62.5 in.) by removal of tailgate connector panel only. Should the standard external dimensions of the 3090 Processor Unit frames (except frame 9) require reduction of 815mm wide by 1,525mm long (32 in. x 60 in.), specify #9571. Specify code #9571 reduces the external dimensions of frames 1, 2, 3, and 5 by removal of covers/hardware. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 lbs and may require partial depopulation of 3090 Processor frames to satisfy this limitation. Specify #9581 to reduce frame 2 and frame 3 weights to less than 1,136kg/2,500 lbs. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Remote Support Facility (RSF): The capability of using the RSF remote service/logout analysis is standard and provided by the 3092 Processor Controller.
- Machine Nomenclature: #2924 for English US, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.

Account Universal Lift Tool: Select one:

- First 3090 ordered in an establishment, specify #9330.
- If 3090 ordered is second to be installed, no additional lift tool is required.
- If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility, First (#1545): Provides the vector facility capability to the first central processor. Prerequisites: Specify #9983, Vector Facility, on the 3097 Power and Coolant Distribution Unit being used with the 3090 Model 200. See M3097 pages. Prerequisites: #7330. Maximum: One. Field Installation: Yes.

Vector Facility, Second (#1550): Provides the vector facility capability to the second central processor. Prerequisites: #1545. Maximum: One. Field Installation: Yes.

Channel Group First Add'l (#3850): Provides the first additional group of eight block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: None.

Channel Group Second Add'l (#3851): Provides the second additional group of eight block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: #3850.

Expanded Storage, 64Mb (#5064): Provides the first 64Mb increment of expanded storage. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 128Mb (#5128): Provides 128Mb of expanded storage. Cannot be ordered with #5064. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 192Mb (#5192): Provides 192Mb of expanded storage. Cannot be ordered with #5064 or #5128. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 256Mb (#5256): Provides 256Mb of expanded storage. Cannot be ordered with #5064, #5128 or #5192. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb to 128Mb (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage. Order by MES only. Maximum: One. Field Installation: Yes. Prerequisites: #5064.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb (#6192): Provides an upgrade from 64Mb to 192Mb of expanded storage. Order by MES only. Maximum: One. Field Installation: Yes. Prerequisites: #5064.

Expanded Storage, 64Mb to 256Mb (#6256): Provides an upgrade from 64Mb to 256Mb of expanded storage. Order by MES only. Maximum: One. Field Installation: Yes. Prerequisites: #5064.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb (#6193): Provides an upgrade from 128Mb to 192Mb of expanded storage. Order by MES only. Maximum: One. Field Installation: Yes. Prerequisites: #5128 or #6128.

Expanded Storage, 128Mb to 256Mb (#6257): Provides an upgrade from 128Mb to 256Mb of expanded storage. Order by MES only. Maximum: One. Field Installation: Yes. Prerequisites: #5128 or #6128.

Expanded Storage, 192Mb to 256Mb (#6258): Provides an upgrade from 192Mb to 256Mb of expanded storage. Order by MES only. Maximum: One. Field Installation: Yes. Prerequisites: #5192, #6192 or #6193.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expansion Frame (#7330): Provides the housing for the first and second 3090 Vector Facilities (#1545, #1550). Required for the installation of #1545. Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisites: #1545.

MODEL CONVERSIONS

Model upgrades from 3090 Model 200 to 3090 Model 300E, from 3090 Model 200 to 3090 Model 400 and from 3090 Model 200 to 3090 Model 400E are field installable and the parts removed or replaced become the property of IBM and must be returned. Model downgrades are not recommended.

Note: Any 3090 Model 200 upgrade to 3090 Model 300E requires that feature code #7330 be installed prior to or as part of the upgrade. The price of this feature is in addition to the upgrade price. Also required are changes to the 3097. Any 3090 Model 200 upgrade to a 3090 Model 400 may require installation of features on the 3090 Model 200 in order to provide symmetry in channels and expanded storage on the 3090 Model 400, will require a model change on the installed 3092 and will require installation of features on the 3097s. Any 3090 Model 200 upgrade to a 3090 Model 400E may require in-

Installation of features on the 3090 Model 200 in order to provide symmetry in channels and expanded storage on the 3090 Model 400E, will require a model change on the installed 3092 and will require installation of features on the installed 3097 as well as an additional 3097. Installation of features required for symmetry on the 3090 Model 200 is a prerequisite to upgrading. Feature additions on the 3090 Model 200 should be ordered separately from any model upgrade MES unless adding a Vector Facility or Additional Central Storage.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator workstation for up to two operators and their display con-

soles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,780mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for willow green, #9162 for garnet rose, #9163 for sunrise yellow, #9164 for classic blue, #9165 for charcoal brown, #9166 for pebble gray, or #9167 for pearl white.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 400

PURPOSE

Provides arithmetic, logic and control function through four integrated central processors with optional Vector Facilities, and houses shared central storage, expanded storage, and channels for a 3090 Model 400 Processor Complex. Available as a 3090 Processor Unit Model 400 and by MES to upgrade a 3090 Model 200 to a Model 400.

MODEL 400

Model 400: 134,217,728 (bytes) Central Storage

Note: At initial microcode load time, a minimum of 576K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte per partition and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 400 Processor Unit requires:

1. One 3092 Model 2 Processor Controller,
2. Two 3097 Model 1 or 2 Power and Coolant Distribution Units, two 3097 Model 1 or two Model 2 or one Model 1 and one Model 2 can be used. I/O power sequence controls are provided on 3097 Model 1, otherwise both models provide the same functions.
3. Four 3089 Model 3 Power Units or other equivalent 400 Hz power source,
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150),
5. Three 3180 Model 140 Display Stations.
6. Two 4800 bps switched network modems each supporting an autocall/autoanswer feature.
7. Access to two paths of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

The system control program requires an appropriate operator stations. In single-image a minimum of one and in partitioned mode a minimum of two operator stations are required in addition to the two 3180 system and the 3180 service support display stations. Access to a 3274 Model X1B or X1D, or the availability of an operator console is required for each to satisfy the minimum service configuration. Access to a tape drive is also required from each partition for installation and certain maintenance functions.

HIGHLIGHTS

Contains 134,217,728 bytes of monolithic central storage -- four integrated central processors, each having a cycle time of 18.5 nanoseconds -- eight-byte data flow between each processor and storage -- each processor has its own 65,536 byte high-speed buffer (buffer storage is transparent to a program and significantly reduces the effective access time of central storage) -- optional integrated expanded storage for high-speed paging -- optional vector facilities for greatly increasing the processor's engineering and scientific processing capabilities -- concurrent repair of a hardware

partition is the normal maintenance procedure -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for hardware controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data error checking -- S/370 mode provides for up to 32 channels per channel set -- Start Interpretive Execution (SIE) assist.

Standard Features: S/370 mode -- 370-XA mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high-speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- Sorting Instructions.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments of 128Mb (64Mb increments per side) up to a maximum of 256Mb.

Vector Facility: The Vector Facility, optionally available for each of the central processors, enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical Vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle, except in a divide when the element produces a result every 16 cycles. Compound operations can produce both a product and a sum each cycle.

Channels: A total of 64 channels are standard; 32 channels on the A-side and 32 channels on the B-side. Up to 96 channels are available in increments of 16 channels, each increment being split between the A and B sides. Up to eight channels (four on each side) may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In S/370 mode (when the Model 400 is in Physically Partitioned Mode), channels may be grouped into logical channel sets, with up to 32 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, channels may be given any valid logical designation.

In 370-XA mode, any processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 96 channel paths in single-image mode or any of the 48 channel paths in partitioned mode. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

3090 Model 400 Tightly Coupled Multiprocessing: The normal operation of the 3090 Model 400 is in 370-XA mode under control of a single control program through a single operational interface and provides the greatest computational capability of any 3090 Processor Complex. Concurrent repair is the normal mode of maintenance.

The operator has the ability to reconfigure processor elements from the functioning configuration, create a maintenance subsystem, effect concurrent repair and return the repaired subsystem to the continuing configuration without an IPL or IML. The continuing subsystem may consist of either half of the 3090 Model 400. This provides very high availability of the surviving portion of the

MACHINES

processor complex. When run in a single-image mode the 3090 Model 400 may operate only in 370-XA mode.

The 3090 Model 400 may also be partitioned into two independent dyadic processors. The resultant dyadic configurations may be operated independently of each other in either 370-XA or S/370 mode.

Publications: GC20-0001

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	380V #2824
- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.
- Tape Drive: Specify #9201 if the tape drive being used by the 3092 Model 2 Processor Controller attached to this 3090 Processor Unit are 3420 Models 4, 6 or 8 or equivalent, or #9202 if the tape drives are 3480 Models B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frames 3 (13), 865mm wide by 1,795mm long (34 in. x 70.5 in.), the longest frame, require reduction of length, specify #9573 (#9673). Specify code #9573 (#9673) reduces frame 3 (13) length to 1,590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Model Processor frames require reduction to 820mm (32 in.) wide by 1,525mm (60 in.) long, specify #9571 (#9671). Specify code #9571 (#9671) reduces external dimensions of frames 1 (11), 2 (12), 3 (13) and 5 (15) by removal of covers/hardware. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 lbs and may require partial depopulation of 3090 Processor frames to satisfy this limitation. Specify #9581 (#9681) to reduce frame 2 (12) and frame 3 (13) weights to less than 1,136kg/2,500 lbs. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Remote Support Facility (RSF): The capability of using the RSF remote service/logout analysis is standard and provided by the 3092 Processor Controller.
- Machine Nomenclature: #2924 for English US, #2931 for Spanish, #2935 For Canadian French, #2930 for Japanese.
- Multiprocessing: Specify #9984, Multiprocessing, on the 3097 Power and Coolant Distribution Unit used with the A-side of the model 400 Processor. Specify #9985, Multiprocessing, on the 3097 Power and Coolant Distribution Unit being used with the B-side of the model 400 Processor. See M3097.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330.

2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility, First, A-Side (#1545): Provides the vector facility capability to the first central processor on the A-side. Prerequisites: Specify #9983, Vector Facility, on the 3097 Power and Coolant Distribution Unit to be used with the A-side of the 3090 Model 400. See M3097 pages. Prerequisite: #7330. Maximum: One. Field Installation: Yes.

Vector Facility, First, B-Side (#1546): Provides the vector facility capability to the first central processor on the B-side. Prerequisites: Specify #9983, Vector Facility, on the 3097 Power and Coolant Distribution Unit to be used with the B-side of the 3090 Model 400. See M3097 pages. Prerequisite: #7331. Maximum: One. Field Installation: Yes.

Vector Facility, Second, A-Side (#1550): Provides the vector facility capability to the second central processor on the A-side. Prerequisites: #1545. Maximum: One. Field Installation: Yes.

Vector Facility, Second, B-Side (#1551): Provides the vector facility capability to the second central processor on the B-side. Prerequisites: #1546. Maximum: One. Field Installation: Yes.

Channel Group First Add'l, A-Side (#3850): Provides the first additional group of eight block multiplexer channels on the A-side. Prerequisites: None. Corequisite: #3852. Maximum: One. Field Installation: Yes.

Channel Group Second Add'l, A-Side (#3851): Provides the second additional group of eight block multiplexer channels on the A-side. Prerequisites: #3850. Corequisite: #3853. Maximum: One. Field Installation: Yes.

Channel Group First Add'l, B-Side (#3852): Provides the first additional group of eight block multiplexer channels on the B-side. Prerequisites: None. Corequisite: #3850. Maximum: One. Field Installation: Yes.

Channel Group Second Add'l, B-Side (#3853): Provides the second additional group of eight block multiplexer channels on the B-side. Prerequisites: #3850 and #3852. Corequisite: #3851. Maximum: One. Field Installation: Yes.

Expanded Storage, 64MB, A-Side (#5064): Provides the first 64Mb increment of expanded storage on the A-side. Prerequisites: None. Corequisite: #7064. Maximum: One. Field Installation: Yes.

Expanded Storage, 128MB, A-Side (#5128): Provides 128Mb of expanded storage on the A-side. Cannot be ordered with #5064. Prerequisites: None. Corequisite: #7128. Maximum: One. Field Installation: Yes.

Expanded Storage, 192MB, A-Side (#5192): Provides 192Mb of expanded storage on the A-side. Cannot be ordered with #5064 or #5128. Prerequisites: None. Corequisite: #7192. Maximum: One. Field Installation: Yes.

Expanded Storage, 256MB, A-Side (#5256): Provides 256Mb of expanded storage on the A-side. Cannot be ordered with #5064, #5128 or #5192. Prerequisites: None. Corequisite: #8256. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 128Mb, A-Side (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage on the A-side. Order by MES only. Prerequisites: #5064. Corequisite: #7128 or #8128. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during the field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb, A-Side (#6192): Provides an upgrade from 64Mb to 192Mb of expanded storage on the A-side. Order by MES only. Prerequisites: #5064. Corequisite: #7192 or #8192. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb, A-Side (#6256): Provides an upgrade from 64Mb to 256Mb of expanded storage on the A-side. Order by MES only. Prerequisites: #5064. Corequisite: #7256 or #8256. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb, A-Side (#6193): Provides an upgrade from 128Mb to 192Mb of expanded storage on the A-side. Order by MES only. Prerequisites: #5128 or #6128. Corequisite: #7192 or #8193. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb, A-Side (#6257): Provides an upgrade from 128Mb to 256Mb of expanded storage on the A-side. Order by MES only. Prerequisites: #5128 or #6128. Corequisite: #7256 or #8257. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb to 256Mb, A-Side (#6258): Provides an upgrade from 192Mb to 256Mb of expanded storage on the A-side. Order by MES only. Prerequisites: #5192, #6192 or #6193. Corequisite: #7256 or #8258. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64MB, B-Side (#7064): Provides the first 64Mb increment of expanded storage on the B-side. Prerequisites: #5064. Corequisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128MB, B-Side (#7128): Provides 128Mb of expanded storage on the B-side. Cannot be ordered with #7064. Prerequisites: #5128 or #6128. Corequisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 192MB, B-Side (#7192): Provides 192Mb of expanded storage on the B-side. Cannot be ordered with #7064 or #7128. Prerequisites: #5192, #6192 or #6193. Corequisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 256MB, B-Side (#7256): Provides 256Mb of expanded storage on the B-side. Cannot be ordered with #7064, #7128 or #7192. Prerequisites: #5256, #6256, #6257 or #6258. Corequisite: None. Maximum: One. Field Installation: Yes.

Expansion Frame, A-Side (#7330): Provides the housing for the first and second 3090 Vector Facilities on the A-side (#1545, #1550). Required for the installation of #1545. Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisites: #1545.

Expansion Frame, B-Side (#7331): Provides the housing for the first and second 3090 Vector Facilities on the B-side (#1546, #1551). Required for the installation of #1546. Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisites: #1546.

Expanded Storage, 64Mb to 128Mb, B-Side (#8128): Provides an upgrade from 64Mb to 128Mb of expanded storage on the B-side. Order by MES only. Prerequisites: #7064 and #6128. Corequisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb, B-Side (#8192): Provides an upgrade from 64Mb to 192Mb of expanded storage on the B-side.

Order by MES only. Prerequisites: #7064 and #6192. Corequisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb, B-Side (#8256): Provides an upgrade from 64Mb to 256Mb of expanded storage on the B-side. Order by MES only. Prerequisites: #7064 and #6256. Corequisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb, B-Side (#8193): Provides an upgrade from 128Mb to 192Mb of expanded storage on the B-side. Order by MES only. Prerequisites: (#7128 or #8128) and #6193. Corequisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb, B-Side (#8257): Provides an upgrade from 128Mb to 256Mb of expanded storage on the B-side. Order by MES only. Prerequisites: (#7128 or #8128) and #6257. Corequisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb to 256Mb, B-Side (#8258): Provides an upgrade from 192Mb to 256Mb of expanded storage on the B-side. Order by MES only. Prerequisites: (#7192, #8192 or #8193) and #6258. Corequisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

MODEL CONVERSIONS

Model upgrade from 3090 Model 400 to 3090 Model 600E is field installable and the parts removed or replaced become the property of IBM and must be returned. Model downgrade from 3090 Model 400 to 3090 Model 200 is not recommended.

Note: Any 3090 Model 400 upgrade to a 3090 Model 600E requires that feature codes #7330 and #7331 be installed prior to, or as part of the upgrade. The prices of these features are in addition to the upgrade price. Also required are changes to the 3097. 3090 feature code addition or deletion must conform to symmetry requirements. Feature additions and deletions on the 3090 Model 400 should be ordered separately from any model upgrade MES unless adding a Vector Facility or Additional Central Storage.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator workstation for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cables may be concealed by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,780mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for willow green, #9162 for garnet rose, #9163 for sunrise yellow, #9164 for classic blue, #9165 for charcoal brown, #9166 for pebble gray, or #9167 for pearl white.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODELS 150 and 180

PURPOSE

Provides arithmetic, logic and control function through a single integrated central processor with an optional Vector Facility and houses central storage, and channels for the 3090 Models 150 and 180. Also houses optional expanded storage for a Model 180.

MODELS

Model 150: 33,554,432 (bytes) Central Storage, standard -- 67,108,864 (bytes) Central Storage, full configuration.

Model 180: 33,554,432 (bytes) Central Storage, standard -- 67,108,864 (bytes) Central Storage, full configuration.

Note: At initial microcode load time, a minimum of 200K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Model Differences: The two uniprocessor models of the 3090 Processor Complex are identical in function but vary in instruction execution rate ratio.

Prerequisites: Each 3090 Model 150 or 180 Processor Unit requires:

1. One 3092 Model 1 Processor Controller.
2. One 3097 Model 1 or 2 Power and Coolant Distribution Unit.
3. Model 150: One 3089 Model 3 Power Unit or other appropriate 400 Hz power source, or Model 180: One 3089 Model 3 Power Unit or other appropriate 400 Hz power source is required except for a configuration consisting of either 192Mb of Expanded Storage and a Vector Facility or 256Mb of Expanded Storage and a Vector Facility, which requires two.
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150).
5. Two 3180 Model 140 Display Stations.
6. A 4800 bps switched network modem supporting an autocall/autoanswer feature.
7. Access to a path of a customer tape control unit operation in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Model 1 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

The system control program requires an appropriate operator station in addition to the 3180 system and service support display stations. Access to a 3274 Model X1B and X1D, or the availability of an operator console is required to satisfy the minimum service configuration. Access to a tape drive is also needed for installation and certain maintenance functions.

HIGHLIGHTS

Contains 33,554,432 bytes of monolithic central storage, standard -- an additional 33,554,432 bytes of central storage is available -- a single integrated central processor with 18.5 nanoseconds cycle time -- 8-byte data flow between the processor and storage -- 65,536 byte high speed buffer -- optional vector facility for greatly increasing the processor's engineering and scientific processing capabilities -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for microcode controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- S/370 mode provides for up to 32 channels per channel set -- Start Interpretive Execution (SIE) assist.

Standard Features: 370-XA mode -- S/370 mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- sorting instructions.

Central Storage: 33,554,432 bytes of central storage are standard. An additional 33,554,432 bytes is available for a total of 67,108,864 bytes.

Expanded Storage: (Available only on Model 180) Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments of 64Mb up to a maximum of 256Mb.

Vector Facility: The optional Vector Facility enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum each cycle.

Channels: A total of 16 channels are standard on Model 150 and Model 180. One additional group of eight block multiplexer channels is optionally available on Model 150 for a total of 24 channels. Two additional groups of eight block multiplexer channels are optionally available on Model 180 for a total of 32 channels. Up to four channels may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In S/370 mode, channels may be grouped into two logical channel sets, with up to 32 channels to a set (up to 24 on Model 150), one set assignable to the central processor. In S/370 mode, channels may be given any valid logical designation.

In 370/XA mode the processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the channel paths. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):
 - 50 Hz: #2807, for 200V, #2815 for 220V, #2816 for 380V, #2825 for 400V, #2826 for 415V
 - 60 Hz: #2733 for 200V, #9903 for 208V, #2800 for 220V, #9915 for 240V, #2824 for 380V
- Color: #9060 for Willow Green, #9061 for Garnet Rose, #9062 for Sunrise Yellow, #9063 for Classic Blue, #9064 for Charcoal Brown, #9065 for Pebble Gray, or #9066 for Pearl White.
- Tape Drive: Specify #9201 if the tape drive being used by the 3092 Model 1 Processor Controller attached to this 3090 Processor Unit is a 3420 Model 4, 6 or 8 or equivalent, or #9202 if the tape drive is a 3480 Model B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3, 865mm wide by 1795mm long (34 in. by 70.5 in.), the largest frame, require reduction of length, specify #9573. Specify code #9573 reduces frame 3 length to 1590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction to 820mm (32 in.) wide by 1525mm (60 in.) long, specify #9571. Specify code #9571 reduces the external dimensions of frames 1, 2, 3, and 5 by removal of cover/hardware. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 lbs. and may require partial depopulation of 3090 frames to satisfy this limitation. Specify #9581 to reduce frame 2 and frame 3 weights to less than 1,136kg/ 2,500 lbs. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Remote Support Facility (RSF): The capability for using the RSF remote service/logout analysis is standard and provided by the 3092 Processor Controller.
- Machine Nomenclature: #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering a 3090 Processor Complex.
2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility (#1545): Provides the vector facility capability for the central processor. See M3097 pages. Maximum: One. Field Installation: Yes. Prerequisite: #7330.

Channel Group, First Add'l (#3848): Provides the first additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: None.

Channel Group, Second Add'l (#3849): Model 180 only. Provides the second additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: #3848.

Central Storage (#4064): Provides an additional 32Mb of central storage. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb (#5064): Model 180 only. Provides the first 64Mb increment of expanded storage. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 128Mb (#5128) Model 180 only.: Provides the first 128Mb increment of expanded storage. Cannot be ordered with #5064. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 192Mb (#5192): Model 180 only. Provides the first 192Mb increment of expanded storage. Cannot be ordered with #5064, or #5128. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 256Mb (#5256): Model 180 only. Provides 256Mb increment of expanded storage. Cannot be ordered with #5064, #5128, or #5192. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, Add'l Increments: Model 180 only. Provide upgrades of expanded storage. Order by MES only. Maximum: One feature. Field Installation: Yes. Prerequisites: Yes. Installed feature. See table below.

Installed		Upgrade Configuration			
Feature	Code	64Mb	128Mb	192Mb	256Mb
0 Mb		#5064	#5128	#5192	#5256
64Mb	#5064	-	#6128	#6192	#6256
128Mb	#5128 or #6128	-	-	#6193	#6257
192Mb	#5192 or #6192 or #6193	-	-	-	#6258

Note: Parts removed or replaced during field installation of features #6128, #6256, or #6258 become the property of IBM and must be returned.

Expansion Frame (#7330): Provides the housing for the 3090 Vector Facility (#1545). Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisites: #1545.

MODEL CONVERSIONS

Model upgrades from 3090 Model 150 to 3090 Model 180, from 3090 Model 150 to 3090 Model 180E, from 3090 Model 180 to 3090 Model 200 and from 3090 Model 180 to 3090 Model 200E are field installable. The parts removed or replaced during a 3090 Model 150 to 3090 Model 180, 3090 Model 150 to 3090 Model 180E or 3090 Model 180 to 3090 Model 200E upgrade become the property of IBM and must be returned. Model downgrades are not recommended. Note: Any 3090 Model 180 upgrade to Model 200 or Model 200E will require installation of features #3848, #3849 and #4064, on the Model 180 in order to meet the minimum channel and central storage configuration of a 3090 Model 200. The price of these features (if not already installed) must be added to the price of the model conversion. Installation of these features on the 3090 Model 180 is a prerequisite to upgrading. Model conversions from 3090 Model 150 to 3090 Model 200E will require feature code changes on the 3097. Feature changes or additions on the Model 150 or 180 should be ordered separately from any model upgrade MES from Model 150 to Model 180 or Model 180 to Model 200. Feature changes or additions on the Model 150 or 180 should be ordered separately from any model upgrade MES from Model 150 to Model 180E or Model 180 to Model 200E unless adding a Vector Facility or additional Central Storage. An additional 3089 Power Unit Model 3 or other appropriate 400 Hz power source, may be required for a Model 180 to Model

200 upgrade, or a Model 180 to Model 200E upgrade. See M3097 pages for the proper power specify code needed on the 3097.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator workstation for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a

surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,708mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for Willow Green, #9162 for Garnet Rose, #9163 for Sunrise Yellow, #9164 for Classic Blue, #9165 for Charcoal Brown, #9166 for Pebble Gray, or #9167 for Pearl White.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 150E

PURPOSE

Provides arithmetic, logic and control function through a single integrated central processor with an optional Vector Facility and houses central storage, expanded storage and channels for the 3090 Model 150E.

MODELS

Model 150E 15E: 33,554,432 (bytes) Central Storage, standard -- 67,108,864 (bytes) Central Storage, full configuration.

Note: At initial microcode load time, a minimum of 200K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 150E Processor Unit requires:

1. One 3092 Model 1 Processor Controller.
2. One 3097 Model 1 or 2 Power and Coolant Distribution Unit.
3. One 3089 Model 3 Power Unit or other appropriate 400 Hz power source.
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150).
5. Two 3180 Model 140 Display Stations, or equivalent.
6. A 4800/2400 bps switched network modem supporting an autoanswer feature and an auto-call unit.
7. Access to a path of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Model 1 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. The tape drives that are supported are 3420 Models 4, 6, and 8, and the 3480 Models B11 and B22, or drives that are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

The system control program requires an appropriate operator station in addition to the 3180 system and service support display stations. The availability of an operator console is required to satisfy the minimum service configuration. Access to a tape drive is also required for installation and certain maintenance functions.

HIGHLIGHTS

Contains 33,554,432 bytes of monolithic central storage, standard -- an additional 33,554,432 bytes of central storage is available -- a single integrated central processor with 17.75 nanoseconds cycle time -- 8-byte data flow between the processor and storage -- 65,536 byte high speed buffer -- optional vector facility for greatly increasing the processor's engineering and scientific processing capabilities -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for microcode controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- S/370 mode provides for up to 32 channels per channel set (24 on 150E) -- enhanced Start

Interpretive Execution (SIE) -- Multiple High Performance Guests Support: Optional Multiple High Performance Guests Support feature provides support for the VM/XA System Product (VM/XA SP) Release 1 Enhancement for Multiple Preferred Guests. If this VM enhancement is required, a feature must be installed on every Central Processor (CP).

Standard Features: 370-XA mode -- S/370 mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- sorting instructions.

Central Storage: 33,554,432 bytes of central storage are standard. An additional 33,554,432 bytes is available for a total of 67,108,864 bytes.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments of 64Mb up to a maximum of 128Mb.

Vector Facility: The optional Vector Facility enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum (or difference) each cycle.

Channels: A total of 16 channels are standard. One additional group of eight block multiplexer channels is optional, providing for a total of 24 channels. Up to four channels may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In S/370 mode, channels may be grouped into two logical channel sets, with up to 24 channels to a set, one set assignable to the central processor. In S/370 mode, channels may be given any valid logical designation.

In 370/XA mode the processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 24 channel paths. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):
 - 50 Hz: #2807, for 200V, #2815 for 220V, #2816 for 380V, #2825 for 400V, #2826 for 415V
 - 60 Hz: #2733 for 200V, #9903 for 208V, #2800 for 220V, #9915 for 240V
- Color: #9060 for Willow Green, #9061 for Garnet Rose, #9062 for Sunrise Yellow, #9063 for Classic Blue, #9064 for Charcoal Brown, #9065 for Pebble Gray, or #9066 for Pearl White.

- **Tape Drive:** Specify #9201 if the tape drive being used by the 3092 Model 1 Processor Controller attached to this 3090 Processor Unit is a 3420 Model 4, 6 or 8 or equivalent, or #9202 if the tape drive is a 3480 Model B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.
- **Shipping Instructions:** (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3, 865mm wide by 1795mm long (34 in. by 70.5 in.), the largest frame, require reduction of length, specify #9573. Specify code #9573 reduces frame 3 length to 1590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction to 820mm (32 in.) wide by 1525mm (60 in.) long, specify #9571. Specify code #9571 reduces the external dimensions of frames 1, 2, 3, and 5 by removal of cover/hardware. Specify code #9573 is a prerequisite to #9571. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- **Machine Nomenclature:** #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering a 3090 Processor Complex.
2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility (#1545): Provides the vector facility capability for the central processor. Prerequisites: Specify #7330 Maximum: One. Field Installation: Yes.

Channel Group, First Add'l (#3848): Provides the first additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: None.

Central Storage (#4064): Provides an additional 32Mb of central storage. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb (#5064): Provides the first 64Mb increment of expanded storage. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 128Mb (#5128): Provides the first 128Mb increment of expanded storage. Cannot be ordered with #5064. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb to 128Mb (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage. Order by MES only. Prerequisites: #5064 Corequisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Multiple High Performance Guests Support, (#6851): Provides support for the VM/XA SP Release 1 Enhancement for Multiple Preferred Guests on the 3090 Model 150E. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Frame (#7330): Provides the housing for the 3090 Vector Facility (#1545). Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisite: #1545

MODEL CONVERSIONS

Model upgrades from 3090 Model 150E to 3090 Model 180E are field installable. The parts removed or replaced become the property of IBM and must be returned. Model downgrades are not available.

Processor model field upgrades, in which the IBM 3090 Multiple High Performance Guests Support is installed, require the installation of the appropriate features on the additional Central Processors (CPs).

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator workstation for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,708mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for Willow Green, #9162 for Garnet Rose, #9163 for Sunrise Yellow, #9164 for Classic Blue, #9165 for Charcoal Brown, #9166 for Pebble Gray, or #9167 for Pearl White.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 180E

PURPOSE

Provides arithmetic, logic and control function through a single integrated central processor with an optional Vector Facility and houses central storage, expanded storage and channels for the 3090 Model 180E.

MODELS

Model 180E 18E: 33,554,432 (bytes) Central Storage, standard -- 67,108,864 (bytes) Central Storage, full configuration.

Note: At initial microcode load time, a minimum of 200K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 180E Processor Unit requires:

1. One 3092 Model 1 Processor Controller
2. One 3097 Model 1 or 2 Power and Coolant Distribution Unit,
3. One 3089 Model 3 Power Unit, two if the configuration consists of 192Mb or greater of Expanded Storage and a Vector Facility or other appropriate 400 Hz power source.
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150).
5. Two 3180 Model 140 Display Stations, or equivalent.
6. A 4800/2400 bps switched network modem supporting autoanswer feature and an auto-call unit.
7. Access to a path of a customer tape control unit operation in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Model 1 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

The system control program requires an appropriate operator station in addition to the 3180 system and service support display stations. The availability of an operator console is required to satisfy the minimum service configuration. Access to a tape drive is also required for installation and certain maintenance functions.

HIGHLIGHTS

Contains 33,554,432 bytes of monolithic central storage -- one integrated central processor with a cycle time of (17.2) nanoseconds -- 8-byte data flow between the processor and storage -- 65,536 byte high speed buffer -- optional vector facility for greatly increasing the processor's engineering and scientific processing capabilities -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for microcode controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- S/370 mode provides for up to 32 channels per channel set -- enhanced Start Interpretive

Execution (SIE) -- Multiple High Performance Guests Support: Optional Multiple High Performance Guests Support feature provides support for the VM/XA System Product (VM/XA SP) Release 1 Enhancement for Multiple Preferred Guests. If this VM enhancement is required, a feature must be installed on every Central Processor (CP).

Standard Features: 370-XA mode -- S/370 mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- sorting instructions.

Central Storage: 33,554,432 bytes of central storage are standard. An additional 33,554,432 bytes are available for a total of 67,108,864 bytes.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments of 64Mb up to a maximum of 256Mb.

Vector Facility: The optional Vector Facility enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum (or difference) each cycle.

Channels: A total of 16 channels are standard. Two additional groups of eight block multiplexer channels each are optional, providing for a total of up to 32 channels. Up to 4 channels may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In S/370 mode, channels may be grouped into two logical channel sets, with up to 32 channels to a set, one set assignable to the central processor. In S/370 mode, channels may be given any valid logical designation.

In 370/XA mode the processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 32 channel paths. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

● Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):	
50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

- Color: #9060 for Willow Green, #9061 for Garnet Rose, #9062 for Sunrise Yellow, #9063 for Classic Blue, #9064 for Charcoal Brown, #9065 for Pebble Gray, or #9066 for Pearl White.
- Tape Drive: Specify #9201 if the tape drive being used by the 3092 Model 1 Processor Controller attached to this 3090 Processor Unit is a 3420 Model 4, 6 or 8 or equivalent, or #9202 if the tape drive is a 3480 Model B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. (See M3092 pages for additional information.)
- Shipping Instructions: (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3, 865mm wide by 1795mm long (34 in. by 70.5 in.), the largest frame, require reduction of length, specify #9573. Specify code #9573 reduces frame 3 length to 1590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction to 820 mm (32 in.) wide by 1525mm (60 in.) long, specify #9571. Specify code #9571 reduces the external dimensions of frames 1, 2, 3 and 5 by removal of cover/hardware. Specify code #9573 is a prerequisite to #9571. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Machine Nomenclature: #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering a 3090 Processor Complex.
2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If the 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility (#1545): Provides the vector facility capability to the central processor. Prerequisites: #7330 Maximum: One. Field Installation: Yes.

Note: If configuration contains 192Mb or greater Expanded storage and a Vector Facility, a second 3089 or equivalent source of power is required.

Channel Group, First Add'l (#3848): Provides the first additional group of 8-block multiplexer channels. Maximum: One. Field installation: Yes. Prerequisites: None.

Channel Group, Second Add'l (#3849): Provides the second additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: #3848.

Central Storage (#4064): Provides an additional 32Mb of central storage. Maximum: One. Field installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb (#5064): Provides the first 64Mb increment of expanded storage. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb (#5128): Provides 128Mb of expanded storage. Cannot be ordered with #5064. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb (#5192): Provides 192Mb of expanded storage. Cannot be ordered with #5064 or #5128. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes. (See Note 1)

Expanded Storage, 256Mb (#5256): Provides 256Mb of expanded storage. Cannot be ordered with #5064, #5128 or #5192. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes. (See Note 1)

Expanded Storage, 64Mb to 128Mb (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb (#6192): Provides an upgrade from 64Mb to 192Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes. (See Note 1)

Expanded Storage, 64Mb to 256Mb (#6256): Provides an upgrade from 64Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes. (See Note 1)

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb (#6193): Provides an upgrade from 128Mb to 192Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes. (See Note 1)

Expanded Storage, 128Mb to 256Mb (#6257): Provides an upgrade from 128Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes. (See Note 1)

Expanded Storage, 192Mb to 256Mb (#6258): Provides an upgrade from 192Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5192 or #6192 or #6193. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Notes:

1. If configuration contains the Vector Facility (#1545) and 192Mb of Expanded Storage or greater, then a second 3089 or equivalent source of power is required.

Multiple High Performance Guests Support, (#6851): Provides support for the VM/XA SP Release 1 Enhancement for Multiple Preferred Guests on the 3090 Model 180E. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expansion Frame, (#7330): Provides the housing for the 3090 Vector Facility, (#1545). Maximum: One. Field Installation: Yes. Pre-requisites: None. Corequisites: #1545

MODEL CONVERSIONS

Model upgrades from 3090 Model 180E to 3090 Model 200E are field installable. Model downgrades are not available.

Note: Any 3090 Model 180E upgrade to Model 200E will require installation of features #3848, #3849 and #4064 on the Model 180E in order to meet the minimum channel and central storage configuration on a 3090 Model 200E. The price of these features (if not already installed) must be added to the price of the model conversion. Installation of these features on the 3090 Model 180E is a prerequisite to upgrading. An additional 3089 Power Unit Model 3 or other appropriate 400 Hz power source, may be required for a Model 180E to Model 200E upgrade. See M3097 pages for the proper power specify code needed on the 3097.

Processor model field upgrades, in which the IBM 3090 Multiple High Performance Guests Support is installed, require the installa-

MACHINES

tion of the appropriate features on the additional Central Processors (CPs).

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator work station for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a

surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,708mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for Willow Green, #9162 for Garnet Rose, #9163 for Sunrise Yellow, #9164 for Classic Blue, #9165 for Charcoal Brown, #9166 for Pebble Gray, or #9167 for Pearl White.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 200E

PURPOSE

Provides arithmetic, logic and control function through two integrated central processors with optional Vector Facilities and houses shared central storage, expanded storage and channels for the 3090 model 200E.

MODELS

Model 200E 20E: 67,108,864 (bytes) Central Storage, standard -- 134,217,728 (bytes) Central Storage, full configuration.

Note: At initial microcode load time, a minimum of 200K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 200E Processor Unit requires:

1. One 3092 Model 1 Processor Controller.
2. One 3097 Model 1 or 2 Power and Coolant Distribution Unit.
3. Two 3089 Model 3 Power Units or other appropriate 400 Hz power source.
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150).
5. Two 3180 Model 140 Display Stations, or equivalent.
6. A 4800/2400 bps switched network modem supporting autoanswer feature and an auto-call unit.
7. Access to a path of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Model 1 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GG22-7074.

The system control program requires an appropriate operator station in addition to the 3180 system and service support display stations. The availability of an operator console is required to satisfy the minimum service configuration. Access to a tape drive is also required for installation and certain maintenance functions.

HIGHLIGHTS

Contains 67,108,864 bytes of monolithic central storage -- Two integrated central processors each having a cycle time of (17.2 nanoseconds) -- 8-byte data flow between each processor and storage -- Each processor has its own 65,536 byte high speed buffer -- optional vector facilities for greatly increasing the processor's engineering and scientific processing capabilities -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for microcode controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- S/370 mode provides for up to 32 channels per channel set -- enhanced Start Interpretive Execution (SIE) -- Multiple

High Performance Guests Support: Optional Multiple High Performance Guests Support feature provides support for the VM/XA System Product (VM/XA SP) Release 1 Enhancement for Multiple Preferred Guests. If this VM enhancement is required, a feature must be installed on every Central Processor (CP).

Standard Features: 370-XA mode -- S/370 mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- sorting instructions.

Central Storage: 67,108,864 bytes of central storage are standard. An additional 67,108,864 bytes are available for a total of 134,217,728 bytes.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments up to a maximum of 1024Mb.

Vector Facility: The Vector Facility, optionally available for each of the central processors, enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum (or difference) each cycle.

Channels: A total of 32 channels are standard. Two additional groups of eight block multiplexer channels each and one additional group of 16 block multiplexer channels are optional, providing for a total of up to 64 channels. Up to four channels may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically address up to eight control units. (See "Special Features" section.)

In S/370 mode, channels may be grouped into two logical channel sets, with up to 32 channels to a set, one set assignable to each central processor. Channel set switching is standard. In S/370 mode, channels may be given any valid logical designation.

In 370-XA mode, any processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 64 channel paths. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

MACHINES

- Color: #9060 for Willow Green, #9061 for Garnet Rose, #9062 for Sunrise Yellow, #9063 for Classic Blue, #9064 for Charcoal Brown, #9065 for Pebble Gray, or #9066 for Pearl White.
- Tape Drive: Specify #9201 if the tape drive being used by the 3092 Model 1 Processor Controller attached to this 3090 Processor Unit is a 3420 Model 4, 6 or 8 or equivalent, or #9202 if the tape drive is a 3480 Model B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3, (865mm wide by 1795mm long (34 in. by 70.5 in.) the largest frame) require reduction of length, specify #9573. Specify code #9573 reduces frame 3 length to 1590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction to 820mm (32 in.) wide by 1525mm (60 in.) long, specify #9571. Specify code #9571 reduces the external dimensions of frames 1, 2, 3 and 5 by removal of cover/hardware. Specify code #9573 is a prerequisite to #9571. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 pounds and may require partial depopulation of 3090 frames to satisfy this limitation. Specify #9581 to reduce frame 2 and frame 3 weights to less than 1,136kg/2,500 pounds. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Machine Nomenclature: #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering a 3090 Processor Complex.
2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility, First (#1545): Provides the vector facility capability to the first central processor. Prerequisites: #7330 Maximum: One. Field Installation: Yes.

Vector Facility, Second (#1550): Provides the vector facility capability to the second central processor. Prerequisites: #1545. Maximum: One. Field Installation: Yes.

Channel Group, First Add'l (#3850): Provides the first additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: None.

Channel Group, Second Add'l (#3851): Provides the second additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: #3850.

Channel Group, Third Add'l (#3854): Provides an additional group of 16-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: #3851, #7330.

Central Storage, (#4128): Provides an additional 64Mb of central storage. Maximum: One. Field Installation: Yes. Prerequisites: None

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb (#5064): Provides the first 64Mb increment of expanded storage. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb (#5128): Provides 128Mb of expanded storage. Cannot be ordered with #5064. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb (#5192): Provides 192Mb of expanded storage. Cannot be ordered with #5064 or #5128. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 256Mb (#5256): Provides 256Mb of expanded storage. Cannot be ordered with #5064, #5128 or #5192. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 512Mb (#5512): Provides 512Mb of expanded storage. Cannot be ordered with #5064, #5128, #5192 or #5256. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 1024Mb (#5024): Provides 1024Mb of expanded storage. Cannot be ordered with #5064, #5128, #5192, #5256, or #5512. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 128Mb (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb (#6192): Provides an upgrade from 64Mb to 192Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb (#6256): Provides an upgrade from 64Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 512Mb (#6512): Provides an upgrade from 64Mb to 512Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb (#6193): Provides an upgrade from 128Mb to 192Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb (#6257): Provides an upgrade from 128Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 512Mb (#6513): Provides an upgrade from 128Mb to 512Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 256Mb (#6258): Provides an upgrade from 192Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5192 or #6192 or #6193. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 512Mb (#6514): Provides an upgrade from 192Mb to 512Mb of expanded storage. Order by MES only. Prerequisites: #5192 or #6192 or #6193. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 256Mb to 512Mb (#6515): Provides an upgrade from 256Mb to 512Mb of expanded storage. Order by MES only. Prerequisites: #5256 or #6256 or #6257 or #6258. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 512Mb to 1024Mb (#6028): Provides an upgrade from 512Mb to 1024Mb of expanded storage. Order by MES only. Prerequisites: #5512 or #6512 or #6513 or #6514 or #6515. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Multiple High Performance Guests Support: Provides support for the VM/XA SP Release 1 Enhancement for Multiple Preferred Guests. The following features are required on the 3090 Model 200E:

- #6851 Multiple High Performance Guests Support on CP-1
- #6852 Multiple High Performance Guests Support on CP-2

Maximum: One each. Field Installation: Yes. Prerequisites: None.

Expansion Frame (#7330): Provides the housing for the first and second 3090 Vector Facilities, (#1545, #1550), and for the third additional 3090 Channel Group (#3854). Required for the installation of #1545 and #3854. Maximum: One. Field Installation: Yes. Pre-requisites: None. Corequisites: #1545 or #3854

MODEL CONVERSIONS

Model upgrades from 3090 Model 200E to 3090 Model 300E and from 3090 Model 200E to 3090 Model 400E are field installable. Model downgrades are not available.

Note: Any 3090 Model 200E upgrade to Model 400E may require installation of features on the 200E in order to provide symmetry in channels, main storage and expanded storage on the 3090 Model 400E. Installation of these features on the 3090 Model 200E is a prerequisite to upgrading. Any 3090 Model 200E upgrade to Model 300E requires that feature #7330 be installed prior to, or as part of the upgrade. The price of this feature is in addition to the upgrade price. Parts removed or replaced during field installation become the property of IBM and must be returned.

Processor model field upgrades, in which the IBM 3090 Multiple High Performance Guests Support is installed, require the installation of the appropriate features on the additional Central Processors (CPs).

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator work station for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,708mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for Willow Green, #9162 for Garnet Rose, #9163 for Sunrise Yellow, #9164 for Classic Blue, #9165 for Charcoal Brown, #9166 for Pebble Gray, or #9167 for Pearl White.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 300E

PURPOSE

Provides arithmetic, logic and control function through three integrated central processors with optional Vector Facilities and houses shared central storage, expanded storage and channels for the 3090 model 300E.

MODELS

Model 300E 30E: 67,108,864 (bytes) Central Storage, standard -- 134,217,728 (bytes) Central Storage, full configuration.

Note: At initial microcode load time, a minimum of 200K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 300E Processor Unit requires:

1. One 3092 Model 1 Processor Controller.
2. One 3097 Model 1 or 2 Power and Coolant Distribution Unit.
3. Two 3089 Model 3 Power Units or other appropriate 400 Hz power source.
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150).
5. Two 3180 Model 140 Display Stations, or equivalent.
6. A 4800/2400 bps switched network modem supporting autoanswer feature and an auto-call unit.
7. Access to a path of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Model 1 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GG22-7074.

The system control program requires an appropriate operator station in addition to the 3180 system and service support display stations. The availability of an operator console is required to satisfy the minimum service configuration. Access to a tape drive is also required for installation and certain maintenance functions.

HIGHLIGHTS

Contains 67,108,864 bytes of monolithic central storage -- Three integrated central processors each having a cycle time of (17.2) nanoseconds -- 8-byte data flow between each processor and storage -- Each processor has its own 65,536 byte high speed buffer -- optional vector facilities for greatly increasing the processor's engineering and scientific processing capabilities -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- 370-XA mode provides for addressing up to two gigabytes and provides for microcode controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- enhanced Start Interpretive Execution (SIE) -- Multiple High Performance Guests Support : Optional Multiple High Performance Guests Support feature provides support for

the VM/XA System Product (VM/XA SP) Release 1 Enhancement for Multiple Preferred Guests. If this VM enhancement is required, a feature must be installed on every Central Processor (CP).

Standard Features: 370-XA mode -- Universal Instruction Set -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- data streaming -- sorting instructions.

Central Storage: 67,108,864 bytes of central storage are standard. An additional 67,108,864 bytes are available for a total of 134,217,728 bytes.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments up to a maximum of 1024MB.

Vector Facility: The Vector Facility optionally available for each of the central processors enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum (or difference) each cycle.

Channels: A total of 32 channels are standard. Two additional groups of eight block multiplexer channels each and one additional group of 16 block multiplexer channels are optional, providing for a total of up to 64 channels. Up to four channels may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In 370-XA mode, any processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 64 channel paths. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

- Color: #9060 for Willow Green, #9061 for Garnet Rose, #9062 for Sunrise Yellow, #9063 for Classic Blue, #9064 for Charcoal Brown, #9065 for Pebble Gray, or #9066 for Pearl White.
- Tape Drive: Specify #9201 if the tape drive being used by the 3092 Model 1 Processor Controller attached to this 3090 Processor Unit is a 3420 Model 4, 6 or 8 or equivalent, or #9202 if the tape drive is a 3480 Model B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.

- **Shipping Instructions:** (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3, 865mm wide by 1795mm long (34 in. by 70.5 in.), the largest frame, require reduction of length, specify #9573. Specify code #9573 reduces frame 3 length to 1590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction to 820mm (32 in.) wide by 1525mm (60 in.) long, specify #9571. Specify code #9571 reduces the external dimensions of frames 1, 2, 3 and 5 by removal of cover/hardware. Specify code #9573 is a prerequisite to #9571. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- **Weight Considerations:** (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 pounds and may require partial depopulation of 3090 frames to satisfy this limitation. Specify #9581 to reduce frame 2 and frame 3 weights to less than 1,136kg/2,500 pounds. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- **Machine Nomenclature:** #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering 3090 Processor Complex.
2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility, First (#1545): Provides the vector facility capability to the first central processor. Prerequisites: None. Maximum: One. Field Installation: Yes.

Vector Facility, Second (#1550): Provides the vector facility capability to the second central processor. Prerequisites: #1545. Maximum: One. Field Installation: Yes.

Vector Facility, Third (#1555): Provides the vector facility capability to the third central processor. Prerequisites: #1550 Maximum: One. Field Installation: Yes.

Channel Group, First Add'l (#3850): Provides the first additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: None.

Channel Group, Second Add'l (#3851): Provides the second additional group of 8-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: #3850.

Channel Group, Third Add'l (#3854): Provides an additional group of 16-block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: #3851.

Central Storage, (#4128): Provides an additional 64Mb of central storage. Maximum: One. Field Installation: Yes. Prerequisites: None.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb (#5064): Provides the first 64Mb increment of expanded storage. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb (#5128): Provides 128Mb of expanded storage. Cannot be ordered with #5064. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb (#5192): Provides 192Mb of expanded storage. Cannot be ordered with #5064 or #5128. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 256Mb (#5256): Provides 256Mb of expanded storage. Cannot be ordered with #5064, #5128 or #5192. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 512Mb (#5512): Provides 512Mb of expanded storage. Cannot be ordered with #5064, #5128, #5192 or #5256. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 1024Mb (#5024): Provides 1024Mb of expanded storage. Cannot be ordered with #5064, #5128, #5192, #5256, or #5512. Prerequisites: None. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 128Mb (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage. Order by MES only. Prerequisites: #5064 Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb (#6192): Provides an upgrade from 64Mb to 192Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb (#6256): Provides an upgrade from 64Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 512Mb (#6512): Provides an upgrade from 64Mb to 512Mb of expanded storage. Order by MES only. Prerequisites: #5064. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb (#6193): Provides an upgrade from 128Mb to 192Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb (#6257): Provides an upgrade from 128Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 512Mb (#6513): Provides an upgrade from 128Mb to 512Mb of expanded storage. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 256Mb (#6258): Provides an upgrade from 192Mb to 256Mb of expanded storage. Order by MES only. Prerequisites: #5192 or #6192 or #6193. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 512Mb (#6514): Provides an upgrade from 192Mb to 512Mb of expanded storage. Order by MES only.

MACHINES

Prerequisites: #5192 or #6192 or #6193. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 256Mb to 512Mb (#6515): Provides an upgrade from 256Mb to 512Mb of expanded storage. Order by MES only. Prerequisites: #5256 or #6256 or #6257 or #6258. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 512Mb to 1024Mb (#6028): Provides an upgrade from 512Mb to 1024Mb of expanded storage. Order by MES only. Prerequisites: #5512 or #6512 or #6513 or #6514 or #6515. Co-requisite: None. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

The Expansion Frame is a standard feature on the Model 300E.

Multiple High Performance Guests Support: Provides support for the VM/XA SP Release 1 Enhancement for Multiple Preferred Guests. The following features are required on the 3090 Model 300E:

- #6851 Multiple High Performance Guests Support on CP-1
- #6852 Multiple High Performance Guests Support on CP-2
- #6853 Multiple High Performance Guests Support on CP-0

Maximum: One each. Field Installation: Yes. Prerequisites: None.

MODEL CONVERSIONS

Model upgrades from 3090 Model 300E to 3090 Model 600E are field installable. The parts removed or replaced become the property of IBM and must be returned. Model downgrades are not available.

Note: Any 3090 Model 300E upgrade to Model 600E may require installation of features on the 300E in order to provide symmetry in channels, main storage and expanded storage on the Model 600E. Installation of these features on the 3090 Model 300E is a prerequisite to upgrading.

Processor model field upgrades, in which the IBM 3090 Multiple High Performance Guests Support is installed, require the installation of the appropriate features on the additional Central Processors (CPs).

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator work station for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,708mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for Willow Green, #9162 for Garnet Rose, #9163 for Sunrise Yellow, #9164 for Classic Blue, #9165 for Charcoal Brown, #9166 for Pebble Gray, or #9167 for Pearl White.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 400E

PURPOSE

Provides arithmetic, logic and control function through four integrated central processors with optional Vector Facilities and houses shared central storage, expanded storage and channels for the 3090 model 400E. Available as a 3090 Processor Unit Model 400E and by MES to upgrade a 3090 Model 200, or 200E to a Model 400E.

MODELS

Model 400E 40E: 268,435,456 (bytes) Central Storage, full configuration.

Note: At initial microcode load time, a minimum of 576K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 400E Processor Unit requires:

1. One 3092 Model 2 Processor Controller.
2. Two 3097 Model 1 or 2 Power and Coolant Distribution Units; two 3097 Model 1s, two Model 2s, or one Model 1 and one Model 2 can be used. I/O power sequence controls are provided on the 3097 Model 1, otherwise both Models provide the same functions.
3. Four 3089 Model 3 Power Units or other appropriate 400 Hz power source.
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150).
5. Three 3180 Model 140 Display Stations, or equivalent.
6. Two 4800/2400 bps switched network modems each supporting autoanswer feature and an auto-call unit.
7. Access to two paths of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GG22-7074.

The system control program requires appropriate operator stations in single image a minimum of one and in partitioned mode a minimum of two operator stations are required in addition to the 3180 system and service support display stations. The availability of an operator console is required for each partition to satisfy the minimum service configuration. Access to a tape drive is also required from each partition for installation and certain maintenance functions.

HIGHLIGHTS

Contains 134,217,728 bytes of monolithic central storage -- four integrated central processors each having a cycle time of (17.2) nanoseconds -- 8-byte data flow between each processor and storage -- each processor has its own 65,536 byte high speed buffer --

optional vector facilities for greatly increasing the processor's engineering and scientific processing capabilities -- Concurrent repair of a hardware partition is the normal maintenance procedure -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode (when Partitioned) or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for microcode controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- S/370 mode provides for up to 32 channels per channel set -- enhanced Start Interpretive Execution (SIE) -- Multiple High Performance Guests Support -- Optional Multiple High Performance Guests Support feature provides support for the VM/XA System Product (VM/XA SP) Release 1 Enhancement for Multiple Preferred Guests. If this VM enhancement is required, a feature must be installed on every Central Processor (CP).

Standard Features: 370-XA mode -- S/370 mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- sorting instructions.

Central Storage: 134,217,728 bytes of central storage are standard. An additional 134,217,728 bytes are available for a total of 268,435,456 bytes.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments up to a maximum of 2048MB.

Vector Facility: The Vector Facility optionally available for each of the central processors enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum (or difference) each cycle.

Channels: A total of 64 channels are standard, 32 channels on the A-side and 32 channels on the B-side. Two additional groups of 16 block multiplexer channels each, eight on the A-side and eight on the B-side, and one additional group of 32 block multiplexer channels, sixteen on the A-side and sixteen on the B-side, are optional, providing for a total of up to 128 channels. Up to eight channels (four on each side) may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In S/370 mode (when the 400E is in Physical Partitioned Mode), channels may be grouped into logical channel sets with up to 32 channels to a set, one assignable to each central processor. Channel set switching is standard. In S/370 mode, channels may be given any valid logical designation.

In 370-XA mode, any processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 128 channel paths in single-image mode or any of the 64 channel paths in partitioned mode. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

MACHINES

3090 Model 400E Tightly Coupled Multiprocessing: The normal operation of the 3090 Model 400E is in 370-XA mode under control of a single control program through a single operational interface. Concurrent repair is the normal mode of maintenance.

The operator has the ability to reconfigure elements from the functioning configuration, create a maintenance subsystem, effect concurrent repair and return the repaired subsystem to the continuing configuration without an IPL or IML. The continuing subsystem may consist of either half of the 3090 Model 400E. This provides very high availability of the surviving portion of the processor complex. When run in single-image mode, the 3090 Model 400E may operate only in 370-XA mode.

The 3090 Model 400E may also be partitioned into two independent dyadic processors. The resultant dyadic configurations may be operated independently of each other in either 370-XA or S/370 mode.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):

50 Hz 200V #2807 220V #2815 380V #2816 400V #2825 415V #2826	60 Hz 200V #2733 208V #9903 220V #2800 240V #9915
---	---
- Color: #9060 for Willow Green, #9061 for Garnet Rose, #9062 for Sunrise Yellow, #9063 for Classic Blue, #9064 for Charcoal Brown, #9065 for Pebble Gray, or #9066 for Pearl White.
- Tape Drive: Specify #9201 if the tapes drives being used by the 3092 Model 2 Processor Controller attached to this 3090 Processor Unit are 3420 Models 4, 6 or 8 or equivalent, or #9202 if the tape drives are 3480 Models B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3 (13), 865mm wide by 1795mm long (34 in. by 70.5 in.), the largest frame, require reduction of length, specify #9573 (#9673). Specify code #9573 (#9673) reduces frame 3 (13) length to 1590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction to 820mm (32 in.) wide by 1525mm (60 in.) long, specify #9571 (#9671). Specify code #9571 (#9671) reduces the external dimensions of frames 1 (11), 2 (12), 3 (13) and 5 (15) by removal of cover/hardware. Specify code #9573 is a prerequisite to #9571. Specify code #9673 is a prerequisite to #9671. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 pounds and may require partial depopulation of 3090 frames to satisfy this limitation. Specify #9581 (#9681) to reduce frame 2 (12) and frame 3 (13) weights to less than 1,136kg/2,500 pounds. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Machine Nomenclature: #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering a 3090 Processor Complex.

2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility, First, A-Side (#1545): Provides the vector facility capability to the first central processor on the A-side. Prerequisites: #7330. Maximum: One. Field Installation: Yes.

Vector Facility, Second, A-Side (#1550): Provides the vector facility capability to the second central processor on the A-side. Prerequisites: #1545. Maximum: One. Field Installation: Yes.

Vector Facility, First, B-Side (#1546): Provides the vector facility capability to the first central processor on the B-side. Prerequisites: #7331. Maximum: One. Field Installation: Yes.

Vector Facility, Second, B-Side (#1551): Provides the vector facility capability to the second central processor on the B-side. Prerequisites: #1546. Maximum: One. Field Installation: Yes.

Channel Group, First Add'l, A-side (#3850): Provides the first additional group of 8-block multiplexer channels on the A-side. Maximum: One. Field Installation: Yes. Prerequisites: None. Co-requisite: #3852.

Channel Group, Second Add'l, A-side (#3851): Provides the second additional group of 8-block multiplexer channels on the A-side. Maximum: One. Field Installation: Yes. Prerequisites: #3850. Co-requisite: #3853.

Channel Group, Third Add'l, A-side (#3854): Provides an additional group of 16-block multiplexer channels on the A-side. Maximum: One. Field Installation: Yes. Prerequisites: #3851, #7330. Co-Requisite: #3856, #7331.

Channel Group, First Add'l, B-side (#3852): Provides the first additional group of 8-block multiplexer channels on the B-side. Maximum: One. Field Installation: Yes. Prerequisites: None. Co-requisite: #3850.

Channel Group, Second Add'l, B-side (#3853): Provides the second additional group of 8-block multiplexer channels on the B-side. Maximum: One. Field Installation: Yes. Prerequisites: #3852. Co-requisite: #3851.

Channel Group, Third Add'l, B-side (#3856): Provides an additional group of 16-block multiplexer channels on the B-side. Maximum: One. Field Installation: Yes. Prerequisites: #3853, #7331. Co-requisite: #3854, #7330.

Central Storage, A-Side, (#4128): Provides an additional 64Mb of central storage. Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisites: #4228 on B-Side.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Central Storage, B-Side, (#4228): Provides an additional 64Mb of central storage. Maximum: One. Field Installation: Yes. Corequisites: #4128 on A-Side.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expand Storage, 64MB-A Side (#5064): Provides the first 64Mb increment of expanded storage on the A-side. Prerequisites: None. Co-requisite: #7064. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb - A Side (#5128): Provides 128Mb of expanded storage on the A-side. Cannot be ordered with #5064. Prerequisites: None. Co-requisite: #7128. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb - A Side (#5192): Provides 192Mb of expanded storage on the A-side. Cannot be ordered with #5064 or #5128. Prerequisites: None. Co-requisite: #7192. Maximum: One. Field Installation: Yes.

Expanded Storage, 256Mb - A Side (#5256): Provides 256Mb of expanded storage on the A-side. Cannot be ordered with #5064, #5128 or #5192. Prerequisites: None. Co-requisite: #7256. Maximum: One. Field Installation: Yes.

Expanded Storage, 512Mb - A Side (#5512): Provides 512Mb of expanded storage on the A-side. Cannot be ordered with #5064, #5128, #5192 or #5256. Prerequisites: None. Co-requisite: #7512. Maximum: One. Field Installation: Yes.

Expanded Storage, 1024Mb - A Side (#5024): Provides 1024Mb of expanded storage on the A-side. Cannot be ordered with #5064, #5128, #5192, #5256, or #5512. Prerequisites: None. Co-requisite: #7024. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 128Mb - A Side (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064 Co-requisite: #7128 or #8128. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb - A-Side (#6192): Provides an upgrade from 64Mb to 192Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064. Co-requisite: #7192 or #8192. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb - A-Side (#6256): Provides an upgrade from 64Mb to 256Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064. Co-requisites: #7256 or #8256. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 512Mb - A-Side (#6512): Provides an upgrade from 64Mb to 512Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064. Co-requisite: #7512 or #8512. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb - A-Side (#6193): Provides an upgrade from 128Mb to 192Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: #7192 or #8193. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb - A-Side (#6257): Provides an upgrade from 128Mb to 256Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: #7256 or #8257. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 512Mb - A-Side (#6513): Provides an upgrade from 128Mb to 512Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: #7512 or #8513. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 256Mb - A-Side (#8258): Provides an upgrade from 192Mb to 256Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5192 or #6192 or #6193. Co-requisite: #7256 or #8258. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 512Mb - A-Side (#6514): Provides an upgrade from 192Mb to 512Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5192 or #6192 or #6193.

Co-requisite: #7512 or #8514. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 256Mb to 512Mb - A-Side (#6515): Provides an upgrade from 256Mb to 512Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5256 or #6256 or #6257 or #6258. Co-requisite: #7512 or #8515. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 512Mb to 1024Mb - A-Side (#6028): Provides an upgrade from 512Mb to 1024Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5512 or #6512 or #6513 or #6514 or #6515. Co-requisite: #7024 or #8028. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Multiple High Performance Guests Support: Provides support for the VM/XA SP Release 1 Enhancement for Multiple Preferred Guests. The following features are required on the 3090 Model 400E:

- #6851 Multiple High Performance Guests Support on CP-1
- #6852 Multiple High Performance Guests Support on CP-2
- #7851 Multiple High Performance Guests Support on CP-3
- #7852 Multiple High Performance Guests Support on CP-4

Maximum: One each. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb - B-Side (#7064): Provides the first 64Mb increment of expanded storage on the B-side. Prerequisites: None. Co-requisite: #5064. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb - B-Side (#7128): Provides 128Mb of expanded storage on the B-side. Cannot be ordered with #7064. Prerequisites: None. Co-requisite: #5128. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb - B-Side (#7192): Provides 192Mb of expanded storage on the B-side. Cannot be ordered with #7064 or #7128. Prerequisites: None. Co-requisite: #5192. Maximum: One. Field Installation: Yes.

Expanded Storage, 256Mb - B-Side (#7256): Provides 256-Mb of expanded storage on the B-side. Cannot be ordered with #7064, #7128 or #7192. Prerequisites: None. Co-requisite: #5256. Maximum: One. Field Installation: Yes.

Expanded Storage, 512Mb - B-Side (#7512): Provides 512Mb of expanded storage on the B-side. Cannot be ordered with #7064, #7128, #7192 or #7256. Prerequisites: None. Co-requisite: #5512. Maximum: One. Field Installation: Yes.

Expanded Storage, 1024Mb - B-Side (#7024): Provides 1024Mb of expanded storage on the B-side. Cannot be ordered with #7064, #7128, #7192, #7256 or #7512. Prerequisites: None. Co-requisite: #5024. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 128Mb - B-Side (#8128): Provides an upgrade from 64Mb to 128Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7064 Co-requisite: #5128 or #6128. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb - B-Side (#8192): Provides an upgrade from 64Mb to 192Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7064. Co-requisite: #5192 or #6192. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb - B-Side (#8256): Provides an upgrade from 64Mb to 256Mb of expanded storage on the B-Side.

Order by MES only. Prerequisites: #7064. Co-requisite: #5256 or #6256. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 512Mb - B-Side (#8512): Provides an upgrade from 64Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7064. Co-requisite: #5512 or #6512. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb - B-Side (#8193): Provides an upgrade from 128Mb to 192Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7128 or #8128. Co-requisite: #5192 or #6193. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb - B-Side (#8257): Provides an upgrade from 128Mb to 256Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7128 or #8128. Co-requisite: #5256 or #6257. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 512Mb - B-Side (#8513): Provides an upgrade from 128Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7128 or #8128. Co-requisite: #5512 or #6513. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 256Mb - B-Side (#8258): Provides an upgrade from 192Mb to 256Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7192 or #8192 or #8193. Co-requisite: #5256 or #6258. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 512Mb - B-Side (#8514): Provides an upgrade from 192Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7192 or #8192 or #8193. Co-requisite: #5512 or #6514. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 256Mb to 512Mb - B-Side (#8515): Provides an upgrade from 256Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7256 or #8256 or #8257 or #8258. Co-requisite: #5512 or #6515. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 512Mb to 1024Mb - B-Side (#8028): Provides an upgrade from 512Mb to 1024Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7512 or #8512 or #8513 or #8514 or #8515. Co-requisite: #6028. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expansion Frame, A-side (#7330): Provides the housing for the first and second 3090 Vector Facilities on the A-side (#1545, #1550) and for the third additional 3090 Channel Group in the A-side (#3854). Required for the installation of #1545 and #3854. Maximum: One. Field Installation: Yes. Pre-requisites: None. Corequisites: #1545 if installed for Vector or #3854, #3856 and #7331 if installed for #3854.

Expansion Frame, B-side (#7331): Provides the housing for the first and second 3090 Vector Facilities on the B-side (#1546, #1551) and for the third additional 3090 Channel Group in the B-side (#3856). Required for the installation of #1546 and #3856. Maximum: One. Field Installation: Yes. Pre-requisites: None. Corequisites: #1546 if installed for Vector or #3854, #3856 and #7330 if installed for #3856.

MODEL CONVERSIONS

Model upgrades from 3090 Model 400E to 3090 Model 600E are field installable. Model downgrades are not available.

Note: Any 3090 Model 400E upgrade to Model 600E requires that feature codes #7330 and #7331 be installed prior to, or as part of the upgrade. The price of these features is in addition to the upgrade price.

Processor model field upgrades, in which the IBM 3090 Multiple High Performance Guests Support is installed, require the installation of the appropriate features on the additional Central Processors (CPs).

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator work station for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,708mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for Willow Green, #9162 for Garnet Rose, #9163 for Sunrise Yellow, #9164 for Classic Blue, #9165 for Charcoal Brown, #9166 for Pebble Gray, or #9167 for Pearl White.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 600E

PURPOSE

Provides arithmetic, logic and control function through six integrated central processors with optional Vector Facilities and houses shared central storage, expanded storage and channels for the 3090 model 600E. Available as a 3090 Processor Unit Model 600E and by MES to upgrade a 3090 Model 300E, 400 or 400E to a Model 600E.

MODELS

Model 600E 60E: 134,217,728 (bytes) Central Storage, standard -- 268,435,456 (bytes) Central Storage, full configuration

Note: At initial microcode load time, a minimum of 576K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 600E Processor Unit requires:

1. One 3092 Model 2 Processor Controller.
2. Two 3097 Model 1 or 2 Power and Coolant Distribution Units, two 3097 Model 1s, two Model 2s, or one Model 1 and one Model 2 can be used. I/O power sequence controls are provided on the 3097 Model 1, otherwise both Models provide the same functions.
3. Four 3089 Model 3 Power Units or other appropriate 400 Hz power source.
4. Two 3370 Model A2 Direct Access Storage Units, each with the string switch feature (#8150).
5. Three 3180 Model 140 Display Stations, or equivalent.
6. Two 4800/2400 bps switched network modems each supporting autoanswer feature and an auto-call unit.
7. Access to two paths of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Processor Controller. If a tape drive with 10.5-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

The system control program requires appropriate operator stations, in single image a minimum of one and in partitioned mode a minimum of two operator stations are required, in addition to the 3180 system and service support display stations. The availability of an operator console is required for each partition to satisfy the minimum service configuration. Access to a tape drive is also required from each partition for installation and certain maintenance functions.

HIGHLIGHTS

Contains 134,217,728 bytes of monolithic central storage -- Six integrated central processors each having a cycle time of (17.2) nanoseconds -- 8-byte data flow between each processor and storage -- Each processor has its own 65,536-byte high speed buffer -- optional vector facilities for greatly increasing the processor's en-

gineering and scientific processing capabilities -- Concurrent repair of a hardware partition is the normal maintenance procedure -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- 370-XA mode provides for addressing up to two gigabytes and provides for microcode controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking enhanced Start Interpretive Execution (SIE) -- Multiple High Performance Guests Support : Optional Multiple High Performance Guests Support feature provides support for the VM/XA System Product (VM/XA SP) Release 1 Enhancement for Multiple Preferred Guests. If this VM enhancement is required, a feature must be installed on every Central Processor (CP).

Standard Features: 370-XA mode -- Universal Instruction Set -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- data streaming -- sorting instructions.

Central Storage: 134,217,728 bytes of central storage are standard. An additional 134,217,728 bytes are available for a total of 268,435,456 bytes.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in increments up to a maximum of 2,048MB.

Vector Facility: The Vector Facility optionally available for each of the central processors enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum (or difference) each cycle.

Channels: A total of 64 channels are standard, 32 channels on the A-side and 32 channels on the B-side. Two additional groups of 16 block multiplexer channels each, eight on the A-side and eight on the B-side, and one additional group of 32 block multiplexer channels, sixteen on the A-side and sixteen on the B-side, are optional, providing for a total of up to 128 channels. Up to eight channels (four on each side) may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In 370-XA mode, any processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 128 channel paths in single-image mode or any of the 64 channel paths in partitioned mode. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

3090 Model 600E Tightly Coupled Multiprocessing: The normal operation of the 3090 Model 600E is in 370-XA mode under control of a single control program through a single operational interface. Concurrent repair is the normal mode of maintenance.

The operator has the ability to reconfigure elements from the functioning configuration, create a maintenance subsystem, effect concurrent repair and return the repaired subsystem to the continuing configuration without an IPL or IML. The continuing subsystem may consist of either half of the 3090 Model 600E. This provides very high availability of the surviving portion of the processor complex. When run in single-image mode, the 3090 Model 600E may operate only in 370-XA mode.

The 3090 Model 600E may also be partitioned into two independent triadic processors.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	
- Color: #9060 for Willow Green, #9061 for Garnet Rose, #9062 for Sunrise Yellow, #9063 for Classic Blue, #9064 for Charcoal Brown, #9065 for Pebble Gray, or #9066 for Pearl White.
- Tape Drive: Specify #9201 if the tapes drives being used by the 3092 Model 2 Processor Controller attached to this 3090 Processor Unit are 3420 Models 4, 6 or 8 or equivalent, or #9202 if the tape drives are 3480 Models B11 or B22 or equivalent. Either #9201 or #9202 may be specified but not both. See M3092 pages for additional information.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3 (13), 865mm wide by 1795mm long (34 in. by 70.5 in.), the largest frame, require reduction of length, specify #9573 (#9673). Specify code #9573 (#9673) reduces frame 3 (13) length to 1590mm (62.5 in.) by removal of the tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction to 820mm (32 in.) wide by 1525mm (60 in.) long, specify #9571 (#9671). Specify code #9571 (#9671) reduces the external dimensions of frames 1 (11), 2 (12), 3 (13) and 5 (15) by removal of cover/hardware. Specify code #9573 is a prerequisite to #9571. Specify code #9673 is a prerequisite to #9671. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Weight Considerations: (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 pounds and may require partial depopulation of 3090 frames to satisfy this limitation. Specify #9581 (#9681) to reduce frame 2 (12) and frame 3 (13) weights to less than 1,136kg/2,500 pounds. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- Machine Nomenclature: #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

3090 Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering a 3090 Processor Complex.
2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility, First, A-Side (#1545): Provides the vector facility capability to the first central processor on the A-side. Prerequisites: None. Maximum: One. Field Installation: Yes.

Vector Facility, Second, A-Side (#1550): Provides the vector facility capability to the second central processor on the A-side. Prerequisites: #1545. Maximum: One. Field Installation: Yes.

Vector Facility, Third, A-Side (#1555): Provides the vector facility capability to the third central processor on the A-side. Prerequisites: #1550. Maximum: One. Field Installation: Yes.

Vector Facility, First, B-Side (#1546): Provides the vector facility capability to the first central processor on the B-side. Prerequisites: None. Maximum: One. Field Installation: Yes.

Vector Facility, Second, B-Side (#1551): Provides the vector facility capability to the second central processor on the B-side. Prerequisites: #1546. Maximum: One. Field Installation: Yes.

Vector Facility, Third, B-Side (#1556): Provides the vector facility capability to the third central processor on the B-side. Prerequisites: #1551. Maximum: One. Field Installation: Yes.

Channel Group, First Add'l, A-side (#3850): Provides the first additional group of 8-block multiplexer channels on the A-side. Maximum: One. Field Installation: Yes. Prerequisites: None. Co-requisite: #3852.

Channel Group, Second Add'l, A-side (#3851): Provides the second additional group of 8-block multiplexer channels on the A-side. Maximum: One. Field Installation: Yes. Prerequisites: #3850. Co-requisite: #3853.

Channel Group, Third Add'l, A-side (#3854): Provides an additional group of 16-block multiplexer channels on the A-side. Maximum: One. Field Installation: Yes. Prerequisites: #3851. Co-requisite: #3856.

Channel Group, First Add'l, B-side (#3852): Provides the first additional group of 8-block multiplexer channels on the B-side. Maximum: One. Field Installation: Yes. Prerequisites: None. Co-requisite: #3850.

Channel Group, Second Add'l, B-side (#3853): Provides the second additional group of 8-block multiplexer channels on the B-side. Maximum: One. Field Installation: Yes. Prerequisites: #3852. Co-requisite: #3851.

Channel Group, Third Add'l, B-side (#3856): Provides an additional group of 16-block multiplexer channels on the B-side. Maximum: One. Field Installation: Yes. Prerequisites: #3853. Co-requisite: #3854.

Central Storage, A-Side, (#4128): Provides an additional 64Mb of central storage. Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisites: #4228 on B-Side.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Central Storage, B-Side, (#4228): Provides an additional 64Mb of central storage. Maximum: One. Field Installation: Yes. Corequisites: #4128 on A-Side.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb - A-Side (#5064): Provides the first 64Mb increment of expanded storage on the A-side. Prerequisites: None. Co-requisite: #7064. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb - A-Side (#5128): Provides 128Mb of expanded storage on the A-side. Cannot be ordered with #5064. Prerequisites: None. Co-requisite: #7128. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb - A-Side (#5192): Provides 192Mb of expanded storage on the A-side. Cannot be ordered with #5064 or #5128. Prerequisites: None. Co-requisite: #7192. Maximum: One. Field Installation: Yes.

Expanded Storage, 256Mb - A-Side (#5256): Provides 256Mb of expanded storage on the A-side. Cannot be ordered with #5064, #5128 or #5192. Prerequisites: None. Co-requisite: #7256. Maximum: One. Field Installation: Yes.

Expanded Storage, 512Mb - A-Side (#5512): Provides 512Mb of expanded storage on the A-side. Cannot be ordered with #5064, #5128, #5192 or #5256. Prerequisites: None. Co-requisite: #7512. Maximum: One. Field Installation: Yes.

Expanded Storage, 1024Mb - A-Side (#5024): Provides 1024Mb of expanded storage on the A-side. Cannot be ordered with #5064, #5128, #5192, #5256, or #5512. Prerequisites: None. Co-requisite: #7024. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 128Mb - A-Side (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064 Co-requisite: #7128 or #8128. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb - A-Side (#6192): Provides an upgrade from 64Mb to 192Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064. Co-requisite: #7192 or #8192. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb - A-Side (#6256): Provides an upgrade from 64Mb to 256Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064. Co-requisite: #7256 or #8256. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 512Mb - A-Side (#6512): Provides an upgrade from 64Mb to 512Mb of expanded storage on the A-Side. Order by MES only. Prerequisites: #5064. Co-requisite: #7512 or #8512. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb - A-Side (#6193): Provides an upgrade from 128Mb to 192Mb of expanded storage on the A Side. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: #7192 or #8193. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb - A-Side (#6257): Provides an upgrade from 128Mb to 256Mb of expanded storage on the A Side. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: #7256 or #8257. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 512Mb - A-Side (#6513): Provides an upgrade from 128Mb to 512Mb of expanded storage on the A Side. Order by MES only. Prerequisites: #5128 or #6128. Co-requisite: #7512 or #8513. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 256Mb - A-Side (#6258): Provides an upgrade from 192Mb to 256Mb of expanded storage on the A Side. Order by MES only. Prerequisites: #5192 or #6192 or #6193. Co-requisite: #7256 or #8258. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 512Mb - A-Side (#6514): Provides an upgrade from 192Mb to 512Mb of expanded storage on the A Side. Order by MES only. Prerequisites: #5192 or #6192 or #6193. Co-requisite: #7512 or #8514. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 256Mb to 512Mb - A-Side (#6515): Provides an upgrade from 256Mb to 512Mb of expanded storage on the A Side. Order by MES only. Prerequisites: #5256 or #6256 or #6257 or #6258. Co-requisite: #7512 or #8515. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 512Mb to 1024Mb - A-Side (#6028): Provides an upgrade from 512Mb to 1024Mb of expanded storage on the A Side. Order by MES only. Prerequisites: #5512 or #6512 or #6513 or #6514 or #6515. Co-requisite: #7024 or #8028. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Multiple High Performance Guests Support: Provides support for the VM/XA SP Release 1 Enhancement for Multiple Preferred Guests. The following features are required on the 3090 Model 600E:

- #6851 Multiple High Performance Guests Support on CP-1
- #6852 Multiple High Performance Guests Support on CP-2
- #6853 Multiple High Performance Guests Support on CP-0
- #7851 Multiple High Performance Guests Support on CP-3
- #7852 Multiple High Performance Guests Support on CP-4
- #7853 Multiple High Performance Guests Support on CP-5

Maximum: One each. Field Installation: Yes. Prerequisites: None

Expanded Storage, 64Mb - B-Side (#7064): Provides the first 64Mb increment of expanded storage on the B-side. Prerequisites: None. Co-requisite: #5064. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb - B-Side (#7128): Provides 128Mb of expanded storage on the B-side. Cannot be ordered with #7064. Prerequisites: None. Co-requisite: #5128. Maximum: One. Field Installation: Yes.

Expanded Storage, 192Mb - B-Side (#7192): Provides 192Mb of expanded storage on the B-side. Cannot be ordered with #7064 or #7128. Prerequisites: None. Co-requisite: #5192. Maximum: One. Field Installation: Yes.

Expanded Storage, 256Mb - B-Side (#7256): Provides 256Mb of expanded storage on the B-side. Cannot be ordered with #7064, #7128 or #7192. Prerequisites: None. Co-requisite: #5256. Maximum: One. Field Installation: Yes.

Expanded Storage, 512Mb - B-Side (#7512): Provides 512Mb of expanded storage on the B-side. Cannot be ordered with #7064, #7128, #7192 or #7256. Prerequisites: None. Co-requisite: #5512. Maximum: One. Field Installation: Yes.

Expanded Storage, 1024Mb - B-Side (#7024): Provides 1024Mb of expanded storage on the B-side. Cannot be ordered with #7064, #7128, #7192, #7256, or #7512. Prerequisites: None. Co-requisite: #5024. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 128Mb - B-Side (#8128): Provides an upgrade from 64Mb to 128Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7064 Co-requisite: #5128 or #6128. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 192Mb - B-Side (#8192): Provides an upgrade from 64Mb to 192Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7064. Co-requisite: #5192 or #6192. Maximum: One. Field Installation: Yes.

Expanded Storage, 64Mb to 256Mb - B-Side (#8256): Provides an upgrade from 64Mb to 256Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7064. Co-requisite: #5256 or #6256. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 64Mb to 512Mb - B-Side (#8512): Provides an upgrade from 64Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7064. Co-requisite: #5512 or #6512. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 128Mb to 192Mb - B-Side (#8193): Provides an upgrade from 128Mb to 192Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7128 or #8128. Co-requisite: #5192 or #6193. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 256Mb - B-Side (#8257): Provides an upgrade from 128Mb to 256Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7128 or #8128. Co-requisite: #5256 or #6257. Maximum: One. Field Installation: Yes.

Expanded Storage, 128Mb to 512Mb - B-Side (#8513): Provides an upgrade from 128Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7128 or #8128. Co-requisite: #5512 or #6513. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 256Mb - B-Side (#8258): Provides an upgrade from 192Mb to 256Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7192 or #8192 or #8193. Co-requisite: #5256 or #6258. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 192Mb to 512Mb - B-Side (#8514): Provides an upgrade from 192Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7192 or #8192 or #8193. Co-requisite: #5512 or #6514. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 256Mb to 512Mb - B-Side (#8515): Provides an upgrade from 256Mb to 512Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7256 or #8256 or #8257 or #8258. Co-requisite: #5512 or #6515. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Expanded Storage, 512Mb to 1024Mb - B-Side (#8028): Provides an upgrade from 512Mb to 1024Mb of expanded storage on the B-Side. Order by MES only. Prerequisites: #7512 or #8512 or #8513 or #8514 or #8515. Co-requisite: #6028. Maximum: One. Field Installation: Yes.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

The Expansion Frames are standard features on the Model 600E.

MODEL CONVERSIONS

Processor model field upgrades, in which the IBM 3090 Multiple High Performance Guests Support is installed, require the installation of the appropriate features on the additional Central Processors (CPs).

Model downgrades are not available.

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator work station for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,708mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for Willow Green, #9162 for Garnet Rose, #9163 for Sunrise Yellow, #9164 for Classic Blue, #9165 for Charcoal Brown, #9166 for Pebble Gray, or #9167 for Pearl White.

SUPPLIES (NONE)

3090 PROCESSOR UNIT MODEL 120E

PURPOSE

Provides arithmetic, logic and control function through a single integrated central processor with optional Vector Facilities and houses central storage, expanded storage, and channels for a 3090 Model 120E.

MODEL 120E

Model 120E 12E: 33,554,432 (bytes) Central Storage, standard.

Note: At initial microcode load time, a minimum of 200K bytes of central storage is assigned for system usage and is unavailable for programs. Depending upon the number of UCWs required in the configuration, additional central storage may be required for the system area. Expansion of the system area occurs automatically as UCWs are added (up to one megabyte and a maximum number of devices supported equal to 4,096 minus the number of channels defined using IOCP).

Prerequisites: Each 3090 Model 120E Processor Unit requires:

1. One 3092 Model 3 Processor Controller
2. One 3097 Model 1 or 2 Power and Coolant Distribution Unit
3. One 3089 Model 3 Power Unit or other appropriate 400 Hz power source
4. One 3370 Model A02 Direct Access Storage Unit, (string switch feature #8150 not required), or equivalent
5. Two 3180 Model 140 Display Stations, or equivalent.
6. A 4800/2400 bps switched network modem supporting autoanswer feature and autocal unit.
7. Access to a path of a customer tape control unit operating in DC Interlock mode at a maximum 1.25Mb per second data rate for use by the 3092 Model 3 Processor Controller. If a tape drive with 10 1/2-inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 Model 4, 6, and 8, and the 3480 Models B11 and B22, or drives which are equivalent. See "Specify" for additional information.

Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

The system control program requires an appropriate operator station in addition to the 3180 system and service support display stations. The availability of an operator console is required to satisfy the minimum service configuration. Access to a tape drive is also required for installation and certain maintenance functions.

HIGHLIGHTS

Contains 33,554,432 bytes of monolithic central storage, standard -- a single integrated central processor with a cycle time of 18.5 nanoseconds -- eight-byte data flow between each processor and storage -- 65,536 byte high-speed buffer -- optional vector facility for greatly increasing the processor's engineering and scientific processing capabilities -- integrated byte and block multiplexer channels -- extensive use of LSI logic circuitry -- has the ability to operate in S/370 mode or 370-XA mode -- 370-XA mode provides for addressing up to two gigabytes and provides for hardware controlled channel pathing to an I/O device -- distributed microcode control stores -- microcode assist for MVS -- extensive data checking -- S/370 mode provides for up to 32 channels per channel set (24 on 120E) -- VMS Start Interpretive Execution (SIE) -- Multiple High Performance Guests Support : Optional Multiple High Performance

Guests Support feature provides support for the VM/XA System Product (VM/XA SP) Release 1 Enhancement for Multiple Preferred Guests. If this VM enhancement is required, a feature must be installed on every Central Processor (CP).

Standard Features: 370-XA mode -- S/370 mode -- Universal Instruction Set -- S/370 Extended Facility -- extended addressing -- extended control mode -- PSW key handling -- conditional swapping -- set prefix -- store prefix -- signal processor -- store CPU address -- extended precision floating point -- high-speed multiply -- instruction retry -- time-of-day clock -- clock comparator -- CPU timer -- interval timer -- byte oriented operand feature -- key controlled storage protection -- page protection -- tracing -- processor storage error checking and correction -- storage configuration and control -- dynamic address translation -- program event recording -- store status -- program reset -- set system-mask suppression -- channel-set switching -- data streaming -- start I/O fast release -- clear I/O -- Virtual Machine Assist -- Preferred Machine Assist -- Sorting instructions.

Expanded Storage: Optional expanded storage allows reduction of I/O paging requirements under system program control. Available in 64Mb increments up to a maximum of 128Mb.

Vector Facility: The optional Vector Facility enhances performance in processing engineering/scientific jobs containing vectors. It adds high speed vector registers, a pipelined arithmetic and logical element, a pipelined multiplier, and a logical vector mask register to the base CP. The arithmetic elements produce a 32-bit floating point or binary result each cycle or a 64-bit floating point result each cycle except in a divide when the element produces a result every 16 cycles. Compound operations produce both a product and a sum (or difference) each cycle.

Channels: A total of 16 channels are standard. One additional group of eight block multiplexer channels is optional, providing for a total of up to 24 channels. Up to four channels may be initialized to operate as byte multiplexer channels. All block multiplexer channels are capable of operating in data streaming mode at a data rate of up to 4.5Mb per second. Each channel can physically attach up to eight control units. (See "Special Features" section.)

In S/370 mode, channels may be grouped into two logical channel sets, with up to 24 channels to a set, one set assignable to the central processor. In S/370 mode, channels may be given any valid logical designation.

In 370/XA mode the processor may initiate an operation with any I/O device and process any I/O interrupt, using any of the 24 channel paths. The 3090 Processor Complex can use up to a maximum of four different logical paths to a single device.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4- or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, or #9066 for pearl white.

- Tape Drive: Specify #9201 if the tape drive being used by the 3092 Model 3 Processor Controller is a 3420 Model 4, 6 or 8 or equivalent, or #9202 if the tape drive is a 3480 Model B11 or

MACHINES

B22 or equivalent. Only one type of tape drive may be specified. See M3092 product description for additional information.

- **Shipping Instructions:** (Use of this specify option will increase installation time. Use only as required.) Should the standard external dimensions of frame 3, 865mm wide by 1,795mm long (34 in. x 70.5 in.), the longest frame, require reduction in length, specify #9573. Specify code #9573 reduces frame 3 length to 1,590mm (62.5 in.) by removal of tailgate connector panel only. Should the external dimensions of the 3090 Processor Unit frames require reduction of 820mm wide by 1,525mm long (32 in. x 60 in.), specify #9571. Specify code #9571 reduces the external dimensions of frames 1, 2, 3, and 5 by removal of cover/hardware. Specify code #9573 is a prerequisite to #9571. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- **Weight Considerations:** (Use of this specify option will increase installation time. Use only where required.) Some elevators may have weight limitations of 1,136kg/2,500 lbs and may require partial depopulation of 3090 frames to satisfy this limitation. Specify #9581 to reduce frame 2 and frame 3 weights to less than 1,136kg/2,500 lbs. For additional information, see "IBM System/370 3090 Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.
- **Machine Nomenclature:** #2924 for English US, #2935 for Canadian French, #2931 for Spanish, #2930 for Japanese.

Account Universal Lift Tool: Select one:

1. First 3090 ordered in an establishment, specify #9330 when ordering a 3090 Processor Complex.
2. If 3090 ordered is second to be installed, no additional lift tool is required.
3. If 3090 is moved to a different location where one is not installed, a lift tool (#9330) is to be ordered on a no-charge MES.

SPECIAL FEATURES

Vector Facility, First (#1545): Provides the vector facility capability to the first central processor. Prerequisites: #7330. Maximum: One. Field Installation: Yes.

Channel Group First Additional (#3848): Provides the first additional group of eight block multiplexer channels. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb (#5064): Provides the first 64Mb increment of expanded storage. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 128Mb (#5128): Provides the first 128Mb increment of expanded storage. Cannot be ordered with #5064. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expanded Storage, 64Mb to 128Mb (#6128): Provides an upgrade from 64Mb to 128Mb of expanded storage. Order by MES only.

Maximum: One. Field Installation: Yes. Prerequisites: #5064. Corequisite: None.

Note: Parts removed or replaced during field installation become the property of IBM and must be returned.

Multiple High Performance Guests Support, (#6851): Provides support for the VM/XA SP Release 1 Enhancement for Multiple Preferred Guests on the 3090 Model 120E. Maximum: One. Field Installation: Yes. Prerequisites: None.

Expansion Frame (#7330): Provides the housing for the 3090 Vector Facility (#1545). Maximum: One. Field Installation: Yes. Prerequisites: None. Corequisites: #1545.

MODEL CONVERSIONS

Model upgrades from 3090 Model 120E to 3090 Model 150E are field installable. The parts removed or replaced become the property of IBM and must be returned. Model downgrades are not recommended.

Note: The upgrade of a Model 10E to Model 150E will require an upgrade to the 3092 Processor Controller from a Model 3 to a Model 1. The 3092 Model 1 requires a second 3370 A02 Direct Access Storage (with string switch feature #8150), or equivalent. Specify #9017 if the 3370 A02 Direct Access Storage is not to be included. A string switch feature for the existing 3370 A02 Direct Access Storage, or equivalent, is a corequisite and must be ordered separately and be available on site at the time of installation.

Processor model field upgrades, in which the IBM 3090 Multiple High Performance Guests Support is installed, require the installation of the appropriate features on the additional Central Processors (CPs).

ACCESSORIES

The following is available on a purchase-only basis for shipment with the 3090 Processor Complex.

Console Table, 3090 Processor Complex (#1590): Provides an operator workstation for up to two operators and their display consoles. The table has a color accented front modesty panel, a shelf facing the back (rear), and a color accented back (rear) cover that hinges down 180 degrees. The purpose of the shelf is to provide a surface for a modem and autocal unit and therefore remove them from the top working surface since access to these is very infrequent. Cable management can be obtained by routing the display cables through the 50mm (2 in.) opening in the rear cover. The display cables and the modem cables exit through a cable open-hole in the shelf. The table measures 1,780mm (70 in.) long, 900mm (35 in.) deep, and 720mm (28 in.) high. Color: Specify #9161 for willow green, #9162 for garnet rose, #9163 for sunrise yellow, #9164 for classic blue, #9165 for charcoal brown, #9166 for pebble gray, or #9167 for pearl white.

SUPPLIES (NONE)

3092 PROCESSOR CONTROLLER

PURPOSE

Provides the controlling mechanism for monitoring and supervising the 3090 Processor Complex. It also provides the adapters for the 3370 mdl A2 DAS units, the 3180 mdl 140 and 145 Display Stations, the 3287 mdl 1 or mdl 2 Printer, or the 4224 mdl 201 and mdl 202 Printer and the channels for attaching a tape control unit. It provides the interfaces for local and remote service and support for the Processor Complex.

MODELS

Model 001: Supports the 3090 mdls 150, 150E, 180, 180E, 200, 200E and 300E Processor Complex.

Model 002: Supports the 3090 mdl 400, 400E and 600E Processor Complex.

Model 003: Supports the 3090 mdl 120E Processor Complex.

Prerequisites: Modem/Autocall: (Order separately.) Customer-provided switched network modem, supporting autoanswer, and autocall equipment. One modem with autocall equipment is required for the 3092 mdl 1. Two modems, each with autocall equipment, are required for the 3092 mdl 2. These must meet the following requirements:

Modem: A country approved or PTT mandatory modem with a CCITT V.24/V.28 communication interface at 1200, 2400, or 4800 bps, also compatible with modems installed at the remote support locations.

(Japan only > Modem: X.21bis interface at 2400/4800 bps. <)

Autocall Equipment: A country approved or PTT mandatory device with a CCITT V.25/ISO2110 autocall interface.

(Japan only > Autocall Equipment: X.21bis interface at 2400/4800 bps. <)

Note: The modem and autocall equipment are required unless prohibited by cross-border data transmission or otherwise limited by the supporting remote site. It is recognized that certain customers will elect not to provide these. These exception cases will be handled by the branch office when they occur.

Tape Drive: (Customer-provided.) Access to one path (3092 mdl 1) or two paths (3092 mdl 2) of a tape control unit operating in DC Interlock mode at a maximum 1.25MB/sec. data rate with attached tape drive for use by the 3092 Processor Controller. If a tape drive with 10.5 inch reels is being used, the tape density must be 6250 bpi. If a cartridge drive is being used, the cartridge density must be 38K bpi. Tape drives which are supported are the 3420 mdls 4, 6 and 8 and the 3480 mdls B11 and B22, or drives which are equivalent. Available for customer use when not being used for system maintenance functions. Needed for installation of a 3090 Processor Complex.

Note: Only one type of tape drive may be selected on a 3092 Processor Controller, e.g., either a tape drive supporting 10 1/2 inch reels or a tape drive supporting cartridges. The customer must specify which media is to be used.

Display Consoles: Two 3180 mdl 140 Display Stations, or equivalent, for use as the system display and the service support display on the 3092 mdl 1. Three 3180 mdl 140 Display Stations, or equivalent, two for use as the system displays and one as the service support display, are required for the 3092 mdl 2.

Three additional optional 3180 mdl 140 Display Stations are supported by the 3092 mdl 1 and mdl 2. One additional optional 3180 mdl 140 Display Station is supported by the 3092 mdl 3. These stations may be up to 1,500m (4,921 ft) from the 3092 Processor Controller.

Two 3370 mdl A2 DAS: (With string feature #8150) on the 3090 mdl 1 and mdl 2. See "Specify" for more information.

Note: The shielded cables for interconnecting the 3092 Processor Controller and the two 3370 mdl A2 DAS are 10.7m (35 ft) long and are provided with the 3090 Processor Complex.

Optional Printer: One customer-supplied 3287 mdl 1 or mdl 2 Printer, or 4224 mdl 201 or mdl 202 Printer is supported by the 3092 mdl 1. Up to two such customer-supplied printers are supported by the 3092 mdl 2. A 3287 Printer and a 4224 Printer may be intermixed on a 3092 mdl 2. The printers are optional and may be used for printing 3180 display screens.

Operator Console: Access to an operator console is required for use of OLTS Diagnostics during certain maintenance procedures.

HIGHLIGHTS

The 3092 provides the machine to human communication for the entire 3090 Processor Complex. The 3092:

- Provides the control unit function for the system console, service console, system/service monitor console, and the program support console.
- Provides Duplexed Function.
- Supports the required 3180 mdl 140 Display Stations and the optional 3180 mdl 140 Display Stations.
- Supports the optional 3287 mdl 1 or mdl 2 Printers and the 4224 mdl 201 or mdl 202 Printers.
- Contains two processors (in normal operation, one is active and one is available for backup).
- Has an audible alarm providing notification of certain system conditions and associated set of contacts for customer use to install remote audible or visual alarm.
- Houses basic switches, lights, and indicators.
- Contains two diskette drives for maintenance data interchange.
- Monitors power levels and coolant flow.
- At initial microprogram load, controls microcode loading of distributed control stores.
- Assists the 3090 Processor Unit in error recovery.
- Battery operated time-of-day clock.
- Provides access to remote support locations via a prerequisite modem.
- Performs basic diagnostic and failure isolation at times concurrent with the above functions.

One 3092 Processor Controller is required with each 3090 Processor Complex.

Publications: GC20-0001.

SPECIFY

Unless indicated otherwise, these specify codes are available only at time of manufacture.

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4 or 5-wire, 50 Hz):

50 Hz
200V #2807

60 Hz
200V #2733

MACHINES

220V	#2815	208V	#9903
380V	#2816	220V	#2800
400V	#2825	240V	#9915
415V	#2826		

- Color: #9065 for pebble gray, #9061 for garnet rose, #9063 for classic blue, #9060 for willow green, #9064 for charcoal brown, #9062 for sunrise yellow, or #9066 for pearl white.
- Shipping Instructions: (Use of this specify option will increase installation time. Use only where required.) Should the standard external dimensions of frame 7, 865mm wide by 1,615mm long (34 in. x 63.5 in.), require reduction to 815mm wide by 1,525mm long (32 in. x 60 in.), specify #9571. Specify #9571 reduces the external dimensions of frame 7 by removal covers/hardware. For additional information, see "IBM System/370 Installation Manual Physical Planning", GC22-7004, and/or your Installation Planning Representative.
- DAS: Two 3370 mdl A2 DAS with string feature #8150 must be ordered with the 3090 Processor Complex unless specified otherwise by the customer. Specify #9107 if 3370 DAS are not to be included.

A specify code is required on the 3370 mdl A2 DAS when they are being ordered for plant merging with the 3090 Processor Complex. Refer to M3370 pages for details.

- Consoles: Two 3180 mdl 140 Display Stations that will be dedicated for use as consoles must be ordered with a 3090 mdl 150, 150E, 180, 180E, 200, 200E or 300E Processor Complex and three mdl 140 Display Stations that will be dedicated for use as consoles with a 3090 mdl 400, 400E or 600E Processor Complex must be ordered, unless specified otherwise by the customer. Specify #9105 if 3180 Display Stations are not to be included.

The 3180 Display Stations will each be provided with a 3m (9.8 ft) power cable as standard.

- Modem and Autocall: The 3864 mdl 2 Modem(s) and Automatic Calling Unit feature(s) #5801 must be ordered with a 3090 Processor Complex unless specified otherwise by the

customer. Specify #9106 if the 3864 mdl 2 Modem(s) and Automatic Calling Unit feature(s) #5801 are not to be included.

- Machine Nomenclature:

English US	#2924	Spanish	#293
Canadian French	#2935	Japanese	#293

- Remote 3180 mdl 140 Display Stations: The standard coaxial cables for interconnecting the 3092 Processor Controller and the two or three required 3180 mdl 140 Display Stations are each 10m (33 ft) long and are provided with the 3090 Processor Complex. Cables greater than 10m (33 ft) up to the maximum of 1,500m (4,921 ft) may be obtained for all except the mdl 140 Display Station used as the service support display. Refer to RPQ 8P0891 in HONE for description and other information.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS

The 3092 mdl 3 Processor Controller is field upgradable to the 3092 mdl 1 Processor Controller. The 3092 mdl 1 Processor Controller is field upgradable to the 3092 mdl 2 Processor Controller. Parts removed or replaced during model upgrades become the property of IBM and must be returned. Model downgrades are not available.

Note: When the 3092 mdl 3 is upgraded to the 3092 mdl 1, a second 3370 A02 DAS (with string switch feature #8150), or equivalent, is required. Specify #9107 if this is not to be included. A string switch feature for the existing 3370 A02 Direct Access Storage, or equivalent, is a co-requisite and must be ordered separately and be available on site at the time of installation.

ACCESSORIES (NONE)

SUPPLIES (NONE)

3097 POWER AND COOLANT DISTRIBUTION UNIT

PURPOSE

Provides the distribution of power and coolant required by a 3090 Processor Complex.

MODELS

Model 1 001: Supports 3090 Processor Complex with I/O Power Sequencing Control.

Model 2 002: Supports 3090 Processor Complex.

Prerequisites: Customer-supplied chilled water is required for the system. See "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074.

HIGHLIGHTS

- Contains power distribution functions and heat exchanger, pumps, and controls necessary for cooling the liquid cooled portion of the 3090 Processor Complex.
- The 3097 model 1 contains I/O Power Sequence Control capability for associating up to 128 control units to the 3090 Processor Complex for power-on/power-off control.
- The 3097 model 2 does not contain I/O Power Sequence (IOPS) control capability. Guidelines for using the model 2 are discussed in the "3097 Model 2 Configuration Guidelines" section.
- One 3097 Power and Coolant Distribution Unit is required for each 3090 model 120E, 150, 150E, 180, 180E, 200, 200E, or 300E Processor Complex.
- Two 3097 Power and Coolant Distribution Units model 1 or 2 are required for each 3090 model 400, 400E, or 600E Processor Complex.

3097 Model 2 Configuration Guidelines

- The 3097 Model 2 is functionally equivalent to the 3097 Model 1 except that it does not contain I/O Power Sequencing (IOPS). IOPS may be required to perform either of the following functions:
 - IOPS gives the customer the ability to power on/off multiple control units by powering on/off the 3090 Processor Complex. Three IBM control units that do not have a customer accessible power on/off switch and use the power on/off capability of IOPS in the 3097 model 1 are:
 - ▲ 3505 Card Reader (3525 Card Punch)
 - ▲ 2501 Card Reader
 - ▲ 2821 Control Unit (for 1403 Printer and 2540 Card Reader Punch)
 - Customers who require customer accessible power on/off for these devices under control of the 3090 Processor Complex must use the 3097 model 1.
 - IOPS provides an electrical ground reference attachment for specified devices. The System/360, System/370, 4300 Processors:
 - ▲ "Input/Output Equipment Installation Manual - Physical Planning" (GC22-7064) states that certain devices require that the IOPS cable be attached for grounding purposes and that attachment is required for proper operation.
- Two control units which attach to the 3090 Processor Complex and use this function are the

3803 Tape Control Unit and the 3540 Diskette Input/Output Unit (which attaches via RPQ). The 3097 model 2 does not provide grounding positions for these control unit IOPS grounds. Therefore, provision has been made in the 3092 Processor Controller models 1, 2, and 3 to attach the ground lead of an IOPS cable to support the grounding requirement of up to six such control units. Customers with more than six such devices can satisfy this requirement by installing a 3097 model 1.

Publications: GC20-0001.

SPECIFY

- Power (AC, 3-phase, 4-wire, 60 Hz or AC, 3-phase, 4 or 5-wire, 50 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
380V #2816	220V #2800
400V #2825	240V #9915
415V #2826	

- Vector Facility: Specify #9983 if the 3097 is to be used with a 3090 model 120E, 150, 150E, 180, 180E, 200, 200E or 300E Processor having the Vector Facility, First (#1545). Specify #9983, if the 3097 is to be used with the A-side of a model 400, 400E, or 600E Processor having the Vector Facility, First, A-side (#1545). Specify #9983 if the 3097 is to be used with the B-side of a model 400, 400E, or 600E Processor having the Vector Facility, First, B-side (#1546).
- Multiple High Performance Guests Support (MHPGS): Specify #9850 if the 3097 is to be used with a 3090 model 120E, 150E, 180E, 200E, or 300E or either side of a 3090 model 400E or 600E with the MHPGS hardware feature #6851.
- Multiprocessing: Specify #9984 if the 3097 is to be used with the A-side of a 3090 model 400, 400E or 600E Processor Complex. Specify #9985 if the 3097 is to be used with the B-side of a model 400, 400E, or 600E Processor Complex.
- 3090 model 180E, 200E, 300E, 400E, 600E Attach: Specify #9352 if the 3097 is to be attached to a 3090 Processor Complex model 180E, 200E, 300E, or either side of a 3090 Processor Complex model 400E or 600E. Specify #9351 if the 3097 is to be attached to a 3090 Processor Complex model 150, 180, 200, 120E, 150E or either side of a 3090 Processor Complex model 400.
- Power: 400 Hz power to a 3097 may be one (for 3090 models 120E, 150, 150E, 180, 180E) or two (for 3090 models 180, 180E, 200, 200E, 300E, or for A-side and B-side of models 400, 400E, 600E), 3089 model 3 Power Units or one (for models 120E, 150, 150E, 180, 180E) or two (for models 180, 180E, 200, 200E, 300E, or for A-side and B-side of models 400, 400E, 600E) customer-provided sources or a combination of either when two are required. To describe the appropriate mix for a 3097 attached to a 3090 Processor Unit, specify the following:

Number 3089s	Number Customer- Provided
-----------------	---------------------------------

Mdls 180,180E (w/
Vector and 192Mb of
Expanded Store or
greater) or 200, 200E,
300E, or the A-side of
a 400, 400E, or 600E
#9491

Refer to the "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074 for specific model 180 and 180E configuration power requirements.

- Shipping Instructions: (Use of this specify option will increase installation time. Use only when required.) Should the standard external dimensions of frame 4 (14) or 6/8 (16/18), 815mm wide by 1,600mm long (32 in. x 63 in.), require reduction in length, specify #9571 (for frame 4 or 6/8) or #9671 (for frame 14 or 16/18). Specify code #9571 (#9671) reduces the length of frames 4 (14) and 6/8 (16/18) to 1,525mm (60 in.), by removal of covers/hardware. For additional information, see the "IBM System/370 3090 Processor Complex Installation Manual - Physical Planning", GC22-7074, and/or your Installation Planning Representative.

Note: Specify code #9571 (#9671) applies only to frame 4(14) on a 3097 model 2.

- Color: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray, #9066 for pearl white.
- Machine Nomenclature: #2924 for US English, #2931 for Spanish, #2935 for French Canadian, #2930 for Japanese.

SPECIAL FEATURES

I/O Power Sequence Control (#4650): (Available only on model 1.) The 3097 Power and Coolant Distribution Unit has a standard capability of associating 64 control units to a 3090 Processor Complex. When requirements exceed these 64 power control relays, #4650 provides for power-on/power-off control for the 65th through 128th control unit. Maximum: One. Field Installation: Yes.

MODEL CONVERSIONS

Model upgrade from a 3097 model 2 to a 3097 model 1 is field installable. Model downgrade from 3097 model 1 to 3097 model 2 is not available.

ACCESSORIES (NONE)

SUPPLIES (NONE)

3115 PROCESSING UNIT

(NO LONGER AVAILABLE)

The 3115 is No Longer Available -- MES orders for model conversions, features, released RPQs and accessories are not affected. No new RPQs will be accepted.

PURPOSE

Provides main and control storage, plus arithmetic and logic circuits for a S/370 mdl 115 including a direct disk attachment.

MODELS

The 3115-0 and 3115-2 Processing Units are available in the following model groups:

Models

				Processor Storage Size
3115-0		3115-2		
F	F00	F2	F02	65,536 bytes
FE	FE0	FE2	FE2	98,304 bytes
G	G00	G2	G02	131,072 bytes
GE	GE0	GE2	GE2	163,840 bytes
GF	GF0	GF2	GF2	196,608 bytes
		H2	H02	262,144 bytes
		HG2	HG2	393,216 bytes*

For differences between the two mdl series, refer to the "Systems" pages.

* Note: If 3411 Magnetic Tape and Control is attached, see Magnetic Tape Adapter special feature paragraph for RPQ requirement.

HIGHLIGHTS

Depending upon the mdl, 65,536 to 393,216 bytes of processor storage are available. The basic main memory cycle time is 480 nanoseconds for 2 bytes. Sixteen general, sixteen control and four floating point registers are provided. The system design provides distributed microcoded processors within the Central Processing Unit for the independent handling of programs, input/output processing and diagnostic/maintenance. Direct attachment of the 3340 DASD Subsystem or the 3340/3344 DAS Subsystem (3115-2 only) is provided. Depending on the mdl and feature up to eight drives can be attached. In a 3340 DASD Subsystem, via the string switch capability (#9315), the 3340 mdl A2 can be shared with another S/370, except 3115-0 and 3125-0. For details and restrictions refer to the 'Direct Disk Attachment' paragraph.

The 2311 Mdl 1/3340 - Series and the 2314/3340 - Series Compatibility features are available as options. They are mutually exclusive. Emulation is under DOS/VS only. 2311 mdl 1 emulation under DOS/VS requires SYRES on 3340.

Capability to attach the 3803/3420 or 3411/3410 magnetic tape subsystem mdl 1, 2 or 3 via the optional Magnetic Tape Adapter.

Capability to natively attach one of the following card I/O: 2560 mdl A1 or A2, or the 5425 mdl A1 or A2 (96-column card) via the optional integrated Card I/O Attachment features.

Capability to attach a wide variety of I/O devices via the optional Byte Multiplexer Channel. Note: The Integrated Card I/O Attachment and the Byte Multiplexer Channel cannot be installed on the same system unless RPQs 7B0158 and 7B0159 are installed.

Capability to natively attach the 5213 Printer mdl 1 (85 cps) is provided with the optional integrated console printer attachment on the

3115. This console printer provides hardcopy output of operator messages presented on the Display Operator Console (DOC).

The optional 1052 Compatibility feature is available to emulate the 1052 Printer keyboard in the S/370 mdl 115. 1052 Compatibility (#8005) in combination with the 5213 Printer mdl 1 allows the mdl 115 to be used as a remote workstation with HASP-RMT/360. Note: The 1052 compatibility mode is not supported under DOS/VS. With DOS/VS, the 5213 mdl 1 will act as a slave unit to the DOC.

Capability to attach up to 5 synchronous lines, or up to 4 synchronous and up to 8 asynchronous lines is provided by the optional Integrated Communications Adapter with appropriate features.

Capability to attach the 5203 Printer mdl 3 or 3203 Printer mdl 1 or 2 is provided with optional Integrated Printer Attachment features.

The optional S/360 Mdl 20 and 1401/1440/1460 Compatibility features are available to allow execution of the instructions of those programs.

The Display Operator Console (DOC) is an integral part of the S/370 mdl 115 operator-machine communications. Data can be entered into main storage or into internal registers via the keyboard. Contents of storage or internal registers of the S/370 mdl 115 can be shown on the video screen with 16 lines of 56 characters/line. A portion of the screen is reserved to display machine status. The Service Processor (SVP) continuously monitors system operation and logs errors on the magnetic IBM Diskette device. The SVP initiates recovery on detection of error conditions and provides control for the display, keyboard, console file and optional console printer.

The standard console file is the basic microprogram loading device for the system. It contains a small file device, which reads and writes on a removable magnetic IBM Diskette. The diskettes that will contain the required microcode for the basic system, the optional features ordered for system, and CE diagnostics.

The CE logout of machine and I/O related control checks and errors are recorded on the diskette for CE diagnosis, to enhance the reliability, availability, and serviceability of the S/370 mdl 115.

Dynamic Address Translation (DAT) is a standard facility on the mdl 115. Since logical storage addressing is not limited by the amount of available real storage, program size may exceed real storage size. This logical storage is referred to as "virtual storage" and may be as large as 16,777,216 bytes on the mdl 115.

Standard features include S/370 commercial instruction set, Extended Control (EC) Mode, Dynamic Address Translation, Channel Indirect Data Addressing, Program Event Recording (PER), Monitor Call, interval timer, time of day clock, CPU-Timer and Clock Comparator, store and fetch protect, byte oriented operand feature error checking and correction of single bit errors on main storage, and Audible Alarm.

Control Storage: On the 3115-0, reloadable control storage for Service Processor (SVP), and Direct Disk Attachment and the basic part of the Machine Instruction Processor (MIP) is provided as standard on the 3115 Processor Unit. In addition, reloadable control storage is provided with the optional Card I/O Attachment, Printer Attachment, Integrated Communications Adapter (ICA), Byte Multiplexer Channel. The MIP contains as standard, 20K words of 22 bits of control storage and may be expanded either to 24K words (4K Control Storage Extension, #4101) or to 28K words (8K Control Storage Extension, #4104). #4101 and #4104 are mutually exclusive. See Chart A below for possible feature combinations and control storage requirements.

Note: Customers who elect to purchase the 4K Control Storage Extension and later upgrade to the 8K Control Storage Extension should consider the purchase of the 8K Control Storage Extension initially because this field upgrade requires replacement of the 4K Control Storage Extension and installation of the 8K Control Storage Extension. This is, however, not recommended for customers considering to eventually convert to a 3115-2.

On the 3115-2, the Instruction Processing Unit (IPU) contains as standard, 12K words of control storage. Certain feature combinations can use up to two additional 4K words increments totaling 20K words of control storage. See Chart B for details.

Chart A

Listed below are the valid feature combinations and their respective requirements for additional control storage on the 3115-0.

Optional Features -- Mdl 3115-0	Basic Control Storage	4K Cntrl Stor Extension -- (#4101) Req'd
Floating Point (#3900)**	X X	X X X X
Floating Point Including Extended Precision (#3910)**	X X	X X X X
1401/1440/1460 Cmpt (#4457)	X	X X X X X
S/360 Mdl 20 Cmpt (#7520)	X X	X X X X
2311-1/3340 Series Cmpt (#8060)***	X	X X X X
2314/3340 Series Cmpt (#8070)***	X X X X	X

Optional Features -- Mdl 3115-0	8K Cntrl Stor Extension -- (#4104) Req'd
Floating Point (#3900)**	XX XX
Floating Point Including Extended Precision (#3910)**	XX X X
1401/1440/1460 Cmpt (#4457)	XX XX X X
S/360 Mdl 20 Cmpt (#7520)	XX XX XX
2311-1/3340 Series Cmpt (#8060)***	X X X X X
2314/3340 Series Cmpt (#8070)***	X X X X X

* #4101 and #4104 are mutually exclusive.
** #3900 and #3910 are mutually exclusive.
*** #8060 and #8070 are mutually exclusive. In addition, #8060 and #8070 are mutually exclusive with specify #9190.

Chart B

Listed below are the valid feature combinations and their respective requirements for additional control storage on the 3115-2.

Optional Features -Mdl 3115-2	Basic Control Storage	First Cntrl Stor Increment (#4101) Required
Floating Point Including Extended Precision (#3910)	X X	X X X X
1401/1440/1460 Com-patibility (#4457) **	X	X X X
S/360 mdl 20 Com-patibility (#7520) **	X X X	X X X
2311-1/3340 Series Com-patibility (#8060) *		X X X
2314/3340 Series Com-patibility (#8070) *		X X X

Optional Features -Mdl 3115-2	Second Cntrl Stor. Incre-ment (#4101) and (#4102) Required**
Floating Point Including Extended Precision (#3910)	X X XX
1401/1440/1460 Com-patibility (#4457) **	X X XX
S/360 mdl 20 Com-patibility (#7520) **	X X
2311-1/3340 Series Com-patibility (#8060) *	X X
2314/3340 Series Com-patibility (#8070) *	X X X

* #8060 and #8070 are mutually exclusive. In addition, #8060 and #8070 are mutually exclusive with Specify feature #9190 or 3344 Attachment specify feature #9317.

** 1401/1440/1460 Compatibility (#4457) and S/360 Mdl 20 Compatibility (#7250) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed on the 3115-2). Note: RPQ SU0002 cannot be installed if the 2311 mdl 1/3340-Series Compatibility (#8060) or 2314/3340-Series Compatibility (#8070) is installed. Cannot be installed with 3344 Attachment (#9317). Specify feature #9315 is mutually exclusive with #4102 and/or #4460.

Input/Output Attachment - Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices. They are designed to interact with their respective I/O devices and should be installed or removed with them since the system is inoperative with only the attachment/adaptor installed.

Direct Disk Attachment (standard): This attachment is provided to attach the 3340 mdl A2 dual drive unit and control directly to the S/370 mdl 115. This is addressed as channel 1. This attachment provides block multiplexing.

3340 DASD Subsystem: On the 3115-0 one 3340 mdl A2 and one 3340 mdl B1/B2 can be attached to provide up to four spindles. On the 3115 mdl 2 (w/o 3344 Attachment #9317) one 3340 mdl A2 and up to three 3340 mdl B1/B2s can be attached to provide up to eight spindles.

3340/3344 DAS Subsystem: On the 3115-2 with 3344 Attachment #9317 installed. One 3340 mdl A2 and any combination of up to three 3340 mdl B1/B2s and 3344 mdl B2/B2Fs can be attached. With the String Switch (#8150) installed, the 3340 mdl A2 may be shared with another S/370 except 3115-0 and 3125-0. Specify features, String Switch Capability (#9315) and 3344 Attachment (#9317) are mutually exclusive. String Switch capability is not supported on a 3344 configuration. 4K DASD Control Storage Extension is required when either #9315 or #9317 is installed. Specify Fixed Head Attachment (#9190) if Fixed Head Feature on 3340 is installed on 3340 Series drives. See Chart A for control storage requirements.

Magnetic Tape Adapter (optional) -- this feature attaches one of the following tape control units and is addressed as channel 2:

3411 Magnetic Tape Unit and Control mdl 1 -- tape control (20 KB) housing one tape drive. Up to three 3410 Magnetic Tape Unit mdl 1s may be attached to the 3411 mdl 1.

3411 Magnetic Tape Unit and Control mdl 2 -- tape control (40 KB) housing one tape drive. Up to five 3410 Magnetic Tape Unit mdl 2s may be attached to the 3411 mdl 2.

3411 Magnetic Tape Unit and Control mdl 3 -- tape control (80 KB) housing one tape drive. Up to five 3410 Magnetic Tape Unit mdl 3s may be attached to the 3411 mdl 3.

3803 Tape Control mdl 3 -- up to eight 3420 mdl 3 (120 KB) or mdl 5 (200 KB) may be attached to the 3803.

Integrated Card I/O Attachments (optional): These features provide native attachment of one of the following:

2560 Multifunction Card Machine mdl A1 or A2
5425 Multifunction Card Unit mdl A1 or A2.

The Integrated Card I/O Attachment uses channel 0. Device address X'00D' is reserved for the 2560 or 5425.

The Integrated Card I/O Attachments and the optional Byte Multiplexer Channel cannot be installed together on the same system unless RPQs 7B0158 and 7B0159 are installed.

Integrated Printer Attachment (optional): Attachment features for the 5203 Printer mdl 3 or the 3203 Printer mdl 1 or 2 are provided. One printer unit may be natively attached. The printer attachment is addressed as channel 0 and the device address is X'00E'. The Universal Character Set (UCS) control is standard on the 3203. On

the 5203, UCS control may be specified on Integrated 5203 Mdl 3 Attachment (#4690).

Integrated Console Printer Attachment (optional): Attaches the 5213 Printer mdl 1 to the 3115 to provide hard copy of operator messages presented on the standard Display Operator Console. It uses address X'01F' (same as the Display Operator Console) on Channel 0. When the 1052 Compatibility feature is installed, the 5213 Printer mdl 1 is required.

Integrated Communications Adapter (ICA) (optional): Provides the basic control storage and common circuits for direct attachment of up to five synchronous (BSC) communications lines OR up to eight asynchronous (Start/Stop) lines. See individual ICA features for limitations. The Integrated Communications Adapter Extension (ICAE) provides the capability to attach up to four BSC AND up to eight Start/Stop lines. IBM line adapters are provided within the mdl 115.

Input/Output Channel

Byte Multiplexer Channel (Optional): Provides for the attachment of a wide variety of low speed devices. The single channel available on the S/370 mdl 115 is functionally equivalent to the Byte Multiplexer Channel on the S/360 mdls 22, 25, 30 and 40 and provides for a maximum of up to eight control unit positions. 32 subchannels are provided as standard and are divided into 8 shared and 24 unshared subchannels.

The Integrated Card I/O Attachments and the Byte Multiplexer Channel cannot be installed together on the same system unless RPQs 7B0158 and 7B0159 are installed.

Console Function: System control functions are provided by the standard integrated Display Operator Console. It has the switches, keyboard, and lights necessary to operate and control the system. It uses address X'01F' on channel 0. The 5213 mdl 1 console printer (85 cps) may be attached optionally.

Publications: GC20-0001

SPECIFY

● Power (AC, 3-phase):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
235V #2818	230V #9905
380V #2816	
408V #2819	

● Line Cord for Japan, 50 & 60 Hz: #2747.

● Color: #9041 for Red, #9042 for Yellow, #9043 for Blue, #9045 for Gray, #9046 for White.

● Fixed Head Attachment (#9190)* If Fixed Head Feature is installed on 3340 Series drives. Note: The Fixed Head Attachment (#9190) cannot be installed with 2311-1/3340 Series Compatibility (#8060) or 2314/3340 Series Compatibility (#8070).

● String Switch Capability (#9315)* If String Switch (#8150) is installed on the 3340 mdl A2. Note: 4K DASD Control Storage Extension (#4210) is prerequisite. Cannot be installed with #4102 or #4460 or 3344 Attachment #9317. When String Switch is installed, an Emergency Power-Off connection between the sharing systems is mandatory. RPQ DC3621 (two system connection) or DC3622 (multiple system connection) must be ordered.

The 3115-2 uses fixed addresses 160 to 167 for its attached disk drives. In the case of string switch, to avoid confusion in Job Control and Operation, the same addresses should be assigned to shared drives on the other system. In the case of the 3135, 3135-3, 3138 IFA, this requires specify code #9821 on the 3135 providing addresses 160 through 167 to comply with

the fixed addresses of the 3115. If intermixing 3330s and 3340s on the 3135 (#9315), no string switching with the 3115-2 is possible.

Note: The string switch of the DASD hardware function can be operated with the present DOS/VS standard DASD support. DOS/VS does not support the device reserve/release channel commands for program controlled sharing of attached DASD units. Therefore, it is the user's responsibility by appropriate organization and programming procedures to resolve conflicting references to shared files and insure data integrity. One method for controlling potential conflicts involves the use of operator commands DVC UP/DVC DN. For additional information, consult "DOS/VS System Management Guide", GC33-5371.

- On the 3115-2, specify 3344 Attachment (#9317)* when 3344 mdl B2/B2F are installed. 4K DASD Control Storage Extension is required. Cannot be installed with any of the following: String Switch Capability (#9315), 231X/3340 Compatibility (#8060/ #8070), S/360 Mdl 20 Compatibility (#7520), 1401/1440/ 1460 Compatibility (#4457), or 1403/3203 Carriage Control Feature (#4460).
- Minimum Configuration: See "Minimum Configuration" in "Systems" for minimum I/O units required on a S/370 mdl 115.
- Video Display/Keyboard Console Language Combination is identical to mdl 125. See chart at end of M3125 pages for "Specify Code".
- 1255, 1259 or 1419 Attachment: Specify #9336 (3115-0 only). External Signal (#3898) is required to attach a 1255, 1259 or 1419.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Planning for Mdl Conversions: When a customer requires feature changes and/or memory upgrades in addition to a mdl upgrade, consolidating the several changes into a single MES is not recommended. In these cases a planning session between sales, CE and the customer is required to develop the proper sequence of MES ordering.

SPECIAL FEATURES

Expansion Base (#3860): (3115-2) Provides additional gate and blowers, etc., and is required if RPQs 7B0158 and 7B0159 are not installed:

for all mdls H2 and HG2
 for mdls F2, FE2, GE2 or GF2 if a Line Adapter Base 2 (#4792)
 or Line Adapter Base 3 (#4793) is required.

Maximum: One. Field Installation: Yes.

External Signals (#3898): Provides six distinct external interrupt lines to request and identify an external interrupt response from the processing unit. Maximum: One per 3115. Cable Order: Required. Field Installation: Yes. Prerequisites: External devices must meet the interface specifications outlined in S/360 Direct Control Feature - OEM I, GA22-6845.

Floating Point (#3900): (3115-0) Adds 44 floating point arithmetic instructions -- these instructions with the standard set make up the Scientific Instruction Set. Field Installation: Yes. Limitations: Cannot be installed with Floating Point Including Extended Precision (#3910).

Floating Point Including Extended Precision (#3910): Adds 51 floating point arithmetic instructions. Provides for floating point operation including extended precision to 28 hexadecimal digits. Field Installation: Yes. Limitations: Cannot be installed with Floating Point (#3900). Prerequisites: See Charts A/B above for control storage requirements.

4K Control Storage Extension (#4101): Adds 4,096 words (22 bits wide) of control storage to the Machine Instruction Processor (3115-0) or Instruction Processing Unit (3115-2). Required for certain feature combinations -- See Charts A/B above for details. Limitations: Cannot be installed with 8K Control Storage Extension (#4104). Field Installation: Yes. See "Note" following "Field Installation" for 8K Control Storage Extension (#4104) below.

4K Control Storage Increment - 2nd (#4102): (3115-2) Expands the IPU control storage by 4,096 words (22 bits wide). Required for certain feature combinations, see Chart B. Limitations: Cannot be installed with #4210 or specify feature #9315. Maximum: One. Field Installation: Yes. Prerequisites: #4101.

8K Control Storage Extension (#4104): (3115-0) Adds 8,192 words (22 bits wide) of control storage to the Machine Instruction Processor. Required for certain feature combinations, see Chart A above for details. Limitations: Cannot be installed with 4K Control Storage Extension (#4101). Field Installation: Yes. Note: Customers who may elect to purchase the 4K Control Storage Extension and later upgrade to the 8K Control Storage Extension should consider the purchase of the 8K Control Storage Extension initially because this field upgrade requires replacement of the 4K Control Storage Extension and installation of the 8K Control Storage Extension.

4K DASD Control Storage Extension (#4210): (3115-2) Adds 4,096 words (22 bits wide) to the DDA control storage. Required for string switch capability specify feature (#9315) or 3344 Attachment, specify feature (#9317). Limitations: Cannot be installed with #4102 or #4460. Maximum: One. Field Installation: Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature which, in combination with an emulator program under DOS/VS, permits the system to execute 1401/1440/1460 instructions. Field Installation: Yes. Prerequisites: See Charts A/B above for control storage requirements. Note: On the 3115-2, #4457 and S/370 Mdl 20 Compatibility (#7250) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed). Limitations: Cannot be installed with 3344 Attachment (#9317).

1403/3203 Carriage Control Feature (#4460): Allows the 3203 Printer with its tapeless carriage control to emulate the function of a tape controlled carriage and thus run programs written for a 1403 Printer. Limitations: The 5203 Printer is not supported by this feature. Cannot be installed with string switch capability (#9315) or 3344 Attachment, specify feature (#9317). Field Installation: Yes. Prerequisites: 3203 Printer. Note: This feature is not required with DOS/VS Release 31 and subsequent releases.

Integrated 3203 Printer Attachment (#4650): Control for attaching the 3203 Printer mdl 1 or 2. The Universal Character Set is standard. Specify: #9770 for mdl 1 or #9771 for mdl 2. Limitations: Cannot be installed with Integrated 5203 Attachment (#4690). Maximum: One. Field Installation: Yes. Prerequisites: #4653.

Integrated 3203/5203 Printer Prerequisite (#4653): Provides a common control base for attaching either the 3203 or 5203 Printer. Required as a feature for installation of the Integrated 3203 Printer Attachment (#4650), or Integrated 5203 Printer Attachment (#4690). Maximum: One. Field Installation: Yes.

Integrated 2560 Attachment (#4670): Control for attaching the 2560 Multi-function Card Machine mdl A1 or A2. Specify: #9800* for mdl A1, or #9801* for mdl A2. Limitations: Cannot be installed with Integrated 5425 Attachment (#4695) or Basic Byte Multiplexer Channel (#5248) -- installation of RPQs 7B0158 and 7B0159 are required to install #4670 with Basic Byte Multiplexer Channel (#5248). Maximum: One. Field Installation: Yes. Prerequisites: #9727 is required on the 2560 MFCM, see "Specify" in M2560 pages.

2560 Card Print Control (#4674): Provides control for Card Print capability on the 2560 Multi-function Card Machine mdl A1. Specify: #9797* for first two print lines, #9798S for second two, #9799* for third two, when corresponding Card Print features (#1575, #1576, #1577) are installed on the 2560 mdl A1. Field Installation: Yes. Prerequisites: #4670 on the 3115.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

2560 Print Languages:

English US	#2956*
Japanese	#2968*
Katakana	#2973*
Spanish (except Spain)	#2961*

Magnetic Tape Adapter (#4675): Provides control for attachment of one 3411 Magnetic Tape Unit and Control mdl 1, 2 or 3 or one 3803 Tape Control mdl 3. See M3420 and 3803 or 3411 and 3410 pages for additional ordering instructions. The Magnetic Tape Adapter is addressed as Channel 2. Maximum: One. Specify: #9807 for attachment of 3803 mdl 3. See "Highlights" for additional information. Field Installation: Yes. Limitations: A 3803 and 3411 cannot coexist on the Magnetic Tape Adapter. Prerequisites: #7361 on the 3411, except for 3115 mdl HG2. When attached to 3115 mdl HG2, RPQ 870061 is required on the 3411.

Integrated 5203 Mdl 3 Printer Attachment (#4690): Control for attaching the 5203 Printer mdl 3. Limitations: Cannot be installed with Integrated 3203 Printer Attachment (#4650). Maximum: One. Field Installation: Yes. Prerequisites: #4653 and #9223 on the 5203 mdl 3. Specify: #9195* for 5203 with 120 print positions, or #9152* for 5203 with 132 print positions. Specify Universal Character Set Control (#9848)* when Universal Character Set Attachment (#8639) is specified on the 5203 mdl 3.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Integrated 5213 Printer Mdl 1 Attachment (#4692): Attaches the 5213 Printer mdl 1. Includes a special cable to support the printer. Maximum: One. Field Installation: Yes.

Integrated 5425 Attachment (#4695): Control for attaching the 5425 Multi-function Card Unit mdl A1 or A2. Specify: #9183* for mdl A1, or #9184 for mdl A2. Limitations: Cannot be installed with Integrated 2560 Attachment (#4670) or Basic Byte Multiplexer Channel (#5248) -- installation of RPQs 7B0158 and 7B0159 are required to install #4695 with Basic Byte Multiplexer Channel (#5248). Maximum: One. Field Installation: Yes. Prerequisites: If the 5425 is attached to 3115 either a 3203 or 5203 Printer is required to provide the necessary power. If however, a separate power supply for the 5425 is desired, IBM will provide it on an RPQ basis.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Basic Byte Multiplexer Channel (#5248): To attach low speed byte multiplex devices, see "Byte Multiplexer Channel" under "Input/Output Channel". Feature includes control storage necessary for IOP operation. Limitations: The basic Byte Multiplexer Channel (#5248) and the Integrated Card I/O Attachments (#4670 or #4695) cannot be installed together on the same system unless RPQs 7B0158 and 7B0159 are installed. On the 3115-2, only the Extended Byte Multiplexer Channel (#5249 with #5248 as a prerequisite) with a data rate up to 25KB is available. Specify: On the 3115-0, specify #9336 when attaching a 1255, 1259 or 1419. Maximum: One. Field Installation: Yes.

Extended Byte Multiplexer Channel (#5249): (3115-2) Provides the additional circuitry to enable the Basic Byte Multiplexer Channel to operate at an improved byte data rate up to 25KB. Maximum: One. Field Installation: Yes. Prerequisites: #5248.

S/360 Mdl 20 Compatibility (#7520): Microprogram controlled feature which, in combination with special software, permits the system to execute S/360 mdl 20 instructions. Field Installation: Yes.

Note: On the 3115-2, #7520 and 1401/1440/1460 Compatibility (#4457) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed). Limitations: Cannot be installed with 3344 Attachment (#9317).

1052 Compatibility (#8005): Operates on the 5213 Printer mdl 1 and standard keyboard as an operator console in S/360 1052 mode only. In this emulation mode of operation the Video/Display acts as a slave unit to the printer. The 1052 Compatibility feature in combination with the 5213 Printer mdl 1 allows running of HASP/360 RMT 360 (stand-alone program) on the S/370 mdl 115. Note: The 1052 compatibility mode is not supported under DOS/VS. With DOS/VS the 5213 mdl 1 acts as a slave unit to the DOC. Field Installation: Yes. Prerequisites: #4692 and the 5213 Printer mdl 1.

2311 Mdl 1/3340 - Series Compatibility (#8060): Permits the emulation of 2311 mdl 1 files on the 3340 disk storage. The user program may access both the emulated 2311 mdl 1 data as well as the native data set. This provides a "mixed mode" operating environment. Limitations: #8060 cannot be installed with #8070, #9190 or #9317. Field Installation: Yes. Prerequisites: See Charts A/B above for control storage requirements. Note: When running DOS Rel. 21 through 26, 1052 Compatibility (#8005), the 5213 mdl 1 console printer and, if a 3203 Printer is attached, the 1403/3203 Carriage Control Feature (#4460) are prerequisites. The 5203 Printer is not supported by #4460. Emulation under DOS/VS requires SYRES on the 3340 DASF.

2314/3340 - Series Compatibility (#8070): Permits the emulation of 2314 files on the 3340 disk storage. The user program may access both the emulated 2314 data set as well as the native data set. This provides a "mixed mode" operating environment. Limitations: #8070 cannot be installed with #8060, #9190 or #9317. Field Installation: Yes. Prerequisites: See Charts A/B above for control storage requirements. Note: When running DOS Rel. 21 through 26, 1052 Compatibility (#8005), the 5213 mdl 1 console printer and if a 3203 Printer is attached, the 1403/3203 Carriage Control Feature (#4460) are prerequisites. The 5203 Printer is not supported by #4460. Emulation under DOS/VS requires SYRES on the 3340 DASF.

Communication Features

Integrated Communications Adapter (ICA) (#4640): Provides the basic control storage and common circuits for direct attachment of up to five synchronous (BSC) communication lines or up to eight asynchronous (Start/Stop) communication lines depending upon line speed. All combinations of BSC and Start/Stop lines require the Integrated Communications Adapter Extension (#4641). Additional features are required to create appropriate line interfaces for the individual lines. Figures 1A and 1B schematically represent the feature build-up. Figure 1A shows the feature build-up for asynchronous lines or for combinations of asynchronous and synchronous lines. Figure 1B shows the feature build-up when only synchronous lines are required. The ICA provides as a standard:

- Autopoll - Start/Stop and BSC
- Multipoint central station functions - Start/Stop and BSC
- Multipoint tributary station functions - BSC only
- EBCDIC transparent mode - BSC only
- EBCDIC or ASCII code - BSC only

Refer to Figures 2A and 2B for attachable terminals and for configuration requirements prior to ordering features below. The normal procedure requires completion of ICA Specification Form Z120-2499 with each mdl 115 containing feature #4640. Any subsequent MES orders affecting #4640 or its sub-features should follow this procedure.

Note: An APL Configurator is available through the HONE system to assist in configuring the ICA (or refer to "ICA Configurator Manual", GA33-1513).

Customer Responsibilities: See M2700 pages for customer responsibilities regarding communications facilities and services. Communications Facilities: See M2700 pages for communications facility requirements with this feature. Maximum: One. Field Installation: Yes.

Integrated Communications Adapter Extension (ICAE) (#4641): This feature is required for all combinations of BSC and Start/Stop lines. Extends the communications capability to up to four BSC and up to eight Start/Stop lines depending upon line speed. Maximum: One. Field Installation: Yes. Prerequisites: #4640.

Asynchronous Line Group (ALG) (#1201): Permits attachment of up to four Medium Speed Asynchronous Lines (AL) (#1231) or up to four Low Speed Asynchronous Lines Pairs (ALP) (#1241) or up to four Telegraph Line Pairs (TLP) (#7881). The lines within the ALG positions A1 through A4, must be installed in ascending order. Specify: One line control specify code from Figure 2A. Limitations: All lines in the ALG must have the same line speed and control. Different terminals can be attached, provided they use the same speed and line control. See Figure 2A. ALG (#1201) and SLHS (#7121) are mutually exclusive. Maximum: One. Field Installation: Yes. Prerequisites: #4640.

Asynchronous Line, Medium Speed (AL) (#1231): Provides for the attachment of one nonswitched 600 bps Start/Stop communications line. The 3767 terminal can be attached to this feature (at EC 380427 plus EC 380628) via switched or nonswitched lines at 200 or 300 bps and via nonswitched lines at 600 bps. Clocking speed is selected at installation time. Connects to the line via a modem or IBM Line Adapter. The lines are installed in ascending order, A1 through A4. Note: IBM Line Adapters are tied to specific line positions, see Figure 4D. Limitations: See Figure 5, Max. ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG. Maximum: Four. Field Installation: Yes. Prerequisites: #1201.

Asynchronous Line Pair, Low Speed (ALP) (#1241): Provides for the attachment of two switched or nonswitched 134.5 bps Start/Stop communications lines. Connects to the line via external IBM or PTT mandatory modems, nonswitched also via IBM line adapters or external telegraph line adapters. Consult your TP Coordinator for RPQ order information when telegraph lines are used -- or, two nonswitched double-current telegraph lines at 50, 75 or 100 bps via external telegraph line adapters. Consult your TP Coordinator for RPQ order information. The lines are installed in ascending order, A1 through A4. Note: IBM Line Adapters are tied to specific line positions, see Figure 4D. Limitations: See Figure 5, Max. ICA Configuration: #1231, #1241 and #7881 cannot be intermixed within the ALG. Maximum: Four. Field Installation: Yes. Prerequisites: #1201.

IBM Leased Line Adapter (#4743): A modem for Start/Stop data transmission at 134.5 or 600 bps over nonswitched facilities. This line adapter operates with Leased Line Adapters on other IBM products. Selection between 2-wire and 4-wire operation is made at installation time. See Leased Line Adapter in GA24-3435 for specifications and restrictions. Specify: See Figure 4D. Maximum: See Figure 4D. Field Installation: Yes. Prerequisites: AL (#1231) or ALP (#1241) and a Line Adapter Base (#4792 or #4793) -- also see Figure 4D.

IBM 1200 bps Line Adapter (#4781): A modem for BSC data transmission at up to 1200 bps over nonswitched facilities. Also for Start/Stop transmission at 300 or 600 bps over nonswitched facilities to the 3767 terminal. Unclocked and must interface to an SLC (#7141-#7144) or AL (#1231). Attachment is directly to the line via an IBM-provided external cable. Customer Responsibilities, see M2700 pages. Communications Facilities, see M2700 pages. Specify: See Figure 4D. In Japan only, specify code #2943 must be ordered for attachment to the NTT D-1 service. Maximum: See Figure 4D. Field Installation: Yes. Prerequisites: #7141-#7144 or #1231 -- #4792 or #4793. Also see Figure 4D. #1295 or #1296 is required for #4791. 7B0158 and 7B0159 are installed.

Line Adapter Base 3 (LAB 3) (#4793): Provides attachment of up to four IBM 1200 bps Line Adapters and up to eight IBM Leased Line Adapters. The Line Adapters are tied to specific line positions. See Figure 4D for configuration and possible line combinations. Maximum: One. Field Installation: Yes. Prerequisites: On 3115-2, LAB 3 requires Expansion Base (#3860) unless RPQs 7B0158 and 7B0159 are installed.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on

a purchased machine to include any number of diskette-only changes ordered on same diskette.

Synchronous Line Medium Speed Clock (SLC) (#7141-#7144)

#7141 -- Line position S1
#7142 -- Line position S2
#7143 -- Line position S3
#7144 -- Line Position S4

Line positions S1 through S4 must be installed in ascending order.

Each feature provides for the attachment of one switched or non-switched BSC line. The clock can be set by the user for a transmission rate of 600 bps or 1200 bps. Connects to the line via an unclocked modem or PTT mandatory modem. The IBM 1200 bps Line Adapter (#4781) can be used instead of a modem on non-switched lines. Notes: IBM Line Adapters are tied to specific line positions, see Figure 4D. SL (#7151-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. Limitations: See Figure 5, Max. ICA Configuration. #7141 is mutually exclusive with #7151, #7142 with #7152, #7143 with #7153, and #7144 with #7154. Maximum: #7141 through #7144, one each. Field Installation: Yes. Prerequisites: #7100.

Synchronous Line Medium Speed (SL) (#7151-#7154):

#7151 -- Line position S1
#7152 -- Line position S2
#7153 -- Line position S3
#7154 -- Line position S4

Line positions S1 through S4 must be installed in ascending order.

Each feature provides for the attachment of one switched or non-switched BSC line. Nonswitched lines are with switched network backup are supported. Maximum line speed on nonswitched line is 7200 bps; maximum speed of switched network depends on current regulations of the national PTT. See Figure 2B for detailed speed and facility information. Connects to the line via an external IBM or PTT mandatory modem. The modem must provide clocking. Note: SL (#7151-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. Limitations: See Figure 5, Max. ICA Configuration. #7151 is mutually exclusive with #7141, #7152 with #7142, #7153 with #7143, and #7154 with #7144. Maximum: #7151 through #7154, one each. Field Installation: Yes. Prerequisites: #7100.

Telegraph Line Pair (TLP) (#7881): Provides for the attachment of two nonswitched single current telegraph lines at 50 or 75 bps. Attachment to the lines is via an IBM-provided external cable. Lines A1 through A4 are installed in ascending order. Limitations: See Figure 5, Max. ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG. Maximum: Four. Field Installation: Yes. Prerequisites: #1201.

Modems: The following IBM modems can be attached to the lines of the 3115 ICA:

Modem	Speed
3976 mdl 1	134.5 bps nonswitched
3976 mdl 2	134.5 bps switched
3976 mdl 3	600/1200 bps
3977 mdl 2	600/1200 bps
3863 mdl 1 1/2	2400 nonswitched or switched
3872	2400/1200 bps nonswitched
3864 mdl 1 1/2	4800 bps nonswitched or switched
3874	4800/2400 bps nonswitched
3875	7200/3600 bps nonswitched

Note: Consult your TP Coordinator for information on IBM RPQ Modem Products.

RPQ ordering information.

** Switched Network only.

*** 3115 ICA must use the IBM 1200 bps Modem (#4781 or #4782).

**** S/32 with #2074 & S/34 with #2500.

> On S/360 mdl 22 and up, S/370 or 4300 processor.

(1) EMEA, AFE not applicable.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

MODEL CONVERSIONS

Field installable -- model downgrade from 3115-2 to 3115-0 is not recommended for field installation.

ACCESSORIES (NONE)

SUPPLIES (NONE)

3117 SCANNER

PURPOSE

The 3117 Scanner is a desk-top, flat bed page scanner, which scans various kinds and sizes of paper documents. A flat bed scanner is especially suitable to scan images in bound documents, signature cards, carbon-backed or odd-sized documents. It has the resolution of up to 240 (horizontal) x 240 (vertical) picture elements per inch (94.5 x 94.5 picture elements per centimeter), with a scan area of letter or A4 size. It provides image input to both personal and host computer systems.

Related products used with the scanner are the 3117 Adapter as an IBM PC and an IBM Personal System/2 Model 30 feature, the 3117 Adapter/A as an IBM Personal Computer Models 50, 60, 80 feature, and the 3117 Extension Unit as an IBM 3117 Scanner feature. These features facilitate the attachment of the 3117 Scanner to a 3193 Display Station, or to the IBM Personal System/2 Models 30, 50, 60, 80, or to the following IBM Personal Computers: IBM PC, IBM PC XT, IBM Personal Computer AT, IBM 3270 PC, and IBM 3270 Personal Computer AT. The 3117 Adapter and the 3117 Adapter A allow the scanner to send image data to an IBM Personal Computer or IBM Personal System/2 without compression for further processing. The 3117 Extension Unit compresses the image data in the 3117 Scanner. Image data compression is a technique to save transmission time and reduce storage requirements.

MODELS

Model 010: Low Voltage (120 V, 50/60 Hz)

Model 011: High Voltage (220V - 240V, 50/60 Hz)

Limitations: Only one 3117 Scanner can be attached to an IBM Personal Computer, or an IBM Personal System/2, or a 3193 Display Station.

The Expanded Memory Adapter (XMA) for the 3270 Personal Computer family is not supported.

If the Enhanced 5250 Emulation Adapter is installed in the IBM PC, the Asynchronous Communications Adapter or the Serial/Parallel Adapter should not exceed a speed of 9600 bps. For System/36 or System/38 attachment, other operating restrictions will be identified in HONE/EQUAL.

Some inks of red, orange or yellow color may not be successfully scanned by the 3117. The maximum weight of a document placed on the scanner's flat-bed is 1k (2.2 lbs.). The scanner flat-bed opening is 216 x 297mm (8.5 x 11.7 in.). The scanner optics cannot scan information within approximately 1.5mm (0.06 in.) of the top and bottom edges of the flat-bed's opening and approximately 3.1mm (0.12 in.) of both sides of the flat-bed's opening.

Prerequisites: The prerequisites for each configuration are as follows:

- 3117 Scanner attached to an IBM Personal Computer and IBM Personal System/2 Model 30 via the 3117 Adapter, and to an IBM Personal System/2 Models 50, 60, 80 via the 3117 Adapter A:
 - Minimum 256KB main storage (to run diagnostics). Note: 512KB for 3270 PC family members.
 - A 3117 Adapter (#4925) or a 3117 Adapter A (#1029)
 - One full card slot in an IBM Personal Computer or an IBM Personal System/2 system unit.
 - A 3117 Personal Computer cable (#3005, P/N 6456807)

- 3117 Scanner configured with the 3117 Extension Unit and attached to an IBM Personal Computer and an IBM Personal System/2:
 - A 3117 Extension Unit (#4555)
 - One Asynchronous Communication Adapter (#2074), or one Serial/parallel Communication Adapter (#0215), or one High Speed Adapter (#4920) or one High Speed Adapter A (#1028)
 - One Communications Adapter Cable (#2067, P/N 1502067), for Asynchronous Communication Adapter and High Speed Adapter, or one Personal Computer AT Serial Adapter Cable (#0217, P/N 6450217) for Serial/Parallel Communications Adapter and High Speed Adapter A.

Note: When the 3117 Scanner is attached to a 3270 PC family member it is strongly recommended that 512KB of main storage and the High Speed Adapter be used.

The 3117 Scanner attached to the IBM Personal Computer is supported by the Image Support Facility 2, a licensed program.

- 3117 Scanner attached to an IBM 3193 Display Station.
 - A 3117 Extension Unit (#4555)
 - A 3193 Display Station
 - A 3174 or 3274 Control Unit Mdl 31A, 31C, 31D, 41A, 41C, 41D, 51C, and 61C with configuration support D at release level 65 or higher.
 - A Communications Adapter Cable (#2067, P/N 1502067)
 - GDDM version 2 release 1 or higher

Customer Setup (CSU): Yes, CSU allowance is one day.

HIGHLIGHTS

- Compact desk-top flat-bed scanner allowing the scanning of a page from bound documents, and of irregular size or paper weight.
- Scan speed per page -- approximately 30 seconds (8-1/2 in. x 11 in. page)
- Program selectable scanning resolutions
- Program specifiable partial page scan
- Program selectable digital halftone emulating grey levels of pictures
- Image data compression*
- Contrast control via dynamic thresholding and edge enhancement*

* Note: Requires 3117 Extension Unit.

DESCRIPTION

The 3117 Scanner is a desk-top, flat-bed page scanner with a small footprint, light weight, low noise and heat generation, for use with an IBM Personal Computer, or an IBM Personal System/2, or a 3193 Display Station.

The scanner is capable of scanning up to letter or A4 size images. The flat-bed design facilitates scanning a page in a bound document, a part of a large page or paper with odd size, shape or paper

weight. The scanner can scan a letter size (8-1/2 in. x 11 in.) or A4 size page in approximately 30 seconds.

Partial page scan is provided under program control. One or more rectangular areas can be defined for selective scanning within a page. Through the use of this function, unnecessary information can be eliminated, thus reducing the image data volume. The user can control darkness, contrast, and half-toning for each rectangular area individually.

Some inks of red, orange or yellow color may not be successfully scanned by the 3117. The maximum weight of a document placed on the scanner's flat-bed is 1K (2.2 lbs.). The scanner flat-bed opening is 216 x 297mm (8.5 x 11.7 in.). The scanner optics cannot scan information within approximately 1.5mm (0.06 in.) of the top and bottom edges of the flat-bed's opening and approximately 3.1mm (0.12 in.) of both sides of the flat-bed's opening.

The scanner has a resolution of up to 240 x 240 pels (Picture Elements) per inch. Horizontal and vertical scanning resolution are program selectable and can be:

- 240 x 240 pels per inch (94.5 x 94.5 pels per centimeter)
- 240 x 120 pels per inch (94.5 x 47.2 pels per centimeter)
- 120 x 120 pels per inch (47.2 x 47.2 pels per centimeter)

Darkness control is controlled by the user by selecting appropriate threshold level via program control, enabling the scanner to scan a darker copy, a lighter copy or a colored original document.

Digital half-toning is provided to improve the quality of scanned pictures by emulating grey levels. Up to 16 levels of digital halftones can be supported. Digital half-toning makes use of a matrix of 4 x 4 pels to determine the grey level of the scanned image.

The 3117 Extension Unit makes use of an Intel 80186 (TM) micro-processor to provide additional image processing power in the scanner. The extension unit provides four additional capabilities to the 3117 Scanner, including:

- Attachment to the IBM Personal Computer and the IBM Personal System/2 via various general purpose communication adapters (as described in the paragraph below).
- Attachment to the 3193 Display Station
- Image compression in the scanner
- Contrast control

The scanner works in three environments: IBM Personal Computer and IBM Personal System/2 Model 30 attachment, IBM Personal System/2 Models 50, 60, 80 attachment, and 3193 Display Station attachment. The 3117 Scanner can be attached to an IBM Personal Computer and an IBM Personal System/2 via the 3117 Adapter, or the 3117 Adapter A, or the 3117 Extension Unit. The 3117 Adapter is a feature of the IBM Personal Computer and the IBM Personal System/2 Model 30 and is installed in a system unit of an IBM Personal Computer and an IBM Personal System/2 Model 30. The 3117 Adapter A is a feature of the IBM Personal System/2 Models 50, 60, 80 and is installed in a system unit of an IBM Personal System/2 Models 50, 60, 80. When the 3117 Extension Unit is installed on the scanner, the scanner attaches to the IBM Personal Computer and the IBM Personal System/2 through one of the following PC adapters: the Asynchronous Communication Adapter, or the Serial/Parallel Communication Adapter, or the High Speed Adapter, or the High Speed Adapter A.

For System/36 or System/38 attached PCs, the asynchronous communication adapter speed should not exceed 9,600 bps. For System/36 or System/38 attachment, other operating restrictions will be identified in HONE/EQUAL.

The scanner can also attach directly to a 3193 Display Station via the 3117 Extension Unit.

Scanning of documents results in an image bit map. The size of the bit map is dependent primarily upon the pel resolution selected by the operator under program control. For example, when an 8-1/2 x 11 inch page is scanned at 240 x 240 pel resolution, the resulting bit map can be over 700K bytes of information. The large amount of data can be more efficiently handled by compressing the raw image bit map. The objective of compression techniques is to reduce the amount of data needed to represent the scanned image. The

method used by IBM's Image products to reduce or compress the scanned image data is called Modified Modified Read (MMR). It is a very efficient technique which can achieve compression ratios of 27 to 1, on average. Note: The compression ratio for a specific document depends on the document's image characteristics.

The 3117 Adapter and the 3117 Adapter A allow the 3117 Scanner to send image data to an IBM Personal Computer and an IBM Personal System/2 without compression for further processing or for compression of the raw image data by a program running in the IBM Personal Computer and the IBM Personal System/2. For example, compression can be done by the Image Support Facility 2 licensed program running in an IBM Personal Computer and an IBM Personal System/2.

The 3117 Extension Unit allows for compression of image data in the 3117 Scanner. Under program control, the 3117 Extension Unit will also send raw image data in addition to compressed image data.

Contrast control is achieved using dynamic thresholding and edge enhancement functions of the 3117 Extension Unit. These functions are useful for capturing images with various quality levels, especially for scanning a low contrast image against its background. The functions also make the edges of characters or lines look sharper and crisper. The edge enhancement is especially useful when the image consists of pictures and characters using digital halftone. Contrast level is selectable under program control.

The 3117 Scanner attaching to a 3193 Display Station is supported by:

GDDM Version 2, Release 1 or higher
GDDM-IVU (Image View Utility)

Operating Systems and Subsystems:

MVS/TSO
MVS/CICS
VM/CMS
VSE/CICS

The 3117 Scanner attached to an IBM Personal Computer and an IBM Personal System/2 is supported by the Image Support Facility 2 licensed program.

Publications: The following publications are shipped with the products at no charge for the initial copy. Additional copies are available for a fee.

- "Guide to Operations for the IBM 3117 Scanner and the 3117 Adapter", GA18-2477 (includes 5.25-inch diagnostic diskette)
- "Supplement to Guide to Operations for the IBM 3117 Scanner and 3117 Adapter", GK2T-0954 (includes 3.5-inch diagnostic diskette)

#1026 (P/N 6952374) 2.8m, High -- Chile
#1027 (P/N 6952291) 2.8m, High -- Argentina
#1020 (P/N 6952311) 2.8m, High -- Australia, New Zealand

MODEL CONVERSIONS (NONE)

SPECIAL FEATURES

Personal Computer Cable (#3005, P/N 6456807): Connects the 3117 Scanner to the 3117 Adapter (IBM Personal Computer and Personal System/2 model 30 feature #4925) and to the 3117 Adapter/A (IBM Personal System/2 models 50, 60, 80 feature #1029). Prerequisite: One 3117 Adapter or 3117 Adapter/A. Limitation: Cannot operate with the 3117 Extension Unit (#4555). CSU: Yes.

Extension Unit (#4555, P/N 6456809): Provides the ability to attach the scanner to the 3193 Display Station or IBM Personal Computer and the IBM Personal System/2 models 30, 50, 60, and 80. Image data compression, dynamic thresholding, and edge enhancement capabilities are built in to provide improved performance, improved contrast and sharper images via program control. Maximum: One. Prerequisite: For IBM Personal Computer attachment, one of the following PC adapters and one of the following associated cables:

- Adapters: Asynchronous Communication Adapter (#2074), Serial/Parallel Communication Adapter (#0215), or High Speed Adapter (#4920), or High-Speed Adapter/A (#1028).
- Cables: One Communications Adapter cable (#2067, P/N 1502067) for Asynchronous Communication Adapter and High Speed Adapter, or one Personal Computer-AT Serial Adapter Cable (#0217, P/N 6450217) for Serial/Parallel Communications Adapter and High-Speed Adapter/A.

For IBM 3193 Display Station attachment, one Communications Adapter Cable (#2067, P/N 1502067) Limitation: Cannot operate with 3117 PC Adapter (#4925) and 3117 Adapter/A. CSU: Yes.

Shipping manuals: The "Guide to Operations for IBM 3117 Scanner and the Extension Unit" is shipped with the 3117 Extension Unit.

ACCESSORIES (NONE)

SUPPLIES (NONE)

3118 SCANNER

PURPOSE

The IBM 3118 Scanner, is a high quality, compact, desk-top, medium speed, feed-through page scanner, having an average scanning speed of 12 seconds per page, and up to 240 (horizontal) x 240 (vertical) picture elements per inch (94.5 X 94.5 picture elements per centimeter) resolution. It is designed to offer image-capturing capabilities for IBM 3270 users and IBM Personal Computer users, and IBM Personal System/2 users. It attaches to the 3193 Display Station to communicate with the host system, or to an IBM Personal System/2, and to an IBM Personal Computer via the PC Asynchronous Communication Adapter, the Serial/Parallel Communication Adapter, or the High Speed Adapter. The 3118 Scanner attaches to the following IBM Personal Computers: IBM PC, IBM PC-XT, IBM Personal Computer-AT, IBM 3270 PC, and IBM 3270 Personal Computer-AT.

The Automatic Document Feed (ADF) provides the capability to automatically feed and scan up to 30 sheets of paper stacked on the chute of the IBM 3118 Scanner.

The High-Speed Adapter is a feature of the IBM Personal Computers and the IBM Personal System/2 model 30. The High-Speed Adapter/A is a feature of the IBM Personal System/2 models 50, 60, 80. The High-Speed Adapter and the High-Speed Adapter/A provide a 1M bps RS-422 interface. These adapters are designed to operate with the 3118 Scanner, and maximize the scanning performance of the 3118 Scanner.

MODELS

Model 010: 100-127V AC, no ADF

Model 011: 200-240V AC, no ADF

Model 020: 100-127V AC, includes ADF

Model 021: 200-240V AC, includes ADF

Limitations: Only one 3118 Scanner will attach to a 3193 Display Station, to an IBM Personal Computer, or to an IBM Personal System/2.

The Expanded Memory Adapter (XMA) for the IBM 3270 Personal Computer family is not supported.

If the Enhanced 5250 Emulation Adapter is installed in the IBM PC, the Asynchronous Communications Adapter or the Serial/Parallel Adapter should not exceed a speed of 9600 bps. For S/36 or S/38 attachment, other operating restrictions will be identified in HONE/EQUAL.

Certain paper types are not appropriate for scanning by the 3118 Scanner such as:

- Multi-part forms
- Carbon coated papers
- Glue coated papers
- Chemically coated papers

Pale yellowish-green ink may not be scanned as it is recognized by the scanner as white.

To ensure that the entire image on a page will be scanned, margins of the following sizes should be allowed:

Top: 3mm (0.12 inch) from the top edge of the paper
Bottom: 3mm (0.12 inch) from the bottom edge of the paper
Sides: 5mm (0.20 inch) from both sides of 8.5-inch width paper

Prerequisites: Prerequisites for attaching to the 3193 Display Station are:

- 3193 Display Station
- 3174 or 3274 Control Unit model 31A, 31C, 31D, 41A, 41C, 41D, 51C, and 61C with configuration support D at release level 65 or higher
- Communications Adapter Cable (#2067, P/N 1502067)
- GDDM Version 2, Release 1 or higher

Prerequisites for attaching to an IBM Personal Computer and an IBM Personal System/2 are:

- An IBM Personal Computer (PC, PC XT, Personal Computer-AT, 3270 PC or 3270 Personal Computer-AT) or an IBM Personal System/2 models 30, 50, 60, 80.
- An IBM PC display/display adapter (5151 Monochrome Display with EGA, 5153 Color Display, 5154 Enhanced Color Display, or 5272 Color Display) or an IBM Personal System/2 display/display adapter (8503 Display, 8512 Display, 8513 Display).
- A High-Speed Adapter (#4920), a High-Speed Adapter/A (#1028), an Asynchronous Communication Adapter (#2074), or a PC Serial/Parallel Communication Adapter (#0215).
- When attaching the 3118 to the PC via the Asynchronous Communications Adapter in the 5150, 5160 or 5271, the Communications Adapter Cable (P/N 1502067) is used. When attaching the 3118 to the IBM Personal Computer and the IBM Personal System/2 model 30 via the Serial/Parallel Communications Adapter in the 5170 or 5273, 8520, the Serial Adapter Cable (P/N 6450217) is used. When attaching the 3118 to the IBM Personal Computer and the IBM Personal System/2 model 30 via the High Speed Adapter in the 5150, 5160, 5271, 5170, 5273, or 8530 the Communications Adapter Cable is used. When attaching the 3118 to the IBM Personal System/2 models 50, 60, 80 via the High-Speed Adapter/A in the 8550, 8560, or 8580 the Serial Adapter Cable is used.
- Image Support Facility 2 licensed program for device support.

Note: The High-Speed Adapter is a feature of the IBM Personal Computer and the IBM Personal System/2 model 30. The High-Speed Adapter/A is an IBM Personal System/2 model 50, 60, 80 feature. These adapters provide a 1M bps RS-422 interface and are designed to operate with the 3118 Scanner, and maximize the performance of the scanner.

When the 3118 Scanner is attached to a 3270 PC family member, it is strongly recommended that the High Speed Adapter be used.

Customer Setup (CSU): Yes, one day.

HIGHLIGHTS

- A compact light-weight desk-top scanner with small footprint.
- Attachment of the 3118 Scanner to the 3193 Display Station through a 38.4K bps RS-422 interface, or attachment to an IBM Personal Computer and an IBM Personal System/2 via the High-Speed Adapter or the High-Speed Adapter/A with a 1M bps RS-422 interface, the Asynchronous Communication Adapter, the Serial/Parallel Adapter with up to 9600 bps RS-232-C interface.
- Handling of a wide variety of paper sizes.
- A built-in paper stacker and paper chute with an adjustable paper guide.
- The Automatic Document Feed feeds up to 30 sheets of paper continuously.
- Program selectable scanning resolutions.
- Scan speed per letter-size page with 240 x 240 picture elements per inch with compression: 12 seconds (average).
- Two dimensional image data compression at an average of 27 to 1 compression ratio at 240 x 240 pels per inch resolution.

MACHINES

- Interface to the 3193 Display station through a 38.4K bps RS-422 interface.
- Program selectable darkness control.
- Program selectable contrast control with dynamic threshold and edge enhancement technology.
- Program specifiable digital half-toning emulating grey levels of pictures.
- Program specifiable partial page scanning.

The 3118 Scanner can be attached to the 3193 Display Station through a 38.4K bps RS-422 interface, or it can be attached to an IBM Personal System/2 models 30, 50, 60, 80, and to an IBM Personal Computer: the IBM PC, PC-XT, Personal Computer-AT, 3270 PC, or 3270 Personal Computer-AT, via the High Speed Adapter with 1M bps RS-422 interface, the PC Asynchronous Communication Adapter, the PC Serial/Parallel Adapter with up to 9600 bps RS-232-C interface.

The 3118 Scanner is a desk-top, feed-through, page scanner with a small foot print, light weight, designed to be compact for use on a desk with an 3193 Display station or with an IBM Personal Computer, or with an IBM Personal System/2.

It allows for scanning of pages of various sizes, from widths of 66mm (2.6 inches) to 216mm (8.5 inches) and from lengths ranging between 99mm (3.9 inches) and 356mm (14 inches), with an adjustable paper guide. Papers of weights from 49 g/square meter (13 pounds) to 187 g/square meter (50 pounds) may be scanned. The thickness of the paper may range between 0.06mm (0.0024 inch) to 0.20mm (0.0078 inch).

Horizontal and vertical scanning resolution is program selectable and may be any of the following:

- 94.5 x 94.5 pels per centimeter (240 x 240 pels per inch)
- 94.5 x 47.2 pels per centimeter (240 x 120 pels per inch)
- 47.2 x 47.2 pels per centimeter (120 x 120 pels per inch)

The scanner can scan a letter size page in 12 seconds average with 240 x 240 picture elements per inch resolution and with compression. The speed may vary depending on the paper size, characteristics of the image, the application programs or communication speed. Scanning speed of the 3118 Scanner will degrade when communicating with the IBM Personal Computer and the IBM Personal System/2 model 30 via the Asynchronous Communication Adapter or the Serial/Parallel Adapter since these adapters are limited to 9600 bps. For S/36 or S/38 attached to the IBM Personal Computer and the IBM Personal System/2 model 30, the asynchronous communication adapter speed should not exceed 9600 bps. For S/36 or S/38 attachment, other operating restrictions will be identified in HONE/EQUAL.

The scanner takes advantage of the increased processing power of the high performance Intel 80186 (TM) microprocessor to handle such functions as compression, digital halftone, darkness and contrast control, dynamic thresholding, edge enhancement, partial page scan and others.

Compression of the image data is performed in the 3118 Scanner using the Modified Modified Read (MMR) compression method. The average compression ratio is 27 to 1 in 240 x 240 pels per inch resolution.

Note: Compression ratio will vary and depends on image content characteristics.

Darkness control is specified by the user through the selection of an appropriate threshold level via program control, which will enable scanning of a darker copy, a lighter copy or a colored original document.

Digital halftoning is provided to improve the quality of scanned pictures by providing emulated grey levels. Up to 16 levels or gradations of grey can be supported. Digital halftoning makes use of a matrix consisting of 16 pels (4 x 4) to determine the grey level of the scanned image.

Contrast control is achieved using dynamic thresholding and edge enhancement functions. These functions are useful for capturing images of varying quality levels, and especially for scanning an image where there is low contrast between the image and its background. Edge enhancement also makes the edges of characters or lines look sharper and crisper. Edge enhancement is especially useful when the image consists of pictures and characters and when digital halftoning is used. An appropriate contrast level is selectable under program control.

The 3118 Scanner provides the user with partial page scanning capability. This function allows a user to define one or more rectangular areas to be scanned within a page, and helps eliminate unnecessary image data volume transmission and storage requirements. The user can control darkness, contrast, and halftoning for each rectangular area individually.

The Automatic Document Feed continuously feeds and scans up to 30 sheets of paper, not exceeding 3mm (0.12 inch) in total thickness, from the chute of the 3118 Scanner. With the Automatic Document Feed installed in the 3118, paper weighing from 49g/sq.m (13 lbs.) to 120g/sq.m (32 lbs.) may be scanned. The thickness of the paper may range between 0.06mm (0.0023 inch) to 0.12mm (0.0046 inch).

The 3118 Scanner attaching to a 3193 Display Station is supported by:

GDDM Version 2, Release 1 or higher
GDDM-IVU

Operating Systems and Subsystems:

MVS/TSO
MVS/CICS
VM/CMS
VSE/CICS

The 3118 Scanner attaching to an IBM Personal Computer and IBM Personal System/2 is designed to operate with the Image Support Facility 2 licensed program.

The 3118 Scanner with Automatic Document Feed attached to a 3193 Display Station is supported by GDDM Version 2, Release 1. "Technical News Letter", GN18-2387, to "IBM 3193 Display Station Description", GA18-2364-1, is available from Mechanicsburg. The TNL describes the additional data stream support by the 3193 Display Station for the Automatic Document Feed. This TNL also documents corresponding support on GDDM Version 2, Release 1. The 3118 with Automatic Document Feed attached to an IBM Personal Computer and an IBM Personal System/2 will be supported by Image Support Facility 2, Version 1.1 licensed program.

Publications: The following publications are shipped with the product at no charge for the initial copy. Additional copy is available for a fee.

- GA18-2475 "Guide to Operations for IBM 3118 Scanner"
- GA18-2476 "Guide to Operations for the High-Speed Adapter" (includes the 5.25-inch diagnostic diskette)
- BK2T-0955 "Supplement to Guide to Operations for High-Speed Adapter (includes 3.5-inch diagnostic diskette)
- GK2T-0951 "Guide to Operations for the High-Speed Adapter/A (Includes 3.5-inch diagnostic diskette)

The GA18-2475 is shipped with the IBM 3118 Scanner, the GA18-2476 and GK2T-0955 are shipped with the High-Speed Adapter, and the GK2T0951 is shipped with the High-Speed Adapter/A.

The following languages for each publication are available:

Shipping Manuals: The "Guide to Operations for the IBM 3118 Scanner" is shipped with the 3118 Scanner. Specify one:

Language	Spec. Code	Item Number	Country
Canadian			
French	#2752	65X1816	Canada
English			
US	#2722	65X1814	All countries
Japanese	#2747	65X1817	Japan
Spanish	#2749	65X1815	Argentina

Additional copies of the "Guide to Operations for the IBM 3118 Scanner" and other publications will be available for a fee.

SPECIFY

Unless indicated otherwise, these specify features are available only at time of manufacture.

- Power - Model 010, no ADF, (120V AC, 1-phase, 50/60 Hz), 3-prong grounded plug; no specify required.
- Power - Model 011, no ADF, (200-240V AC, 1-phase, 50/60 Hz): no specify required.
- Power - Model 020, includes ADF, (120V AC, 1-phase, 50/60 Hz), 3-prong grounded plug; no specify required.
- Power - Model 021, includes ADF, (200-240V AC, 1-phase, 50/60 Hz): no specify required.
- Power Cord: 2.8m (9 ft) or 1.8m (6 ft) with nonlocking plug. Specify one:
 - #1017, P/N 6952323, 2.8m (200-240V), Indonesia

- #1019, P/N 6952359, 2.8m (200-240V), Hong Kong, Malaysia, Singapore
- #1025, P/N 1838578, 2.8m (200-240V), Thailand, Peru
- #1026, P/N 6952377, 2.8m (200-240V), Chile
- #1027, P/N 6952294, 2.8m (200-240V), Argentina
- #2721, P/N 6952314, 2.8m (200-240V), Australia, New Zealand

- Power for the Automatic Document Feed is supplied from the 3118 Scanner.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES (NONE)

SUPPLIES (NONE)

3125 PROCESSING UNIT

(NO LONGER AVAILABLE)

The 3125 is No Longer Available -- MES orders for model changes, features, released RPQs and accessories are not affected. No new RPQs will be accepted.

PURPOSE

Provides main and control storage, plus arithmetic and logic circuits for a S/370 mdl 125.

MODELS

The 3125-0 and 3125-2 Processing Units are available in the following model groups:

				Processor
				Storage Size
3125-0		3125-2		
FE	FE0	FE2	FE2	98,304 bytes
G	G00	G2	G02	131,072 bytes
GE	GE0	GE2	GE2	163,840 bytes
GF	GF0	GF2	GF2	196,608 bytes
H	H00	H2	H02	262,144 bytes
		HG2	HG2	393,216 bytes *
		I2	I02	524,288 bytes *

* If 3411 Magnetic Tape and Control is attached see Magnetic Tape Adapter special feature paragraph for RPQ requirement.

HIGHLIGHTS

98,304 bytes up to 524,288 bytes of processor storage are available. The basic main memory cycle time is 480 nanoseconds for two bytes. 16 general purpose, 16 control, and four floating point registers are provided. The system design provides distributed micro-coded sub-processors for the independent handling of programs -- Instruction Processing Unit (IPU), Input/Output Processing (IOPs), and Diagnostic/Maintenance (SVP).

Direct attachment of the 3333/3330 DASD Subsystem or the 3340 DASD Subsystem or the 3340/3344 DAS Subsystem (3125-2 only) is provided. Depending on model and features up to 16 spindles can be attached. In a 3340 Subsystem the 3340 mdl A2 and its attached 3340 drives can be shared with another S/370, except 3115-0 or 3125-0, via the String Switch capability (#9315).

The 2311/3330 Series, the 2311-1/3340 Series and the 2314/3340 Series Compatibility features are available as options. They are mutually exclusive. Emulation is under DOS and DOS/VS only. 2311 mdl 1 emulation under DOS/VS requires SYSRES on 3340 or on 3330.

Capability to attach the 3803/3420 or 3411/3410 Magnetic Tape Subsystem mdls 1, 2, or 3 via the Magnetic Tape Adapter.

Capability to natively attach the following card I/Os through appropriate Integrated Card I/O Attachments: 2560 mdl A1; 3504 mdls A1, A2; 3525 mdls P1, P2, P3; and the 5425 mdls A1, A2 (96-column card).

Capability to natively attach the 5213 mdl 1 Console Printer (85 cps) is provided with the Integrated 5213 Printer Mdl 1 Attachment. This console slave printer provides hard copy output of operator messages presented on the Video/Display (CRT) Console. The 1052 compatibility feature is also available.

Capability to natively attach up to six synchronous and up to 16 asynchronous lines is provided by the Integrated Communications Adapter with appropriate features.

Capability to natively attach the 1403 Printer (mdl 2 or 7 or N1) is provided with the Integrated Printer Attachment.

Capability to natively attach the 3203 Printer is provided with the Integrated 3203 Printer Attachment.

The 1403/3203 Carriage Control Feature provides the capability to load information contained in the 1403 Carriage Control Tape into the 3203 Forms Control Buffer.

S/360 Model 20 Compatibility and 1401/1440/1460 Compatibility Features are provided to allow execution of the instructions of those systems.

The Operator Console is an integral part of the 3125. The standard online Video/Display-Keybaord enhances operator (human factor) machine communications. Data can be manually entered into the processor's main storage or into internal registers via the keybaord. Contents of storage or internal registers of the 3125 can be displayed on the Video/Display screen. The Video/Display with 16 lines of 56 characters/line and keybaord are designed for use as an operator console. A portion of the screen is reserved to display machine status. The Service Processor (SVP) continuously monitors system operation and logs errors on the magnetic diskette device. The SVP initiates recovery on detection of error conditions and provides control for the display, keybaord, magnetic diskette and optional console printer.

The standard console file is the basic microprogram loading device for the system. The console file contains a small read/write file device that provides the microcode for the system on removable magnetic IBM Diskettes. The diskettes that will be supplied with the system will contain the required microcode for the basic system, the optional features ordered for the system, and CE diagnostics.

The CE logout of machine and I/O related control checks and errors is recorded on the console file diskette for CE diagnosis, to enhance the reliability, availability, and serviceability of the mdl 125.

Extended Control (EC) Mode expands the structure of the Program Status Word to accommodate the control of S/370 features and extends the number of permanently assigned main storage locations. The mdl 125 can operate in either EC Mode or Basic Control (BC) Mode as defined for the S/360.

Dynamic Address Translation (DAT) is a standard facility on the mdl 125. When the mdl 125 is in Extended Control (EC) Mode with Translation Mode operable, programs are not required to be completely resident in main memory for execution. Under Supervisor control, portions of programs ("pages") may be stored on a direct access device until needed, at which time they are returned to main storage and may be relocated to any available location. Program addresses are treated as "logical addresses" and the translation feature develops "real addresses". Since logical storage addressing is not limited by the amount of available real storage, program size may exceed real storage size. This logical storage is referred to as "virtual storage" and may be as large as 16,777,216 bytes on the mdl 125.

Program Event Recording (PER), a standard feature, is a debugging aid which permits four types of events to be selectively monitored: (1) successful branches, (2) instruction fetch address compare, (3) main storage alteration address compare, (4) general register alteration address compare.

Standard features include a S/370 commercial instruction set, Extended Control (EC) Mode, Dynamic Address Translation, Channel Indirect Data Addressing, Program Event Recording, Monitor Call, interval timer, time-of-day clock, CPU Timer and Clock Comparator, store and fetch protect, byte-oriented operand feature, error checking and correction in main storage, automatic instruction retry, and Audible Alarm.

Control Storage: Reloadable control storage for the Service Processor (SVP), direct DASD attachment, and Instruction Processing Unit (IPU) are provided as standard on the 3125 Processing Unit. In addition reloadable control storage is available for the optional

Card I/O Attachment, Printer Attachment, Integrated Communications Adapter (ICA), Byte Multiplexer Channel, and Console Printer Attachment. Control storage is loaded from the diskette housed in the Service Console Unit.

The IPU of the 3125-0 contains as standard 12K words of control storage. Certain features/combinations require up to two 4K word increments in addition. See Chart A for details.

The IPU of the 3125-2 contains as standard 16K words of control storage. One 8K word increment may be ordered as an optional feature for use with certain feature combinations. See Chart A for details.

CHART A: Listed below are the valid feature combinations and their respective requirements for additional control storage.

Model	Basic Control	#4105 Req'd									
3125-2	Storage										
Model	Ba.	Stg	#4101	#4101 and #4102 Req'd							
3125-0	Ctl	Stg	Required								
#4457 *	x		x*	*					x*	x	x*
#7520 *	x	x	*	*	x	x	x	*	x	x	*
#3910		x	x	x	x	x	x		x	x	x
#8040**				x	x			x	x	x	x
#8060**				x	x			x	x		x
#8070**				x		x		x	x		x

* 1401/1440/1460 Compatibility (#4457) and S/360 Mdl 20 Compatibility (#7520) are mutually exclusive (may not be ordered on the same system unless RPQ SU0002 is installed on the 3125.) Cannot be installed with 3344 Attachment (#9317). Note: RPQ SU0002 cannot be installed if the 2311 Mdl 1/3340-Series Compatibility (#8060) or 2314/3340-Series Compatibility (#8070) is installed.

** #8040 and #8060 and #8070 are mutually exclusive. In addition, #8060 and #8070 are mutually exclusive with specify feature #9190 or 3334 Attachment specify feature (#9317). #9190 does not require additional control storage.

Note: Specify feature #9315 is mutually exclusive with #4105 and/or #4460.

Input/Output Attachment - Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices. They are designed to interact with their respective I/O devices and should be installed/removed with them since the system is inoperative with only the attachment/adaptor installed.

- Direct Disk Attachment (standard): Attaches either the 3340 mdl A2 or the 3333 mdl 1 dual disk drive and control unit directly to the 3125. The attachment supports block multiplexing. Channel address is 1, physical spindle addresses are 160 to 167 on the first string and 168 to 16F on the second string. For logical address assignment for 3344 refer to the "Functional Characteristics Manual", GA33-1506.
- 3333/3330 DASD Subsystem: One 3333 mdl 1 and one additional 3330 mdl 1 or 2 can be attached to provide up to four spindles.
- 3340 DASD Subsystem: On the 3125-0 one 3340 mdl A2 and up to three 3340 mdls B1/B2 can be attached to provide up to eight spindles. On the 3125-2 (with 16-Drive Expansion #9315) one or two 3340 mdls A2 can be directly attached with up to three 3340 mdls B1/B2 attached to each of the 3340 mdl A2 to provide up to 16 spindles on the system.

- 3340/3344 DAS Subsystem: On the 3125-2 with 3344 Attachment #9317 installed: One 3340 mdl A2 and any combination of up to three 3340 mdls B1/B2 and 3344 mdl B2/B2F can be attached on the first string. In addition, on the 3125-2, one 3340 mdl A2 and up to three 3340 mdls B1/B2 can be attached on the second string to provide up to 16 physical or the equivalent of up to 34 logical spindles on the system.

- Magnetic Tape Adapter (optional): This feature attaches one of the following tape control units and is addressed as channel 2:

- 3411-1 Tape Control (data rate 20Kb) housing one tape drive. Up to three additional 3410-1 Magnetic Tape Drives may be attached to the 3411-1 Control Unit.
- 3411-2 Tape Control (data rate 40Kb) housing one tape drive. Up to five additional 3410-2 Magnetic Tape Drives may be attached to the 3411-2 Control Unit.
- 3411-3 Tape Control (data rate 80Kb) housing one tape drive. Up to five additional 3410-3 Magnetic Tape Drives may be attached to the 3411-3 Control Unit.
- 3803-3 Tape Control. Up to eight 3420 Tape Units Mdl 3 or 5 may be attached to the 3803.

- Integrated Card I/O Attachments (optional): These features provide native attachment of one of the following:

3504 Card Reader mdls A1 or A2
3525 Card Punch mdl P1, P2, or P3
2560 Multifunction Card Machine mdl A1
5425 Multifunction Card Unit mdls A1 or A2
3504 Card Reader and 3525 Card Punch
3504 Card Reader and 2560 MFCM
3504 Card Reader and 5425 MFCU

The Integrated Card I/O Attachment uses channel 0. Device address X'00C' is reserved for the 3504 reader and device address X'00D' is reserved for the 2560, 5425, or 3525.

- Integrated Printer Attachment (optional): Attachment features for the 1403 Printer mdls 2, 7, and N1 and for the 3203 Printer mdl 1 or 2 are available. Only one printer unit can be natively attached. The printer adapter is addressed as channel 0 and the device address is X'00E'. The Universal Character Set feature can be optionally selected for the 1403-2 or N1 on the 3125 at no charge.

- Integrated Console Printer Attachment (optional): Attaches the 5213 mdl 1 Printer to the 3125 to provide hard copy of operator messages presented on the standard Display Operator Console. It uses address X'01F' (same as the Display Operator Console) on channel 0. When the 1052 Compatibility feature is installed, 5213 mdl 1 Printer is required.

- Integrated Communications Adapter (ICA) (optional): Provides the basic control storage and common circuits for direct attachment of up to six synchronous (BSC) communication lines or up to 16 asynchronous (start/stop) lines. The Integrated Communications Adapter Extension (ICAE) #4641 adds the capability to attach up to six BSC and up to 16 start/stop lines. IBM line adapters are provided within the mdl 125.

Input/Output Channel:

- Byte Multiplexer Channel (optional): A wide variety of I/O devices may be attached to the S/370 mdl 125 via the optional byte multiplexer channel. One channel is available on the 3125 as a special feature and is functionally equivalent to the byte multiplexer channel on S/360 mdls 22, 25, 30, and 40. 32 subchannels are provided as standard. (Eight channels may be shared and 24 are unshared). The byte multiplexer channel provides eight control unit positions and permits I/O units to operate normally in byte mode, giving the effect of several I/O operations simultaneous with computing. In burst mode, the channel handles one high-speed unit with a maximum data rate of 29Kb per second. It is capable of sustained data rates up to 25Kb per second in byte mode. It is addressed as

channel 0. For OS/360 exclusions, refer to "System/360 Operating System Generation", (GC28-6554).

Console Function: System control functions are provided by the standard integrated Video/Display-Keybaord. It has the switches and lights necessary to operate and control the system. Optionally, the 5213-1 Console Printer 85 cps) may be attached via feature number #4692. The optional 1052 compatibility (#8005) operates the 5213-1 printer and standard systems keyboard as an operator console in S/360-1052 mode only. In this mode of operation, the Video/Display-Keybaord acts as a slave unit to the printer.

Publications: GC20-0001

SPECIFY

- Power (AC, 3-phase 4-wire):

50 Hz		60 Hz	
200V	#2807	200V	#2733
220V	#2815	208V	#9903
235V	#2818	230V	#9905
380V	#2816		
408V	#2819		
- Line Cord for Japan, 50 Hz: #2747.
- Color Group: #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray, #9046 for white.
- Cabling: #9080 for below the floor, or #9081 for on the floor.
- CPU Configuration: #9091 for Configuration 1 (CPU located behind console table), or #9092 for Configuration 2 (CPU bolted to right side of console table). Configuration 2 excludes a 5425 MFCU from being natively attached. See "S/370 Installation Manual for details.
- Minimum Configuration: In addition to the 3125 Processing Unit, each S/370 mdl 125 requires a 2-spindle direct access storage device, line printer, and card reader. To run back level DOS Version 3 (Releases 21 - 26) and DOS Version 4, a 5213 mdl 1 Console Printer and the 1052 Compatibility feature must be installed. To run DOS Version 3, the 2311 mdl 1 Compatibility feature is also required.
- Video Display/Keyboard Console Language Combination: See chart at end of M3125 pages for "Specify" code.
- DASD Attachment: Specify one - #9313* for 3330 Attachment or #9314* for 3340/3344 Attachment (3125-2 only). Specify Fixed Head Attachment (#9190)* if Fixed Head Feature is installed on the 3340 Series Drives. Note: The Fixed Head Attachment Feature (#9190) cannot be installed with 2311 Mdl 1/3340-Series Compatibility (#8060) or 2314/3340-Series Compatibility (#8070).
- Specify String Switch Capability/16-Drive Expansion (#9315)* (3125-2 only) if String Switch (#8150) is installed on one or both 3340 mdl A2s, or if a second 3340 mdl A2 is installed no matter how many drives there are (16-Drive Expansion). Specify #9306 Second String if two 3340 mdl A2s are installed. #9315 requires 4K DASF Control Storage Extension (#4210). #9315 cannot be installed with #4105 or #4460, and is mutually exclusive with 3344 Attachment #9317*.

When String Switch is installed, an Emergency Power Off connection between the sharing systems is mandatory. RPQ DC3621 (two system connection) or DC3622 (multiple system connection) must be ordered.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

The 3125-2 uses fixed addresses 160 to 16F for its attached disk drives. In the case of string switch, to avoid confusion in

Job Control and Operation, the same addresses should be assigned to shared drives on the other system. In the case of the 3135, 3135-3, 3138 IFA, this requires specify code #9821 on the 3135 providing addresses 160 through 16F to comply with the fixed addresses of the 3125. If intermixing 3330 and 3340 on the 3135, 3135-3, 3138 (#9315), no string switching with the 3125-2 is possible.

Note: The string switch of the DASD hardware function can be operated with the present DOS/VS standard DASD support. DOS/VS does not support the device reserve/release channel commands for program-controlled sharing of attached DASD units. Therefore, it is the user's responsibility by appropriate organization and programming procedures to resolve conflicting references to shared files and ensure data integrity. One method for controlling potential conflicts involves the use of operator commands DVC UP/DVC DN. For additional information, consult "DOS/VS System Management Guide", GC33-5371.

- On the 3125-2 -- specify 3344 Attachment (#9317)* when 3344 mdl B2/B2Fs are installed. 4K DASF Control Storage Extension is required. Cannot be installed with any of the following: String Switch Capability (#9315), 231X/3340 Compatibility (#8060/#8070), S/360 Mdl 20 Compatibility (#7520) -- 1401/1440/1460 Compatibility (#4457) -- 1403/3203 Carriage Control Feature (#4460). Specify #9306, Second String, if two 3340 mdl A2s are installed.

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

External Signals (#3898): Provides six distinct external interrupt lines to request and identify an external interrupt response from the processing unit. Maximum: One per 3125. Cable Order: Required. Field Installation: Yes. Prerequisites: External devices must meet the interface specifications outlined in "S/360 Direct Control Feature - OEMI", GA22-6845.

Floating Point Including Extended Precision (#3910): Adds 51 floating point arithmetic instructions. Provides for floating point operation including extended precision to 28 hexadecimal digits. Field Installation: Yes. Limitations: Cannot be installed with Floating Point (#3900). Prerequisites: See Charts A/B above for control storage requirements.

4K Control Storage Increment (#4101, #4102): (Mdl 0) Each adds 4,096 words (22 bits wide) of control storage. Required for certain feature combinations -- See "Control Storage Requirements" under "Highlights" for details. #4101 for first 4K increment -- #4102 for second 4K increment. Field Installation: Yes. Prerequisites: #4102 requires #4101.

8K Control Storage Extension (#4105): (Mdl 2) Adds 8,192 words (22 bits wide) of control storage to the IPU. Required for some combinations -- see Chart A. Limitations: Cannot be installed with #4210 or #9315. Field Installation: Yes. Maximum: One.

4K DASF Control Storage Extension (#4210): (Mdl 2) Adds 4,096 words (22 bits wide) to the DDA control storage for use with either or both the String Switch Capability or 16 Drive Expansion specify feature (#9315) or 3344 Attachment specify feature (#9317). Limitations: Cannot be installed with 4105 or #4460. Maximum: One. Field Installation: Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature which, in combination with an emulator program under DOS/VS, permits the system to execute 1401/1440/1460 instructions. Field Installation: Yes. Prerequisites: See "Control Storage Requirements" under "Highlights" above. Limitations: Cannot be installed with 3344 Attachment (#9317) or with S/360 Mdl 20 Compatibility (#7520) unless RPQ SU0002 is installed on the 3125 -- RPQ SU0002 cannot be installed if the 2311 Mdl 1/3340 or 2314/3340 Compatibility feature (#8060, #8070) is installed.

1403/3203 Carriage Control Feature (#4460): Allows the 3203 Printer with its tapeless carriage control to emulate the function of a tape controlled carriage and thus run programs written for a 1403 Printer. Limitations: The 5203 Printer is not supported by this feature. Cannot be installed with string switch capability (#9315) or 3344 Attachment specify feature (#9317). Field Installation: Yes. Prerequisites: 3203 Printer. Note: This feature is not required with DOS/VS Release 31 and subsequent releases.

5425 Multifunction Card Unit Power Prerequisite (#4500): Provides the power supply for the 5425 Multifunction Card Unit when no native printer 1403 or 3203 is attached. Limitations: Cannot be installed with 1403 Printer/5425 Card Unit Power Prerequisite (#4505). Maximum: One. Field Installation: Yes.

1403 Printer/5425 Card Unit Power Prerequisite (#4505): Provides the power supply for the natively attached 1403 Printer with or without a 5425 MFCU. Limitations: Cannot be installed with 5425 Multifunction Card Unit Power Prerequisite (#4500). Maximum: One. Field Installation: Yes.

Integrated 3203 Printer Attachment (#4650): Control for attaching the 3203 Printer mdl 1 or 2. Limitations: Cannot be installed with Integrated 1403 Printer Attachment (#4662, #4667 or #4668). Maximum: One. Field Installation: Yes.

Integrated 1403 Printer Mdl 2 Attachment (#4662): Provides control for attaching the 1403 Printer mdl 2. Specify: #9847* to support UCS (#8641) on the 1403 mdl 2. Limitations: Cannot be installed with Integrated 3203 Printer Attachment (#4650). Maximum: One. Field Installation: Yes. Prerequisites: #4667 and #4505.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Integrated 1403 Printer Attachment (#4667): Control for attaching the 403 Printer mdl 7. Prerequisite feature required for installation of the Integrated 1403 Printer Mdl 2 or Mdl N1 Attachment (#4662, #4668). Limitations: Cannot be installed with Integrated 3203 Printer Attachment (#4650). Maximum: One. Field Installation: Yes. Prerequisites: #4505.

Integrated 1403 Printer Mdl N1 Attachment (#4668): Control for attaching the 1403 Printer mdl N1. Specify: #9847* to support UCS (#8640) on the 1403 mdl N1. Limitations: Cannot be installed with Integrated 3203 Printer Attachment (#4650). Maximum: One. Field Installation: Yes. Prerequisites: #4662, #4667, #4505.

Integrated 2560 Attachment (#4670): Control for the 2560 Multifunction Card Machine mdl A1. Limitations: Cannot be installed with Integrated 3525 Card Punch Attachment (#4685) or with Integrated 5425 Attachment (#4695). Maximum: One. Field Installation: Yes. Prerequisites: #9726 is required on the 2560 mdl A1.

2560 Card Print Control (#4674): Provides control for Card Print capability on the 2560 Multifunction Card Machine mdl A1. Specify: #9797* for first two print lines, #9798* for second two, #9799* for third two, when corresponding Card Print features (#1575, #1576, #1577) are installed on the 560 mdl A1. Field Installation: Yes. Prerequisites: #4670 on the 3125.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

2560 Print Languages:

English US	#2956*
Japanese	#2968*
Katakana	#2973*
Spanish	#2961*

Magnetic Tape Adapter (#4675): Provides control for attachment of one 411 Magnetic Tape Unit and Control mdl 1, 2 or 3 or one 3803 Tape Control mdl 3. See M3420 and 3803 or 3411 and 3410 pages for additional ordering instructions. The Magnetic Tape Adapter is ad-

ressed as Channel 2. Maximum: One. Specify #9807 for attachment of 3803 mdl 3. See "Highlights" for additional information. Field Installation: Yes. Limitations: A 3803 and 3411 cannot coexist on the Magnetic Tape Adapter. Prerequisites: #7361 on the 3411, except for 3125 mdl HG2. When attached to 3125 mdl HG2, RPQ 870061 is required on the 3411.

Integrated 3504 Card Reader Attachment (#4680): Control for attaching the 504 Card Reader mdl A1 or A2. Supports Read Column Eliminate capability on the 3504 Card Reader. Specify: #9781 for 3504 mdl A1, or #9782 for 3504 mdl A2; #9783 provides Optical Mark Read capability on the 3125 when Optical Mark Read (#5450) is installed on the 3504 mdl A1 or A2; #9784 provides the capability of using the Selective Stacker (#6555) feature on the 3504 mdl A1 or A2. Maximum: One. Field Installation: Yes.

Integrated 3525 Card Punch Attachment (#4685): Control for attaching the 3525 Card Punch mdl P1, P2 or P3. Specify: #9791* for 3525 mdl P1, #9792* or 3525 mdl P2, or #9793S for 3525 mdl P3. Specify #9794* when the Card Read (#1533) feature is installed on the 3525. Limitations: Cannot be installed with Integrated 2560 Mdl A1 Attachment (#4670) or Integrated 5425 Attachment (#4695). Maximum: One. Field Installation: Yes.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Integrated 5213 Printer Mdl 1 Attachment (#4692): Attaches the 5213 Printer mdl 1. Includes a special cable to support the printer. Maximum: One. Field Installation: Yes.

3525 Card Print Control (#4693): Provides control for Card Print (#8339, #5273) capability on the 3525 Card Punch. Specify: #9795* when Two-line Card Print (#8339) is installed on the 3525, or #9796* when Multiline Card Print (#5273) is installed on the 3525. (Japan only> Note: Specify 2973 for Katakana (if desired) in addition to #9795 or #9796.<) Field Installation: Yes. Prerequisites: Integrated 3525 Card Punch Attachment (#4685).

Integrated 5425 Attachment (#4695): Control for attaching the 5425 Multifunction Card Unit mdl A1 or A2. Specify: #9183* for mdl A1, or #9184* for mdl A2. Limitations: Cannot be installed with Integrated 3525 Card Punch Attachment (#4685) or with Integrated 2560 Mdl A1 Attachment (#4670). Can only be installed with CPU Configuration 1 (#9091). See "Specify" above. Maximum: One. Field Installation: Yes. Prerequisites: 1403 Printer/5425 Card Unit Power Prerequisite (#4505) required when 1403 is natively attached, or 5425 Multifunction Card Unit Power Prerequisite (#4500) if no native printer (1403 or 3203) is configured. When 3203 Printer is attached, #4500 or #4505 is not required.

Basic Byte Multiplexer Channel (#5248): To attach low speed byte Multiplex devices -- see "Byte Multiplexer Channel" under "Input/Output Channel". Feature includes control storage necessary for IOP operation. Maximum: One. Field Installation: Yes.

S/360 Mdl 20 Compatibility (#7520): Microprogram controlled feature which, in combination with special software, permits the system to execute S/360 mdl 20 instructions. Field Installation: Yes. Limitations: Cannot be installed with 3344 Attachment (#9317) or with 1401/1440/1460 Compatibility (#4457) unless RPQ SU0002 is installed on the 3125 -- RPQ SU0002 cannot be installed if either 2311 Mdl 1/3340 or 2314/3340 compatibility feature (#8060, #8070) is installed. Also note control storage requirements in Chart A. Prerequisites: See "Control Storage Requirements" under Highlights" above.

1052 Compatibility (#8005): Operates the 5213 Printer mdl 1 and standard keyboard as an operator console in S/360 1052 mode only. In this emulation mode of operation the Video/Display acts as a slave unit to the printer. Field Installation: Yes. Prerequisites: #4692 and the 5213 Printer mdl 1.

2311 Mdl 1/3330 - Series Compatibility (#8040): Permits the emulation of 2311 mdl 1 files on the 3333/3330 Disk Storage. The user program may access both the emulated 2311 mdl 1 data set as well as the native data set. This provides a "mixed-mode" operating en-

vironment. Prerequisites: Minimum of one 4K Increment of Control Storage (#4101, #4102). See "Control Storage Requirements" under "Highlights" above. Note: When running DOS Release 21-27, 1052 Compatibility (#8005) is a prerequisite. The 1403/3203 Carriage Control Feature (#4460) is also required if a 3203 Printer is attached. Emulation under DOS/VS requires SYRES on 3330 in native mode. Field Installation: Yes. Limitations: #8040, #8060 and #8070 are mutually exclusive.

2311 Mdl 1/3340 - Series Compatibility (#8060): Permits the emulation of 2311 mdl 1 files on the 3340 disk storage. The user program may access both the emulated 2311 mdl 1 data as well as the native data set. This provides a "mixed mode" operating environment. Limitations: #8060 cannot be installed with #9317. #8040, #8060, #8070 and #9190 are mutually exclusive. Field Installation: Yes. Prerequisites: Minimum of one 4K Increment of Control Storage (#4101, #4102). See "Control Storage Requirements" under "Highlights" above. Note: When running DOS Release 21 through 27, 1052 Compatibility (#8005) is a prerequisite. The 1403/3203 Carriage Control Feature (#4460) is also required if a 3203 Printer is attached. Emulation under DOS/VS requires SYRES on the 3340 DASD.

2314/3340 - Series Compatibility (#8070): Permits the emulation of 2314 files on the 3340 disk storage. The user program may access both the emulated 2314 data set as well as the native data set. This provides a mixed mode" operating environment. Limitations: #8070 cannot be installed with 3344 Attachment (#9317). #8040, #8060, #8070 and #9190 are mutually exclusive. Field Installation: Yes. Prerequisites: Minimum of one 4K Increment of Control Storage (#4101, #4102). See "Control Storage Requirements" under "Highlights" above. Note: When running DOS Release 21 through 27, 1052 Compatibility (#8005) is a prerequisite. The 1403/3203 Carriage Control Feature (#4460) is also required if a 3203 Printer is attached. Emulation under DOS/VS requires SYRES on the 3340 DASD in native mode.

COMMUNICATIONS FEATURES

Asynchronous Line Group 1 (ALG1) (#1201): Permits attachment of up to four Medium Speed Asynchronous Lines (AL) (#1231) or up to four Low Speed Asynchronous Lines Pairs (ALP) (#1241) or up to four Telegraph Line Pairs (TLP) (#7881). The lines within the ALG positions A1 through A4, must be installed in ascending order. Specify: One line control specify code from Figure 2A. Limitations: All lines in the ALG1 must have the same line speed and line control. Different terminals can be attached within one line group, provided they use the same speed and line control. See Figure 2A. ALG1 (#1201) and SLHS (#7121) are mutually exclusive. Maximum: One. Field Installation: Yes. Prerequisites: #4640.

Asynchronous Line Group 2 (ALG2) (#1202): Permits attachment of up to four medium speed asynchronous lines (AL) (#1232) or up to four low speed asynchronous line pairs (ALP) (#1242) or up to four telegraph line pairs (TLP) (#7882). ALG1 and ALG2 are identical in function and either one can be installed as the first line group in the ICA. The lines within ALG2, positions A5 through A8, must be installed in ascending order. Limitations: All lines in ALG2 must have the same line speed and line control. Different terminals using the same line speed and line control can be attached within one line group. See Figure 2A. Specify: One line control specify code from Figure 2A. Maximum: One. Field Installation: Yes. Prerequisites: #4640.

Asynchronous Line, Medium Speed (AL) (#1231 in ALG1, #1232 in ALG2): Provides for the attachment of one nonswitched 600 bps Start/Stop communications line. The 3767 terminal can be attached to this feature (at EC 380427 plus EC 380627) via switched or non-switched lines at 200 or 300 bps and via nonswitched lines at 600 bps. Clocking speed is selected at installation time. Connects to the line via a modem or IBM Line Adapter. The lines are installed in ascending order, A1 through A4 in ALG1 and A5 through A8 in ALG2. Note: IBM Line Adapters are tied to specific line positions. See Figure 4D. Limitations: See Figure 5, Maximum ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG1. #1232, #1242 and #7882 cannot be intermixed within ALG2. Maximum: Four each of #1231 and #1232. Field Installation: Yes. Prerequisites: #1201.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Asynchronous Line Pair, Low Speed (ALP) (#1241 in ALG1, #1242 in ALG2): Provides for the attachment of two switched or nonswitched 134.5 bps Start/Stop communications lines. Connects to the line via a modem, nonswitched also via IBM line adapters or external telegraph line adapters. Consult your TP Coordinator for RPQ order information when telegraph lines are used or, two nonswitched double-current telegraph lines at 50, 75 or 100 bps via external telegraph line adapters. Consult your TP Coordinator or RPQ order information. The lines are installed in ascending order, A1 through A4 in ALG1 and A5 through A8 in ALG2. Note: IBM Line Adapter are tied to specific line positions. See Figure 4D. Limitations: See Figure 5, Maximum ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG1. #1232, #1242 and #7882 cannot be intermixed within ALG2. Maximum: Four. Field Installation: Yes. Prerequisites: #1201 is prerequisite to #1231. #1202 is prerequisite to #1232.

Integrated Communications Adapter (ICA) (#4640): Provides the basic control storage and common circuits for direct attachment of up to six synchronous (BSC) communication lines or up to 16 asynchronous (Start/Stop) communication lines depending upon line speed. All combinations of BSC and Start/Stop lines require the Integrated Communications Adapter Extension (#4641). Additional features are required to create appropriate line interfaces for the individual lines. Figure 1A schematically represents the feature build-up. Figure 1A shows the feature build-up for asynchronous lines or for combinations of asynchronous and synchronous lines. The ICA provides as a standard:

- Autopoll -- Start/Stop and BSC
- Multipoint central station functions -- Start/Stop and BSC
- Multipoint tributary station functions -- BSC only
- EBCDIC transparent mode -- BSC only
- EBCDIC or ASCII code -- BSC only

Refer to Figures 2A and 2B for attachable terminals and for configuration requirements prior to ordering features below.

Note: An APL Configurator is available from IBM in configuring the ICA (or refer to "ICA Configurator Manual", GA33-1508, using ICA Specification Sheet, Z811-0023). Customer Responsibilities: See M2700 pages for customer responsibilities regarding communications facilities and services. Communications Facilities: See M2700 pages for communications facility requirements with this feature. Maximum: One. Field Installation: Yes.

Integrated Communications Adapter Extension (ICAE) (#4641): This feature is required for all combinations of BSC and Start/Stop lines. Extends the communications capability to up to six BSC and up to 16 Start/Stop lines depending upon line speed. Maximum: One. Field Installation: Yes. Prerequisites: #4640.

IBM Leased Line Adapter (#4743): A modem for Start/Stop data transmission at 134.5 or 600 bps over nonswitched facilities. This line adapter operates with Leased Line Adapters on other IBM products. Selection between 2- and 4-wire operation is made at installation time. See "Leased Line Adapter" in GA24-3435 for specifications and restrictions. Specify: See Figure 4D. Maximum: See Figure 4D. Field Installation: Yes. Prerequisites: #4792 or #4793. See Figure 4D.

IBM 1200 bps Line Adapter (#4781): A modem for BSC data transmission at up to 1200 bps over nonswitched facilities. Also for Start/Stop transmission at 300 or 600 bps over nonswitched facilities to the 3767 terminal. Non-clocked and must interface to an SLC (#7141-#7144) or AL (#1231). Attachment is directly to the line via an IBM-provided external cable. Customer Responsibilities: See M2700 pages. Communications Facilities: See M2700 pages. Specify: See Figure 4D. In Japan only, specify code #2943 must be ordered for attachment to the NTT D-1 service. Maximum: See Figure 4D. Field Installation: Yes. Prerequisites: #7141 - #7144 or #1231, #4792 or #4793. See Figure 4D. #1295 or #1296 is required for #4791.

Line Adapter Base 3 (LAB3) (#4793): Provides attachment of up to 12 IBM 1200 bps Line Adapters and IBM Leased Line Adapters. The Line Adapters are tied up to specific line positions. See Figure 4D for configuration and possible line combinations. Maximum: One. Field Installation: Yes.

Synchronous Line, Low-Load (SLLL) (#7131 - 1st Line, #7132 - 2nd Line): Each provides for the attachment of one switched or non-switched BSC line. Nonswitched lines with switched network backup are supported. Maximum line speed on nonswitched lines is 7200 bps. Maximum line speed on switched network is 1200 bps. See Figure 2B for detailed speed and facility information. Requires external modem. This feature has a lower load factor than #7151 - #7154. See Figure 5. The modem must provide clocking. Specify: The highest line speed used on #7131 and #7132: #9758 if the highest line speed is from 1200 bps up to 4800 bps. #9759 if the highest line speed is above 4800 bps and up to 7200 bps. Note: 1200 bps is the LOWEST allowed line speed for these features. SLG (#7100) not required as a prerequisite. Limitations: See Figure 5, Maximum ICA configuration. #7121 and #7131 are mutually exclusive. Maximum: One each. #7131 and #7132. Field Installation: Yes. Prerequisites: ICA (#4640) -- #7132 requires #7121 or #7131.

Synchronous Line Medium-Speed Clock (SLC) (#7141-#7144):

#7141 -- Line position S1
#7142 -- Line position S2
#7143 -- Line position S3
#7144 -- Line Position S4

Line positions S1 through S4 must be installed in ascending order. Each feature provides for the attachment of one switched or non-switched BSC line. The clock can be set by the user for a transmission rate of 600 bps or 1200 bps. Connects to the line via a non-clocked modem or PTT mandatory modem. The IBM 1200 bps Line Adapter (#4781) can be used instead of a modem on non-switched lines. Notes: IBM Line Adapters are tied to specific line positions. See Figure 4D. SL (#7151-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. Limitations: See Figure 5, Maximum ICA Configuration. #7141 is mutually exclusive with #7151, #7142 with #7152, #7143 with #7153, and #7144 with #7154. Maximum: #7141 through #7144, one each. Field Installation: Yes. Prerequisites: #7100.

* CPU diskette-only feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on a purchased machine to include any number of diskette-only changes ordered on same diskette.

Synchronous Line Medium-Speed (SL) (#7151-#7154):

#7151 -- Line position S1
#7152 -- Line position S2
#7153 -- Line position S3
#7154 -- Line position S4

Line positions S1 through S4 must be installed in ascending order. Each feature provides for the attachment of one switched or non-switched BSC line. Nonswitched lines with switched network backup are supported. Maximum line speed on nonswitched line is 7200 bps; maximum speed of switched network depends on current regulations of the national PTT. See Figure 2B for detailed speed and facility information. Connects to the line via an external IBM or PTT mandatory modem. The modem must provide clocking. Note: SL (#7141-#7154) may be intermixed with SLC (#7141-#7144) within the SLG. Limitations: See Figure 5, Maximum ICA Configuration. #7151 is mutually exclusive with #7141, #7152 with #7142, #7153 with #7143, and #7154 with #7144. Maximum: #7151 through #7154, one each. Field Installation: Yes. Prerequisites: #7100.

Telegraph Line Pair (TLP) (#7881 in ALG1, #7882 in ALG2): Provides for the attachment of two nonswitched single current telegraph lines at 50 or 75 bps. Attachment to the lines is via an IBM-provided external cable. Lines A1 through A4 in ALG1 and A5 through A8 in ALG2 are installed in ascending order. Limitations: See Figure 5, Maximum ICA Configuration. #1231, #1241 and #7881 cannot be intermixed within the ALG1. #1232, #1242 and #7882 cannot be intermixed within ALG2. Maximum: Four each. Field Installation:

Yes. Prerequisites: #1201 is prerequisite to #7881. #1202 is prerequisite to #7882.

Modems: The IBM modem can be attached to each external modem line interface maximum 22 modems).

Modem	Speed (bps)/Lines
3976 mdl 1	up to 200/nonswitched
3976 mdl 2	up to 200/switched
3976 mdl 3	up to 1200/nonswitched or switched
3977 mdl 2	up to 1200/nonswitched
3863 mdl 1/2	2400/nonswitched or switched
3872 mdl 1	2400/nonswitched or Caducee switched
3864 mdl 1/2	4800/nonswitched or switched
3874 mdl 1	4800/nonswitched
3875 mdl 1	7200/nonswitched

Note: For communications capabilities, product utilization, and special features, see M2700, 3863, 3864, and 3872 pages.

Customer Responsibilities: See "Customer Responsibilities" in M2700 pages.

MODEL CONVERSIONS

Planning for Model Conversions: When a customer requires feature changes and/or memory upgrades in addition to a model upgrade, consolidating the several changes into a single MES is not recommended. In these cases a planning session between sales, CE and the customer is required to develop the proper sequence of MES ordering. Field installable.

3135 PROCESSING UNIT

THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT

(NO LONGER AVAILABLE)

The 3135 is NO LONGER AVAILABLE. Features and model changes can be ordered on an 'as available' basis.

PURPOSE

Has main and control storage, plus arithmetic and logic circuits for a S/370 model 135.

MODELS F - I

Model FE FE0: 98,304 bytes of processor storage

Model GD GD0: 147,456 bytes of processor storage

Model GF GF0: 196,608 bytes of processor storage

Model H H00: 262,144 bytes of processor storage

Model HF HF0: 327,680 bytes of processor storage

Model HG HG0: 393,216 bytes of processor storage

Model I I00: 524,288 bytes of processor storage

Prerequisites: Each 3135 requires a 3046 Power Unit. See M3046 pages.

HIGHLIGHTS

Depending on the mdl, up to 524,288 bytes of processor storage are available. CPU cycle time varies from 275 to 1485 nanoseconds, depending on the internal operation being performed. 16 general-purpose and four floating point registers are provided.

Capability to natively attach a 2319 Disk Storage mdl A1 (and additional 2319 mdl A3, 2312 or 2318 Disk Storage). Capability to natively attach one or two 3333 Disk Storage and Control modules. Capability to natively attach one or two 3340 Direct Access Storage Facility mdl A2s. See 3340 and 3333 in "Machines". Capability to natively attach a 1403 Printer mdl 2, 7 or N1. See "Special Features." Note: 2312s, 2318s, and 2319 all mdls are no longer available.

Virtual storage capability to increase the effective utilization of main storage.

Up to eight teleprocessing lines are attachable via the Integrated Communications Adapter (#4640).

Standard features include a commercial instruction set, additional S/370 instructions, Extended Control (EC) Mode, Dynamic Address Translation, Channel Indirect Data Addressing, Program Event Recording, interval timer, time-of-day clock, store and fetch protect, console file, byte-oriented operand feature, error checking and correction on main and control storage, automatic instruction retry, channel command retry, byte multiplexer channel, OS/DOS Compatibility Feature, and audible alarm.

A standard console file is the basic microprogram loading device for the system. The console file contains a small, low-performance, read-only file device that provides all the microcode for the system on removable magnetic disk cartridges. The disks supplied with the system contain all of the required microcode for the basic system, the optional features ordered for the system, and CE diagnostics.

An optional Clock Comparator and Timer provide additional timing facilities for the programmer.

Control Storage Requirements: Reloadable Control Storage is housed in the 3135 and is loaded from the Console file. 24,576 bytes of control storage are standard; two additional increments of 12,288 bytes are available if required to support special features.

Table of Control Storage Requirements

- Basic Systems Microcode; 15,482 bytes
- APL Assist (#1005); 13,800 bytes
- Conditional Swapping (#1051); 300 bytes
- Autocall (#1290)*; 440 bytes
- Block Multiplexer Channel (#1421); 1,568 bytes
- Block Multiplexer Shared Subchannel (#1431); 14 bytes
- Clock Comparator and CPU Timer (#2001); 1,400 bytes
- OCR Multifont (#2989); 380 bytes
- Direct Control (#3274); 50 bytes
- Extended Precision Floating Point (#3840); 676 bytes
- Floating Point (#3900); 1,200 bytes
- 64 Multiplexer Subchannels (#3905); 1,024 bytes
- 128 Multiplexer Subchannels (#3906); 2,048 bytes
- 256 Multiplexer Subchannels (#3907); 4,096 bytes
- 1401/1440/1460 Compatibility (#4457); 4,492 bytes
- Integrated Communications Adapter (#4640); 2,100 bytes
- 2319 Integrated File Adapter (#4650); 4,652 bytes (Not Available)
- 3333/3340 Series IFA (#4655) w/#9313; 10,192 bytes
- 3333/3340 Series IFA (#4655) w/#9314; 9,768 bytes
- 3333/3340 Series IFA (#4655) w/#9315; 12,800 bytes
- 3333/3340 Series IFA (#4655) w/#9316***; 300 bytes
- 3333/3340 Series IFA (#4655) w/#9317 + +; 2,200 bytes
- IFA Conversion (#4645); 2,048 bytes
- Integrated Printer Adapter Basic Control (#4670); 1,300 bytes
- Integrated 1403 Printer Mdl 2/N1 Attachment (#4672); 0 bytes
- Integrated 1403 Printer Mdl 7 Attachment (#4677); 0 bytes
- Virtual Machine Assist (#8740); 2,000 bytes
- First or First & Second Selector Channel(#6981,#6982); 1,584 bytes
- S/360 mdl 20 Compatibility (#7520); 876 bytes
- 3210 Mdl 1 Adapter (#7844); 1,494 bytes
- 3215 Adapter (#7855); 1,930 bytes
- 2314/3340 Compatibility (#8070); 6,400 bytes (2314 A1/B1 Not Available)
- String Switch Attachment (#9841) w/#9313; 300 bytes
- String Switch Attachment (#9841) w/#9314; 370 bytes
- String Switch Attachment (#9841) w/#9315; 334 bytes
- String Switch Attachment (#9841) w/#9316***; 0 bytes
- Synchronous Data Adapter Type II (#9649-#9656)*; 3,700 bytes
- Adapter Base Type I + +; 1,200 bytes
- Terminal Adapter Type I Model II (#9721-#9728) + +; 1,700 bytes
- Terminal Adapter Type III (#9753-#9760)*; 2,100 bytes
- Fixed Head Attachment (#9190) with #9314; 300 bytes
- Fixed Head Attachment (#9190) with #9315; 300 bytes

* The specified control storage is required only once for any number of lines of one type.

+ For Terminal Adapter Type I Mdl II, the control storage required is the Adapter Base Type I plus the control storage for the Terminal Adapter Type I Mdl II. One copy of Adapter Base Type I is automatically included whenever this adapter is ordered.

+ + Requires #9314.

*** Requires either #9313 or #9315.

For the basic system and applicable special features, total the control storage requirements given in the table. If the total exceeds 24,576 bytes, First 12K Control Storage Increment (#7861) is required. If the total exceeds 36,864 bytes, Second 12K Control Storage Increment (#7862) is also required.

Limitations: The maximum configuration that can operate at any one time is determined by the available control storage (maximum 49,152 bytes). Alternate feature configurations can be operated by utilizing additional magnetic disk cartridges with another set of 3135

features. Alternate cartridges for an installation with be available by RPQ.

Virtual Storage: Extended Control (EC) Mode expands the structure of the Program Status Word to accommodate the control of additional S/370 features and extends the number of permanently assigned main storage locations. The S/370 mdl 135 can operate in either EC Mode or Basic Control (BC) Mode as defined for the S/360. Dynamic Address Translation (DAT) is a standard feature on the S/370 mdl 135. When the S/370 mdl 135 is in Extended Control (EC) Mode with Translation Mode operable, program addresses are treated as "logical addresses" and the translation feature develops "real addresses". Since logical storage addressing is not limited by the amount of available real storage, program size may exceed real storage size. This logical storage is referred to as "virtual storage" and may be as large as 16,777,216 bytes on the S/370 mdl 135. For I/O operations, Channel Indirect Data Addressing provides a means to transmit data that spans pages in non-contiguous real storage.

Program Event Recording, a standard feature, is a debugging aid which permits four types of events to be selectively monitored in a virtual environment: (1) successful branches; (2) instruction fetch address compare; (3) main storage alteration address compare; (4) general-purpose register alteration address compare.

Input/Output Attachments: A wide variety of I/O devices may be attached to the S/370 mdl 135 via the standard byte multiplexer and optional selector channels. There are, additionally, five direct attachment features for the 3135. They are:

1. **Console Printer-Keyboard (required):** This unit serves as the online I/O device for operator/system communications. It provides a means of manually entering data into the system, altering or displaying data already in storage, and for printing error logout messages.
2. **2319 Integrated File Adapter (#4650) (Optional):** This feature enables native attachment of a 2319 Disk Storage mdl A1 (and a 2319 mdl A3, 2312 mdl A1s, or 2318 mdl A1), up to a total of eight drives. The IFA is addressed as channel 1. Limitations: Cannot be installed if 3333/3340 Intermix (#9315) is specified when 3330/3340 Series IFA (#4655) is also ordered.
3. **3330/3340 Series Integrated File Adapter (#4655) (Optional):** This feature allows the native attachment of one or two 3333 modules or 3340 A2 units. Each 3333 module (either mdl 1 or mdl 11) can attach up to three 3330 modules (any combination of mdls 1, 2 or 11). Each 3340 mdl A2 can attach 3340 mdl B2 or B1 units, and one 3340 mdl A2 can also attach 3344 units to a maximum of eight drives. One but not both 3340 mdl A2s which can attach to an IFA may have up to three 3344s attached. Maximum is 16 drives per IFA. If 2319 IFA (#4650) is also present, IFA Conversion (#4645) is required.
4. **Integrated Communications Adapter (#4640) (Optional):** This feature provides attachment of up to eight teleprocessing lines to the 3135. These may be any combination of supported BSC and Start/Stop lines and appear to the processor as if connected via one or more 2701s on the byte multiplexer channel.

Integrated Printer Adapter (Optional): This feature enables native attachment of a 1403 Printer mdl 2, 7 or N1. The Universal Character Set Feature can be optionally specified on the 1403 mdl 2 or N1.

Input/Output Channels

Byte Multiplexer Channel: One is standard on the 3135 and is functionally equivalent to the byte multiplexer channel on S/360 mdl 22, 25, 30, 40, 50. Sixteen subchannels are provided as standard, with the option to extend to 64, 128 or 256. See "Special Features". From the number of subchannels chosen, one must be allocated to the Console Printer-Keyboard (see "Specify") and one to each ICA line installed. The byte multiplexer channel provides eight control unit positions and permits I/O units to operate normally in byte mode, giving the effect of several I/O operations simultaneous with computing. Burst mode operation of unbuffered devices operating in excess of 10KB is not allowed for concurrent operation with the In-

tegrated File Adapter, the Integrated Communications Adapter, or a Selector Channel. See "IBM S/370 Mdl 135 Channel Characteristics Manual", GA33-3010 for further clarification. For OS exclusion, refer to "System Generation", GC28-6554.

Note: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Additional, in "Special Features".

Selector Channels: Two are available as special features. Data rates are 1.3 megabytes per second. Direct access devices may be attached to selector channels and/or to the Integrated File Adapters. If either or both the 2319 IFA and the 3330/3340 IFA is present, the following applies:

- Direct access devices should be attached to the higher priority selector channel (normally the first).
- If the device on the higher priority selector channel is the 3330/3340 Disk Storage Series, the lower priority selector channel should be limited to devices with data rates not exceeding 144KB per second.
- The selector channel priorities for command chaining may be reversed by specifying Channel Priority (#1501).

If the 3330/3340 Series IFA or both IFAs are present without additional direct access devices attached via a selector channel, tape units on selector channels 2 and 3 are limited to an aggregate 950KB.

If an IFA is not present, two channels of 3330/3340/3350 Series DASD can be attached. For additional information and limitations, see "S/370 Mdl 135 Channel Characteristics", GA33-3010.

Note: If Block Multiplexer Channel(s) are installed, subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. Also see Block Multiplexer Shared Subchannels in "Special Features".

Console Function: A standard system control panel is located on the 3135. It has switches and lights necessary to operate and control the system. A system console I/O function is provided with either of two alternatives. Feature #7844 attaches the 3210 Console Printer-Keyboard mdl 1 (15.5 cps) on the console table reading board. Optionally, the 3215 Console Printer-Keyboard (85 cps) may be attached via feature #7855. A right reading board extension is standard on the 3135; a left extension is not available. Either feature #7844 or #7855 is required in the system. See "Special Features".

Publications: GC20-0001

220V #2815	208V #9903
235V #2818	230V #9905

Note: 200V (#2807, #2733) not available.

- Order the Online Test System (OLTS) for your customer's configuration as required: Initially, or when being modified.
- Color: #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray, #9046 for white.
- Cabling: #9080 for below the floor; #9081 for on the floor.
- Console Printer Keyboard Address: Recorded on console file disk at the plant #9101* for "01F" or #9102* for "009".
- Console Printer-Keyboard: A 3210 mdl 1 or 3215 is required in every system. See M3210, 3215 pages and "Special Features" below.

Note: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

- Control Panel Language Group: #2927 for English, #2928 for French, #2929 for German.
- Keyboard and Printer Language Groups (must be specified on 3135 for the 3210 and 3215):

English US	#2956	Portuguese	#2961
French	#2964	Spanish	#2961
Italian	#2968		

All are diskette-only features.

- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3135 Frame 01 (CPU) are 31-1/2 in. wide x 70 in. long x 60 in. high. Removal of the side covers will reduce the width to 29-1/2 inches. If further reduction in length is required, specify #9570. Shipping dimensions will then be 29-1/2 inches wide x 60 inches long x 60 inches high.

SPECIAL FEATURES

APL Assist (#1005): Provides performance assist to APL programs when used with VS APL PP (#5748-AP1). Prerequisites: #7861, #7862 and #3900. Field Installation: Yes.

Conditional Swapping (#1051): Provides two additional instructions: COMPARE and SWAP COMPARE DOUBLE and SWAP. This feature is a prerequisite for the execution of VTAM programming support and for TCAM/NCP. Field Installation: Yes.

Autocall (#1290): (Canada only) Provides automatic calling capabilities on facilities C1, C2, C3, C4, C5 or C6 to initiate (dial), through stored program control, a data link to a remote station. For the appropriate calling units, see M2700 pages. Specify: Refer to Table 1C for Terminal Adapter Type I Mdl II or Table 1E for Synchronous Data Adapter Type II for appropriate feature code according to line positions desired. Limitations: Each Autocall feature installed reduces the number of lines available on the ICA by one. Autocall must be ordered once for each line where the function is desired. Thus, the ICA can accommodate a maximum of four lines if each of these lines also has the Autocall feature. A single Autocall feature can be associated with any of the lines from one to seven. When operating with the DCEIA Autocall unit in the UK, Autocall is limited to calls within the United Kingdom. Cable Order: Required. Maximum: Four. This feature must be ordered only once for each line position required. Prerequisites: 9721-9728 or 9649-9656; and 9625-9632. Field Installation: Yes.

Block Multiplexer Channel (#1421): Increases the efficiency of the 3330/3340 Series IFA and selector channel(s) when using direct access storage devices equipped with rotational position sensing or other devices capable of disconnected command chaining. The disconnected command chaining feature of the channel allows multiple devices to perform non-data transfer operation concurrently with one data transfer operation. This permits increased utilization of the channel(s) by performing operations of other devices while the channel would normally have been waiting on one device. The feature provides 16 non-shared and one shared selector subchannel. The shared selector subchannel may attach a control unit having a maximum of 16 device addresses. Devices on a block multiplexer channel which cannot utilize the block multiplexer feature will function as if attached to a conventional selector channel. Maximum: One. Applies to both selector channels and to the 3330/3340 Series IFA. Field Installation: Yes. Prerequisites: #6981 or #4655.

Block Multiplexer Shared Subchannel (#1431): (Note: This feature should only be installed if devices capable of "Block Shared" operation are installed on the block multiplexer channel. See "I/O Configuration Form", GA22-7002.)

Allows any one of the following combinations of "Non-Shared", "Block Shared", or selector subchannels to be attached to the Block Multiplexer Channel (#1421): (1) 16 non-shared and one shared selector (see "Address Restrictions") --- (2) 8 non-shared, 8 block shared, and 1 shared selector (see "Address Restrictions") --- (3) 8 non-shared, 4 block shared, 1 shared selector (see "Address Re-

strictions"). If option (2) is selected, then each block shared subchannel may have attached to it a control unit having a maximum of 16 device addresses. If option (3) is selected, the four block shared subchannels may each have attached a control unit having a maximum of 32 device addresses. If option (1) is selected, no block shared subchannels are available, and addresses X00 through X7F are not available. With any option, the selector subchannel may have attached to it control units with a maximum of 16 device addresses. This feature will apply to both selector channels if installed. The options are selectable by the Customer Engineer and may be defined differently on each channel. Maximum: One. Field Installation: Yes. Prerequisites: #1421.

Address Restrictions with #1431: a) Addresses X00 through X7F are assigned as block shared subchannels. With option (1), they may not be used. With option (2), each control unit address position, i.e., X00, X10, X20, etc., through X70 is available. With option (3), "even" control unit address positions only are available, i.e., 00, 20, 40 and 60. b) Selector and non-shared addresses are limited to addresses X80 through XFF.

Channel Priority (#1501): When the IFA (#4650 or #4655) and both selector channels are present, this feature changes the higher priority for command chaining from the first selector channel (Channel 2) to the second selector channel (Channel 3). #1501 is required if any DASD devices are to be attached to Channel 3. Field Installation: Yes. Prerequisites: #4650 or #4655 and both #6981 and #6982.

Clock Comparator and CPU Timer (#2001): The Clock Comparator provides a means of causing an interruption when the time-of-day clock has passed a program-specified value. The CPU Timer is a binary counter which is decremented every microsecond but has a resolution of 16 microseconds. It provides a means for measuring elapsed CPU time by causing an interruption when a pre-specified amount of time has elapsed. Maximum: One. Field Installation: Yes.

200 bps (#2711-#2718): Allows the Terminal Adapter Type 1 Mdl II to operate at 200 bps. Specify: Refer to Table 1-C for appropriate feature code according to the line positions desired. Prerequisites: Terminal Adapter Type 1 Mdl II. Field Installation: Yes.

OCR Multifont (#2989)*: Permits the execution of the Multifont Preprocessor programming support. The programming support, in turn, provides a means of translating input data produced by the Multifont Preprocessor feature of the 1287 mdl 5 and the 1288 mdl 1 to EBCDIC characters. Field Installation: Yes. Prerequisites: Terminal Adapter Type 1 Mdl III.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct, and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes, between two cable-connected processing units, or cable-connected processing unit and external devices. Maximum: One. Cable Order: Required. Field Installation: Yes. Prerequisites: External devices must meet the interface specifications outlined in "S/360 Direct Control Feature - OEMI", GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see "S/370 Installation Manual - Physical Planning", GC22-7004. Field Installation: Yes.

Extended Precision Floating Point (#3840): Extends the precision of floating point instructions to 28 hexadecimal digits. Field Installation: Yes. Prerequisites: #3900.

Floating Point (#3900): Adds 44 floating point arithmetic instructions, which, with the Standard Set, make up the Scientific Instruction Set. Field Installation: Yes.

Multiplexer Subchannels, Add'l (#3905-#3907): To increase the number of I/O devices on the byte multiplexer channel, the number

of subchannels can be increased by specifying one of the following: #3905 for 64 subchannels, #3906 for 128 subchannels, #3907 for 256 subchannels. The maximum number of shared subchannels is eight. When 256 subchannels are installed, there are no shared subchannels. Also see "Byte Multiplexer Channel" under "Input/Output Channels" above. Note: The number of subchannels ordered must be equal to or greater than the device addresses. Field Installation: Yes.

1401/1440/1460 Compatibility (#4457): Microprogrammed controlled feature, which, in combination with special software, permits the system to execute 1401/1440/1460 instructions. Field Installation: Yes.

Integrated Communications Adapter (#4640): Provides the circuits and controls for direct attachment of up to eight teleprocessing lines to the 3135. The controls for the first line adapter are included in this feature. Lines can be any combination of Start/Stop or BSC. Provides for the attachment of 1050, 2260 mdl 1, 2260 mdl 2, 2265 mdl 1, 2740 mdl 1, 2740 mdl 2, 2741 mdl 1, 2760 mdl 1, 5010 AXX, or any IBM computer, multiplexer, or terminal conforming to the Binary Synchronous Communication (BSC) standard. Note: In addition to the appropriate adapter, each communication line attached to the system requires an external modem. Refer to Table 2 below to define customer configuration requirements prior to ordering features below. Customer Responsibilities: See M2700 pages for customer responsibilities regarding communication facilities and servicing requirements. Communications Facilities: See M2700 pages for communication facility requirements with this feature. Field Installation: Yes

See "Specify Requirements for Integrated Communication Adapter" under "Specify".

IFA Conversion (#4645): Permits co-residence of both 2319 IFA (#4650) and 3330/3340 Series IFA (#4655). Both IFAs are addressed as Channel 1. Limitations: Cannot be installed if 3333/3340 Intermix (#9315) or 3344 Attach (#9317) is specified. Cannot be installed with 2314/3340 Compatibility Feature (#8070). Maximum: One per 3135. Prerequisites: #4650 and #4655. Field Installation: Yes.

2319 Integrated File Adapter (#4650): Permits native attachment of a 2319 Disk Storage mdl A1 (and a 2319 mdl A3, 2312 mdl A1, or 2318 mdl A1) up to a total of eight drives. Standard features include file scan and record overflow functions. The IFA is always addressed as channel 1. Note: 2312 mdl A1s, 2318 mdl A1s, and 2319 all mdls are no longer available. Limitations: Cannot be installed if 3333/3340 Intermix (#9315) is specified. Cannot be installed with 2314/3340 Compatibility (#8070). Maximum: One per 3135. Prerequisites: #4645 is required if installed with 3330 or 3340 Series IFA (#4655). Field Installation: Yes.

3330/3340 Series Integrated File Adapter (#4655): Permits native attachment of up to two 3333s or 3340 mdl A2s. A maximum of sixteen 3330 or 3340 Series drives may be attached to the IFA. The IFA supports rotational position sensing, disconnected command chaining, and multiple requesting. Record overflow is standard. For 3330, standard I/O addresses are (hex) 150 through 15F. For 3340, standard addresses are (hex) 1C0 through 1CF. For 3340 with 3344 standard addresses are (hex) 1C0 through 1E1. Maximum: One. Prerequisites: #4645 is required if installed with 2319 IFA (#4650). Field Installation: Yes. Note: 2319 all mdls no longer available.

Specify:

1. DASD Designation. Specify ONE of the following: #9313* (DASD 3333/3330) to attach up to two 3333 mdl 1s, each with up to three 3330 mdl 1s, 2 in any combination. #9314* (DASD 3340 only) to attach up to two 3340 mdl A2s, each with up to three 3340 mdl B1, B2 in any combination. #9315* (3333/3340 Intermix) to attach one 3333 mdl 1 (with up to three 3330 mdl 1, 2 in any combination) plus one 3340 mdl A2 (with up to three 3340 mdl B1, B2 in any combination). #9315 cannot be installed with IFA Conversion Feature (#4645).

2. If any 3333 mdl 11 and/or 3330 mdl 11 is to be attached, also specify #9316* (3333/3330 mdl 11) in addition to #9313 or #9315.

With #9313 plus #9316 a mixture of one 3333 mdl 1 and one 3333 mdl 11, each with up to three 3330 mdl 1, 2 and 11 (in any combination) can be attached, or two 3333 mdl 11s, each with any mixture of up to three 3330 mdl 1, 2 and 11.

With #9315 plus #9316, one 3333 (either mdl 1 or mdl 11) with up to three 3330 mdl 1, 2 and 11 (in any combination) can be attached in addition to one 3340 mdl A2 with up to three associated mdl B1, B2. The standard addresses with #9315 for 3330 are (hex) 150 through 157, for 3340 (hex) 158 through 15F.

3. If any 3344 is to be attached, specify #9317* in addition to #9314 (#9317 and #9315 are mutually exclusive). #9190* must also be specified if 3344 mdl B2Fs or the 3340 Fixed Head Feature (#4301, #4302) is ordered.

With #9314, #9317 and #9190 up to three 3344 mdl B2/B2F and/or 3340 mdl B2, B1 units in any combination can be attached to one 3340 mdl A2. The second 3340 mdl A2 if present can attach up to three 3340 mdl B1/B2 units.

#9317 is mutually exclusive with IFA Conversion Feature (#4645) and with 2314/3340 Compatibility Feature (#8070).

4. When just #9314 is specified, also specify 3340 Address Designation: #9820* for addresses (hex) 1C0 through 1CF, or #9821* for addresses (hex) 160 through 16F. The specification of 160 allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFAs.

5. When #9314 or #9315 is specified, also specify #9190* (Fixed Head Attachment) if Fixed Head Feature (#4301, #4302) is ordered for any 3340 attached to the IFA.

6. If String Switch (#8150) is ordered for any attached 3333 or 3340 mdl A2, specify String Switch Attachment (#9841)*.

7. When #9821* is specified in conjunction with #9813 the addresses for the 3333/3330s are (HEX) 160 thru 16F.

8. When #9821* is specified and both #9314 and #9317 are specified the addresses for the 3340/3344s are as follows:

	3340 A2				3344 B2/B2Fs			
S	*	*	*	*	*	*	*	*
t	160 161	162 163	164 165	166 167	168 169	16A 16B	16C 16D	16E 16F

Physical Drive:

0 1 2 3 4 5 6 7

Note 1: The DASD control combinations that can be attached to the 3330/3340 Series IFA (#4655) are shown in the left hand column of the table below. From Section A of the table select one of the feature numbers shown (one and only one must be selected). From Section B select the feature number(s) required to support your configuration (select none, one, or more than one from Section B). Section C of the table shows the addresses available. The specification of the (hex) 160 addresses allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFA. Select a number from Section C if required.

Note 2: Any change to an installed DASD configuration requires an MES ONLY if the new configuration indicates that a different Specify and/or Special Features not previously installed AND removal of any not listed as required for the new configuration.

* No feature number required.

** Mutually exclusive with String Switch (#9841, 2319 IFA (#4650), IFA Conversion feature (#4645), 3344 Attachment (#9317).

*** Mutually exclusive with 3344 Attachment (#9317) and 2314/3340 Compatibility (#8070).

Integrated Printer Adapter Basic Control (#4670): Provides the power supply and basic control for a natively attached 1403 Printer. The standard address is '00E'. Specify: #9485* if optional address of '00F' is desired. Maximum: One. Field Installation: Yes.

See table below for corresponding voltages for 50 Hz.

CPU	1403
220V	220V
235V	220V
380V	380V
408V	308V

Note: If the optional addresses of '01F' for the Console Printer Keyboard (#3210 or #3215) and '00F' for the integrated 1403 are both used, Multiplexer Subchannels, Add'l (#3905) must be specified.

Integrated 1403 Printer Mdl 2/Mdl N1 Attachment (#4672): Provides control for attaching 1403 mdl 2 or mdl N1. Specify: #9182* to attach 1403 mdl 2, #9188* to attach 1403 mdl N1. Maximum: One. Prerequisites: #4670. On the 1403, #9709 and #9725 are required on a mdl 2; #9726 is required on a mdl N1. See Specify under 1403. Field Installation: Yes.

Integrated 1403 Printer Mdl 7 Attachment (#4677): Provides control for attaching 1403 mdl 7. Maximum: One. Prerequisites: #4670. On the 1403, #9725 is required on a mdl 7. See "Specify" under 1403. Field Installation: Yes.

Additional Lines (#4722-#4728): Each provides circuits and controls for attachment of an additional line adapter, for a total of eight lines in the system. Specify: Order additional lines according to line position required. See Table 1-A. Each line specified requires the next lower order line as a prerequisite. Maximum: One of each (#4722 through #4728). Field Installation: Yes. Prerequisites: #4640.

Specify Requirements For Integrated Communications Adapter: For each line (#4722-#4728) attached to the ICA, including the first line included in #4640, one of the following line adapters must be specified: Terminal Adapter Type 1 Mdl II (#9721-#9728), Terminal Adapter Type III (#9753-#9760), or Synchronous Data Adapter Type II (#9649-#9656). Each line adapter and all associated features must be specified according to the line position to which they correspond. Refer to Table 2 below prior to ordering features for the ICA. For limitations of ICA line speeds, refer to "135 Channel Characteristics", GA33-3010.

Selector Channel (#6981, #6982): Each adds a high-speed channel to the system. The channel permits overlapped I/O operation with processing. Eight control unit positions are provided on each channel. If an Integrated File Adapter (#4650 or #4655) is present, these channels are addressed as 2 and 3, respectively. Otherwise, they are addressed as 1 and 2. #6981 for first selector channel, #6982 for second. Field Installation: Yes. Prerequisites: #6982 requires #6981.

S/360 Mdl 20 Compatibility (#7520): Microprogram-controlled feature, which, in combination with special software, permits the system to execute S/360 mdl 20 or S/360 mdl 25 in mdl 20 mode instructions. Field Installation: Yes.

3210 Mdl 1 Adapter (#7844): To attach a 3210 Console Printer-Keyboard mdl 1 (15.5 cps) for systems console I/O; includes an alter-display ability. Maximum: One. Limitations: Cannot be installed with 3215 Adapter (#7855). Field Installation: Yes. Prerequisites: Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

3215 Adapter (#7855): To attach a 3215 Console Printer-Keyboard (85 cps) for system console I/O; includes alter-display ability. Max-

imum: One. Limitations: Cannot be installed with 3210 mdl 1 Adapter (#7844). Field Installation: Yes. Prerequisites: Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

12K Control Storage Increments (#7861, #7862): Each adds 12,288 bytes of control storage. Required for some feature combinations. See "Control Storage Requirements under "Highlights" for detail. #7861 for first 12K increment, #7862 for second. Field Installation: Yes. Prerequisites: #7862 requires #7861.

2314/3340 Compatibility (#8070): Permits the emulation of 2314/2319 volumes on the 3340 Disk Storage. The user program may access both the emulated 2314 data set as well as 3340 volumes. This provides a "mixed-mode" operating environment. "Mixed-mode" is only possible with DOS releases which support 3340 on mdl 135. Maximum: One. Limitations: Cannot be installed with IFA Conversion (#4645), 2319 IFA (#4650), 3330/3340 Intermix (#9315), 3344 Attach (#9317), or String Switch Attachment (#9841). Field Installation: Yes. Prerequisites: #9314 on 3330/3340 Series IFA (#4655).

Universal Character Set Adapter (#8637): Permits the use of the Universal Character Set Feature on a 1403 Mdl 2 or Mdl N1 attached via the Integrated 1403 Printer Mdl 2, Mdl N1 Attachment (#4672). Maximum: One. Prerequisites: #4670, #4672. Field Installation: Yes.

Virtual Machine Assist (#8740): Provides assist to VS operating systems operating under VM/370 by emulation of certain privileged operations. Field Installation: Yes. Prerequisites: #2001 and #3900.

300 bps (#9593-#9600)*: Allows the Terminal Adapter Type 1 Mdl II to operate at 300 bps. Specify: Refer to Table 1-C for Terminal Adapter Type I Mdl II for appropriate feature code according to the line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type 1 Mdl II.

600 bps (#9601-#9608)*: Allows the Terminal Adapter Type I mdl II or the Synchronous Adapter Type II to operate at 600 bps. Specify: Refer to Table 1-C for Terminal Adapter Type I mdl II or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type 1 Mdl II, or Synchronous Data Adapter Type II.

Modem Clocking (#9609-#9616): Allows a Terminal Adapter Type III to operate at 2400 bps or a Synchronous Data Adapter Type II to operate at 2000 bps, 2400 bps, 4800 bps, or 7200 bps. Requires the appropriate clocking to be in the attached modem. It should be pointed out, however, that there are certain modems (for example, the 3872 mdl 1) which, although basically 2400 bps modems, offer a 1200 bps half-speed facility. Since the requirements for the Modem Clocking feature are defined by the type of modem, not the line speed, the Modem Clocking Feature (#9609-#9616) is still required as a prerequisite on the ICA when such modems are attached to the Synchronous Data Adapter Type II and are switched for 1200 bps operation. Specify: Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type III or Synchronous Data Adapter Type II.

Half-Duplex Facility (#9617-#9624)*: Required if the Synchronous Data Adapter Type II is attached to a two-wire facility. Note: This feature is not required with Switched Network (#9625-#9632) or Tributary Station (#9665-#9672). Specify: Refer to Table 1-E for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Switched Network Facility (#9625-#9632)*: Allows the Terminal Adapter Type I mdl II or the Synchronous Data Adapter Type II to operate over C-type switched lines. Specify: Refer to Table 1-C for Terminal Adapter Type I mdl II or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type I mdl II, or Synchronous Data Adapter Type II.

Connect Data Set To Line (#9633-#9640): Required with some modems when used on switched public networks. Consult your Teleprocessing Coordinator to determine specific modems requiring this feature. Specify: Refer to Table 1C for TA-1 or Table 1E for SDA-II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: TA-I mdl II or SDA-II and switched network facility.

Switched Speed (#9641-#9648): Provides control of data signaling rate selection from the console printer-keyboard via the Alter/Display Function. Speed selection can be 600 or 1200 bps. Specify: Refer to Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installable: Yes. Prerequisites: Synchronous Data Adapter Type II.

Synchronous Data Adapter Type II (#9649-#9656)*: Provides control of data transfers between the 3135 and binary synchronous terminals. See "Binary Synchronous Terminals" under 2701 Data Adapter Unit. Control Station is included with this feature. Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Speed Selection: Provides operation over switched telephone network or leased, voice-grade channels at 600 bps if 600 Bits Per Second feature is specified. See above. Provides operation over leased voice-grade channels at 1200 bps (no speed need be specified). Provides operation over switched telephone network at 2000 bps if Modem Clocking is specified. See above. Provides operation over leased voice-grade lines at 7200 bps if Modem Clocking is specified. See above. Field Installation: Yes. Prerequisites: #4640.

For special requirements: See Table 1-E and features below for additional specify requirements if Half-duplex Facility, Transparency, Tributary Station, Switched Network Facility, Autocall, EON, or New Sync are required. See Table 1-E and 600 Bits Per Second (#9601-#9608) if operation at 600 bps is required. See Table 1-E and Modem Clocking below if 2000 bps, 2400 bps, 4800 bps, or 7200 bps operation is required. The appropriate Data Code feature must be specified if other than EBCDIC is required as the primary data code. See "Data Code Features" below.

Limitations: For line speed limitations, refer to "Mdl 135 Channel Characteristics Manual", GA33-3010.

Note on Data Code Features: The primary data code for the SDA Type II is EBCDIC. As an option to EBCDIC, either ASCII or 6-bit Transcode (2780 Data Transmission Terminal only) may be specified as the primary code. In addition to the primary data code, an alternate data code, selected under program control, may be specified for the Synchronous Data Adapter Type II. EBCDIC, ASCII, or 6-bit Transcode may be selected as an alternate code. Specify (for data code features): Refer to Table 1-E for appropriate feature codes according to line position(s) desired. Field Installation (of data code features): Yes. Prerequisites (for data code features): Synchronous Data Adapter Type II.

Tributary Station (#9665-#9672)*: Required when a Synchronous Data Adapter Type II is installed and functioning as a leased communication line, as a tributary station, and not functioning as a control station. Specify: Refer to Table 1-E for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Transparency (#9673-#9680)*: Provides the Synchronous Data Adapter Type II with the ability to transmit and receive 8-bit binary data as well as EBCDIC or ASCII codes; or 6-bit binary data as well as 6-bit Transcode. This feature with ASCII modifies VRC/LRC checking to VRC/CRC checking. Limitation: ASCII code and Transparency cannot be installed together for the same line position when attached to the 2770, 2780, 3780, S/3 or S/7. On S/32, EBCDIC and EBCDIC Transparency are standard, and one is selected by programming. Specify: Refer to Table 1-E for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Terminal Adapter Type I Model II (#9721-#9728)*: Controls data transfers between the 3135 and 1050/2740 mdl 1/2741/5010 mdl Axx over facility C1 or D1, and between the 3135 and 2740 mdl 2 or 5010 mdl Axx over facility D1 or D2, and 1050/2741/2740 mdl 1 over facility

C1 or D1, and between the 3135 and 2740, 2312, or 5010 mdl AXX over facilities D1 or D2, or between the 3135 and a 3767, 5010 or 5100 over Facility M1, or between the 3135 and a 3767 or 5010 over Facility M2, or between the 3135 and a 3767 over Facility M3. Includes vertical and longitudinal checking for 1050 terminals and 2740s equipped with Record Checking (#6114). Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Special Requirements: See Table 1-C and features below for additional specify requirements if Switched Network Facility, Write Interrupt, Unit Exception Suppression, Read Interrupt, or Autocall are required. Normal operation is at 134.5 bps. 600 Bits Per Second feature must be specified for operation at 600 bps to 2740s or 5010 mdl Axx. Field Installation: Yes. Prerequisites: #4640.

Unit Exception Suppression (#9729-#9736)*: If this feature is installed with Terminal Adapter Type 1 Mdl II, Unit Exception will not be set in response to a Circle C. Not supported under BTAM, QTAM or TCAM. Specify: Refer to Table 1-C for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type 1 Mdl II.

Read Interrupt (#9737-#9744)*: Allows the Terminal Adapter Type I mdl II to operate with a 2741 equipped with Transmit Interrupt (#7900). Not supported under BTAM, QTAM or TCAM. Specify: Refer to Table 1-C for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type 1 Mdl II.

Write Interrupt (#9745-#9752)*: Allows the Terminal Adapter Type 1 Mdl II to operate with a 2741 equipped with Receive Interrupt (#4708). Not supported under BTAM, QTAM or TCAM. Specify: Refer to Table 1-C for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type 1 mdl II.

Terminal Adapter Type III (#9753-#9760)*: Controls data transfers between the 3135 and either remote 2845 Display Controls or 2848 Display Controls operating at 1200 bps over facility D5. Permits operation at 2400 bps over facility D7 if Modem Clocking is specified. Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: #4640.

Multipoint (#9761-#9768)*: Specifies that a Terminal Adapter Type III is to operate in multipoint mode. If #9761-#9768 is not ordered for a given Terminal Adapter Type III, point-to-point operation is presumed. Specify: Refer to Table 1-D for appropriate feature code according to line positions desired. Prerequisites: Terminal Adapter Type III. Field Installation: Yes.

EON (#9801-#9807)* (Canada only): Automatically generates an EON digit at the end of the dial sequence. Specify: Refer to Table 1E for appropriate feature code according to line position desired. Specify for 3872 with EON option. Field Installation: Yes. Prerequisites: #1290, #9649-#9656.

New Sync (#9808-#9815)*: Allows Synchronous Data Adapter Type II or Terminal Adapter Type III to be connected to modems which offer the New Sync feature option and have this option installed. New Sync feature minimizes modem turn-around and allows faster bit synchronization of the following data. Specify: Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: #9609-#9616 and a modem offering New Sync. Note: New Sync is not required if #9617-#9624, #9665-#9672, or #9625-#9632 is installed for the line position in question.

Note: * CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

Modems: Up to eight modems can be attached to a 3135, any mdl. Prerequisites: Integrated Communications Adapter (#4640) and Synchronous Communications Adapter Type II (#9649-#9656) 2400 bps to 7200 bps, Terminal Adapter Type 1 Mdl II (#9721-#9728) 134.5

bps to 600 bps, or Terminal Adapter Type III (#9753-#9760) 1200 bps or 2400 bps. See feature descriptions for limitations.

Modem	Speed (bps)	Facility
3976 mdl 1	up to 200	Nonswitched
3976 mdl 2	up to 200	Switched
3976 mdl 3	up to 1200	Nonswitched or Switched
3863 mdl 1/2	2400	Nonswitched or Switched
3872 mdl 1	2400	Nonswitched or Caducee Switched
3864 mdl 1/2	4800	Nonswitched or Switched
3874 mdl 1	4800	Nonswitched
3875 mdl 1	7200	Nonswitched

Note: For communications capabilities, product utilization, and special features, see M2700, 3863, 3864, 3872, 3874, 3875, 3976.

MES Orders: For an MES order containing multiple features, the sequence of installation of individual features is determined at the plant of manufacture. No change to MES content or sequence can be made at installation time. If changes are required, the original MES must be cancelled and a new one originated.

COMMUNICATION INFORMATION TABLES

Before ordering, check Special Feature write-ups for Prerequisites and Limitations.

Table 1-A Additional Line Appearances

Feature	Line Position			
	1	2	3	4
Additional Lines	4640	4722	4723	4724

Additional Lines	Line Position			
	5	6	7	8
	4725	4726	4727	4728

Specify additional lines according to line positions.

Table 1-B Terminal Adapters

Feature	Line Position			
	1	2	3	4
Terminal Adapter Type 1 mdl II	9721	9722	9723	9724
Terminal Adapter Type III	9753	9754	9755	9756
Synchronous Data Adapter Type II	9649	9650	9651	9652

Feature	Line Position			
	5	6	7	8
Terminal Adapter Type 1 mdl II	9725	9726	9727	9728
Terminal Adapter Type III	9757	9758	9759	9760
Synchronous Data Adapter Type II	9653	9654	9655	9656

Any adapter added, removed, or relocated to another line position requires reconfiguration of the entire line.

Select one terminal adapter for each line position specified in Table 1-A.

Table 1-C Options for Terminal Adapter Type 1 Model II

Feature	Line Position			
	1	2	3	4
200 bps	2711	2712	2713	2714
300 bps	9593	9594	9595	9596
600 bps	9601	9602	9603	9604
Switched Network Facility	9625	9626	9627	9628
Connect Data Set to Line	9633	9634	9635	9636
Unit Exception Suppression	9729	9730	9731	9732
Read Interrupt	9737	9738	9739	9740
Write Interrupt	9745	9746	9747	9748
Autocall (Canada only)	9777	9778	9779	9780

Feature	Line Position			
	5	6	7	8
600 bps	9605	9606	9607	9608
Modem Clocking	9613	9614	9615	9616
Half Duplex Fac.	9621	9622	9623	9624
Switched Network Facility	9629	9630	9631	9632
Connect Data Set to Line	9637	9638	9639	9640
Switched Speed	9645	9646	9647	9648
Tributary Station	9669	9670	9671	9672
Transparency	9677	9678	9679	9680
Autocall	9780	9781	9782	9783
EON	9804	9805	9806	9807
New Sync	9812	9813	9814	9815

Select features required for each line position for which Synchronous Data Adapter Type II is specified.

Optional Primary Data Codes

Feature	Line Position			
	5	6	7	8
200 bps	2715	2716	2717	2718
300 bps	9597	9598	9599	9600
600 bps	9605	9606	9607	9608
Switched Network Facility	9629	9630	9631	9632
Connect Data Set to Line	9637	9638	9639	9640
Unit Exception Suppression	9733	9734	9735	9736
Read Interrupt	9741	9742	9743	9744
Write Interrupt	9749	9750	9751	9752
Autocall (Canada only)	9780	9781	9782	9783

Feature	Line Position			
	1	2	3	4
ASCII	9681	9682	9683	9684
6-Bit Transcode*	9689	9690	9691	9692

Feature	Line Position			
	5	6	7	8
ASCII	9685	9686	9687	9688
6-Bit Transcode*	9693	9694	9695	9696

Select one of the above data codes if required in lieu of EBCDIC for each line position for which Synchronous Data Adapter Type II is specified.

Optional Alternate Data Codes

Table 1-D Options For Terminal Adapter Type III

Feature	Line Position			
	1	2	3	4
Modem Clocking	9609	9610	9611	9612

Feature	Line Position			
	5	6	7	8
Modem Clocking	9613	9614	9615	9616

Select modem clocking feature for each line position for which Terminal Adapter Type III is needed and operation at 2400 bps is desired.

Table 1-E Options For Synchronous Data Adapter Type II

Feature	Line Position			
	1	2	3	4
600 bps	9601	9602	9603	9604
Modem Clocking	9609	9610	9611	9612
Half Duplex Fac.	9617	9618	9619	9620
Switched Network Facility	9625	9626	9627	9628
Connect Data Set to Line	9633	9634	9635	9636
Switched Speed	9641	9642	9643	9644
Tributary Station	9665	9666	9667	9668
Transparency	9673	9674	9675	9676
Autocall	9777	9778	9779	9780
EON	9801	9802	9803	9804
New Sync	9808	9809	9810	9811

Feature	Line Position			
	1	2	3	4
EBCDIC	9697	9698	9699	9700
ASCII	9705	9706	9707	9708
6-Bit Transcode*	9713	9714	9715	9716

Feature	Line Position			
	5	6	7	8
EBCDIC	9701	9702	9703	9704
ASCII	9709	9710	9711	9712
6-Bit Transcode*	9717	9718	9719	9720

Select one of the above data codes if required in lieu of EBCDIC for each line position for which Synchronous Data Adapter Type II is specified.

* 6-Bit Transcode can be used only with a 2780 Data Transmission Terminal.

Table 2 -- Part 1

Features Required for Start/Stop Terminals

- 1050 Data Communication System

Modem: 3976 mdl 2

▲ Line Speed: 134.5 bps

▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.

- ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Connect Data Set to line (if required).
- Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features required: Terminal Adapter Type 1 mdl II
- 2260 Display Station mdl 1
 - Connects via 2848 Display Control mdl 3 -- see this table
- 2260 Display Station mdl 2
 - Connects via 2848 Display Control mdl 1 or 2 -- see this table
- 2265 Display Station mdl 1
 - connects via 2845 Display control mdl 1 -- see this table
- 2740 Communication Terminal mdl 1
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Connect data Set to Line (if required).
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II
- 2740 Communication Terminal mdl 2
 - Modem: 3976 mdl 1
 - ▲ Line Speed 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - ▲ Features Required: Terminal Adapter Type I mdl II, 600 bps
- 2741 Communication Terminal mdl 1 (without interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps
 - ▲ Features Required: Terminal Adapter Type 1 mdl II
- 2741 Communication Terminal mdl 1 (with Receive Interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps
 - ▲ Features Required: Terminal Adapter Type 1 mdl II
- 2741 Communication Terminal mdl (with Transmit Interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Read Interrupt, Unit-Exception Suppression (if required)
- 2741 Communication Terminal mdl 1 (with receive Interrupt and Transmit Interrupt features)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, Read-Interrupt, Unit-Exception Suppression (if required)
- 2760 Optical Image Unit mdl 1
 - Connects via 2740 Communication Terminal mdl 1 -- see this table
- 2845 Display Control mdl 1 Point-to-Point or Multipoint
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 1200 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
 - ▲ Features Required: Terminal Adapter Type III Multipoint for Multipoint Operations.
 - Modem: 3872 mdl 1
 - ▲ Line Speed: 2400 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.
 - ▲ Features Required: Terminal Adapter Type III, Modem Clocking Multipoint for Multipoint Operation, New Sync (if required).
- 2848 Display Control mdls 1,2 and 3 Point-to-Point or Multipoint
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps
 - ▲ Features Required: Terminal Adapter Type 1 mdl II

- Modem: 3976 mdl 3
 - ▲ Line Speed: 1200 bps.
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
 - ▲ Features Required: Terminal Adapter Type II Multipoint for Multipoint Operation.
- Modem: 3872 mdl 1
 - ▲ Line Speed: 2400 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.
 - ▲ Features Required: Terminal Adapter Type III, Modem Clocking Multipoint for Multipoint Operation, New sync (if required).
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (without interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - ▲ Features Required: Terminal Adapter Type 1, mdl II, Switched Network Facility, 200 bps Line Speed, Connect Data Set to Line (if required)
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II 200 bps Line Speed
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 300 bps
 - ▲ Type of Communication Line Required: Code O
 - ▲ Features Required: Terminal Adapter Type 1, mdl II, Switched Data Network Facility, 300 bps Line Speed, Connect Data Set to Line (if required)
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 300 bps
 - ▲ Type of Communication Line Required: Code P
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, 300 bps Line Speed
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt feature)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line control (with Transmit Interrupt feature)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt feature)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1, 2, or 3 with #7112 - 2740-2 Line Control
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps.
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps -OR- Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, 600 bps Line Speed
- System/7
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.

- ▲ Features Required: Terminal Adapter Type 1, mdl II, Switched Network Facility, Connect Data Set to Line (if required)
- Modem: 3976 mdl 1
- ▲ Line Speed: 134.5 bps
- ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
- ▲ Features Required: Terminal Adapter Type 1 mdl II
- Modem: 3976 mdl 3
- ▲ Line Speed: 600 bps
- ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.

Note: For information about the attachment of World Trade modems, refer to Table 2 - Parts 1 and 2, and to the M2700 pages.

Table 2 -- Part 2

Features Required for Binary Synchronous Terminals

- Modem: 3976 mdl 3
- Line Speed: 600 bps
- ▲ Manner of Line Operation: Point-to-Point
 - △ Communication Line and Modem Facilities (Nonswitched): Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
Features Required: Synchronous Data Adapter Type II, 600 bps, and Half Duplex Facility, Data Code features
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
Features Required: Synchronous Data Adapter Type II, 600 bps, Data Code features
 - △ Communication Line and Modem Facilities (Switched): PTT switched telephone network, with half-duplex modems, capable of operating at 600 bps.
Features Required: Synchronous Data Adapter Type II, 600 bps, Switched Speed and Switched Network Facility, Data Code features, Connect Data Set to Line (if required)
- ▲ Manner of Operation: Multipoint -- 3135 as Control Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
Features Required: Synchronous Adapter Type II, 600 bps, Data Code features
- ▲ Manner of Line Operation: Multipoint -- 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
Features Required: Synchronous Data Adapter Type II, 600 bps, Tributary Station, Data Code features
- Line Speed: 1200 bps
- ▲ Manner of Line Operation: Point-to-Point
 - △ Communication Line and Modem Facilities (Nonswitched): Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
Features Required: Synchronous data Adapter Type II, Half Duplex Facility, Data Code features
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
Features Required: Synchronous Data Adapter Type II, Data Code features
 - △ Communication Line and Modem Facilities (Switched): PTT switched telephone network, with half-duplex modems, capable of operating at 1200 bps.
Features Required: Synchronous Data Adapter Type II, Switched Speed, Switched Network Facility, Data Code features, Connect Data Set to Line (if required)
- ▲ Manner of Operation: Multipoint -- 3135 as Control Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
Features Required: Synchronous Data Adapter Type II, Data Code features
- ▲ Manner of Operation: Multipoint -- 3135 as Tributary Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication line), capable of operating at 1200 bps.
Features Required: Synchronous Data Adapter Type II, Tributary Station, Data Code features

- Modem: 3863 mdl 1, 3872 mdl 1

- Line Speed: 2400 bps
- ▲ Manner of Operation: Point-to-Point
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.
Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features

- ▲ Manner of Operation: Multipoint - 3135 as Control Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, and Data Code features, New Sync (if required)
- ▲ Manner of Operation: Multipoint - 3135 as Tributary Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code Features
- Modem: 3864 mdl 1, 3874 mdl 1
 - Line Speed: 4800 bps
 - ▲ Manner of Operation: Point-to-Point
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features
 - ▲ Manner of Operation: Multipoint - 3135 as Control Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features
 - ▲ Manner of Operation: Multipoint - 3135 as Tributary Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features

- Modem: 3875 mdl 1

- Line Speed: 7200 bps

- ▲ Manner of Operation: Point-to-Point
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 7200 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code Features
- ▲ Manner of Operation: Multipoint - 3135 as Control Station
 - △ Communication Line and Modem Facilities: None Specified

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code Features
- ▲ Manner of Operation: Multipoint - 3135 as Tributary Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 7200 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary station, Data Code features

ACCESSORIES (NONE)

SUPPLIES (NONE)

3135 PROCESSING UNIT MODELS A1 - A4

(NO LONGER AVAILABLE)

The 3135-3 is NO LONGER AVAILABLE. Features and model changes can be ordered on an 'as available' basis.

PURPOSE

Provides a performance improvement for S/370 model 135 models H, HF, HG and I only.

MODELS A1 - A4

Model A1* A01: 262,144 bytes of processor storage

Model A2* A02: 327,680 bytes of processor storage

Model A3* A03: 393,216 bytes of processor storage

Model A4* A04: 524,288 bytes of processor storage

Note: The 3135-3 is available as a non-removable, field installable upgrade to a S/370 model 135 model H, HF, HG and I only.

* A complete review by IBM is required before ordering.

Prerequisites: The following prerequisites apply to each 3135-3 processor mdl.

1. 3046 Power Unit. See M3046 pages.
2. Extended Precision Floating Point Feature (#3840).

HIGHLIGHTS

Depending on the mdl, up to 524,288 bytes of processor storage are available. CPU cycle time varies from 275 to 1485 nanoseconds, depending on the internal operation being performed. Sixteen general-purpose and four floating point registers are provided.

Standard Features:

- APL Assist
- Audible Alarm
- Byte-Oriented Operand
- 1 Byte Multiplexer Channel
- 64 Byte Multiplexer Subchannels
- Channel Command Retry
- Channel Indirect Addressing
- Clock Comparator and CPU Timer
- Conditional Swapping
- Console File
- Control Registers
- Dynamic Address Translation
- Error Checking and Correction (on Main and Control Storage)
- Extended Control Mode
- Extended Control-Program Support
- Instruction Retry
- Interval Timer
- Machine Check Handling
- OS/DOS Compatibility
- Program Event Recording
- Storage Protection (Store and Fetch)
- S/370 Universal Instruction Set (Floating Point included)
- Time of Day Clock
- PSW Key Handling.

Control Storage: 131,072 bytes of Reloadable Control Storage are provided for each mdl in addition to the applicable main storage. This feature permits emulator and control routines to function. Reloadable Control Storage is housed in the CPU and is loaded

from the Console file. Reloadable Control Storage is not addressable by the user.

Virtual Storage: Virtual Storage capability is provided to increase the effective utilization of main storage.

Console File (standard): This is the basic microprogram loading device for the system. The console file contains a small file device that provides all of the microcode for the system on removable magnetic disks. The several disks that will be provided with the system will supply all of the required microcode for CE diagnostics, basic system features, plus the optional features ordered for the system.

Console Function: Operator communications with the system is via a system control panel located on the 3135-3 and a 3210 mdl 1 or 3215 Console Printer-KeyBoard as on other mdls of the S/370 mdl 135. A right reading board extension is standard — a left extension is not available.

Input/Output Channels

Byte Multiplexer Channel: One is standard on the 3135 and is functionally equivalent to the byte multiplexer channel on S/370 mdl 135. Provides eight control unit positions in byte mode, permits simultaneous operation of many low-speed devices. Burst mode operation of unbuffered devices operating in excess of 10KB is not allowed for concurrent operation with the integrated File Adapter, the Integrated Communications Adapter, or the Block Multiplexer Channel — see "IBM S/370 Channel Characteristics Manual", GA33-3010 for further clarification. For OS exclusion, refer to GC28-6554, "System Generation".

Note: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Additional, in "Special Features".

Block Multiplexer Channels: Two are available as special features. Data rates are 1.3 megabytes per second. Permits simultaneous operation of high-speed devices. Ability to "Block Muxplex" provides greater channel efficiency. Devices on these channels which cannot utilize block multiplexing will function as if attached to selector channels. If the 3330/3340 Series Integrated File Adapter is present these channels are addressed as 2 and 3 respectively. Otherwise they are addressed as 1 and 2.

Subchannels: On the byte multiplexer channel, 64 subchannels are provided as standard with the option of 128 or 256 (see "Special Features"). On each of the two available block multiplexer channels, 16 non-shared subchannels and 1 shared subchannel are provided as standard with the option of 8 non-shared and 9 shared or 8 non-shared and 5 shared (see "Special Features"). On a block multiplexer channel, a single shared subchannel may attach a control unit having a maximum of 16 device addresses.

Note: If Block Multiplexer Channel(s) are installed, subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. Also see Block Multiplexer Shared Subchannels in "Special Features".

Input/Output Attachments

Non-native: A wide variety of I/O devices may be attached to these models of the S/370 mdl 135 via the standard byte multiplexer channel, and/or the optional block multiplexer channel(s). In particular, any device which is attachable to a 3135 is attachable to a 3135-3.

Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices.

Console Printer-KeyBoard: (required) This unit serves as the online I/O device for operator/system communications. It provides a means of manually entering data into the system, altering or dis-

playing data already in storage, and for printing error logout messages.

2319 Integrated File Adapter (#4650): (optional) This feature enables native attachment of a 2319 Disk Storage mdl A1** (and a 2319 mdl A3**, 2312 mdl A1s** or 2318 mdl A1**) up to a total of eight drives. The IFA is addressed as channel 1. Limitation: Cannot be installed if 3333/3340 Intermix (#9315) is specified when 3330/3340 Series IFA (#4655) is also ordered.

** No longer available.

3330/3340 Series Integrated File Adapter (#4655): (optional) This feature allows the native attachment of one or two 3333 modules or 3340 mdl A2 units. Each 3333 module (either mdl 1 or mdl 11) can attach up to three 3330 modules (any combination of mdls 1, 2 or 11). Each 3340 mdl A2 can attach 3340 mdl B2 or B1 units, and one 3340 mdl A2 can also attach 3344 units to a maximum of eight drives. Maximum is sixteen drives per IFA. If 2319 IFA (#4650) is also present, IFA Conversion (#4645) is required.

Integrated Communications Adapter (#4640): (optional) This feature provides attachment of up to eight teleprocessing lines to the 3135-3. These may be any combination of supported BSC and Start/Stop lines and appear to the processor as if connected via one or more 2701s on the byte multiplexer channel.

Integrated Printer Adapter: (optional) This feature enables native attachment of a 1403 Printer mdl 2, 7 or N1. The Universal Character Set Feature can be optionally specified on the 1403 mdl 2 or N1.

Programming Features

APL Assist: (standard) This feature is an APL emulator. It replaces functions performed by the APL software interpreter. This feature can provide a performance improvement for many APL applications when used with VS APL (5748-AP1).

Conditional Swapping: (standard) Provides two additional instructions --- Compare and Swap --- Compare Double and Swap

PSW Key Handling: (standard) Provides two additional instructions --- Insert PSW Key --- Det PSW Key from Address.

Extended Control Program Support: (standard) The 3135-3 processor mdls of the S/370 mdl 135 include Extended Control Program Support. This is a hardware assist that reduces the CPU time needed to execute certain frequently used supervisor functions in both VS1 and VM/370.

The functional areas for VM/370 include:

- Virtual Machine I/O
- Storage Management
- Page Management
- SVC Handler
- Privileged Instruction Interfaces
- Dispatching
- Virtual Interval Timer

For VS1 the functional areas are:

- Storage Management
- IOS
- SVC FLIH
- System Trace
- Page Management

Publications: GC20-0001

SPECIFY

- Power (AC, 3-phase, 4-wire, 50/60 Hz): See GI Section 12 for voltage specify feature numbers. Note: 200V (#2807, #2733) not available.
- Order the Online Test System (OLTS) for your customer's configuration as required: Initially, or when being modified.

The ordering procedure will be found in the WT Instruction Manual, section 2-11.

- Color: #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray, #9046 for white.
- Cabling: #9080 for below the floor; #9081 for on the floor.
- Console Printer Keyboard Address: Recorded on console file disk at the plant #9101* for "01F" or #9102* for "009".

* CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required in a S/370 mdl 135.
- Console Printer-Keyboard: A 3210 mdl 1 or 3215 is required in every system. See M3210, 3215 pages "Special Features" below.

Note: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

- Control Panel Language Groups:

English	#2927
French	#2928
German	#2929

- Keyboard and Printer Language Groups (must be specified on 3135 for the 3210 and 3215):

Austrian/German	#2957
Belgian/French	#2964
Danish	#2965
English UK	#2958
English US	#2956
Finnish/Swedish	#2963
Italian	#2968
Norwegian	#2966
Portuguese	#2959
Spanish	#2961

All are diskette - only features.

- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3135 Frame 01 (CPU) are 31-1/2 inches wide x 70 inches long x 60 inches high. Removal of the side covers will reduce the width to 29-1/2 inches. If further reduction in length is required, specify #9570. Shipping dimensions will then be 29-1/2 inches wide x 60 inches long x 60 inches high.

SPECIAL FEATURES

AUTOCALL (#1290): (Canada only) Provides automatic calling capabilities on on facilities C1, C2, C3, C4, C5 or C6 to initiate (dial), through stored program control, a data link to a remote station. For the appropriate calling units, see M2700 pages. Specify: Refer to Table 1C for Terminal Adapter Type I Mdl II or Table 1E for Synchronous Data Adapter Type II for appropriate feature code according to line positions desired. Limitations: Each Autocall feature installed reduces the number of lines available on the ICA by one. Autocall must be ordered once for each line where the function is desired. Thus, the ICA can accommodate a maximum of four lines if each of these lines also has the Autocall feature. A single Autocall feature can be associated with any of the lines from one to seven. Cable Order: Required. Maximum: Four. This feature must be ordered only once for each line position required. Prerequisites: #9721-#9728 or #9649-#9656; and #9625-#9632. Field Installation: Yes.

Block Multiplexer Channel (#1425, #1426): Each adds a block multiplexer channel with 16 non-shared subchannels and 1 shared

selector subchannel to the system. #1425 first --- #1426 second. If the 3330/3340 Series Integrated File Adapter is present these channels are addressed as 2 and 3 respectively. Otherwise they are addressed as 1 and 2. Field Installation: Yes. Prerequisites: #1426 requires #1425.

Block Multiplexer Shared Subchannel (#1431): (Note: This feature should only be installed if devices capable of "Block Shared" operation are installed on the block multiplexer channel. See "I/O Configuration Form", GA22-7002.)

Allows any one of the following combinations of "Non-Shared", "Block Shared", or selector subchannels to be attached to the Block Multiplexer Channel (#1421): (1) 16 non-shared and one shared selector (see "Address Restrictions") --- (2) 8 non-shared, 8 block shared, and 1 shared selector (see "Address Restrictions") --- (3) 8 non-shared, 4 block shared, 1 shared selector (see "Address Restrictions"). If option (2) is selected, then each block shared subchannel may have attached to it a control unit having a maximum of 16 device addresses. If option (3) is selected, the four block shared subchannels may each have attached a control unit having a maximum of 32 device addresses. If option (1) is selected, no block shared subchannels are available, and addresses X00 through X7F are not available. With any option, the selector subchannel may have attached to it control units with a maximum of 16 device addresses. This feature will apply to both selector channels if installed. The options are selectable by the Customer Engineer and may be defined differently on each channel. Maximum: One. Field Installation: Yes. Prerequisites: #1421.

Address Restrictions with #1431:

- Addresses X00 through X7F are assigned as block shared subchannels. With option (1), they may not be used. With option (2), each control unit address position, i.e., X00, X10, X20, etc., through X70 is available. With option (3), "even" control unit address positions only are available, i.e., 00, 20, 40 and 60.
- Selector and non-shared addresses are limited to addresses X80 through XFF.

Channel Priority (#1501): When the IFA (#4650 or #4655) and both selector channels are present, this feature changes the higher priority for command chaining from the first selector channel (Channel 2) to the second selector channel (Channel 3). #1501 is required if any DASD devices are to be attached to Channel 3. Field Installation: Yes. Prerequisites: #4650 or #4655 and both #1425 and #1426.

200 Bits Per Second (#2711-#2718): Allows the Specify: Refer to Table 1-C for appropriate feature code according to the line positions desired. Prerequisites: Terminal Adapter Type 1 Mdl II. Field Installation: Yes.

OCR Multifont (#2989)*: Permits the execution of the Multifont Preprocessor programming support. The programming support, in turn, provides a means of translating input data produced by the Multifont Preprocessor feature of the 1287 mdl 5 and the 1288 mdl 1 to EBCDIC characters. Field-Installation: Yes. Prerequisites: Terminal Adapter Type 1 Mdl III.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct, and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes, between two cable-connected processing units, or cable-connected processing unit and external devices. Maximum: One. Cable Order: Required. Field Installation: Yes. Prerequisites: External devices must meet the interface specifications outlined in "S/360 Direct Control Feature-OEMI", GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see "S/370 Installation Manual - Physical Planning", GC22-7004. Field Installation: Yes.

Extended Precision Floating Point (#3840): Extends the precision of floating point instructions to 28 hexadecimal digits. Field Installation: Yes. Prerequisites: #3900.

Multiplexer Subchannels, Add'l (#3906-#3907): To increase the number of I/O devices on the byte multiplexer channel, the number of subchannels can be increased by specifying one of the following: #3906 for 128 subchannels, #3907 for 256 subchannels. The maximum number of shared subchannels is eight. When 256 subchannels are installed, there are no shared subchannels. Also see "Byte Multiplexer Channel" under "Input/Output Channels" above. Note: The number of subchannels ordered must be equal to or greater than the device addresses. Field Installation: Yes.

1401/1440/1460 Compatibility (#4457): Microprogrammed controlled feature, which, in combination with special software, permits the system to execute 1401/1440/1460 instructions. Field Installation: Yes.

Integrated Communications Adapter (#4640): Provides the circuits and controls for direct attachment of up to eight teleprocessing lines to the 3135. The controls for the first line adapter are included in this feature. Lines can be any combination of Start/Stop or BSC. Provides for the attachment of 1050, 2260 mdl 1, 2260 mdl 2, 2265 mdl 1, 2740 mdl 1, 2740 mdl 2, 2741 mdl 1, 2760 mdl 1, 5010 AXX, or any IBM computer, multiplexer, or terminal conforming to the Binary Synchronous Communications (BSC) standard. Note: In addition to the appropriate adapter, each communication line attached to the system requires an external modem. Refer to Table 2 below to define customer configuration requirements prior to ordering features below. Customer Responsibilities: See M2700 pages for customer responsibilities regarding communication facilities and servicing requirements. Communications Facilities: See M2700 pages for communication facility requirements with this feature. Field Installation: Yes.

See "Specify Requirements for Integrated Communication Adapter" under "Specify".

IFA Conversion (#4645): Permits co-residence of both 2319 IFA (#4650) and 3330/3340 Series IFA (#4655). Both IFAs are addressed as Channel 1. Limitations: Cannot be installed if 3333/3340 Intermix (#9315) or 3344 Attach (#9317) is specified. Cannot be installed with 2314/3340 Compatibility Feature (#8070). Maximum: One per 3135. Prerequisites: #4650 and #4655. Field Installation: Yes.

2319 Integrated File Adapter (#4650): Permits native attachment of a 2319 Disk Storage mdl A1 (and a 2319 mdl A3, 2312 mdl A1, or 2318 mdl A1) up to a total of eight drives. Standard features include file scan and record overflow functions. The IFA is always addressed as channel 1. Note: 2312 mdl A1s, 2318 mdl A1s and 2319 all mdls are no longer available. Limitations: Cannot be installed if 3333/3340 Intermix (#9315) is specified. Cannot be installed with 2314/3340 Compatibility (#8070). Maximum: One per 3135. Prerequisites: #4645 is required if installed with 3330 or 3340 Series IFA (#4655). Field Installation: Yes.

3330/3340 Series Integrated File Adapter (#4655): Permits native attachment of up to two 3333s or 3340 mdl A2s. A maximum of 16 3330 or 3340 Series drives may be attached to the IFA. The IFA supports rotational position sensing, disconnected command chaining, and multiple requesting. Record overflow is standard. For 3330, standard I/O addresses are (hex) 150 through 15F. For 3340, standard addresses are (hex) 1C0 through 1CF. For 3340 with 3344 standard addresses are (hex) 1C0 through 1E1. Maximum: One. Prerequisites: #4645 is required if installed with 2319 IFA (#4650). Field Installation: Yes. Note: 2319 all mdls are no longer available.

SPECIFY

- DASD Designation. Specify ONE of the following: #9313* (DASD 3333/3330) to attach up to two 3333 mdl 1s, each with up to three 3330 mdls 1, 2 in any combination. #9314* (DASD 3340 only) to attach up to two 3340 mdl A2s, each with up to three 3340 mdls B1, B2 in any combination. #9315* (3333/3340

Intermix) to attach one 3333 mdl 1 (with up to three 3330 mdls 1, 2 in any combination) plus one 3340 mdl A2 (with up to three 3340 mdls B1, B2 in any combination). #9315 cannot be installed with IFA Conversion Feature (#4645).

* CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

2. If any 3333 mdl 11 and/or 3330 mdl 11 is to be attached, also specify #9316* (3333/3330 mdl 11) in addition to #9313 or #9315.

With #9313 plus #9316 a mixture of one 3333 mdl 1 and one 3333 mdl 11, each with up to three 3330 mdls 1, 2 and 11 (in any combination) can be attached, or two 3333 mdl 11s, each with any mixture of up to three 3330 mdls 1, 2 and 11.

With #9315 plus #9316, one 3333 (either mdl 1 or mdl 11) with up to three 3330 mdls 1, 2 and 11 (in any combination) can be attached in addition to one 3340 mdl A2 with up to three associated mdls B1, B2. The standard addresses with #9315 for 3330 are (hex) 150 through 157, for 3340 are (hex) 158 through 15F.

3. If any 3344 is to be attached, specify #9317* in addition to #9314 (#9317 and #9315 are mutually exclusive). #9190* must also be specified if 3344 mdl B2Fs or the 3340 Fixed Head Feature (#4301, #4302) is ordered.

With #9314, #9317 and #9190 up to three 3344 mdl B2/B2F and/or 3340 mdl B2, B1 units in any combination can be attached to one 3340 mdl A2. The second 3340 mdl A2 if present can attach up to three 3340 mdl B1/B2 units.

#9317 is mutually exclusive with IFA Conversion Feature (#4645) and with 2314/3340 Compatibility Feature (#8070).

4. When just #9314 is specified, also specify 3340 Address Designation: #9820* for addresses (hex) 1C0 through 1CF, or #9821* for addresses (hex) 160 through 16F. The specification of 160 allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFAs.
5. When #9314 or #9315 is specified, also specify #9190* (Fixed Head Attachment) if Fixed Head Feature (#4301, #4302) is ordered for any 3340 attached to the IFA.
6. If String Switch (#8150) is ordered for any attached 3333 or 3340 mdl A2, specify String Switch Attachment (#9841)*.
7. When #9821* is specified in conjunction with #9813 the addresses for the 3333/3330s are (HEX) 160 through 16F.
8. When #9821* is specified and both #9314 and #9317 are specified the addresses for the 3340/3344s are as follows:

3340 A2				3344 B2/B2Fs					
Stringing 0	*-----*		*-----*		*-----*		*-----*		
	160	161	162	163	164	165	166	167	
	-----		*-----*		*-----*		*-----*		
			172	173	174	175	176	177	
			1E2	1E3	1E4	1E5	1E6	1E7	
		1F2	1F3	1F4	1F5	1F6	1F7

1	168	169	16A	16B	16C	16D	16E	16F

Note 1: The DASD control combinations that can be attached to the 3330/3340 Series IFA (#4655) are shown in the left hand column of the table below. From Section A of the table select one of the fea-

ture numbers shown (one and only one must be selected). From Section B select the feature number(s) required to support your configuration (select none, one, or more than one from Section B). Section C of the table shows the addresses available. The specification of the (hex) 160 addresses allows the 3135 IFA addresses to coincide with those of the 3115 and 3125 IFA. Select a number from Section C if required.

Note 2: Any change to an installed DASD configuration requires an MES ONLY if the new configuration indicates that a different Specify and/or Special Features not previously installed AND removal of any not listed as required for the new configuration.

3135 3330/3340 IFA (#4655)

* No feature number required.

** Mutually exclusive with String Switch #9841, 2319 IFA (#4650), IFA Conversion feature (#4645), 3344 Attachment (#9317).

*** Mutually exclusive with 3344 Attachment (#9317) and 2314/3340 Compatibility (#8070).

+ CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

Integrated Printer Adapter Basic Control (#4670): Provides the power supply and basic control for a natively attached 1403 Printer. The standard address is '00E'. Specify: #9485* if optional address of '00F' is desired. Maximum: One. Field Installation: Yes.

See table below for corresponding voltages for 50 Hz:

CPU	1403
220V	220V
235V	220V
380V	380V
408V	408V

Note: If the optional addresses of '01F' for the Console Printer Keyboard (#3210 or #3215) and '00F' for the integrated 1403 are both used, Multiplexer Subchannels, Add'l (#3905) must be specified.

Integrated 1403 Printer Mdl 2/Mdl N1 Attachment (#4672): Provides control for attaching 1403 mdl 2 or mdl N1. Specify: #9182* to attach 1403 mdl 2, #9188* to attach 1403 mdl N1. Maximum: One. Prerequisites: #4670. On the 1403, #9709 and #9725 is required on a mdl 2; #9726 is required on a mdl N1. See "Specify" under 1403. Field Installation: Yes.

Integrated 1403 Printer Mdl 7 Attachment (#4677): Provides control for attaching 1403 mdl 7. Maximum: One. Prerequisites: #4670. On the 1403, #9725 is required on a mdl 7. See "Specify" under 1403. Field Installation: Yes.

Additional Lines (#4722-#4728): Each provides circuits and controls for attachment of an additional line adapter, for a total of eight lines in the system. Specify: Order additional lines according to line position required. See Table 1-A. Each line specified requires the next lower order line as a prerequisite. Maximum: One of each (#4722 through #4728). Field Installation: Yes. Prerequisites: #4640.

Specify Requirements For Integrated Communications Adapter: For each line (#4722-#4728) attached to the ICA, including the first line included in #4640, one of the following line adapters must be specified: Terminal Adapter Type I Mdl II (#9721-#9728), Terminal Adapter Type III (#9753-#9760), or Synchronous Data Adapter Type II (#9649-#9656). Each line adapter and all associated features must be specified according to the line position to which they correspond. Refer to Table 2 below prior to ordering features for the ICA. For limitations of ICA line speeds, refer to "135 Channel Characteristics", GA33-3010.

S/360 Mdl 20 Compatibility (#7520): Microprogram-controlled feature, which, in combination with special software, permits the system to execute S/360 mdl 20 or S/360 mdl 25 in mdl 20 mode instructions. Field Installation: Yes.

3210 Mdl 1 Adapter (#7844): To attach a 3210 Console Printer-KeyBoard mdl 1 (15.5 cps) for systems console I/O; includes an alter-display ability. Maximum: One. Limitations: Cannot be installed with 3215 Adapter (#7855). Field Installation: Yes. Pre-

requisites: Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

3215 Adapter (#7855): To attach a 3215 Console Printer-KeyBoard (85 cps) for system console I/O; includes alter-display ability. Maximum: One. Limitations: Cannot be installed with 3210 mdl 1 Adapter (#7844). Field Installation: Yes. Prerequisites: Uses one address on the standard byte multiplexer channel, but does not use a control unit position. See "Specify."

2314/3340 Compatibility (#8070): Permits the emulation of 2314/2319 volumes on the 3340 Disk Storage. The user program may access both the emulated 2314 data set as well as 3340 volumes. This provides a "mixed-mode" operating environment. "Mixed-mode" is only possible with DOS releases which support 3340 on mdl 135. Maximum: One. Limitations: Cannot be installed with IFA Conversion (#4645), 2319 IFA (#4650), 3330/3340 Intermix (#9315), 3344 Attach (#9317), or String Switch Attachment (#9841). Field Installation: Yes. Prerequisites: #9314 on 3330/3340 Series IFA (#4655).

Universal Character Set Adapter (#8637): Permits the use of the Universal Character Set Feature on a 1403 Mdl 2 or Mdl N1 attached via the Integrated 1403 Printer Mdl 2, Mdl N1 Attachment (#4672). Maximum: One. Prerequisites: #4670, #4672. Field Installation: Yes.

300 Bits Per Second (#9593-#9600)*: Allows the Terminal Adapter Type I Mdl II to operate at 300 bps. Specify: Refer to Table 1-C for Terminal Adapter Type I Mdl II for appropriate feature code according to the line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type I Mdl II.

600 Bits Per Second (#9601-#9608)*: Allows the Terminal Adapter Type I mdl II or the Synchronous Adapter Type II to operate at 600 bps. Specify: Refer to Table 1-C for Terminal Adapter Type I mdl II or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type I Mdl II, or Synchronous Data Adapter Type II.

Modem Clocking (#9609-#9616): Allows a Terminal Adapter Type III to operate at 2400 bps or a Synchronous Data Adapter Type II to operate at 2000 bps, 2400 bps, 4800 bps or 7200 bps. Requires the appropriate clocking to be in the attached modem. It should be pointed out, however, that there are certain modems (for example, the 3872 mdl 1) which, although basically 2400 bps modems, offer a 1200 bps half-speed facility. Since the requirements for the Modem Clocking feature are defined by the type of modem, not the line speed, the Modem Clocking Feature (#9609-#9616) is still required as a prerequisite on the ICA when such modems are attached to the Synchronous Data Adapter Type II and are switched for 1200 bps operation. Specify: Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type III or Synchronous Data Adapter Type II.

Half-Duplex Facility (#9617-#9624)*: Required if the Synchronous Data Adapter Type II is attached to a two-wire facility. Note: This feature is not required with Switched Network (#9625-#9632) or Tributary Station (#9665-#9672). Specify: Refer to Table 1-E for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Switched Network Facility (#9625-#9632)*: Allows the Terminal Adapter Type I mdl II or the Synchronous Data Adapter Type II to operate over C-type switched lines. Specify: Refer to Table 1-C for Terminal Adapter Type I mdl II or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type I mdl II, or Synchronous Data Adapter Type II.

Connect Data Set To Line (#9633-#9640): Required with some modems when used on switched public networks. Consult your Teleprocessing Coordinator to determine specific modems requiring this feature. Specify: Refer to Table 1-C for TA-1 or Table 1-E for SDA-II for appropriate feature code according to line position(s)

desired. Field-Installation: Yes. Prerequisites: TA-I mdl II or SDA-II and switched network facility.

Switched Speed (#9641-#9648): Provides control of data signaling rate selection from the console printer-keyboard via the Alter/Display Function. Speed selection can be 600 or 1200 bps. Specify: Refer to Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Synchronous Data Adapter Type II (#9649-#9656)*: Provides control of data transfers between the 3135 and binary synchronous terminals. See "Binary Synchronous Terminals" under 2701 Data Adapter Unit. Control Station is included with this feature. Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Speed Selection: Provides operation over switched telephone network or leased, voice-grade channels at 600 bps if 600 Bits Per Second feature is specified. See above. Provides operation over leased voice-grade channels at 1200 bps (no speed need be specified). Provides operation over switched telephone network at 2000 bps if Modem Clocking is specified. See above. Provides operation over leased voice-grade 7200 bps if Modem Clocking is specified. See above. Field Installation: Yes. Prerequisites: #4640.

For special requirements: See Table 1-E and features below for additional specify requirements if Half-duplex Facility, Transparency, Tributary Station, Switched Network Facility, Autocall, EON, or New Sync are required. See Table 1-E and 600 Bits Per Second (#9601-#9608) if operation at 600 bps is required. See Table 1-E and Modem Clocking below if 2000 bps, 2400 bps, 4800 bps or 7200 bps operation is required. The appropriate Data Code feature must be specified if other than EBCDIC is required as the primary data code. See "Data Code Features" below.

Limitations: For line speed limitations, refer to "Mdl 135 Channel Characteristics Manual", GA33-3010.

Note on Data Code Features: The primary data code for the SDA Type II is EBCDIC. As an option to EBCDIC, either ASCII or 6-bit Transcode (2780 Data Transmission Terminal only) may be specified as the primary code. In addition to the primary data code, an alternate data code, selected under program control, may be specified for the Synchronous Data Adapter Type II. EBCDIC, ASCII, or 6-bit Transcode may be selected as an alternate code. Specify (for data code features): Refer to Table 1-E for appropriate feature codes according to line position(s) desired. Field Installation (of data code features): Yes. Prerequisites (for data code features): Synchronous Data Adapter Type II.

Tributary Station (#9665-#9672)*: Required when a Synchronous Data Adapter Type II is installed and functioning as a leased communication line, as a tributary station, and not functioning as a control station. Specify: Refer to Table 1-E for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Transparency (#9673-#9680)*: Provides the Synchronous Data Adapter Type II with the ability to transmit and receive 8-bit binary data as well as EBCDIC or ASCII codes; or 6-bit binary data as well as 6-bit Transcode. This feature with ASCII modifies VRC/LRC checking to VRC/CRC checking. Limitation: ASCII code and Transparency cannot be installed together for the same line position when attached to the 2770, 2780, 3780, S/3 or S/7. On S/32, EBCDIC and EBCDIC Transparency are standard, and one is selected by programming. Specify: Refer to Table 1-E for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Terminal Adapter Type I Mdl II (#9721-#9728)*: Controls data transfers between the 3135 and 1050/2741/2740 mdl 1 over facility C1 or D1, and between the 3135 and 2740, 2312, or 5010 mdl AXX over facilities D1 or D2, or between the 3135 and a 3767, 5010 or 5100 over Facility M1, or between the 3135 and a 3767 or 5010 over Facility M2, or between the 3135 and a 3767 over Facility M3. Includes vertical and longitudinal checking for 1050 terminals and 2740s equipped with Record Checking (#6114). Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Special

Requirements: See Table 1-C and features below for additional specify requirements if Switched Network Facility, Write Interrupt, Unit Exception Suppression, Read Interrupt, or Autocall are required. Normal operation is at 134.5 bps. 600 Bits Per Second feature must be specified for operation at 600 bps to 2740s or 5010 mdl AXX. Field Installation: Yes. Prerequisites: #4640.

Unit Exception Suppression (#9729-#9736)*: If this feature is installed with Terminal Adapter Type I Mdl II, Unit Exception will not be set in response to a Circle C. Not supported under BTAM, QTAM or TCAM. Specify: Refer to Table 1-C for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type I Mdl II.

Read Interrupt (#9737-#9744)*: Allows the Terminal Adapter Type I mdl II to operate with a 2741 equipped with Transmit Interrupt (#7900). Not supported under BTAM, QTAM or TCAM. Specify: Refer to Table 1-C for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type I Mdl II.

Write Interrupt (#9745-#9752)*: Allows the Terminal Adapter Type I Mdl II to operate with a 2741 equipped with Receive Interrupt (#4708). Not supported under BTAM, QTAM or TCAM. Specify: Refer to Table 1-C for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type I mdl II.

Terminal Adapter Type III (#9753-#9760)*: Controls data transfers between the 3135 and either remote 2845 Display Controls or 2848 Display Controls operating at 1200 bps over facility D5. Permits operation at 2400 bps over facility D7 if Modem Clocking is specified. Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: #4640.

Multipoint (#9761-#9768)*: Specifies that a Terminal Adapter Type III is to operate in multipoint mode. If #9761-#9768 is not ordered for a given Terminal Adapter Type III, point-to-point operation is presumed. Specify: Refer to Table 1-D for appropriate feature code according to line positions desired. Prerequisites: Terminal Adapter Type III. Field Installation: Yes.

EON (#9801-#9807)* (Canada only): Automatically generates an EON digit at the end of the dial sequence. Specify: Refer to Table 1-E for appropriate feature code according to line position desired. Specify for 3872 with EON option. Field Installation: Yes. Prerequisites: #1290, #9649-#9656.

New Sync (#9808-#9815)*: Allows Synchronous Data Adapter Type II or Terminal Adapter Type III to be connected to modems which offer the New Sync feature option and have this option installed. New Sync feature minimizes modem turn-around and allows faster bit synchronization of the following data. Specify: Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: #9609-#9616 and a modem offering New Sync. Note: New Sync is not required if #9617-#9624, #9665-#9672, or #9625-#9632 is installed for the line position in question.

Modems: Up to eight modems can be attached to a 3135, any mdl. Prerequisites: Integrated Communications Adapter (#4640) and Synchronous Communications Adapter Type II (#9649-#9656) 2400 bps to 7200 bps, Terminal Adapter Type I Mdl II (#9721-#9728) 134.5 bps to 600 bps, or Terminal Adapter Type III (#9753-#9760) 1200 bps or 2400 bps. See feature descriptions for limitations.

Modem	Speed (bps)	Facility
3976 mdl 1	up to 200	Nonswitched
3976 mdl 2	up to 200	Switched
3976 mdl 3	up to 1200	Nonswitched or Switched
3863 mdl 1/2	2400	Nonswitched or Switched
3872 mdl 1	2400	Nonswitched or Caducee

3864 mdl 1/2	4800	Switched
		Nonswitched
3874 mdl 1	4800	or Switched
3875 mdl 1	7200	Nonswitched
		Nonswitched

Note: For communications capabilities, product utilization and special features, see M2700, 3863, 3864, 3872, 3874, 3875, 3976.

MES Orders: For an MES order containing multiple features, the sequence of installation of individual features is determined at the plant of manufacture. No change to MES content or sequence can be made at installation time. If changes are required, the original MES must be cancelled and a new one originated.

Communication Information Tables

Before ordering, check Special Feature write-ups for Prerequisites and Limitations.

* CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. There is a fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

Table 1-A Additional Line Appearances

	Line Position			
Feature	1	2	3	4
Additional Lines	4640	4722	4723	4724

	Line Position			
Feature	5	6	7	8
Additional Lines	4725	4726	4727	4728

Specify additional lines according to line positions.

Table 1-B Terminal Adapters

	Line Position			
Feature	1	2	3	4
Terminal Adapter Type I mdl II	9721	9722	9723	9724
Terminal Adapter Type III	9753	9754	9755	9756
Synchronous Data Adapter Type II	9649	9650	9651	9652

	Line Position

Select features required for each line position for which Synchronous Data Adapter Type II is specified.

Optional Primary Data Codes

Feature	Line Position			
	1	2	3	4
ASCII	9681	9682	9683	9684
6-Bit Transcode *	9689	9690	9691	9692

Feature	Line Position			
	5	6	7	8
ASCII	9685	9686	9687	9686
6-Bit Transcode *	9693	9694	9695	9696

Select one of the above data codes if required in lieu of EBCDIC for each line position for which Synchronous Data Adapter Type II is specified.

* 6-Bit Transcode can be used only with a 2780 Data Transmission Terminal.

Optional Alternate Data Codes

Feature	Line Position			
	1	2	3	4
EBCDIC	9697	9698	9699	9700
ASCII	9705	9706	9707	9708
6-Bit Transcode *	9713	9714	9715	9716

Feature	Line Position			
	5	6	7	8
EBCDIC	9701	9702	9703	9704
ASCII	9709	9710	9711	9712
6-Bit Transcode *	9717	9718	9719	9720

Select one of the above data codes if required in lieu of EBCDIC for each line position for which Synchronous Data Adapter Type II is specified.

* 6-Bit Transcode can be used only with a 2780 Data Transmission Terminal.

Table 2 -- Part 1

Features Required for Start/Stop Terminals

- 1050 Data Communication System
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Connect Data Set to line (if required)

- Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features required: Terminal Adapter Type 1 mdl II

- 2260 Display Station mdl 1
 - Connects via 2848 Display Control mdl 3 -- see this table
- 2260 Display Station mdl 2
 - Connects via 2848 Display Control mdl 1 or 2 -- see this table
- 2265 Display Station mdl 1
 - connects via 2845 Display control mdl 1 -- see this table
- 2740 Communication Terminal mdl 1
 - Modem: 3976 mdl 2

- ▲ Line Speed: 134.5 bps
- ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.
- ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Connect data Set to Line (if required)

- Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II

- 2740 Communication Terminal mdl 2

- Modem: 3976 mdl 1
 - ▲ Line Speed 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II

- Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - ▲ Features Required: Terminal Adapter Type I mdl II, 600 bps

- 2741 Communication Terminal mdl 1 (without interrupt feature)

- Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps

- ▲ Features Required: Terminal Adapter Type 1 mdl II
- 2741 Communication Terminal mdl 1 (with Receive Interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type i mdl II, Write Interrupt, Unit-Exception Suppression (if required)
- 2741 Communication Terminal mdl (with Transmit Interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Read Interrupt, Unit-Exception Suppression (if required)
- 2741 Communication Terminal mdl 1 (with receive Interrupt and Transmit Interrupt features)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, Read-Interrupt, Unit-Exception Suppression (if required)
- 2760 Optical Image Unit mdl 1
 - Connects via 2740 Communication Terminal mdl 1 -- see this table
- 2845 Display Control mdl 1 Point-to-Point or Multipoint
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 1200 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
 - ▲ Features Required: Terminal Adapter Type III Multipoint for Multipoint Operations
 - Modem: 3872 mdl 1
 - ▲ Line Speed: 2400 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.
 - ▲ Features Required: Terminal Adapter Type III, Modem Clocking Multipoint for Multipoint Operation, New Sync (if required)
- 2848 Display Control mdls 1,2 and 3 Point-to-Point or Multipoint
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 1200 bps.
- ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
- ▲ Features Required: Terminal Adapter Type II Multipoint for Multipoint Operation
- Modem: 3872 mdl 1
 - ▲ Line Speed: 2400 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.
 - ▲ Features Required: Terminal Adapter Type III, Modem Clocking Multipoint for Multipoint Operation, New sync (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (without interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - ▲ Features Required: Terminal Adapter Type 1, mdl II, Switched Network Facility, 200 bps Line Speed, Connect Data Set to Line (if required)
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II 200 bps Line Speed
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 300 bps
 - ▲ Type of Communication Line Required: Code O
 - ▲ Features Required: Terminal Adapter Type 1, mdl II, Switched Data Network Facility, 300 bps Line Speed, Connect Data Set to Line (if required)
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 300 bps
 - ▲ Type of Communication Line Required: Code P
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, 300 bps Line Speed
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt feature)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line control (with Transmit Interrupt feature)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)

- Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1, mdl II, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt and Transmit Interrupt features)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code M
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7111 - 2740-1 Line Control
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code M
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, 200 bps Line Speed, Connect Data Set to Line (if required)
 - Modem 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, 200 bps Line Speed
 - Modem: 3976 mdl 3
 - ▲ Line Speed 300 bps
 - ▲ Type of Communication Line Required: Code P
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, 300 bps Line Speed
- 3767 Communication Terminal mdl 1, 2, or 3 with #7112 - 2740-2 Line Control
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps.
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps -OR- Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II, 600 bps Line Speed
- System/7
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1, mdl II, Switched Network Facility, Connect Data Set to Line (if required)

- Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II
- Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.

Note: For information about the attachment of World Trade modems, refer to Table 2 - Parts 1 and 2, and to the M2700 pages.

Table 2 -- Part 2

Features Required for Binary Synchronous Terminals

- Modem: 3976 mdl 3
 - Line Speed: 600 bps
 - ▲ Manner of Operation: Point-to-Point
 - △ Communication Line and Modem Facilities (Nonswitched): Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - Features Required: Synchronous Data Adapter Type II, 600 bps, and Half Duplex Facility, Data Code features
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - Features Required: Synchronous Data Adapter Type II, 600 bps, Data Code features
 - △ Communication Line and Modem Facilities (Switched): PTT switched telephone network, with half-duplex modems, capable of operating at 600 bps.
 - Features Required: Synchronous Data Adapter Type II, 600 bps, Switched Speed and Switched Network Facility, Data Code features, Connect Data Set to Line (if required)
 - ▲ Manner of Operation: Multipoint -- 3135 as Control Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - Features Required: Synchronous Adapter Type II, 600 bps, Data Code features
 - ▲ Manner of Operation: Multipoint -- 3135 as Tributary Station
 - △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.

privately owned communication facility), capable of operating at 600 bps.

Features Required: Synchronous Data Adapter Type II, 600 bps, Tributary Station, Data Code features

- Line Speed: 1200 bps

▲ Manner of Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.

Features Required: Synchronous data Adapter Type II, Half Duplex Facility, Data Code features

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Data Code features

- △ Communication Line and Modem Facilities (Switched): PTT switched telephone network, with half-duplex modems, capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Switched Speed, Switched Network Facility, Data Code features, Connect Data Set to Line (if required)

▲ Manner of Operation: Multipoint -- 3135 as Control Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Data Code features

▲ Manner of Operation: Multipoint -- 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication line), capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Tributary Station, Data Code features

● Modem: 3863 mdl 1, 3872 mdl 1

- Line Speed: 2400 bps

▲ Manner of Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features

▲ Manner of Operation: Multipoint - 3135 as Control Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, and Data Code features, New Sync (if required)

▲ Manner of Operation: Multipoint - 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code Features

● Modem: 3864 mdl 1, 3874 mdl 1

- Line Speed: 4800 bps

▲ Manner of Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features

▲ Manner of Operation: Multipoint - 3135 as Control Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features

▲ Manner of Operation: Multipoint - 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features

● Modem: 3875 mdl 1

- Line Speed: 7200 bps

▲ Manner of Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 7200 bps

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code Features

▲ Manner of Operation: Multipoint - 3135 as Control Station

MACHINES

- △ Communication Line and Modem Facilities:
None Specified

Features Required: Synchronous Data
Adapter Type II, Modem Clocking, Data Code
Features

- ▲ Manner of Operation: Multipoint - 3135 as
Tributary Station

- △ Communication Line and Modem Facilities
(Nonswitched): Four-wire, full-duplex, PTT
leased line telephone service (or equivalent
privately owned communication facility), ca-
pable of operating at 7200 bps.

Features Required: Synchronous Data
Adapter Type II, Modem Clocking, Tributary
Station, Data Code Features

Planning For Model Conversions: When a customer requires fea-
ture changes (except for the prerequisite feature Extended Preci-
sion Floating Point, #3840), and/or memory upgrades in addition to
a model upgrade to a 3135-3, consolidating the several changes into
a single MES is not recommended. In these cases, a planning ses-
sion between sales, CE and the customer is required in addition to
the normally required branch office review/approval to develop the
proper sequence of MES ordering.

From	To	A1	A2	A3	A4
H		X	X	X	X
HF			X	X	X
HG				X	X
I					X
A1			X	X	X
A2				X	X
A3					X

Note: For information about the attachment of World Trade mod-
ems, refer to Table 2 - Parts 1 and 2, and to the M2700 pages.

ACCESSORIES (NONE)

MODEL CONVERSIONS

SUPPLIES (NONE)

Field Installable.

3138 PROCESSING UNIT

PURPOSE

Provides main and control storage plus arithmetic and logic circuits for the S/370 mdl 138.

MODELS

Model I I00: 524,288 bytes of processor storage

Model J J00: 1,048,576 bytes of processor storage

Prerequisites: Each S/370 mdl 138 requires a 3046 power unit --- see M3046 pages.

HIGHLIGHTS

524,288 bytes or 1,048,576 bytes of processor storage are provided. CPU cycle time ranges from 275 to 1485 nanoseconds depending on the internal operation being performed. 16 general purpose and four floating point registers are provided.

Standard Features:

- Conditional Swapping
- APL Assist
- Audible Alarm
- Byte Oriented Operand
- 1 Byte Multiplexer Channel
- 64 Byte Multiplexer Subchannels
- 2 Block Multiplexer Channels
- 16 Non-Shared Block Multiplexer Subchannels
- 1 Shared Block Multiplexer Subchannel
- Channel Command Retry
- Channel Indirect Addressing
- Clock Comparator & CPU Timer
- Console File
- Control Registers
- Dynamic Address Translation
- Error Checking and Correction (on Main and Control Storage)
- Extended Control Mode
- Extended Control-Program Support
- Extended Precision Floating Point
- Instruction Retry
- Floating Point
- Interval Timer
- Machine Check Handling
- OS/DOS Compatibility
- Program Event Recording
- Storage Protection (Store and Fetch)
- S/370 Universal Instruction Set
- Time of Day Clock
- PSW Key Handling.

Control Storage: 131,072 bytes of Reloadable Control Storage are provided in addition to main storage. This permits emulator and control routines to function. The Reloadable Control Storage is housed in the CPU and is loaded from the Console File which is located beneath the operator's display console. Reloadable Control Storage is not available to the user.

Virtual Storage: Virtual Storage capability is provided to increase the effective utilization of main storage.

Console File (Standard): This is the basic microprogram loading device for the system. The console file contains a small file device that provides all of the microcode for the system on removable magnetic disks. The several disks that will be supplied with the system will supply all of the required microcode for diagnostics, basic systems features, plus the optional features ordered for the system.

Console Function:

- A display console is standard
- includes a cathode ray tube, and a keyboard
- functions as an operator's I/O console to communicate with the operating system
- standard attachment for an optional 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 for hard copy output

CRT can accommodate twenty-four 80-character lines of information. A system control panel is also located on the 3138 for additional operator communication with the system. Three console modes are available:

Printer-keyboard Mode
Display Mode
115/125 Console-display-emulation Mode

In "Printer-keyboard" mode, the display console uses the keyboard for input and the CRT and a recommended 3286 mdl 2 or 3287 mdl 1 and 2 for output. The CRT, keyboard and printer appear to the system as a 3215 Console Printer-Keybaord. "Printer-Keybaord" mode is supported by DOS, DOS/VS, OS/360, OS/VS and VM/370.

In "Display" mode, the keyboard is used for input, the CRT with 24 lines by 80 characters/line for output, and DDOCS or equivalent support is required. DOS/VS does not support Display Mode. The 3286 Printer mdl 2 or 3287 Printer mdl 1 or 2 (optional) has a separate address and requires MCS support or equivalent. When present, the printer appears to the system as a 3213 Console Printer.

In "115/125 Console-display-emulation" mode, the keyboard is used for input, the CRT is used for output, and the CRT displays twelve 56-character lines of information. The 3286 mdl 2 or 3287 mdl 1 or 2 are optional. When present, the printer emulates a 5213 Printer mdl 1 and acts as a slave unit to the display console. That is, the 3286 mdl 2 or 3287 mdl 1 or 2 are not separately addressable in this mode. The "115/125 Console-display-emulation" mode is available in DOS/VS Release 28 and above.

The display console provides the capability to select three aspects of the system's environment at IMPL time:

Console mode - See above (Mode Descriptions).
CPU mode (3138 or 3135) - See "Programming Features".
Unit addresses of natively attached I/O.
Integrated Communications Adapter Line Characteristics - See "Integrated Communications Adapter Features".

These selections will be recorded on the console file for permanent reuse until such time as any new selection is made during a subsequent IMPL. (Note: This is the only user access to the console file.) A right reading board extension is standard; a left extension is not available.

Input/Output Channels

Byte Multiplexer Channel

- One is standard
- functionally equivalent to the byte multiplexer channel on the S/370 mdl 135
- provides eight control unit positions
- in byte mode, permits simultaneous operation of many low-speed devices
- burst mode operation of unbuffered devices operating in excess of 10KB is not allowed for concurrent operation with the Integrated File Adapter, the Integrated Communications Adapter, or a Block Multiplexer Channel - see "IBM S/370 Model 138 Channel Characteristics Manual", GA24-3633, for further clarification; for OS exclusion refer to SRL GC28-6554, System Generation.

Note: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See Multiplexer Subchannels, Add'l, in "Special Features".

Block Multiplexer Channels:

- Two are standard
- data rates are 1.3 megabytes per second
- permits simultaneous operation of high-speed devices
- ability to "Block Multiplex" provides greater channel efficiency and increases the efficiency of the 3330/3340 Series IFA when using direct access storage devices equipped with rotational position sensing
- devices on these channels which cannot utilize block multiplexing will function as if attached to selector channels
- if the 3330/3340 Series Integrated File Adapter is present these channels are addressed as 2 and 3 respectively. Otherwise they are addressed as 1 and 2.

Subchannels: On the byte multiplexer channel 64 subchannels are provided as standard with the option of 128 or 256 (see "Special Features"); for each of the two standard block multiplexer channels 16 non-shared subchannels and 1 shared selector subchannel are provided as standard with the option of 8 non-shared and 9 shared or 8 non-shared and 5 shared (see "Special Features"); each of the standard single shared subchannels may attach a control unit having a maximum of 16 device addresses.

Note: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

Input/Output Attachment

Non-Native: A wide variety of I/O devices may be attached to the S/370 mdl 138 via the standard byte multiplexer channel or any of the two standard block multiplexer channels.

Native: The following integrated I/O attachments/adapters are provided for controlling the designated I/O devices:

Integrated 3203-4 Printer Attachment, First Printer (Optional) - Provides the capability to natively attach the 3203 Printer mdl 4 as the first systems printer. The Universal Character Set feature is standard on the 3203.

Integrated 3203-4 Printer Attachment, Second Printer (Optional) - Provides the capability to natively attach the 3203 Printer mdl 4 as the second systems printer. The Universal Character Set feature is standard on the 3203.

Integrated 1403 Printer Adapter (Optional) - This feature allows native attachment of a 1403 Printer mdl 2, 7, or N1; the Universal Character Set Feature can be optionally specified on the 1403 mdl 2 or N1.

Integrated Console Printer Adapter (Standard) - Provides the capability to natively attach the optional 3286 Printer mdl 2, 3287 Printer mdl 1 and 2 as a hard copy console printer.

3330/3340 Series Integrated File Adapter (Optional) - This feature allows the native attachment of one or two 3333 modules or 3340 mdl A2 units; each 3333 module (either mdl 1 or mdl 11) can attach up to three 3330 modules (any combination of mdls 1, 2 or 11); each 3340 mdl A2 can attach 3340 mdl B2 or B1 units, and one 3340 mdl A2 can also attach 3344 units to a maximum of eight drives; maximum is 16 drives per IFA.

Integrated Communications Adapter (Optional) - This feature provides for attachment of up to eight teleprocessing lines to the S/370 mdl 138; these may be any combination of supported BSC and Start/Stop lines and appear to the processor as if connected via one or more 2701s on the byte multiplexer channel.

Integrated Communications Adapter Features: To improve the ordering of the ICA on the S/370 mdl 138, the user may define, from the display-console-keyboard, the following line characteristics for each line installed (a maximum of 8 lines are attachable to the ICA):

1. Leased Facility* or Switched Network Facility: Allows the Terminal Adapter Type 1 mdl II, Synchronous Data Adapter Type II (SDA), or Telegraph Adapter Type II to operate over leased or C-type switched lines.

2. Half-Duplex Facility or Full Duplex Facility* - Allows the user to make a business tradeoff between his TP applications and turn-around requirements and available teleprocessing facilities. and the cost of those facilities; half-duplex is required if the Synchronous Data Adapter Type II is attached to a 2-wire facility or that facility is part of a switched network unless that facility is a leased line and the Synchronous Data Adapter Type II is installed and functioning as a tributary station and not functioning as a control station on that leased line.
3. Primary Code for the SDA Type II (EBCDIC*, ASCII, 6-Bit).
4. Secondary or Alternate Code for the SDA Type II (EBCDIC*, ASCII, 6-Bit).
5. Tributary Station Address - Allows the user to specify a station address A to R of any Synchronous Data Adapter Type II which is installed and functioning on a leased communications line as a tributary station and not functioning as a control station on that leased line. (Station address 0829*) Only addresses A to R are valid.
6. Line Speed:
 - a. 134 bps*, 200 bps, 300 bps, or 600 bps for Terminal Adapter Type 1 mdl II.
 - b. 600 bps or 1200 bps* for Synchronous Data Type II.
 - c. Not applicable for Terminal Adapter Type III or Telegraph Adapter Type II.
7. Transparency - Yes or No* - Provides the SDA Type II with the ability to transmit and receive 8-bit binary as well as EBCDIC or ASCII codes or 6-bit binary data as well as 6-bit Transcode; Transparency with ASCII modifies VRC/LRC checking to VRC/CRC checking. Limitations: ASCII code and Transparency cannot be installed together for the same line position when attached to the 2780, 3780, System/3, System/7, System/32 or System/34. Prerequisite: SDA II.
8. Write Interrupt - Yes or No* - Allows the Terminal Adapter Type 1 mdl II to operate with a 2741 equipped with Receive Interrupt (#4708). Limitations: Not supported under BTAM, QTAM, or TCAM. Prerequisite: Terminal Adapter Type 1 mdl II.
9. Read Interrupt - Yes or No* - Allows the Terminal Adapter Type 1 mdl II to operate with a 2741 equipped with Transmit Interrupt (#7900). Limitations: Not supported under BTAM, QTAM, or TCAM. Prerequisite: Terminal Adapter Type 1 mdl II.
10. New SYNC - Yes or No* - Allows the Synchronous Data Adapter Type II or Terminal Adapter Type III to be connected to modems which offer the New Sync feature option and have this option installed. New Sync minimizes modem turnaround and allows faster bit synchronization of the following data. Prerequisites: Modem Clocking (#9606-#9616), and a modem offering New Sync. Note: New Sync is not required if Half Duplex Facility, Tributary Station, or Switched Network is selected for the line position in question.
11. Multipoint - Yes or No* - Specifies that a Terminal Adapter Type III is to operate in multipoint mode. If multipoint is not selected for a given Terminal Adapter Type III, point-to-point operation is presumed. Prerequisite: Terminal Adapter Type III.
12. Unit Exception Suppression - Yes or No* - If selected with Terminal Adapter Type 1 mdl II, Unit Exception will not be set in response to a circle C. Limitations: Not supported under BTAM, QTAM, or TCAM. Prerequisite: Terminal Adapter Type 1 mdl II.
13. Connect Data Set To Line - Yes or No*: Allows the user to define those switched network lines which will contain this feature and thus, the line(s) to which the user can attach modems requiring this feature. Consult your Teleprocessing Coordinator to determine specific modems requiring this feature. Field Installation: Yes. Prerequisites: Terminal Adapter Type

I mdl II or SDA Type II and switched network facility definition for the appropriate line(s) from the display-console-keyboard.

* These options will comprise the standard microcode on the console file as shipped from the plant. They may be altered, as explained, from the display-console-keyboard at the operator's discretion.

Note: See "Special Features" for optional "ICA features" on the S/370 mdl 138.

Programming Features:

Conditional Swapping (Standard): Provides two additional instructions; Compare and Swap; Compare Double and Swap.

PSW Key Handling (Standard): Provides two additional instructions; Insert PSW Key; Set PSW Key from Address.

APL Assist (Standard): This feature is an APL emulator. It replaces functions performed by the APL software interpreter. This feature can provide a performance improvement for many APL applications when used with VS APL PP (5748-AP1).

IMPL 3135 CPU Mode Selection: Provides the capability to "run" on S/370 mdl 138 any SCP which will "run" today on a S/370 mdl 135. No performance degradation or loss of S/370 mdl 135 recovery from error capabilities will be experienced in this mode. That is, in 3135 CPU Mode the improved hardware performance of the S/370 mdl 138 will be available to the user. Moreover, the user will have the same recovery capabilities on the S/370 mdl 138 as he has on a S/370 mdl 135 when 3135 CPU Mode is selected. **Note:** S/370 mdl 138 Extended Logout/EREP is not supported in this mode.

Extended Control Program Support (Standard): The S/370 mdl 138 includes Extended Control-Program Support. This is a hardware assist that reduces the CPU time needed to execute certain frequently used supervisor functions in both VS1 and VM/370.

The functional areas for VM/370 include:

- Virtual Machine I/O
- Storage Management
- Page Management
- SVC Handler
- Privileged Instruction Interfaces
- Dispatching
- Virtual Interval Timer

For VS1 the functional areas are:

- Storage Management
- IOS
- SVC FLIH
- System Trace
- Page Management

Publications: GC20-0001

SPECIFY

- Power (AC, 3-phase, 50 and 60 Hz):

50 Hz	60 Hz
200V #2807	200V #2733
220V #2815	208V #9903
235V #2818	230V #9905
- Order the Online Test System (OLTS) for your customer's configuration as required: initially or when being modified. Contact IBM for ordering procedure.
- Cabling: #9080 for below the floor, #9081 for on the floor.
- Color: #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray, #9046 for white.
- Control Panel Language Group: #2927 for English, #2928 for French, #2929 for German.

- Display Console Nomenclature (plant installation only):

English US	#2827	Italian	#2832
French	#2828	Spanish	#2831
German	#2829		

- Keyboard Language (must be specified at time of order):

Brazil	#2959	Ger. QUERTY	#2972
Eng.US	#2956	Italy	#2968
Fr. AZERTY	#2964	Spain	#2960
Fr. QWERTY	#2970	Span Speak	#2969
Ger. QWERTZ	#2957		

- Minimum Configuration: See "Minimum Configurations" in "Systems" for minimum I/O units required in S/370 mdl 138.

- Shipping Instructions: Unless otherwise specified, shipping dimensions of the 3138 Frame 01 (CPU) are 800mm (31-1/2 in.) wide x 1778mm (70 in.) long x 1524mm (60 in.) high. Removal of the side covers will reduce the width to 749mm (29-1/2 in.). If further reduction in width is required, specify #9570. Shipping dimensions will then be 749mm (29-1/2 in.) wide x 1524mm (60 in.) long x 1524mm (60 inches) high.

- IOC Site Mobility Cart: #9585 Check with CE Physical Planning to determine if it is available locally.

Note: Subchannel requirements must be reviewed when adding new I/O to ensure adequate number are available. See "Special Features".

SPECIAL FEATURES

Autocall (#1290)(Canada only): Provides automatic calling capabilities on the public switched telephone network to initiate (dial) through stored program control, a data link to a remote station. For the appropriate automatic calling units, see M2700 pages. Specify: Refer to Table 1-C for Terminal Adapter Type 1 mdl II or Table 1-E for Synchronous Data Adapter Type II or Table 1-F for Telegraph Adapter Type II for appropriate feature code according to line positions desired. Maximum: Four. Limitations: Each Autocall feature installed reduces the number of lines available on the ICA by one. Autocall must be ordered once for each line where the function is desired. Thus, the ICA can accommodate a maximum of four lines if each of these lines also has the Autocall feature. A single Autocall feature can be associated with any of the lines from one to seven. Cable Order: Required. Field Installation: Yes. Prerequisites: #9721-#9728, #9649-#9656 or #9785-#9792 #9792 and Switched Network Facility selection from the display console.

Block Multiplexer Shared Subchannel (#1431): Note: This feature should be installed only if devices capable of "Block Shared" operation are installed on the block multiplexer channel. See "370 I/O Configuration Form", GA22-7002. Allows any one of the following combinations of "Non-Shared", "Block Shared" or selector subchannels to be attached to the block multiplexer channel: (1) 16 Non-Shared and 1 Shared Selector (see address restrictions); (2) 8 Non-Shared, 8 Block Shared and 1 Shared Selector (see address restrictions); (3) 8 Non-Shared, 4 Block Shared and 1 Shared Selector (see address restrictions). If option (2) is selected, then each block shared subchannel may have attached to it a control unit having a maximum of 16 device addresses. If option (3) is selected, the four block shared subchannels may each have attached a control unit having a maximum of 32 device addresses. If option (1) is selected, no block shared subchannels are available, and addresses X00 through X7F are not available. With any option, the selector subchannel may have attached to it control units with a maximum of 16 device addresses. This feature will apply to both selector channels if installed. The options are selectable by the Customer Engineer and may be defined differently on each channel. Maximum: One. Field Installation: Yes.

Address Restrictions with #1431: a) Addresses X00 through X7F are assigned as block shared subchannels. With option (1) they may not be used. With option (2) each control unit address position, i.e., X00,

X10, X20, etc. through X70, is available. With option (3) "even" address positions only are available, i.e., 00, 20, 40 and 60. b) Selector and Non-Shared addresses are limited to addresses X80 through XFF.

Channel Priority (#1502): When the IFA (#4655) is present, this feature changes the higher priority for command chaining from the first block multiplexer channel (Channel 2) to the second block multiplexer channel (Channel 3). #1502 is required if any DASD devices are to be attached to Channel 3. Field Installation: Yes. Prerequisites: #4655.

OCR Multifont (#2989): Permits the execution of the Multifont Preprocessor programming support. The programming support, in turn, provides a means of translating input data produced by the Multifont Preprocessor feature of the 1287 mdl 5 and the 1288 mdl 1 to EBCDIC characters. Field Installation: Yes.

Direct Control (#3274): Provides two instructions, Read Direct and Write Direct, and six distinct external interrupt lines which are independent of data channel operations. The read and write instructions provide timing signals and transfer a single byte of information, normally for controlling or synchronizing purposes between two cable-connected processing units, or a cable-connected processing unit and external devices. Maximum: One. Cable Order: Required. Field Installation: Yes. Prerequisites: External devices must meet the interface specifications outlined in "S/360 Direct Control Feature - OEMI", GA22-6845.

Emergency Power-Off Control (#3621, #3622): To provide, in effect, a single emergency power-off switch in a room or area where cable connection is other than via communication lines. #3621 to interconnect two emergency power-off switches; #3622 to interconnect up to 12 emergency power-off switches. For further information, see "S/370 Installation Manual - Physical Planning", GC22-7004. Field Installation: Yes.

Multiplexer Subchannels, Add'l (#3906, #3907): To increase the number of I/O devices on the byte multiplexer channel, the number of subchannels can be increased by specifying one of the following: #3906 -- for 128 subchannels; #3907 -- for 256 subchannels. The maximum number of shared subchannels is eight. When 256 subchannels are installed there are no shared subchannels. Note: The number of subchannels ordered must be equal to or greater than the device addresses. Also see "Byte Multiplexer Channel" under "Input/Output Channels" above. Field Installation: Yes.

1401/1440/1460 Compatibility (#4457): Microprogram controlled feature, which, in conjunction with special software, permits the system to execute 1401/1440/1460 instructions. Field Installation: Yes.

Integrated Communications Adapter (#4640): Provides the circuits and controls for direct attachment of up to eight teleprocessing lines to the S/370 mdl 138. The controls for the first line adapter are included in this feature. Lines can be any combination of Start/Stop or BSC. Provides for the attachment of 1050, 2260 mdl 1, 2260 mdl 2, 2265 mdl 1, 2740 mdl 1, 2740 mdl 2, 2741 mdl 1, 2760 mdl 1, 5010 AXX, or any IBM computer multiplexer or terminal conforming to the Binary Synchronous Communications (BSC) standard. Note: In addition to the appropriate adapter, each communications line attached to the system requires an external modem. Refer to Table 2 below to define customer configuration requirements prior to ordering features below. Customer Responsibilities -- see M2700 pages for customer responsibilities communications facilities and servicing requirements. Communications Facilities -- see M2700 pages for communications facility requirements with this feature. Field Installation: Yes.

See "Specify Requirements for Integrated Communication Adapter" under "Specify".

3330/3340 Series Integrated File Adapter (#4655): Permits native attachment of up to two 3333s or 3340 mdl A2s. A maximum of sixteen 3330 or 3340 series drives can be attached to the IFA. The IFA supports rotational position sensing, disconnected command

chaining and multiple requesting. Record overflow is standard. For 3330, standard I/O addresses are (hex) 150 through 15F. For 3340, standard addresses are (hex) 1C0 through 1CF. For 3340 with 3344, standard addresses are (hex) 1C0 through 1E1. Maximum: One. Field Installation: Yes.

Specify:

1. DASD Designation -- Specify ONE of the following -- #9313* (DASD 3333/3330) to attach up to two 3333 mdl 1s, each with up to three 3330 mdls 1/2 in any combination -- #9314* (DASD 3340 only) to attach up to two 3340 mdl A2s, each with up to three 3340 mdls B1/B2 in any combination -- #9315* (3333/3340 Intermix) to attach one 3333 mdl 1 (with up to three 3330 mdls 1/2 in any combination) plus one 3340 mdl A2 (with up to three 3340 mdls B1/B2 in any combination.)

2. If any 3333 mdl 11 and/or 3330 mdl 11 is to be attached, also specify #9316* (3333/3330 mdl 11) in addition to #9313 or #9315.

With #9313 plus #9316, a mixture of one 3333 mdl 1 and one 3333 mdl 11, each with up to three 3330 mdls 1, 2, and 11 (in any combination) can be attached -- or two 3333 mdl 11s, each with any mixture of up to three 3330 mdls 1, 2, and 11.

With #9315 plus #9316, one 3333 (either mdl 1 or mdl 11) with up to three 3330 mdls 1, 2, and 11 (in any combination) can be attached in addition to one 3340 mdl A2 with up to three associated mdls B1/B2. The standard addresses with #9315 for 3330 are (hex) 150 through 157, for 3340 (hex) 158 through 15F.

3. If any 3344 is to be attached, specify #9317* in addition to #9314 (#9317 and #9315 are mutually exclusive). #9190* must also be specified if 3344 mdl B2Fs or the 3340 Fixed Head Feature (#4301/#4302) is ordered.

With #9314, #9317, and #9190 up to three 3344 mdl B2/B2F and/or 3340 mdl B2, B1 units in any combination can be attached to one 3340 mdl A2. The second 3340 mdl A2, if present, can attach up to three 3340 mdl B1/B2 units.

4. When #9314 is specified, also specify 3340 Address Designation: #9820* for addresses (hex) 1C0 through 1CF, or #9821* for addresses (hex) 160 through 16F. The specification of 160 allows the 3138 IFA addresses to coincide with those of the 3115 and 3125 IFAs.

5. When #9314 or #9315 is specified, also specify #9190* (Fixed Head Attachment) if Fixed Head Feature (#4301/#4302) is ordered for any 3340 attached to the IFA.

6. If String Switch (#8150) is ordered for any attached 3333 or 3340 mdl A2, specify String Switch Attachment (#9841*).

7. When #9821* is specified in conjunction with #9313 the addresses for the 3333/3330s are (hex) 160 through 16F.

8. When #9821* is specified and both #9314 and #9317 are specified, the addresses for the 3340/3344s are as follows:

* CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

	3340 A2	---	3344 B2/B2Fs	---
S	*-----*	*	*-----*	*
t	160 161		162 163 164 165 166 167

1 | 168 | 169 | | 16A | 16B | 16C | 16D | 16E | 16F |

Note 1: The DASD control combinations that can be attached to the 3330/3340 Series IFA (#4655) are shown in the left hand column of the table below. From Section A of the table select one of the feature numbers shown (one and only one must be selected). From Section B select the feature number(s) required to support your configuration (select none, one, or more than one from Section B). Section C of the table shows the addresses available. The specification of the (hex) 160 addresses allows the 3138 IFA addresses to coincide with those of the 3115 and 3125 IFA. Select a number from Section C if required.

Note 2: Any change to an installed DASD configuration requires an MES ONLY if the new configuration indicates that a different Specify and/or Special Features not previously installed AND removal of any not listed as required for the new configuration.

- * No feature number required.
- ** CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only Changes ordered on the same diskette.
- *** Mutually exclusive with String Switch (#9841), 3130/3340 Intermix (#9315), 3344 Attachment (#9317).

Integrated 1403 Printer Adapter Basic Control (#4670): Provides the power supply and basic control for a natively attached 1401 Printer. Maximum: One. Field Installation: Yes.

See table below for corresponding voltages for 50 Hz

CPU	1403
220	220
235	220
380	380
408	380

Integrated 1403 Printer Mdl 2, Mdl N1 Attachment (#4672): Provides control for attaching 1403 mdl 2 or N1. Specify: #9182* to attach 1403 mdl 2, #9188* to attach 1403 mdl N1. Maximum: One. Field Installation: Yes. Prerequisites: #4670. On the 1403, #9709 and #9725 are required on a mdl 2; #9726 is required on a mdl N1. See Specify under 1403.

Integrated 1403 Printer Mdl 7 Attachment (#4677): Provides control for attaching a 1403 mdl 7. Maximum: One. Field Installation: Yes. Prerequisites: #4670. On the 1403, #9725 (see "Specify" in M1403 pages).

Add'l Lines (#4722-#4728): Each provides circuits and Controls for attachment of an additional line adapter --- for a total of eight lines in a system. Specify: Order additional lines according to line position required --- see Table 1-A below. Each line specified requires the next lower order line as a prerequisite. Maximum: One of each (#4722 through #4728). Field Installation: Yes. Prerequisites: #4640.

Specify Requirements For Integrated Communications Adapter: For each line (#4722-#4728) attached to the ICA, including the first line included in the Integrated Communications Adapter (#4640), one of the following line adapters must be specified: Terminal Adapter Type 1 mdl II (#9721-#9728), Terminal Adapter Type III (#9753-#9760), Telegraph Adapter Type II (#9785-#9792), or Synchronous Data Adapter Type II (#9649-#9656). Each line adapter and all associated features must be specified according to the line position to which they correspond. Refer to table 2 below prior to ordering features for the ICA.

S/360 Mdl 20 Compatibility (#7520): Microprogram controlled feature which, in combination with special software, permits the system to execute S/360 mdl 20 or S/360 mdl 25 in mdl 20 mode instructions. Field Installation: Yes.

2314/3340 Compatibility Feature (#8070): Permits the evaluation of 2314/2319 volumes on the 3340 Disk Storage. The user program may access both the emulated 2314 data set as well as 3340 volumes. This provides a "mixed-mode" operating environment. "Mixed-mode" is only possible with DOS releases which support 3340 on the mdl S/370 mdl 138. Maximum: One. Field Installation: Yes. Limitations: Cannot be installed with 3333/3340 InterMix (#9315), 3344 Attach (#9317), or String Switch Attachment (#9841). Prerequisites: #9314 on #4655.

Integrated 3203-4 Printer Attachment, First Printer (#8175): Provides the capability to natively attach the 3203 Printer mdl 4. Maximum: One. Field Installation: Yes.

Integrated 3203-4 Printer Attachment, Second Printer (#1076): Provides the capability to natively attach a second 3203 Printer mdl 4. Maximum: One. Field Installation: Yes. Prerequisites: #8075.

Universal Character Set Adapter (#8637): Permits the use of the Universal Character Set feature on a 1403 mdl 2 or N1 attached via

the Integrated 1403 Printer mdl 2, mdl N1 Attachment (#4672). Maximum: One. Field Installation: Yes. Prerequisites: #4670, #4672.

Modem Clocking (#9609-#9616): Allows a Terminal Adapter Type III to operate at 2400 bps or a Synchronous Data Adapter Type II to operate at 2000 bps, 2400 bps, 4800 bps or 7200 bps. Requires the appropriate clocking to be in the attached modem. Note: Certain models such as the 3872 mdl 1, although basically 2400 bps modems, offer a 1200 bps half speed facility. Since the requirements for the Modem Clocking feature are defined by the type of modem, not the line speed, when such modems are attached to the Synchronous Data Adapter Type II and are stitched for 1200 bps operation, Modem Clocking is still required as a prerequisite on the ICA. Specify: Refer to Table 1-D for Terminal Adapter Type III or Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Terminal Adapter Type III or Synchronous Data Adapter Type II.

Switched Speed (#9641-#9648): Provides control of data signaling rate selection from the display console keyboard via the Mode Select key. Speed selection can be 600 bps or 1200 bps. Specify: Refer to Table 1-E for Synchronous Data Adapter Type II for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: Synchronous Data Adapter Type II.

Synchronous Data Adapter Type II (#9649-#9656)*: Provides control of data transfers between the 3138 and binary synchronous terminals. See "Binary Synchronous Terminals" under 2701 Data Adapter Unit. Control Station is included with this feature. Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Speed Selection: Provides operation over facilities at 600 bps if 600 Bits Per Second is selected from the display console. Provides operation over the Public Switched Telephone Network or nonswitched Voice Grade Lines at 1200 bps (no speed need be specified). Provides operation over the Public Switched Telephone Network at speeds up to 4800 bps, nonswitched Voice Grade Lines at speeds up to 7200 bps and Public Switched and nonswitched Data Networks at speeds up to 4800 bps all provided that the clocking is supplied from the attached DCE. Field Installation: Yes. Prerequisites: #4640. Special Requirements: See Table 1-E for additional specify requirements if Autocall is required. See Table 1-E and Modem Clocking above if 2000 bps, 2400 bps, 4800 bps, or 7100 bps operation is required. The appropriate Data Code must be selected from the display console. Limitations: For line speed limitations, refer to "Model 138 Channel Characteristics Manual", GA33-3010.

Terminal Adapter Type 1 Mdl II (#9721-#9728)*: Control data transfers between the 3138 and 1050/2740 mdl 1/2741/5010 mdl AXX between the 3138 and 2740 model 2 or 5010 mdl AXX between the 3138 and a 2741 Over Facility K1M. Includes vertical and longitudinal checking for 1050 terminals and 2740s equipped with Record Checking (#6114). Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Special Requirements: See Table 1-C for additional specify requirements if Autocall is required. Field Installation: Yes. Prerequisites: #4640.

Terminal Adapter Type III (#9753-#9760)*: Controls data transfers between the 3138 and either remote 2845 Display Controls or 2848 Display Controls operating at 1200 bps. Permits operation at 2401 bps if Modem Clocking is specified. Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: #4640.

Telegraph Adapter Type II (#9785-#9792)*: Controls data transfers between ICA and Model 33/35 TTY terminals (8 level code at 110 bps only). Specify: Refer to Table 1-B for appropriate feature code according to line position(s) desired. Field Installation: Yes. Prerequisites: #4640 and Switched Network Facility selection from the display console.

* CPU diskette-only specify feature. No fee when ordered at time of manufacture or with chargeable feature that supplies diskette. A fee on purchased machines to include any number of diskette-only changes ordered on the same diskette.

Modems Up to eight modems can be attached to a 3138. Prerequisites: Integrated Communications Adapter (#4640) and Synchronous Data Adapter Type II (#9649-#9656) 2400 bps to 7200 bps, Terminal Adapter Type 1 mdl II (#9721-#9728) 134.5 bps to 600 bps, or Terminal Adapter Type III (#9753-#9760) 1200 bps or 2400 bps. See feature descriptions for limitations.

Modem	Speed (bps)	Facility
3976 mdl 1	up to 200	Nonswitched
3976 mdl 2	up to 200	Switched
3976 mdl 3	up to 1200	Nonswitched or Switched
3863 mdl 1/2	2400	Nonswitched or Switched
3868 mdl 1	2400	Nonswitched
3872 mdl 1	2400	Nonswitched or
		Switched
3864 mdl 1/2	4800	Nonswitched or Switched
868 mdl 2		4800 Nonswitched

Note: For communications capabilities, product utilization and special features, see M2700, 3863, 3864, 3868-1, 3868-2, 3872, and 3976 pages.

Communication Information Tables

Before ordering, check Special Feature write-ups for Prerequisites and Limitations.

TABLE 1-A Additional Line Appearances

Feature	Line Position			
	1	2	3	4
Additional Lines	4640	4722	4723	4724
Feature	Line Position			
	5	6	7	8
Additional Lines	4725	4726	4727	4728

Specify additional lines according to line positions.

Table 1-B Terminal Adapters

Feature	Line Position			
	1	2	3	4
Terminal Adapter Type 1 mdl II	9721	9722	9723	9724
Terminal Adapter Type III	9753	9754	9755	9756

Table 2 -- Part 1

Features Required for Start/Stop Terminals

- 1050 Data Communication System
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.
 - Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Connect Data Set to line (if required).
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - Features required: Terminal Adapter Type 1 mdl II
- 2260 Display Station mdl 1
 - Connects via 2848 Display Control mdl 3 -- see this table
- 2260 Display Station mdl 2
 - Connects via 2848 Display Control mdl 1 or 2 -- see this table
- 2265 Display Station mdl 1
 - connects via 2845 Display control mdl 1 -- see this table
- 2740 Communication Terminal mdl 1
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.
 - Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Connect data Set to Line (if required).
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - ▲ Features Required: Terminal Adapter Type 1 mdl II
- 2740 Communication Terminal mdl 2
 - Modem: 3976 mdl 1
 - ▲ Line Speed 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.

- Features Required: Terminal Adapter Type 1 mdl II
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - Features Required: Terminal Adapter Type I mdl II, 600 bps
- 2741 Communication Terminal mdl 1 (without interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps
 - Features Required: Terminal Adapter Type 1 mdl II
- 2741 Communication Terminal mdl 1 (with Receive Interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - Features Required: Terminal Adapter Type i mdl II, Write Interrupt, Unit-Exception Suppression (if required)
- 2741 Communication Terminal mdl (with Transmit Interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - Features Required: Terminal Adapter Type 1 mdl II, Read Interrupt, Unit-Exception Suppression (if required)
- 2741 Communication Terminal mdl 1 (with receive Interrupt and Transmit Interrupt features)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, Read-Interrupt, Unit-Exception Suppression (if required)
- 2760 Optical Image Unit mdl 1
 - Connects via 2740 Communication Terminal mdl 1 -- see this table
- 2845 Display Control mdl 1 Point-to-Point or Multipoint
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 1200 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
 - Features Required: Terminal Adapter Type III Multipoint for Multipoint Operations.
- Modem: 3872 mdl 1
 - ▲ Line Speed: 2400 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.
- Features Required: Terminal Adapter Type III, Modem Clocking Multipoint for Multipoint Operation, New Sync (if required).
- 2848 Display Control mdls 1,2 and 3 Point-to-Point or Multipoint
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 1200 bps.
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.
 - Features Required: Terminal Adapter Type II Multipoint for Multipoint Operation.
- Modem: 3872 mdl 1
 - ▲ Line Speed: 2400 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.
- Features Required: Terminal Adapter Type III, Modem Clocking Multipoint for Multipoint Operation, New sync (if required).
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (without interrupt feature)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - Features Required: Terminal Adapter Type 1, mdl II, Switched Network Facility, 200 bps Line Speed, Connect Data Set to Line (if required)
 - ▲ Type of Communication Line Required: Code N
 - Features Required: Terminal Adapter Type 1 mdl II 200 bps Line Speed
- Modem: 3976 mdl 3
 - ▲ Line Speed: 300 bps
 - ▲ Type of Communication Line Required: Code O
- Features Required: Terminal Adapter Type 1, mdl II, Switched Data Network Facility, 300 bps Line Speed, Connect Data Set to Line (if required)
- Modem: 3976 mdl 3
 - ▲ Line Speed: 300 bps
 - ▲ Type of Communication Line Required: Code P

- Features Required: Terminal Adapter Type 1 mdl II, 300 bps Line Speed
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt feature)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line control (with Transmit Interrupt feature)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required (Switched): Code M
 - Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - Features Required: Terminal Adapter Type 1, mdl II, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7113 - 2741 Line Control (with Receive Interrupt and Transmit Interrupt features)
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code M
 - Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, Write Interrupt, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required), Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
 - Features Required: Terminal Adapter Type 1 mdl II, Write Interrupt, Read Interrupt, 200 bps Line Speed, Unit-Exception Suppression (if required)
- 3767 Communication Terminal mdl 1 or 2 with #7111 - 2740-1 Line Control
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code M
 - Features Required: Terminal Adapter Type 1 mdl II, Switched Network Facility, 200 bps Line Speed, Connect Data Set to Line (if required)

- Modem 3976 mdl 1
 - ▲ Line Speed: 200 bps
 - ▲ Type of Communication Line Required: Code N
- Features Required: Terminal Adapter Type 1 mdl II, 200 bps Line Speed
- Modem: 3976 mdl 3
 - ▲ Line Speed 300 bps
 - ▲ Type of Communication Required: Code P
- Features Required: Terminal Adapter Type 1 mdl II, 300 bps Line Speed
- 3767 Communication Terminal mdl 1, 2, or 3 with #7112 - 2740-2 Line Control
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps.
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps -OR- Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.
 - Features Required: Terminal Adapter Type 1 mdl II, 600 bps Line Speed
- System/7
 - Modem: 3976 mdl 2
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Switched): PTT switched network, capable of operating at 134.5 bps.
 - Features Required: Terminal Adapter Type 1, mdl II, Switched Network Facility, Connect Data Set to Line (if required)
 - Modem: 3976 mdl 1
 - ▲ Line Speed: 134.5 bps
 - ▲ Type of Communication Line Required (Non-switched): Two-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 134.5 bps.
 - Features Required: Terminal Adapter Type 1 mdl II
 - Modem: 3976 mdl 3
 - ▲ Line Speed: 600 bps
 - ▲ Type of Communication Line Required (Non-switched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.

Note: For information about the attachment of World Trade modems, refer to Table 2 - Parts 1 and 2, and to the M2700 pages.

Table 2 -- Part 2

Features Required for Binary Synchronous Terminals

- Modem: 3976 mdl 3
 - Line Speed: 600 bps
 - ▲ Manner of Line Operation: Point-to-Point
 - △ Communication Line and Modem Facilities (Nonswitched): Two-wire, half-duplex, PTT leased line telephone service (or equivalent

privately owned communication facility), capable of operating at 600 bps.

Features Required: Synchronous Data Adapter Type II, 600 bps, and Half Duplex Facility, Data Code features

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.

Features Required: Synchronous Data Adapter Type II, 600 bps, Data Code features

- △ Communication Line and Modem Facilities (Switched): PTT switched telephone network, with half-duplex modems, capable of operating at 600 bps.

Features Required: Synchronous Data Adapter Type II, 600 bps, Switched Speed and Switched Network Facility, Data Code features, Connect Data Set to Line (if required)

- ▲ Manner of Operation: Multipoint -- 3135 as Control Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.

Features Required: Synchronous Adapter Type II, 600 bps, Data Code features

- ▲ Manner of Line Operation: Multipoint -- 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 600 bps.

Features Required: Synchronous Data Adapter Type II, 600 bps, Tributary Station, Data Code features

- Line Speed: 1200 bps

- ▲ Manner of Line Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Two-wire, half-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.

Features Required: Synchronous data Adapter Type II, Half Duplex Facility, Data Code features

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Data Code features

- △ Communication Line and Modem Facilities (Switched): PTT switched telephone network, with half-duplex modems, capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Switched Speed, Switched

Network Facility, Data Code features, Connect Data Set to Line (if required)

- ▲ Manner of Operation: Multipoint -- 3135 as Control Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Data Code features

- ▲ Manner of Operation: Multipoint -- 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication line), capable of operating at 1200 bps.

Features Required: Synchronous Data Adapter Type II, Tributary Station, Data Code features

- Modem: 3863 mdl 1, 3872 mdl 1

- Line Speed: 2400 bps

- ▲ Manner of Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features

- ▲ Manner of Operation: Multipoint - 3135 as Control Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, and Data Code features, New Sync (if required)

- ▲ Manner of Operation: Multipoint - 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 2400 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code Features

- Modem: 3864 mdl 1, 3874 mdl 1

- Line Speed: 4800 bps

- ▲ Manner of Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features

▲ Manner of Operation: Multipoint - 3135 as Control Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code features

▲ Manner of Operation: Multipoint - 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line service (or equivalent privately owned communication facility), capable of operating at 4800 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary Station, Data Code features

- Modem: 3875 mdl 1

- Line Speed: 7200 bps

▲ Manner of Operation: Point-to-Point

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 7200 bps

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code Features

▲ Manner of Operation: Multipoint - 3135 as Control Station

- △ Communication Line and Modem Facilities: None Specified

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Data Code Features

▲ Manner of Operation: Multipoint - 3135 as Tributary Station

- △ Communication Line and Modem Facilities (Nonswitched): Four-wire, full-duplex, PTT leased line telephone service (or equivalent privately owned communication facility), capable of operating at 7200 bps.

Features Required: Synchronous Data Adapter Type II, Modem Clocking, Tributary station, Data Code features

3151 ASCII DISPLAY STATION

PURPOSE

A stand-alone, high quality, 14-inch, monochrome display station used for displaying up to 3,300 characters, and for entering data into and retrieving data from a host processor. The 3151 provides an asynchronous communication interface with a 7-bit or 8-bit word length, using RS-232-C (CCITT V.24/28) interface expandable to additional RS-422-A (CCITT V.11) interface. It communicates with the 128-character, 7-bit ASCII/ISO code or 256-character, 8-bit ASCII/ISO code in ASCII/ISO communication protocols. The 3151 provides a native mode, 3101 mode and various emulation modes, which allow the 3151 to attach to a variety of host processors. The 3151 native mode is compatible with the native (Canada only) modes of the 3161 and 3162 (<) (Except Canada > mode of the IBM 3161 <), with limitations.

MODELS

Model 11: (Except Canada > 11Y <) (Canada only > 11Y, 11D <) Provides 84-(Canada only > or 85-<) key keyboard and green phosphor.

Model 31: (Except Canada and Japan > 31Y <) (Canada only > 31Y, 31D <) (Japan only > 31Y, 31K <) Provides 102-(Canada only > or 103-<) (Japan only > or 104-<) key keyboard and green phosphor.

Model 41: (Except Canada and Japan > 41Y <) (Canada only > 41Y, 41D <) (Japan only > 41Y, 41K <) Provides 102-(Canada only > or 103-<) (Japan only > or 104-<) key keyboard and Amber-gold phosphor.

Note:

Models 11Y, 31Y, 41Y provide English (US). For Canada, Models 11D, 31D, 41D provide Canadian-French. For Japan, Models 31K, 41K provide Katakana. Except for US English models (11Y/31Y/41Y) with which a cartridge is not an element of a model, a keyboard and a cartridge unique to the language are provided to each of the models.

Upon request from the customer, the special 3151 models with a 1-year warranty are provided. The 1-year warranty model numbers corresponding to the standard 3-year warranty models are:

3-Year Warranty Model	Corresponding 1-year Warranty Model
11X	16X
31X	36X
41X	46X

DESCRIPTION

The 3151 is designed with 2 elements and a cartridge for emulation features and language support. The video element is a 14-inch flat screen design. The keyboard is connected to the video element with coiled cable and is detachable. The cartridge is of a slim-line design.

The 3151 Model 11X displays 1,920 (80 by 24) and 2,000 (80 by 25) characters. The 3151 Model 31X and 41X display 1,920 (80 by 24), 2,000 (80 by 25), 3,168 (132 by 24), and 3,300 (132 by 25) characters. An alphameric character is represented in a character cell of 9x15 or 9x14 dot matrix. The data displayed uses the 128-characters of the 7-bit ASCII/ISO codes or 256-characters of the 8-bit ASCII/ISO codes and an additional character set containing 24 line drawing graphics, 10 script characters and 10 subscript characters. A line drawing character is represented in a 9x15 or 9x14 dot matrix to create a contiguous line. Character- or Echo- transmission mode provides the capability to transmit a character over a communi-

cation line upon depression of each key. The block transmission mode, selectable at setup time, allows buffered transmission of data.

Communications: The use of ASCII (ISO) codes and the asynchronous communication interface allows the 3151 to attach to a variety of host processors. Various communication options are selectable by the customer on the setup menu such as line speed (50, 75, 110, 134.5, 150, 200, 300, 600, 1200, 1800, 2400, 3600, 4800, 9600, 19200, and 38400 bps), parity (None, Odd, Even, Mark, Space), interface (EIA RS-232-C (CCITT V.24/V.28), EIA RS-422-A (CCITT V.11)), word length (7-, 8-bit), operation mode (echo, character, block mode), turnaround character (ETX, EOT, CR, DC3), line control (CRTS, PRTS, IPRTS), stop bit (1, 2), and break signal (170, 500ms).

Operator Factors: The 3151 has an etched screen, which minimizes glare and fingerprints. Operator messages are displayed on the bottom (25th or 26th row) of the screen, and provide useful operator information. An audible alarm is provided to alert the operator, and its volume is adjustable by the operator. The video element can be tilted to set the screen angle for the operator. The tilt/swivel stand, an accessory, offers ergonomically designed tilt and swivel mechanism. The cable-connected keyboard can be moved and its slope is selectable.

Keyboard: The 3151 keyboard has a low profile with tactile feedback, has a coiled cable, and is detachable from the Video WSE. The Model 11 keyboard offers 84-(Canada only > or 85-<) keys including 12 F-keys (Function-keys). The Model 31X/41X keyboard offers 102-(Canada only > or 103-<) (Japan only > or 104-<) keys including 12 F-keys to shift to Program Attention keys, and a numeric keypad with a line drawing capability, and keycaps are recappable on 31X/41X.

Input Editing Capability: Cursor move (up, down, right, left, and home), tab (forward, backward, set and clear), erase (end of line, end of page and end of field), clear (entire page and entire buffer), insert (character and line) and delete (character and line) are provided. Tab erase, insert and delete may be manipulated by field attribute. All characters can be rendered by character or field attributes. A twelve-key numeric keypad and 12 F-keys are provided on the keyboard.

Major characteristics of the 3151 are:

All models:

- Compact design with 2 major elements: Video and keyboard
- 14-inch, etched screen display
- 24 lines or 25 lines of data display plus one line display for operator indicator
- RS-232-C communication with speeds up to 38.4K bps
- Native mode compatible with 3161 (Canada only > and 3162 <) ASCII Display Station
- 10 non-IBM emulations included in (US English) base model
- Bidirectional, smooth and jump scroll
- Concurrent support of character attributes (for blink, non-display, underline, reverse and high intensity) and field attributes (for normal, blink, non-display, underline, reverse, high intensity, protected, numeric and modified data tag)

Model 31/41:

- Green or Amber-gold phosphor colors
- IBM 316X compatible, 102-, 103- or 104-key keyboard
- 12 F-keys shiftable to 36, definable by operator or host
- 3 PA (Program attention) keys
- Customer recappable keytops

MACHINES

- RS-422-A communication (option) with speeds up to 38.4K bps
- IBM 3101 model 23 emulation
- National Language Models
- A cartridge for National Language support or for additional attachment capabilities
- 80/132-character column display
- Split screen capability (3 horizontal viewports)
- Native mode is superset of 3161

Model 11:

- Green phosphor
- 84-(Canada only) > or 85-< key keyboard
- 12 F-keys
- 80-column display
- Native mode is subset of 3161

IBM 3161 Migration/Coexistence: The native mode of 3151 Model 31/41 is a superset of 3161 ASCII Display Station(Canada only) and 3162 ASCII display Station(<), and provides a migration path for the 3161(Canada only) and 3162(<) users without any software modifications. The native mode of 3151 Model 11 is a subset of the 3161.

IBM 3101 Compatibility and Migration: The 3101 emulation mode of Model 31X and 41X provides enhanced 3101 functions and a migration path for 3101 users without any software modifications. When operating in 3101 emulation mode, the 3151 will accept and generate the 3101 Model 23 data stream. There are some operational differences in terms of the screen management facilities. 3151 ASCII Display Station Reference Manual documents these differences.

Emulation Modes in Models: 3101 mode of Model 31/41 provides emulation of 3101 Model 23. 10 non-IBM emulation modes of the 3151 (US English) models provide emulation of 10 (US English) non-IBM ASCII terminals (TVI 925/925E/910/910+ /912/920, HZ1500, ADDS VP A2, and ADM 3A/5).

Emulation Modes in Features: A Cartridge to emulate IBM and DEC terminals, provided as an optional feature (#8235) on the 3151 Models 31X/41X provides:

- RS-232-C and RS-422-A Communications
- DEC VT220/100/52 modes
- 3151 native mode
- 3101 mode
- Enhanced 3708 Attachment Mode (with US English models only)
- 10 non-IBM modes (with US English models only)
- Mode switch

A Cartridge to emulate Wyse WY-50/50+ terminals, provided as an optional feature (#8505) on the 3151 Models 31Y/41Y (US English) provides:

- WY-50/50+ data stream
- Wyse WY-50/50+ Expand Data Stream for TeleVideo 925E/925/920/912 /910+ /910, Lear Siegler ADM 3A/5, ADDS VP A2, HZ 1500
- 3151 native mode

- 3101 mode
- 10 non-IBM modes

Data Stream: In non-emulation mode, the 3151 Model 11Y, 31Y, and 41Y generates an ANSI X3.4 (or ISO 646) data stream.

Cables: The customer is responsible for preparation of cables. Many IBM systems provide their own unique cables for 3151 attachment and those systems should be referenced for detail information. A modem cable is provided as an IBM accessory for use in attaching to certain devices (specifically modems) and an I/O cable are provided as an IBM accessory for attaching a 4201 or 4202 Proprinter.

Auxiliary Port: An auxiliary interface is provided for attachment of an input or output device with EIA RS-232-C (CCITT V.24/28). The 4201 or 4202 Proprinter may be attached at the Auxiliary Port.

Communication Interfaces: The 3151 communicates with a variety of host processors. When using the EIA RS-232-C (CCITT V.24/28) interface, the 3151 can communicate through a modem, to a remote host processor at 50 - 2400 bps, or it can directly attach to a host processor within 12.2m (40.0 ft.) at 50 - 38,400 bps.

When using the EIA RS-422-A (CCITT V.11) interface, the 3151 Models 31X, 41X with a feature cartridge that supports the interface (feature #8235), can communicate with a host processor, without a modem, up to 1,219m (4,000 ft.) at 50 - 38,400 bps depending on the type of the cable used. A shielded communication cable is recommended. A multi-function attachment cable, an accessory, is used to attach a 3151 to the host via IBM Cabling System.

Communicating through Modem: When using an external modem through EIA RS-232-C (CCITT V.24/28) interface, the 3151 operates in point-to-point on full-duplex facility at transmission speeds of up to 300, 600, 1200/600, and 2400 bps on nonswitched facilities, (D1, D3, M1, M2, M1D, M2M, P1 and P2). In addition, the 3151 operates on switched facilities at transmission speeds of 50, 75, 110, 134.5, 150, 200, 300, 600 and 1200/600 and 2400 bps in full duplex and half duplex modes, and at 1800 bps in half-duplex mode and at 2400 bps in full-duplex mode. For attachment to the facility P1 or P2, character mode or echo mode will be used. For communication capabilities, product utilization and special features, see M2700 pages. The 3151 provides XON/XOFF Control. The 3151 may be attached to packet switched networks through the PAD complying with the CCITT recommendation X.28 via DCEs with CCITT X.20bis interface.

Modems: PTT-mandatory modems complying with CCITT Recommendation (1979) V.24, V.28, ISO Standard 2110 and either CCITT Recommendations V.21, V.22, V.22bis or V.23 may be attached. Other non-IBM modems may be attached subject to the Multiple Supplier Systems Bulletin. A modem cable is required for the attachment to a modem. As an alternative to a modem attachment, the 3151 may be directly connected to a ROLM CBX at speeds up to 19.2K bps through one of the following devices with RS-232-C (CCITT V.24/28) interface: ROLMphone Datacom Module (DCM), Data Terminal Interface (DTI), rack-mounted version of the DCM or DTI.

SYSTEM SUPPORT AND PROGRAMMING SUPPORT

The 3151 support is provided by the current version of the following systems and licensed programs. Contact each system for availability and details of system support.

Systems to which 3151 attaches and licensed program	Support System	3151-11	3151-31/41	
		Native mode(*1)	Native mode(*2)	3101 mode
Series/1(*5) with				
- EDX		X	X	X

*4 = The channel attachment model of the 3174 is supported by 308X and 3090 only
*5 = Series/1 with Multi-function attachment feature (#1310), or with Feature-programmable 4-line Adapter feature (#2096)

Width: 402mm (15.8 in.)
Depth: 190mm (7.5 in.)
Height: 41mm (1.6 in.)
Weight: 2.1kg

Cartridge

Width: 54mm (2.1 in.)
Depth: 86mm (3.4 in.)
Height: 3mm (0.1 in.)
Weight: 0.03kg

System Attachment: Series/1, System/88, 9370, and non-IBM mini-computers attach the 3151 with RS-232-C (CCITT V.24/28) interface, or RS-422-A (CCITT V.11) interface (with a feature #8235 on Models 31X, 41X only) both in 50 to 19.2K bps line speed, and via a modem with RS-232-C (CCITT V.24/28) interface in 50 to 2400 bps line speed. IBM Processors attach the 3151, via 270X, 370X, or 3725/6 with RS-232-C (CCITT V.24/28) interface in 50 to 1,200 bps line speed, via 370X/8100, 3725/8100 or 3726/8100 with RS-232-C (CCITT V.24/28) interface in 50 to 2,400 bps (with modem) or 50 to 9,600 bps (without modem) line speed, and via a protocol converter with RS-232-C (CCITT V.24/28) interface in 50 to 19.2K bps line speed. The 3151 can be attached to the 6150/6151 via the 4-Port Asynchronous 232-C Adapter or 4-Port Asynchronous 422-A Adapter, and operate in native mode. The 3151 may be attached to a 4361 processor via the 4361 feature "EIA/CCITT interface" (#3701) with the 4361 feature "Line attachment base for non-clocked modems" (#4696). It may operate at speeds up to 2,400 bps, in 3101 mode and 3151 native mode. The attachment must be via the EIA RS-232-C (CCITT V.24/28) interface, via asynchronous modem with switched or non-switched telephone line, or via direct attachment at distance up to 12m (40 ft.). For direct connection to the 8100 system, the 3.0m (10.0 ft.) Modem Cable must be used, and the length of the 8100 direct connect cable cannot exceed 9.1m (30.0 ft.), thus the total maximum cable length from the 8100 system to the 3151 must be 12.2m (40.0 ft.).

Printers: The 3151 has an auxiliary port that can connect an ASCII printer over an RS-232-C direct connection. A print key allows local printing of the screen, while the software commands allow remote printing from a host. For example, the 4201 and 4202 Proprinter may attach via its serial (RS-232-C) interface to the 3151 for direct printing of text-oriented screens (or graphics and text via host programming).

Physical Characteristics:

Video element

Width: 328mm (12.9 in.)
Depth: 327mm (12.9 in.)
Height: 326mm (12.8 in.)
Weight: 7.6kg

Keyboard element (Models 31, 41)

Width: 492mm (19.4 in.)
Depth: 210mm (8.3 in.)
Height: 40mm (1.6 in.)
Weight: 2.5kg

Keyboard element (Model 11)

SPECIFY

- Low-voltage machine: 100 - 127V; 0.1 kVA; 50/60 Hz; 88 BTU/hr; 1-phase
- High-voltage machine: 200 - 250V; 0.1 kVA; 50 Hz; 88 BTU/hr; 1-phase

Environmental Requirements:

Operating: 10 to 40.6C; 8 to 80 percent RH; 26.7 Maximum Wet Bulb

Non-Operating: 10 to 51.7C; 8 to 80 percent RH; 26.7 Maximum Wet Bulb

Storage: 0.6 to 60C; 5 to 80 percent RH; 29.4 Maximum Wet Bulb

Shipment: -20 to 60C; 5 to 100 percent RH; 29.4 Maximum Wet Bulb

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3151 to enhance the availability to the customer. This has been done through the use of Problem Analysis and Solving routines and procedures that are used by the customer.

Customer Setup (CSU): The 3151 is designated as a customer setup machine. Setup instructions are shipped with each machine, as the "IBM 3151 ASCII Display Station, Guide to Operations".

Customer Responsibilities: The customer is responsible for:

- Adequate site, system, cables and other vendor preparation.
- Receipt at customer's receiving dock, unpacking and placement of unit.
- Physical setup, connection of cables in customer access area, program setting of setup options.
- Determination of the required number of spares.
- Performing Problem Analysis and Resolution using "IBM 3151 ASCII Display Station Guide to Operation".
- (Except Japan> Returning a failing workstation element to an IBM Repair Center (for Customer Carry-in Repair maintenance) with a completed Service Replacement Order Form for repairs, if required.<)

- Ordering the "IBM 3151 ASCII Display Station Reference Manual" for site planning and preparation work, if required additionally before it is shipped with each machine.
- Evaluation of the attachment capabilities of the 3151 to the Host Processor at the other end via the modem or Packet/Depacket (PAD) function of the telecommunication network.

Spare: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3151 units for such use. The number of spare units is dependent upon the number of 3151 units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility. However, the minimum number of spare units recommended where one unit consists of a keyboard and a video is shown in the following table:

Recommended Minimum Number of Spare 3151s:

Number Installed	Recommended Minimum Spare Machines
1 - 50	1
51 - 100	2
101 - 300	3
301 - 500	5
501 - 700	6
701 - 1000	7

The customer should be advised to verify units for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as an individual workstation element where spare elements do not have VPA discount. See "Accessories" for ordering individual element.

Publications: Publications in the following list are for all models, unless otherwise remarked.

SPECIAL FEATURES

IBM 3151 Cartridge to emulate Wyse WY-50/50+ terminals (#8505, P/N 81X4456): (Models 31Y, 41Y, only) Field Installation: Yes. Customer Setup: Yes.

IBM 3151 Cartridge to emulate IBM and DEC terminals (#8235, P/N 81X4457): (Models 31Y, 31D, 31K, 41Y, 41D, 41K only) Field Installation: Yes. Customer Setup: Yes.

MODEL CONVERSIONS (NONE)

ACCESSORIES

The following accessories can be ordered. By using a P/N, order the Country Direct Marketing Center, or other Supplies Marketing Groups.

Stand (Tilt/Swivel) (P/N 81X4450)

Keycaps (P/N 1392098): Ten ASCII Terminals Emulation.

Keycaps (P/N 1392508): Emulating Wyse 50/50+.

Blank Keycaps (Light) (P/N 1351710): 60 caps and a keycap removal tool.

Blank Keycaps (Dark) (P/N 1351728): 60 caps and a keycap removal tool.

Clear Lens Caps (60 light and 60 dark) (P/N 6341707): With paper inserts and a keycap removal tool.

Keycap Removal Tool (P/N 1351717): 6 tools.

Paper Inserts for Clear Lens Keycaps (150 light and 150 dark) (P/N 6341704)

(Except Japan > Modem Cable (P/N 6343332): Inch screws.

I/O Cable (P/N 6343373)

Multi-function Attachment Cable (P/N 8310553) <

(Japan only > Modem Cable (P/N 6343333): Metric screws.

I/O Cable (P/N 6343373)

Multi-function attachment cable (P/N 8310553): For connection to IBM 5841, 5842 Modem or PTT-Modem the above IBM cable or equivalent must be used. <

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by the IBM maintenance agreement and must be purchased by the customer when a replacement is needed.

- Field Packing Material:
 - For Video (P/N 83X9316)
 - For Keyboard (Models 31, 41) (P/N 7342889)
 - For Keyboard (Model 11) (P/N 7343197)

MACHINE ELEMENTS

Elements can be ordered to provide individual element as needed by the customer for the use of the 3151. For shipment, specify Machine Element Number (P/N) at the time of order entry.

Order by parts and supply requisition.

- (Canada only > Models 11Y, 11D, Video (Green), P/N 81X4508

Maintenance: Maintenance for individual workstation element is available at IBM Repair Centers or through an IBM Service/Exchange Center at the applicable IBM Hourly Service rates and minimum charges.

SUPPLIES (NONE)

3161 ASCII DISPLAY STATION

PURPOSE

A stand-alone, high quality, 12-inch, display station used for displaying up to 1,920 characters, and for entering data into and retrieving data from a host processor. The 3161 provides an asynchronous communication interface using a 7-bit (or 8-bit) ASCII/ISO code and an interface for direct attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28) interface. A cable-connected keyboard is provided for operator data input. The 3161 uses the ASCII (ISO) communication protocols and provides a native mode, 3101 mode and various non-IBM emulation modes which allows the 3161 to attach to a variety of host processors including Series/1 and non-IBM mini-computers. The 3161 meets both general industry and unique customer information requirements.

MODELS

Model 11: (Except Canada and Japan>(11Y)<) (Canada only>(11Y, 11D)<) (Japan only>(11Y, 11K)<) With green monitor, provides EIA RS-232-C (CCITT V.24/V.28) interface.

Model 12: (Except Canada and Japan>(12Y)<) (Canada only>(12Y, 12D)<) (Japan only>(12Y, 12K)<) With green monitor, provides program-selectable interface of either EIA RS-232-C (CCITT V.24/V.28) or EIA RS-422-A (CCITT V.11).

Model 21: (Except Canada and Japan>(21Y)<) (Canada only>(21Y, 21D)<) (Japan only>(21Y, 21K)<) With amber-gold monitor, provides EIA RS-232-C (CCITT V.24/V.28) interface.

Model 22: (Except Canada and Japan>(22Y)<) (Canada only>(22Y, 22D)<) (Japan only>(22Y, 22K)<) With amber-gold monitor, provides program-selectable interface of either EIA RS-232-C (CCITT V.24/V.28) or EIA RS-422-A (CCITT V.11).

Note: Mdl's 11Y/12Y/21Y/22Y provide English (US).

(Canada only>Note: Mdl's 11D/12D/21D/22D provide Canadian-French.<)

(Japan only>Note: Mdl 11K/12K/21K/22K provide Katakana.<)

(Canada and Japan only>A keyboard and a cartridge unique to language are provided to each of all models except mdl<) (Canada and Japan only> 11Y/21Y<) (Canada and Japan only> 12Y/22Y.<)

Upon request from the customer, the 3161 is available with a 90-day warranty. Orders are entered in AAS with special model numbers. These special model numbers are for ordering and administrative purposes only. The special model numbers correspond to the standard 3-year warrantied models as follows:

3-Year Warranty Model	Corresponding 90-Day Warranty Model
3161-11X	3161-16X
3161-12X	3161-17X
3161-21X	3161-26X
3161-22X	3161-27X

Customer Setup (CSU): The 3161 is designated as a customer setup machine. Setup instructions are shipped with each machine, as the "IBM 3161/3163 ASCII Display Station Setup Instructions" (GA18-2312).

HIGHLIGHTS

The 3161 displays up to 1,920 characters, 24 rows of 80 characters each. An alphanumeric character is represented in an 8x16 contiguous box matrix. The data displayed uses the 128 characters of ASCII/ISO codes and an additional character set containing 24 line drawing graphics, 10 superscript characters and 10 subscript characters.

acters. A line drawing character is represented in a maximum 8x16 dot matrix to create a contiguous line. The character transmission mode provides the capability to transmit a character over a communication line upon depression of each key. The block transmission mode, selectable at setup time, allows buffered transmission mode of data. The 3161 consists of the three Workstation Elements (Video, Logic, and Keyboard) and Cartridge.

Communications Flexibility: The use of ASCII (ISO) codes and the asynchronous communication interface allows the 3161 to attach to a variety of host processors. Various communication options are selectable by the customer on the setup menu such as line speed (50, 75, 110, 134.5, 150, 200, 300, 600, 1200, 1800, 2400, 3600, 4800, 7200, 9600 and 19,200 bps), parity (none, odd, even, mark, space), interface (EIA RS-232-C (CCITT V.24/V.28), EIA RS-422-A (CCITT V.11)), word length (7, 8-bit), operation mode (echo, character, block mode), turn-around character (ETX, EOT, CR, DC3), line control (CRTS, PRTS, IPRTS), stop bit (1, 2), response delay (0, 100ms) and break signal (170, 500ms).

Operator Factors: The 3161 has an etched screen, which minimizes glare and fingerprints. Indicators are displayed on the bottom (25th row) of the screen, and provide useful operator information. An audible alarm is provided to alert the operator, and its volume is adjustable by the operator. The video element can be tilted and swiveled by the pedestal to set the screen angle for the operator. The cable-connected keyboard can be moved and its slope is selectable.

Input Editing Capability: Cursor move (up, down, right, left, and home), tab (forward, backward, set and clear), erase (end of line, end of page and entire page), clear (entire page and entire buffer), insert (character and line) and delete (character and line) are provided. Tab erase, insert and delete may be manipulated by field attribute. All characters can be rendered by character or field attributes. A 12-key numeric keypad and 12 Function (F) keys are provided on the keyboard.

Major characteristics of the 3161 are:

- Green or amber-gold phosphor CRT
- Split screen capability (3 horizontal viewports)
- Auto skip
- CRT saver with programmable timer
- Hold (temporarily stop receiving data from the host)
- Block or underlined cursor with blinking option
- Character attributes (for blink, non-display, underline, reverse, high intensity) or field attributes for normal, blink, non-display, underline, reverse, high intensity, protected, numeric and modified data tag
- Function keys redefinable from the terminal, as well as from the host (12 keys with two shifts each)

Emulation Modes: Machine modes of 3101 mdl(Canada only> 881 or<) 23 and five non-IBM display terminals (ADM-3A and ADM 5 of Lear Siegler Inc., Viewpoint of Applied Digital Data Systems Inc., Hazeltine-1500 of Hazeltine Corp., and Mdl 910 of TeleVideo Systems Inc.) are provided to emulate these models. The Extended Emulation Feature (#8501) provides the enhanced functions such as 24 Definable Function Keys (set by both host and keyboard), 3 PA keys, Local Print Key, 25th Line On/Off Key, Return Setup to Factory Default, Pacing in Main Port, and Mono/Dual option, in 3101, or five non-emulation modes above. Five TeleVideo's Emulation Feature (#8901) provides the functions to emulate TeleVideo models 910PLUS/912/920/925/925E. In addition, it provides the extended functions such as 32 Definable Function keys (set by both host and keyboard), 3 PA keys, 25th Line On/Off selection, and Mono/Dual case option. All of the emulation above are supported for the 3161 English US models only. There are some operational differences such as keyboard layout and how to set up the machine.

Cables: The customer is responsible to prepare cables. Many IBM systems provide their own unique cables for 3161 attachment and those systems should be referenced for detail information. A modem cable is provided as an IBM accessory for use in attaching

to certain devices (specifically modems) and an I/O cable are provided as an IBM accessory for attaching the 4201 Proprinter.

Auxiliary Port: An auxiliary interface is provided for attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28). The 4201 Proprinter may be attached at the Auxiliary port.

Communications: The 3161 communicates with a variety of host processors. When using the EIA RS-232-C (CCITT V.24/V.28) interface, the 3161 can communicate through a modem, to a remote host processor at 50 - 2400 bps (and at 1800 bps in half-duplex mode), or it can directly (without a modem) attach to a host processor within 12.2m (40.0 ft) at 50 - 19,200 bps.

Note: For direct connect to the 8100 system, the 3.0m (10.0 ft) Modem Cable must be used; and the length of the 8100 direct connect cable cannot exceed 9.1m (30.0 ft), thus the total maximum cable length from the 8100 system to the 3161 must be 12.2m (40.0 ft).

When using the EIA RS-422-A (CCITT V.11) interface, the 3161 can communicate with a host processor, without a modem, up to 1,219m (4000 ft) at 50 - 19,200 bps depending on the type of cable used. A shielded communication cable is recommended. Multi-function attachment cable is used to attach a 3161 mdl 12 to the host via IBM Cabling System. The 3161 may be attached to a 4361 processor via the 4361 feature "EIA/CCITT Interface" (#3701) with the 4361 feature "Line Attachment Base for Non-Clocked Modems" (#4696). It may operate at speeds up to 2400 bps, in 3101 mode and 316X native mode. The attachment must be via the EIA RS-232-C (CCITT V.24/V.28) interface, via asynchronous modem with switched or non-switched telephone line, or via direct attachment at a distance up to 12m (40 ft).

Communicating through Modem When using an external modem through EIA RS-232-C (CCITT V.24/V.28) interface, the 3161 operates in point-to-point On full-duplex facility at transmission speeds of up to 300, 600 and 1200/600 bps on nonswitched facilities. D1, D3, M1, M2, M1M, M2M, P1 and P2. In addition, the 3161 operates on switched facilities at transmission speeds of 50, 75, 110, 134.5, 150, 200, 300, 600 and 1200/600 bps in full-duplex and half-duplex modes, and at 1800 bps in half-duplex mode and at 2400 bps in full-duplex mode. For attachment to the facility P1 or P2, character mode or echo mode will be used. For communication capabilities, product utilization and special features, see M2700 pages. The 3161 provides XON/XOFF Control. The 3161 may be attached to packet switched networks through the PAD complying with the CCITT recommendation X.28 via DCEs with CCITT X.20 bis interface.

Modems: A modem cable is required for the attachment to a modem. 5811-20/28, 5812-10/18 at speeds up to 19,200 bps on facilities GASYN, 5841 and PTT mandatory modems complying with CCITT Recommendations (1979), V.24, V.28, ISO standard 2110 and either CCITT Recommendations V.21, V.22 or V.23 may be attached. Other non-IBM modems may be attached subject to the Multiple Supplier Systems Bulletin.

Software Support: The 3161 is supported both in 3161 Native Mode and in 3101 Mode by Series/1, 3798, 3710, 7171 and other hosts that support the CPT-TWX 33/35 ASCII protocols. The 3161 is also supported in 3101 mode by System/88, 8100, and the other IBM hosts that support the 3101 Mdl (Canada only) > 881 or < 23. The 3161 support is provided by the current version of the following licensed programs:

System -	Licensed Program	3161 Native Mode	3101 Mode
Series/1	RPS, EDX, CM, CF	-	X
	TPS	X	X
	IOX*	X	X

* Series/1 5170 System Unit only.

System/88: OS, 3270 Emulation,

8100:	TP, HLL	-	X
S/370, 30XX,	DPCX, DPPX	-	X
4300, and			
9370:	DOS/VSE, OS/VSI,		
	MVS/370, MVS/XA,		
	VM/SP and VM/SP		
	HPO via:		
	*3708, 3710, 7171	X	X
	*270X, 370X, 3725/6,		
	4995, 7426, and		
	8100	-	X

In non-emulation mode, the 3161 generates an ANSI X3.4 data stream (English US models only).

System Attachment: Series/1, System/88 and Non-IBM Mini Computers attach the 3161 with RS-422-A (CCITT V.11) interface (mdl 12 only), or RS-232-C (CCITT V.24/28) interface both in 50 to 19.2K bps line speed, and via a modem with RS-232-C (CCITT V.24/28) interface in 50 to 2400 bps line speed. IBM Processors attach the 3161, via 270X, 370X, or 3725/6 with RS-232-C (CCITT V.24/28) interface in 50 to 1200 bps line speed, via 370X-8100 or 3725/6-8100 with RS-232-C (CCITT V.24/28) interface in 50 to 2400 bps (with modem) or 50 to 9600 bps (without modem) line speed, and via a protocol converter with RS-232-C (CCITT V.24/28) interface in 50 to 19.2K bps line speed. For connection of the 3161 to 8100, a connection cable of 9.1m (30 ft) or less and a modem cable of 3m (10 ft) must be used. As an alternative to a modem attachment, the 3161 may be directly connected to a ROLM CBX at speeds up to 19.2K bps through one of the following devices with RS-232-C (CCITT V.24/28) interface: Rolmphone Datacom Module (DCK), Data Terminal Interface (DTI), rack-mounted version of the DCM or DTI. The 3161 can be attached to the 6150/6151 via the 4-Port Asynchronous 232C Adapter or 4-Port Asynchronous 422A Adapter, and operate in native mode.

Keyboard: The 3161 keyboard, detachable from the Logic WSE, has coiled cable, low profile with tactile feedback, and 102 (Canada only) > or 103 < (Japan only) > or 104 < keys including 12 Function keys shiftable to 24, 3 Program Attention keys, and a numeric keypad with a line drawing capability.

Printers: The 3161 has an auxiliary port that can connect an ASCII printer over an RS-232-C direct connection. A print key allows local printing of the screen, while the software commands allow remote printing from a host. For example, the 4201 Proprinter may attach via its serial interface to the 3161 for direct printing of text-oriented screens (or graphics and text via host programming).

IBM 3101 Compatibility and Migration: The 3161, when operating in 3101 emulation mode, will accept and generate the 3101 mdl 881 data streams. There are two methods of placing the 3161 into the 3101 emulation mode. The operator may select the 3101 mode during menu setup, or a suitably programmed host may send a "3101 mode" command to 3161. There are some operational differences in terms of the screen management facilities. The 3161/3163 ASCII Display Station Description documents these differences.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system, cables and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. Physical setup, connection of cables in customer access area, program setting of setup options.
4. Determination of the required number of spares.
5. Performing Problem Analysis and Resolution using "IBM 3161/3163 ASCII Display Station Operator Reference and Problem Solving Guide".

MACHINES

6. (Except Japan> Returning a failing workstation element to an IBM Repair Center (for Customer Carry-In Repair maintenance) with a completed Service Replacement Order Form for repairs, if required.<)
7. Ordering the IBM 3161/3163 ASCII Display Station Description for site planning and preparation work, if required additionally before it is shipped with each machine.
8. Evaluation of the attachment capabilities of the 3161 to the Host Processor at the other end via the modem or Packet/Depacket (PAD) function of the telecommunication network.

Spare: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3161 units for such use. The number of spare units is dependent upon the number of 3161 units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility. However, the minimum number of spare units recommended where one unit consists of a keyboard, a logic, and a video is shown in the following table:

Recommended Minimum Number of Spare 3161s:

Number Installed	Recommended Minimum Spare Machines
1 - 50	1
51 - 100	2
101 - 300	3
301 - 500	5
501 - 700	6
701 - 1000	7

The customer should be advised to verify units for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as an individual workstation element where spare elements do not have VPA discount. See "Accessories" for ordering individual elements.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3161 to enhance the availability to the customer. This has been done through the use of Problem Analysis and Solving routines and procedures that are used by the customer.

(Except Japan> Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged at IBM's then current hourly service rates and minima. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the customer calls the Service/Exchange Communication Center (S/ECC). IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the customer. All on-site assistance is available on an hourly service basis at the applicable hourly rates and terms.

Customer-owned spare elements may be installed to replace defective elements by IBM upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. On-site assistance is available on an hourly service basis at the applicable hourly rates and terms.<)

SPECIFY

No need to specify the following standard features.

- Power: 100-125V AC, 1-phase, 3-wire, 50/60 Hz; 200-240V AC, 1-phase, 3-wire, 50/60 Hz
- Power Cord: 2.8m (9 ft) cord with nonlocking plug.

SPECIAL FEATURES

Optional Feature	Feature Code
Additional Read Command	#8001
Extended Emulation	#8501
Five TeleVideo's Emulation	#8901

Limitations: All special features are provided for English US models only.

Field Installation: All special features are field installable. Customer Setup: All special features are designed for customer setup.

MODEL CONVERSIONS (NONE)

ACCESSORIES

The following accessories may be ordered:

By using a P/N, order from the Country Direct Marketing Center, or other Supplies Marketing Groups.

Description	P/N
(Except Japan>	
Modem Cable - inch screws	6343332<)
Wrap Socket	5640724
Tag	5640852
(Except Japan>	
I/O Cable	6343373
Multi-function attachment cable	8310553<)
(Japan only>	
Modem Cable - metric screws	6343333
Wrap Socket	5640724
I/O Cable	6343373
Multi-function attachment cable	8310553<)

For connection to 5841 modem or PTT modem the above modem cable equivalent must be used.

Do not reproduce without written permission

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by the IBM maintenance agreement and must be purchased by the customer when a replacement is needed.

Order through Branch Office Parts Station and/or Field Part Distribution Centers to NSD Greencastle or the customer directly places orders to the IBM Parts Order Center in Greencastle.

Description	P/N
Field Packing Material:	
Video	6339511
Logic	6165946
Keyboard	7342889

MACHINE ELEMENTS

Elements can be ordered to provide individual elements as needed by the customer for the use of the 3161.

Order Entry: For shipment, specify Machine Element Number (P/N) at the time of order entry.

Order by Parts Requisition.

The 3161 elements can be ordered as follows:

To Fit Model	Machine Element	P/N

Maintenance: Maintenance for individual workstation element is available at IBM Repair Centers or through an IBM Service/Exchange Center at the applicable IBM Hourly Service rates and minimum charges.

SUPPLIES (NONE)

3162 ASCII DISPLAY STATION

PURPOSE

A stand-alone, high quality, 14-inch, monochrome display station used for displaying up to 3,696 characters, and for entering data into and retrieving data from a host processor. The 3162 provides an asynchronous communication interface using a 7-bit (or 8-bit) ASCII/ISO code and an interface for direct attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28) interface. A cable-connected keyboard is provided for operator data input. The 3162 uses the ASCII (ISO) communication protocols and provides a native mode, 3101 mode and various non-IBM emulation modes which allow the 3162 to attach to a variety of host processors including the Series/1 and non-IBM mini-computers. The 3162 meets both general industry and unique customer information requirements.

MODELS

Model 11: (Except Canada and Japan>(11Y)<) (Canada only>(11Y, 11D)<) (Japan only>(11Y, 11K)<) Provides EIA RS-232-C (CCITT V.24/V.28) interface, standard keyboard, green monitor.

Model 12: (Except Canada and Japan>(12Y)<) (Canada only>(12Y, 12D)<) (Japan only>(12Y, 12K)<) Provides program-selectable interface of either EIA RS-232-C (CCITT V.24/V.28) or EIA RS-422-A (CCITT V.11), standard keyboard, green monitor.

Model 21: (Except Canada and Japan>(21Y)<) (Canada only>(21Y, 21D)<) (Japan only>(21Y, 21K)<) Provides EIA RS-232-C (CCITT V.24/V.28) interface, standard keyboard, amber-gold monitor.

Model 22: (Except Canada and Japan>(22Y)<) (Canada only>(22Y, 22D)<) (Japan only>(22Y, 22K)<) Provides program-selectable interface of either EIA RS-232-C (CCITT V.24/V.28) or EIA RS-422-A (CCITT V.11), standard keyboard, amber-gold monitor.

Note: Models 11Y/12Y/21Y/22Y provide English (US).

Note: (Canada only> Models 11D/12D/21D/22D provide Canadian French.<)

Note: (Japan only> Models 11K/12K/21K/22K provide Katakana.<)

(Canada and Japan only> A keyboard and a cartridge unique to language are provided to each of models 11D/K, 12D/K, 21D/K, 22D/K.<)

Upon request from the customer, the 3162 special models with a 90-day warranty are provided. The special model numbers correspond to the standard 3-year warranted models as follows:

3-Year Warranty Model	Corresponding 90-day Warranty Model
3162-11X	3162-16X
3162-12X	3162-17X
3162-21X	3162-26X
3162-22X	3162-27X
3162-31X	3162-36X
3162-32X	3162-37X

Customer Setup (CSU): The 3162 is designated as a customer setup machine. Setup instructions are shipped with each machine, as the "IBM 3162 ASCII Display Station Setup Instructions".

HIGHLIGHTS

The 3162 displays up to 1,920 characters (80 x 24), 2,240 characters (80 x 28), 3,168 characters (132 x 24), and 3,696 characters (132 x 28). An alphanumeric character is represented in an 9 x 15 contiguous box matrix in 24 lines display mode and an 9 x 13 contiguous box matrix in 28 lines display mode. The data displayed uses the 128 characters of ASCII/ISO codes and an additional character set containing 24 line drawing graphics, 10 script characters and 10 subscript characters. A line drawing character is represented in a maximum 9x13/9x15 dot matrix to create a contiguous line. The character transmission mode provides the capability to transmit a character over a communication line upon depression of each key. The block transmission mode, selectable at setup time, allows buffered transmission mode of data. The 3162 consists of the three Workstation Elements (Video, Logic, and Keyboard) and Cartridge.

Communications Flexibility: The use of ASCII (ISO) codes and the asynchronous communication interface allows the 3162 to attach to a variety of host processors. Various communication options are selectable by the customer on the setup menu such as line speed (50, 75, 110, 134.5, 150, 200, 300, 600, 1200, 1800, 2400, 3600, 4800, 7200, 9600 and 19,200 bps), parity (none, odd, even, mark, space), interface (EIA RS-232-C (CCITT V.24/V.28), EIA RS-422-A (CCITT V.11)), word length (7, 8-bit), operation mode (echo, character, block mode), turnaround character (ETX, EOT, CR, DC3), line control (CRTS, PRTS, IPRTS), stop bit (1, 2), response delay (0, 100ms) and break signal (170, 500ms).

Operator Factors: The 3162 has an etched screen, which minimizes glare and fingerprints. Indicators are displayed on the bottom (25th or 29th row) of the screen, and provide useful operator information. An audible alarm is provided to alert the operator and its volume is adjustable by the operator. The video element can be tilted and swiveled by the pedestal to set the screen angle for the operator. The cable-connected keyboard can be moved and its slope is selectable.

Input Editing Capability: Cursor move (up, down, right, left, and home), tab (forward, backward, set and clear), erase (end of line, end of page and entire page), clear (entire page and entire buffer), insert (character and line) and delete (character and line) are provided. Tab erase, insert and delete may be manipulated by field attribute. All characters can be rendered by character or field attributes. A 12-key numeric keypad and 12 Function (F) keys are provided on the keyboard.

Migration/coexistence: The 3162 native mode which is a superset of the 3161, provides a migration path for 3161 users without any software modifications.

The 3101 mdl 23 emulation provides enhanced 3101 functions and a migration path for 3101 users without any software modifications.

Major characteristics of the 3162 are:

- Green or amber phosphor CRT
- Split screen capability (3 horizontal viewports)
- 80/132 character column display
- 24/28 lines display
- CRT saver with programmable timer
- Smooth scroll
- Block or underlined cursor with blinking option
- Character attributes (for blink, non-display, underline, reverse, high intensity) or field attributes for normal, blink, non-display, underline, reverse, high intensity, protected, numeric and modified data tag
- Function keys re-definable from the terminal, as well as from the host (12 keys with two shifts each)
- Customer replaceable keytops

Emulation Modes: Machine mode of 3101 (Canada only> mdl 881 or <) mdl 23 is provided to emulate the model. VT200/100/52 mode provided as an optional feature (#8222, cartridge), allows the emulation of VT220, VT100, and VT52. 10 ASCII cartridge (#8922) allows

the emulation of 10 ASCII (TVI 925/925E/910/910 + /912/920, HZ1500, ADDS VPA2, ADM 3A/5). WYSE 50/50 + cartridge (#8502) allows the emulation of TVI 925E/925/910/910 + /912/920, HZ1500, ADDS VPA2, ADM 3A/5 and WYSE 50/50 +.

Cables: The customer is responsible to prepare cables. Many IBM systems provide their own unique cables for 3162 attachment and those systems should be referenced for detail information. A modem cable is provided as an IBM accessory for use in attaching to certain devices (specifically modems) and an I/O cable are provided as an IBM accessory for attaching the 4201/4202 Proprinter.

Auxiliary Port: An auxiliary interface is provided for attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28). The 4201/4202 Proprinter may be attached at the Auxiliary Port.

Communications: The 3162 communicates with a variety of host processors. When using the EIA RS-232-C (CCITT V.24/V.28) interface, the 3162 can communicate through a modem, to a remote host processor at 50 - 2400 bps (1800 bps in half-duplex mode), or it can directly (without a modem) attach to a host processor within 12.2m (40.0 ft) at 50 - 19,200 bps.

Note: For direct connect to the 8100 system, the 3.0m (10.0 ft) Modem Cable must be used and the length of the 8100 direct connect cable cannot exceed 9.1m (30.0 ft), thus the total maximum cable length from the 8100 system to the 3162 must be 12.2m (40.0 ft).

When using the EIA RS-422-A (CCITT V.11) interface, the 3162 can communicate with a host processor, without a modem, up to 1,219m (4,000 ft) at 50 - 19,200 bps depending on the type of cable used. A shielded communication cable is recommended. Multi-function attachment cable is used to attach a 3162 mdl 12/22/32/42 to the host via IBM Cabling System. The 3162 may be attached to a 4361 processor via the 4361 feature EIA/CCITT interface (#3701) with the 4361 feature Line Attachment Base for Non-Clocked Modems (#4696) and Start/Stop Line Control (#968X) and operates at speeds up to 2400 bps in 3101 mode and 3162 native mode. The attachment must be via the EIA RS-232-C (CCITT V.24/V.28) interface, via asynchronous modem with switched or non-switched telephone line, or via direct attachment at a distance up to 12m (40 ft).

Communicating through Modem: When using an external modem through EIA RS-232-C (CCITT V.24/V.28) interface, the 3162 operates in point-to-point on full-duplex facility at transmission speeds of up to 300, 600 and 1200/600 bps on non-switched facilities. D1, D3, M1, M2, M1M, M2M, P1 and P2. In addition, the 3162 operates on switched facilities at transmission speeds of 50, 75, 110, 134.5, 150, 200, 300, 600 and 1200/600 bps in full-duplex and half-duplex modes, and at 1800 bps in half-duplex mode and at 2400 bps in full-duplex mode. For attachment to the facility P1 or P2, character mode or echo mode will be used. For communication capabilities, product utilization and special features, see M2700 pages. The 3162 provides XON/XOFF Control. The 3162 may be attached to packet switched networks through the PAD complying with the CCITT recommendation X.28 via DCEs with CCITT X.20 bis interface.

Modems: A modem cable is required for the attachment to a modem. 5811-20/28, 5812-10/18 at speeds up to 19,200 bps on facilities GASYN, 5841 and PTT mandatory modems complying with CCITT Recommendations (1979), V.24, V.28, ISO Standard 2110 and either CCITT Recommendations V.21, V.22 or V.23 may be attached. Other non-IBM modems may be attached subject to the Multiple Supplier Systems Bulletin.

Software Support: The 3162 is supported both in 3162 Native Mode and in 3101 Mode by Series/1, 3708, 3710, 7171 and other hosts that support the CPT-TWX 33/35 ASCII protocols. The 3162 is also supported in 3101 mode by System/88, 8100, and the other IBM hosts that support the 3101 mdl (Canada only > 881 or < 23). The 3162 support is provided by the current version of the following licensed programs:

		3162	3101
System	Licensed Program	Native (80) (132) Mode	
Series/1	RPS, EDX,		

CM, CF	-	-	X
TPS	X	X	X
IOX*	X	-	X

* Series/1 5170 System Unit only.

System/88:	OS, 3270 Emulation, TP, HLL	X	-	X
8100:	DPCX, DPPX	-	-	X
S/370, 30XX, and 4300:	DOS/VSE, OS/VSI, MVS/370, MVS/XA, VM/SP and VM/SP HPO via:			
	*7171	X	X	X
	*3708, 3710	X	-	X
	*270X, 370X, 3725/6, 4995, 7426, and			
	8100	-	-	X
	*3174	X	-	X

In non-emulation mode, the 3162 generates an ANSI X3.4 data stream (English US models only).

System Attachment: Series/1, System/88 and Non-IBM Mini Computers attach the 3162 with RS-422-A (CCITT V.11) interface (mdl 12 only), or RS-232-C (CCITT V.24/28) interface both in 50 to 19.2K bps line speed, and via a modem with RS-232-C (CCITT V.24/28) interface in 50 to 2400 bps line speed. IBM Processors attach the 3162, via 270X, 370X, or 3725/6 with RS-232-C (CCITT V.24/28) interface in 50 to 1200 bps line speed, via 370X-8100 or 3725/6-8100 with RS-232-C (CCITT V.24/28) interface in 50 to 2400 bps (with modem) or 50 to 9600 bps (without modem) line speed, and via a protocol converter with RS-232-C (CCITT V.24/28) interface in 50 to 19.2K bps line speed. For connection of the 3162 to 8100, a connection cable of 9.1m (30 ft) or less and a modem cable of 3m (10 ft) must be used. As an alternative to a modem attachment, the 3162 may be directly connected to a ROLM CBX at speeds up to 19.2K bps through one of the following devices with RS-232-C (CCITT V.24/28) interface: Rolmphone Datacom Module (DCM), Data Terminal Interface (DTI), rack-mounted version of the DCM or DTI. The 3162 can be attached to the 6150/6151 via the 4-Port Asynchronous 232-C Adapter or 4-Port Asynchronous 422-A Adapter, and operate in native mode.

Keyboard: The 3162 keyboard, detachable from the Logic WSE, has coiled cable, low profile with tactile feedback and 102 (Canada only > or 103 <) (Japan only > or 104 <) keys including 12 Function keys shiftable to 24, 3 Program Attention keys, and a numeric keypad with a line drawing capability, and keycaps are replaceable.

Printers: The 3162 has an auxiliary port that can connect an ASCII printer over an RS-232-C direct connection. A print key allows local printing of the screen, while the software commands allow remote printing from a host. For example, the 4201 Proprinter may attach via its serial interface to the 3162 for direct printing of text-oriented screens (or graphics and text via host programming).

IBM 3101 Compatibility and Migration: The 3162, when operating in 3101 emulation mode, will accept and generate the 3101 (Canada only > mdl 881 <) data streams. There are two methods of placing the 3162 into the 3101 emulation mode. The operator may select the 3101 mode during menu setup, or a suitably programmed host may send a "3101 mode" command to 3162. There are some operational differences in terms of the screen management facilities. The 3161/3163 ASCII Display Station Description documents these differences.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system, cables and other vendor preparation.

2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. Physical setup, connection of cables in customer access area, program setting of setup options.
4. Determination of the required number of spares.
5. Performing Problem Analysis and Resolution using "IBM 3162 ASCII Display Station Operator Reference and Problem Solving Guide".
6. (Except Japan > Returning a failing workstation element to an IBM Repair Center (for Customer Carry-In Repair maintenance) with a completed Service Replacement Order Form for repairs, if required. <)
7. Ordering the "IBM 3162 ASCII Display Station Description" for site planning and preparation work, if required additionally before it is shipped with each machine.
8. Evaluation of the attachment capabilities of the 3162 to the Host Processor at the other end via the modem or Packet/Depacket (PAD) function of the telecommunication network.

Spares: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3162 units for such use. The number of spare units is dependent upon the number of 3162 units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility. However, the minimum number of spare units recommended where one unit consists of a keyboard, a logic, and a video is shown in the following table:

Recommended Minimum Number of Spare 3162s:

Number Installed	Recommended Minimum Spare Machines
1 - 50	1
51 - 100	2
101 - 300	3
301 - 500	5
501 - 700	6
701 - 1000	7

The customer should be advised to verify units for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as an individual workstation element where spare elements do not have VPA discount. See "Accessories" for ordering individual elements.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3162 to enhance the availability to the customer. This has been done through the use of Problem Analysis and Solving routines and procedures that are used by the customer.

(Except Japan > Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged at IBM's then current hourly service rates and minima. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the customer calls the Service/Exchange Communication Center (S/ECC). IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the customer. All on-site assistance is available on an hourly service basis at the applicable hourly rates and terms.

Customer-owned spare elements may be installed to replace defective elements by IBM upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. On-site assistance is available on an hourly service basis at the applicable hourly rates and terms. <)

SPECIFY

- Power: 100-125V AC, 1-phase, 3-wire, 50/60 Hz; 200-240V AC, 1-phase, 3-wire, 50/60 Hz
- Power Cord: 2.8m (9 ft) cord is provided with all models.

Note: No specifics are required on orders. These will be defaulted by country number.

SPECIAL FEATURES

Optional Feature	Feature Code
VT220 Emulation	#8222
WYSE 50/50+ Emulation	#8502
10 ASCII Emulation	#8922

Limitations: VT220 Emulation (#8222/#8232) is provided for mdl 1XX/2XX only.

Field Installation: All special features are field installable. Customer Setup: All special features are designed for customer setup.

Maintenance: Maintenance for individual workstation element is available at IBM Repair Centers or through an IBM Service/Exchange Center at the applicable IBM Hourly Service rates and minimum charges.

SUPPLIES (NONE)

3163 ASCII DISPLAY STATION

PURPOSE

A stand-alone, high quality, 12-inch, monochrome display station used for displaying up to 1,920 characters, and for entering data into and retrieving data from a host processor. The 3163 provides an asynchronous communication interface using a 7-bit (or 8-bit) ASCII/ISO code and an interface for direct attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28) interface. A cable-connected keyboard is provided for operator data input. The 3163 provides the advanced editing functions and is upward compatible from the 3161 native mode. The 3163 uses the ASCII (ISO) communication protocols and provides a native mode, 3101 mode, VT-100/52 mode and TeleVideo 950 mode, which allow the 3163 to attach to a variety of host processors including Series/1 and non-IBM mini-computers. The 3163 meets both general industry and unique customer information requirements.

MODELS

Model 11 (Except Canada and Japan > 11Y <) (Canada only > 11Y, 11D <) (Japan only > 11Y, 11K <): With green monitor, provides EIA RS-232-C (CCITT V.24/V.28) interface.

Model 12 (Except Canada and Japan > 12Y <) (Canada only > 12Y, 12D <) (Japan only > 12Y, 12K <): With green monitor, provides program-selectable interface of either EIA RS-232-C (CCITT V.24/V.28) or EIA RS-422-A (CCITT V.11).

Model 21 (Except Canada and Japan > 21Y <) (Canada only > 21Y, 21D <) (Japan only > 21Y, 21K <): With amber-gold monitor, provides EIA RS-232-C (CCITT V.24/V.28) interface.

Model 22 (Except Canada and Japan > 22Y <) (Canada only > 22Y, 22D <) (Japan only > 22Y, 22K <): With amber-gold monitor, provides program-selectable interface of either EIA RS-232-C (CCITT V.24/V.28) or EIA RS-422-A (CCITT V.11).

Note: Mdl's 11Y/12Y/21Y/22Y provide English (US).

(Canada only > Mdl's 11D/12D/21D/22D provide Canadian-French. <)

(Japan only > Note: Mdl's 11K/12K/21K/22K provide Katakana. <)

(Canada and Japan only > A keyboard and a cartridge unique to language are provided to each of all models except mdl <) (Canada and Japan only > 11Y/21Y <) (Canada and Japan only > 12Y/22Y. <)

Upon request from the customer, the 3163 is available with a 90-day warranty. Orders are entered in AAS with special model numbers. These special model numbers are for ordering and administrative purposes only. The special model numbers correspond to the standard 3-year warranted models as follows:

3-Year Warranty Model	Corresponding 90-day Warranty Model
3163-11X	3163-16X
3163-12X	3163-17X
3163-21X	3163-26X
3163-22X	3163-27X
3163-86X	3163-Z6X

Customer Setup (CSU): The 3163 is designated as a customer setup machine. Setup instructions are shipped with each machine, as the "IBM 3161/3163 ASCII Display Station Setup Instructions" (GA18-2312).

HIGHLIGHTS

The 3163 displays up to 1,920 characters, 24 rows of 80 characters each. An alphanumeric character is represented in an 8 x 16 contig-

uous box matrix. The data displayed uses the 128 characters of ASCII/ISO codes and an additional character set containing 24 line drawing graphics, 10 superscript characters and 10 subscript characters. A line drawing character is represented in a maximum 8 x 16 dot matrix to create a contiguous line. The character transmission mode provides the capability to transmit a character over a communication line upon depression of each key. The block transmission mode, selectable at setup time, allows buffered transmission mode of data. The 3163 consists of the three Workstation Elements (Video, Logic, and Keyboard) and Cartridge.

Communications Flexibility: The use of ASCII (ISO) codes and the asynchronous communication interface allows the 3163 to attach to a variety of host processors. Various communication options are selectable by the customer on the setup menu such as line speed (50, 75, 110, 134.5, 150, 200, 300, 600, 1200, 1800, 2400, 3600, 4800, 7200, 9600 and 19,200 bps), parity (none, odd, even, mark, space), interface (EIA RS-232-C (CCITT V.24/V.28), EIA RS-422-A (CCITT V.11)), word length (7, 8-bit), operation mode (echo, character, block mode), turn-around character (ETX, EOT, CR, DC3), line control (CRTS, PRTS, IPRTS), stop bit (1, 2), response delay (0, 100ms) and break signal (170, 500ms).

Operator Factors: The 3163 has an etched screen, which minimizes glare and fingerprints. Indicators are displayed under the divider scan on the bottom (25th row) of the screen, and provide useful operator information. An audible alarm is provided to alert the operator, and its volume is adjustable by the operator. The video element can be tilted and swiveled by the pedestal to set the screen angle for the operator. The cable-connected keyboard can be moved and its slope is selectable.

Input Editing Capability: Cursor move (up, down, right, left, and home), tab (forward, backward, set and clear), erase (end of line, end of page and entire page), clear (entire page and entire buffer), insert (character and line) and delete (character and line) are provided. Tab erase, insert and delete may be manipulated by field attribute. All characters can be rendered by character or field attributes. A 12-key numeric keypad and 12 Function (F) keys are provided on the keyboard.

Major characteristics of the 3163 are:

- Green or amber-gold phosphor CRT
- Windowing (up/down/ left/right)
- Split screen capability (viewports, paging, partitioning)
- Vertical smooth scroll
- Auto skip
- Divider scan
- CRT saver with programmable timer
- Hold screen (stop scrolling temporarily)
- Block or underlined cursor with blinking option
- Block LRC (Longitudinal Redundancy Checking)
- Host access to the indicator row
- Character attributes for blink, non-display, underline, reverse, high intensity
- Field attributes for normal, blink, non-display, underline, reverse, high intensity, protected, numeric, right justify with zero or space, must fill, must enter and auto send
- Line attributes for double high/double wide characters
- Re-definable keyboard layout and customer replaceable keytops
- 12 Function (F) keys redefinable from the terminal, as well as from the host (12 keys with two shifts each)
- 7680-characters buffer
- Host-loadable characters or patterns of up to 94
- Bidirectional auxiliary port

Emulation Modes: A machine mode to emulate 3101 mdl (Canada only > 881 or <) 23 is provided. VT 100/52 mode, provided as an optional feature, allows the emulation of the DEC VT 100, and VT 52 mode of DEC VT 100. TeleVideo 950 Mode, also provided as an optional feature, allows the emulation of TeleVideo 950. These emulation modes of optional features are provided for English US models only.

MACHINES

Cables: The customer is responsible to prepare cables. Many IBM systems provide their own unique cables for 3163 attachment and those systems should be referenced for detail information. A modem cable is provided as an IBM accessory for use in attaching to certain devices (specifically modems) and I/O cable are provided as an IBM accessory for attaching the 4201 Proprietary.

Auxiliary Port: An auxiliary interface is provided for attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28). The 4201 Proprietary may be attached to the Auxiliary Port.

Communications: The 3163 communicates with a variety of host processors. When using the EIA RS-232-C (CCITT V.24/V.28) interface, the 3163 can communicate, through a modem, to a remote host processor at 50 - 1200 bps (and at 1800 bps in half-duplex mode), or it can directly (without a modem) attach to a host processor within 12.2m (40.0 ft) at 50 - 19,200 bps.

Note: For direct connect to the 8100 system, the 3.0m (10.0 ft) Modem Cable must be used; and the length of the 8100 direct connect cable cannot exceed 9.1m (30.0 ft), thus the total maximum cable length from the 8100 system to the 3163 must be 12.2m (40.0 ft).

When using the EIA RS-422-A (CCITT V.11) interface, the 3163 can communicate with a host processor, without a modem, up to 1,219m (4000 ft) at 50 - 19,200 bps depending on the type of cable used. A shielded communication cable is recommended. Multi-function attachment cable is used to attach a 3163 mdl 12 to the host via IBM Cabling System. The 3163 may be attached to a 4361 processor via the 4361 feature "EIA/CCITT Interface" (#3701) with the 4361 feature "Line Attachment Base For Non-Clocked Modems" (#4696). It may operate at speeds up to 2400 bps, in 3101 mode and 316X native mode. The attachment must be via the EIA RS-232-C (CCITT V.24/V.28) interface, via asynchronous modem with switched or non-switched telephone line, or via direct attachment at distance up to 12m (40 ft).

Communicating through Modem When using an external modem through EIA RS-232-C (CCITT V.24/V.28) interface, the 3163 operates in point-to-point On full-duplex facility at transmission speeds of up to 300, 600 and 1200/600 bps on non-switched facilities. D1, D3, M1, M2, M1M, M2M, P1 and P2. In addition, the 3163 operates on switched facilities at transmission speeds of 50, 75, 110, 134.5, 150, 200, 300, 600 and 1200/600 bps in full-duplex and half-duplex modes, and at 1800 bps in half-duplex mode and at 2400 bps in full-duplex mode. For attachment to the facility P1 or P2, character mode or echo mode will be used. For communication capabilities, product utilization and special features, see M2700 pages. The 3163 provides XON/XOFF Control. The 3163 may be attached to packet switched networks through the PAD complying with the CCITT recommendation X.28 via DCEs with CCITT X.20 bis interface.

Modems: A modem cable is required for the attachment to a modem. 5811-20/28, 5812-10/18 at speeds up to 19,200 bps on facilities GASYN, 5841 and PTT mandatory modems complying with CCITT Recommendations (1979), V.24, V.28, ISO standard 2110 and either CCITT Recommendations V.21, V.22 or V.23 may be attached. Other non-IBM modems may be attached subject to the Multiple Supplier Systems Bulletin.

Software Support: The 3163 is supported both in 3163 Native Mode and in 3101 Mode by Series/1, 3708, 3710, 7171 and other hosts that support the CPT-TWX 33/35 ASCII protocols. The 3163 is also supported in 3101 mode by System/88, 8100, and the other IBM hosts that support the 3101 Mdl(Canada only) 881 or < 23. The 3163 support is provided by the current version of the following licensed programs:

System -	Licensed Program	3163 Native Mode	3101 Mode
Series/1	RPS, EDX, CM, CF, TPS, IOX*	- X X	X X X
System/88:	OS, 3270 Emulation,		

8100:	TP, HLL	-	X
S/370,	DPCX, DPPX	-	X
30XX, and			
4300:	DOS/VSE, OS/VSI, MVS/370, MVS/XA, VM/SP and VM/SP HPO via:		
	*3708, 3710, 7171	X	X
	*270X, 370X,		
	3725/6, 4995,		
	7426, and 8100	-	X

* Series/1 5170 System Unit only.

In non-emulation mode, the 3163 generates an ANSI X3.4 data stream (English US model only).

System Attachment: Series/1, System/88 and Non-IBM Mini Computers attach the 3163 with RS-422-A (CCITT V.11) interface (mdl 12 only), or RS-232-C (CCITT V.24/V.28) interface both in 50 to 19.2K bps line speed, and via a modem with RS-232-C (CCITT V.24/V.28) interface in 50 to 1200 bps line speed. IBM Processors attach the 3163, via 270X, 370X, or 3725/6 with RS-232-C (CCITT V.24/V.28) interface in 50 to 1200 bps line speed, via 370X-8100 or 3725/6-8100 with RS-232-C (CCITT V.24/V.28) interface in 50 to 1200 bps (with modem) or 50 to 9600 bps (without modem) line speed, and via a protocol converter with RS-232-C (CCITT V.24/V.28) interface in 50 to 19.2K bps line speed. For connection of the 3163 to 8100, a connection cable of 9.1m (30 ft) or less and a modem cable of 3m (10 ft) must be used. As an alternative to a modem attachment, the 3163 may be directly connected to a ROLM CBX at speeds up to 19.2K bps through one of the following devices with RS-232-C (CCITT V.24/V.28) interface: Rolmphone Datacom Module (DCM), Data Terminal Interface (DTI), rack-mounted version of the DCM or DTI. The 3163 can be attached to the 6150/6151 via its 4-Port Asynchronous 232-C Adapter or 4-Port Asynchronous 422-A Adapter, and operate in native mode as the 3161.

Keyboard: The 3163 keyboard, detachable from the Logic WSE, has coiled cable, low profile with tactile feedback, and 102 (Canada only) > or 103 < (Japan only) > or 104 < keys including 12 Function keys shiftable to 24, 3 Program Attention keys, and a numeric keypad with a line drawing capability. 41 keys are redefinable by swapping the function of the two keys, copying from one key to another, deleting a function from the keyboard and setting a default function. Keycaps are also changeable.

Printers: The 3163 has an auxiliary port that can connect an ASCII printer over an RS-232-C direct connection. A print key allows local printing of the screen, while the software commands allow remote printing from a host. For example, the 4201 Proprietary may attach via its serial interface to the 3163 for direct printing of text-oriented screens (or graphics and text via host programming).

IBM 3101 Compatibility and Migration: The 3163, when operating in 3101 emulation mode, will accept and generate the 3101 mdl 881 data streams. There are two methods of placing the 3163 into the 3101 emulation mode. The operator may select the 3101 mode during menu setup, or a suitably programmed host may send a "3101 mode" command to 3163. There are some operational differences in terms of the screen management facilities. The 3161/3163 ASCII Display Station Description documents these differences.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system, cables and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. Physical setup, connection of cables in customer access area, setting of setup and select options.

4. Determination of the required number of spares.
5. Performing Problem Analysis and Resolution using IBM 3161/3163 ASCII Display Station Operator Reference and Problem Solving Guide.
6. (Except Japan > Returning a failing workstation element to an IBM Repair Center (for Customer Carry-In Repair maintenance) with a completed Service Replacement Order Form for repairs, if required. <)
7. Ordering the IBM 3161/3163 ASCII Display Station Description for site planning and preparation work, if required additionally before it is shipped with each machine.
8. Evaluation of the attachment capabilities of the 3163 to the Host Processor at the other end via the modem or Packet/Depacket (PAD) function of the telecommunication network.

Spares: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3163 units for such use. The number of spare units is dependent upon the number of 3163 units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility. However, the minimum number of spare units recommended where one unit consists of a keyboard, a logic, and a video is shown in the following table:

Recommended Minimum Number of Spare 3163s:

Number Installed	Recommended Minimum Spare Machines
1 - 50	1
51 - 100	2
101 - 300	3
301 - 500	5
501 - 700	6
701 - 1000	7

The customer should be advised to verify units for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as an individual workstation element where spare elements do not have VPA discount. See "Accessories" for ordering individual elements.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3163 to enhance the availability to the customer. This has been done through the use of Problem Analysis and Solving routines and procedures that are used by the customer. See "Customer Responsibilities".

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged at IBM's then current hourly service rates and minima. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the customer calls the Service/Exchange Communication Center (S/ECC). IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the customer. All on-site assistance is available on an hourly service basis at the applicable hourly rates and terms.

Customer-owned spare elements may be installed to replace defective elements by IBM upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. On-site assistance is available on an hourly service basis at the applicable hourly rates and terms.

SPECIFY

- Power: 100-125V AC, 1-phase, 3-wire, 50/60 Hz. 200-240V AC, 1-phase, 3-wire, 50/60 Hz.
- Power Cord: 2.8m (9 ft) cord with nonlocking plug.

SPECIAL FEATURES

Optional Features	Feature Code
Additional Read Command	#8003
VT 100/52 Emulation	#8103
TeleVideo 950 Emulation	#8953

Limitations: All special features are provided for English US models only.

Field Installation: All special features are field installable.

Customer Setup: All special features are designed for customer setup.

MODEL CONVERSIONS (NONE)

ACCESSORIES

The following accessories may be ordered:

By using a P/N, order from the Country Direct Marketing Center, or other Supplies Marketing Groups.

Description	P/N
Blank keycaps - light (60 caps) and a keycap removal tool	1351710
Blank keycaps - dark (60 caps) and a keycap removal tool	1351728
Clear lens cap - with paper inserts (60 light and 60 dark)	6341707

MACHINES

and a keycap removal tool
Keycap removal tool (6 tools) 1351717
Paper Inserts for clear lens 6341704
keycaps (150 light and 150
dark) and keycap removal tool
(Except Japan>
Modem Cable - inch screws 6343332<)
Wrap Socket 5640724
Tag 5640852
(Except Japan>
I/O Cable 6343373
Multi-function attachment
cable 8310553<)
(Japan only>
Modem Cable - metric screws 6343333
Wrap Socket 5640724
I/O Cable 6343373
Multi-function attachment
cable 8310553<)

For connection to 5841 modem or PTT modem the above IBM cable
or equivalent must be used.

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by the IBM maintenance
agreement and must be purchased by the customer when a re-
placement is needed.

Order through Branch Office Parts Station and/or Field Part Distrib-
ution Centers to NSD Greencastle or the customer directly places
orders to the IBM Parts Order Center in Greencastle.

Description	P/N
Field Packing Material:	
Video	6339511
Logic	6165946
Keyboard	7342889

MACHINE ELEMENTS

Elements can be ordered to provide individual elements as needed
by the customer for the use of the 3163.

Order Entry: For shipment, specify Machine Element Number (P/N)
at the time of order entry. Order by Parts Requisition.

The 3163 elements can be ordered as follows:

Maintenance: Maintenance for individual workstation element is available at IBM Repair Centers or through an IBM Service/Exchange Center at the applicable IBM Hourly Service rates and minimum charges.

SUPPLIES (NONE)

3164 COLOR ASCII DISPLAY STATION

PURPOSE

A stand-alone, high quality, 14-inch, color display station used for displaying up to 1,920 characters, and for entering data into and retrieving data from a host processor. The 3164 provides an asynchronous communication interface using a 7-bit (or 8-bit) ASCII/ISO code and an auxiliary interface for direct attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28) interface. A cable-connected keyboard is provided for operator data input. The 3164 provides the advanced editing functions as the 3163 and is upward compatible from the 3161/3163 native modes and displays both the foreground and the background in up to 8 colors. The 3164 meets the general and unique ASCII display requirements.

MODELS

Model 11 (Except Canada and Japan > 11Y <) (Canada only > 11Y, 11D <) (Japan only > 11Y, 11K <): Provides EIA RS-232-C (CCITT V.24/V.28) interface.

Model 12 (Except Canada and Japan > 12Y <) (Canada only > 12Y, 12D <) (Japan only > 12Y, 12K <): Provides program-selectable interface of either EIA RS-232-C (CCITT V.24/V.28) or EIA RS-422-A (CCITT V.11).

Note: Mdl's 11Y/12Y provide English (US).

(Canada only > Note: Mdl's 11D/12D provide Canadian-French. <)

(Japan only > Note: Mdl's 11K/12K provide Katakana. <)

(Canada and Japan only > A keyboard and a cartridge unique to language are provided to each of all models <) (Canada and Japan only > 11Y/ <) (Canada and Japan only > 12Y. <)

Upon request from the customer, the 3164 is available with a 90-day warranty. Orders are entered in AAS with special model numbers. These special model numbers are for ordering and administrative purposes only. The special model numbers correspond to the standard 3-year warrantied models as follows:

3-Year Warranty Model	Corresponding 90-day Warranty Model
3163-11X	3163-16X
3163-12X	3163-17X
3163-86X	3163-Z6X

Customer Setup (CSU): The 3164 is designated as a customer setup machine. Setup instructions are shipped with each machine, as the "IBM 3164 ASCII Display Station Setup Instructions" (GA18-2319).

HIGHLIGHTS

The 3164 displays up to 1,920 characters, 24 rows of 80 characters each. An alphameric character is represented in an 8x16 contiguous box matrix. The data displayed uses the 128 characters of ASCII/ISO codes and an additional character set containing 24 line drawing graphics, 10 superscript characters and 10 subscript characters. A line drawing character is represented in a maximum 8x16 dot matrix to create a contiguous line. The character transmission mode provides the capability to transmit a character over a communication line upon depression of each key. The block transmission mode, selectable at setup time, allows buffered transmission mode of data. The 3164 consists of the three machine elements (Video, Logic, and Keyboard) and cartridge.

Color Capability: The color presentation in the 3164 (native) mode provides up to 8 color attributes in both the foreground and the background of the characters. In the default color mode if pre-determined, the 3164 displays characters in up to 4 default colors de-

pending on the combination of field attribute and character attribute.

Communications Flexibility: The use of ASCII (ISO) codes and the asynchronous communication interface allows the 3164 to attach to a variety of host processors. Various communication options are selectable by the customer on the setup menu such as line speed (50, 75, 110, 134.5, 150, 200, 300, 600, 1200, 1800, 2400, 3600, 4800, 7200, 9600 and 19,200 bps), parity (none, odd, even, mark, space), interface (EIA RS-232-C (CCITT V.24/V.28), EIA RS-422-A (CCITT V.11)), word length (7, 8-bit), operation mode (echo, character, block mode), turn-around character (ETX, EOT, CR, DC3), line control (CRTS, PRTS, IPRTS), stop bit (1, 2), response delay (0, 100ms) and break signal (170, 500ms).

Operator Factors: The 3164 has an etched screen, which minimizes glare and fingerprints. Indicators are displayed under the divider scan on the bottom (25th row) of the screen, and provide useful operator information. An audible alarm is provided to alert the operator, and its volume is adjustable by the operator. The video element can be tilted and swiveled by the pedestal to set the screen angle for the operator. The cable-connected keyboard can be moved and its slope is selectable.

Input Editing Capability: Cursor move (up, down, right, left, and home), tab (forward, backward, set and clear), erase (end of line, end of page and entire page), clear (entire page and entire buffer), insert (character and line) and delete (character and line) are provided. Tab erase, insert and delete may be manipulated by field attribute. All characters can be rendered by character or field attributes. A 12-key numeric keypad and 12 Function (F) keys are provided on the keyboard.

Major characteristics of the 3164 are:

- Windowing (up/down/ left/right)
- Split screen capability (viewports, paging, partitioning)
- Vertical smooth scroll
- Auto skip
- Divider scan
- CRT saver with programmable timer
- Hold screen (stop scrolling temporarily)
- Block or underlined cursor with blinking option
- Block LRC (Longitudinal Redundancy Checking)
- Host access to the indicator row
- Character attributes for blink, non-display, underline, reverse, high intensity
- Field attributes for normal, blink, non-display, underline, reverse, high intensity, protected, numeric, right justify with zero or space, must fill, must enter and auto send
- Color attributes for red, green, blue, yellow, magenta, turquoise, black and white
- Line attributes for double high/double wide characters
- Re-definable keyboard layout and customer replaceable keytops
- 12 Function (F) keys redefinable from the terminal, as well as from the host (12 keys with two shifts each)
- 7680-characters buffer
- Host-loadable characters or patterns of up to 94
- Bidirectional auxiliary port

Emulation Modes: A machine mode to emulate 3101 mdl (Canada only > 881 or <) 23 is provided. The 3163 compatible mode is provided as the default color mode.

Cables: The customer is responsible to prepare cables. Many IBM systems provide their own unique cables for 3164 attachment and those systems should be referenced for detail information. A modem cable is provided as an IBM accessory for use in attaching to certain devices (specifically modems) and an I/O cable are provided as an IBM accessory for attaching the 4201 Proprietary.

Auxiliary Port: An auxiliary interface is provided for attachment of an input or output device with EIA RS-232-C (CCITT V.24/V.28). The

4201 Proprinter may be attached using the I/O cable provided as an accessory.

Communications: The 3164 communicates with a variety of host processors. When using the EIA RS-232-C (CCITT V.24/V.28) interface, the 3164 can communicate, through a modem, to a remote host processor at 50 - 1200 bps (and at 1800 bps in half-duplex mode), or it can directly (without a modem) attach to a host processor within 12.2m (40.0 ft) at 50 - 19,200 bps.

Note: For direct connect to the 8100 system, the 3.0m (10.0 ft) Modem Cable must be used; and the length of the 8100 direct connect cable cannot exceed 9.1m (30.0 ft), thus the total maximum cable length from the 8100 system to the 3164 must be 12.2m (40.0 ft).

When using the EIA RS-422-A (CCITT V.11) interface, the 3164 can communicate with a host processor, without a modem, up to 1,219m (4000 ft) at 50 - 19,200 bps depending on the type of cable used. A shielded communication cable is recommended. Multi-function attachment cable is used to attach a 3164 mdl 12 to the host via IBM Cabling System.

Communicating through Modem: When using an extended modem through EIA RS-232-C (CCITT V.24/V.28) interface, the 3164 operates in point-to-point On full-duplex facility at transmission speeds of up to 300, 600 and 1200/600 bps on nonswitched facilities. D1, D3, M1, M2, M1M, M2M, P1 and P2. In addition, the 3164 operates on switched facilities at transmission speeds of 50, 75, 110, 134.5, 150, 200, 300, 600 and 1200/600 bps in full-duplex and half-duplex modes, and at 1800 bps in half-duplex mode and at 2400 bps in full-duplex mode. For attachment to the facility P1 or P2, character mode or echo mode will be used. For communication capabilities, product utilization and special features, see M2700 pages. The 3164 provides XON/XOFF Control. The 3164 may be attached to packet switched networks through the PAD complying with the CCITT recommendation X.28 via DCEs with CCITT X.20 bis interface.

Modems: A modem cable is required for the attachment to a modem. 5841 and PTT mandatory modems complying with CCITT Recommendations (1979), V.24, V.28, ISO standard 2110 and either CCITT Recommendations V.21, V.22 or V.23 may be attached. Other non-IBM modems may be attached subject to the Multiple Supplier Systems Bulletin.

Software Support: The 3164 is supported both in 3163 Compatible Mode and in 3101 Mode by Series/1, 3708, 3710, 7171 and other hosts that support the CPT-TWX 33/35 ASCII protocols. The 3164 is also supported in 3101 mode by System/88, 8100, and the other IBM hosts that support the 3101 Mdl (Canada only >881 or <) 23. The 3164 support is provided by the current version of the following licensed programs:

System -	Licensed Program	3164 Native Mode	3101 Mode
Series/1	RPS, EDX, CM, CF	-	X
	TPS	X	X
	IOX*	X	X
	OS, 3270 Emula.	-	X
System/88:	TP, HLL	-	X
	DPCX, DPPX	-	X
8100: S/370, 30XX, and 4300:	DOS/VSE, OS/VSI, MVS/370, MVS/XA, VM/SP and VM/SP	-	X
	HPO via:	-	X
	*3708, 3710, 7171	X	X
	*270X, 370X, 3725/6, 4995, 7426, and 8100	-	X
* Series/1 5170 System Unit only.			

In non-emulation mode, the 3164 generates an ANSI X3.4 data stream (mdls 11Y and 12Y only).

System Attachment: Series/1 and Non-IBM Mini Computers attach the 3164 with RS-422-A (CCITT V.11) interface (mdl 12 only), or RS-232-C (CCITT V.24/V.28) interface both in 50 to 19.2K bps line speed, and via a modem with RS-232-C (CCITT V.24/V.28) interface in 50 to 1200 bps line speed. IBM Processors attach the 3164, via 270X, 370X, or 3725/6 with RS-232-C (CCITT V.24/V.28) interface in 50 to 1200 bps line speed, via 370X-8100 or 3725/6-8100 with RS-232-C (CCITT V.24/V.28) interface in 50 to 1200 bps (with modem) or 50 to 9600 bps (without modem) line speed, and via a protocol converter with RS-232-C (CCITT V.24/V.28) interface in 50 to 19.2K bps line speed. For connection of the 3164 to 8100, a connection cable of 9.1m (30 ft) or less and a modem cable of 3m (10 ft) must be used. As an alternative to a modem attachment, the 3164 may be directly connected to a ROLM CBX at speeds up to 9600 bps through one of the following devices with RS-232-C (CCITT V.24/V.28) interface: Rolmphone Datacom Module (DCK), Data Terminal Interface (DTI), rack-mounted version of the DCM or DTI.

Keyboard: The 3164 keyboard, compatible with the 3163 keyboards, detachable from the Logic WSE, has coiled cable, low profile with tactile feedback, and 102 (Canada only > or 103 <) (Japan only > or 104 <) keys including 12 Function keys shiftable to 24, 3 Program Attention keys, and a numeric keypad with a line drawing capability. There are 41 keys that are re-definable by swapping the function of two keys, copying from one key to another, deleting a function from the keyboard and setting a default function. Keycaps are also changeable.

Printers: The 3164 has an auxiliary port that can connect an ASCII printer over an RS-232-C direct connection. A print key allows local printing of the screen, while the software commands allow remote printing from a host. For example, the 4201 Proprinter may attach via its serial interface to the 3164 for direct printing of text-oriented screens (or graphics and text via host programming).

IBM 3101 Compatibility and Migration: The 3164, when operating in 3101 emulation mode, will accept and generate the 3101 mdl 881 data streams. There are two methods of placing the 3164 into the 3101 emulation mode. The operator may select the 3101 mode during menu setup, or a suitably programmed host may send a "3101 mode" command to 3164. There are some operational differences in terms of the screen management facilities. The 3164 ASCII Color Display Station Description documents these differences.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3164 to enhance the availability to the customer. This has been done through the use of Problem Analysis and Solving routines and procedures that are used by the customer. See "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

1. Preparation of adequate site, system, cables and other vendor.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. Physical setup, connection of cables in customer access area, setting of setup and select options.
4. Determination of the required number of spares.
5. Performing Problem Analysis and Resolution using "IBM 3164 ASCII Display Station Operator Reference and Problem Solving Guide".
6. (Except Japan > Returning a failing workstation element to an IBM Repair Center (for Customer Carry-In Repair maintenance) with a completed Service Replacement Order Form for repairs, if required. <)
7. Ordering the "IBM 3164 ASCII Display Station Description" for site planning and preparation work, if required additionally before it is shipped with each machine.

8. Evaluation of the attachment capabilities of the 3164 to the Host Processor at the other end via the modem or Packet/Depacket (PAD) function of the telecommunication network.

Spares: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3164 units for such use. The number of spare units is dependent upon the number of 3164 units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility. However, the minimum number of spare units recommended where one unit consists of a keyboard, a logic, and a video is shown in the following table:

Recommended Minimum Number of Spare 3164s:

Number Installed	Recommended Minimum Spare Machines
1 - 50	1
51 - 100	2
101 - 300	3
301 - 500	5
501 - 700	6
701 - 1000	7

The customer should be advised to verify units for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as an individual workstation element where spare elements do not have VPA discount. See "Accessories" for ordering individual elements.

Customer Responsibility for Damaged or Altered Elements: (Except Japan> Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged at IBM's then current hourly service rates and minima. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the customer calls the Service/Exchange Communication Center (S/ECC). IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the customer. All on-site assistance is available on an hourly service basis at the applicable hourly rates and terms.

Customer-owned spare elements may be installed to replace defective elements by IBM upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. On-site assistance is available on an hourly service basis at the applicable hourly rates and terms.<)

SPECIFY

No Need to specify for the following standard features.

- Power: 100-125V AC, 1-phase, 3-wire, 50/60 Hz. 200-240V AC, 1-phase, 3-wire, 50/60 Hz.
- Power Cord: 2.8m (9 ft) cord is provided for all models.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

The following accessories may be ordered:

By using a P/N, order from the Country Direct Marketing Center, or other Supplies Marketing Groups.

Description	P/N
Blank keycaps - light (60 caps) and a keycap removal tool	1351710
Blank keycaps - dark (60 caps) and a keycap removal tool	1351728
Clear lens cap - with paper inserts (60 light and 60 dark) and a keycap removal tool	6341707
Keycap removal tool (6 tools)	1351717
Paper Inserts for clear lens keycaps (150 light and 150 dark) and keycap removal tool	6341704
(Except Japan>	
Modem Cable - inch screws	6343332<)
Wrap Socket	5640724
Tag	5640852
(Except Japan>	
I/O Cable	6343373
Multi-function attachment cable	8310553<)
(Japan only>	
Modem Cable - metric screws	6343333
Wrap Socket	5640724
I/O Cable	6343373
Multi-function attachment cable	8310553<)

For connection to 5841 modem or PTT modem the above IBM cable or equivalent must be used.

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by the IBM maintenance agreement and must be purchased by the customer when a replacement is needed.

Order through Branch Office Parts Station and/or Field Part Distribution Centers to NSD Greencastle or the customer directly places orders to the IBM Parts Order Center in Greencastle.

Description	P/N
Field Packing Material:	

Video	6317356
Logic	6165946
Keyboard	7342889

MACHINE ELEMENTS

Elements can be ordered to provide individual elements as needed by the customer for the use of the 3164.

Order Entry: For shipment, specify Machine Element Number (P/N) at the time of order entry. Order by Parts Requisition.

The 3164 elements can be ordered as follows:

To Fit Model	Machine Element	P/N
<Canada only>		
11Y/D,		
12Y/D	Video	6405302
11Y/D,		
12Y/D	Video Cable	6405213

Maintenance: Maintenance for individual workstation element is available at IBM Repair Centers or through an IBM Service/Exchange Center at the applicable IBM Hourly Service rates and minimum charges.

SUPPLIES (NONE)

3174 SUBSYSTEM CONTROL UNIT MODELS 1L, 1R, 2R, 3R

THIS PRODUCT HAS MORE THAN ONE MODEL DESCRIPTION

PURPOSE

Large-cluster control units for local, remote, or local area network attachment of up to 32 3270 Information Display System displays, printers, and workstations to IBM host processors via S/370-architecture channels, telecommunications links, or IBM Token-Ring Networks. An optional feature provides for attachment to ASCII terminals and hosts via telecommunications links.

MODELS 1L, 1R, 2R, 3R

Model 1L: S/370-architecture channel interface for SNA and non-SNA local attachment.

Model 1R: EIA RS-232-C/CCITT V.24 and CCITT V.35 interfaces for SNA/SDLC, BSC, or X.25 remote link attachment.

Model 2R: CCITT X.21 interface for SNA/SDLC or X.25 remote link attachment.

Model 3R: IBM Cabling System interface (IEEE 802.5/ECMA 89) for IBM Token-Ring Network attachment.

Prerequisites:

1. The Model 1L requires a control unit position on a system channel. See processor pages for details.
2. When a Model 1L is attached to a 308X channel via a 3044 Fiber Optic Channel Extender Link, the 3044 Model D01 must have RPQ 8P1162.
3. When a Model 1L is attached to a 4361 byte multiplexer channel, the 4361 must be at EC level 364436, or higher.
4. When a Model 1L is attached to a 3090 channel, the 3090 must be at System EC level 218590 with patches CXL10044 and CXY10045 applied.
5. A control unit terminal (CUT) or 3270-PC operating in CUT mode attached to port 0 is required to customize subsystem microcode or to run offline diagnostics from a display.
6. A CUT or 3270-PC operating in CUT mode attached to any port is required to perform subsystem RAS tests.
7. A CUT or 3270-PC operating in CUT mode attached to any port is required to establish X.21 switched network and X.25 sessions. After session establishment, all terminals, CUT and DFT, can use the established session.
8. 3299 Terminal Multiplexers and/or 3174 Terminal Multiplex Adapter optional features are required to attach more than four terminals to these models.
9. The Model 3R requires 3174 Configuration Support-A, Release 2 (or higher) microcode, which is shipped with each machine.

Customer Setup (CSU): All models, model conversions, and features ordered via MES after the machine is shipped from IBM are designated as Customer Setup.

HIGHLIGHTS

The 3174 is a non-programmable subsystem control unit to attach 3270 Information Display System displays, printers, and workstations to IBM host processors. An optional feature provides for attachment to ASCII terminals and hosts. The 3174 runs under control of its integrated microprocessor and associated control program, which can be customized by the user to meet specific requirements.

Units are shipped with a host-attachment adapter, 1.0Mb of control storage, a 1.2Mb diskette drive, a utility/diagnostic diskette, and a 4-port terminal adapter to attach up to 32 supported devices (see "Terminal Attachment") via 3299 Terminal Multiplexers or via optional

Terminal Multiplexer Adapter features. The Model 1R provides both EIA RS-232 (CCITT V.24) and CCITT V.35 interfaces. The desired interface is enabled during IML of the control unit, based on the type of communication cable (RS-232 or V.35) that is attached. All units are shipped with a 4.3m (14 ft) power cord.

Characteristics of the 3174 Models 1L, 1R, 2R, and 3R include:

- Function base equivalent to 3274 Models 41A, 41C, and 41D with Configuration Support D microcode, except:
 - 3278 Model 1 displays (960-character buffer) and use of the 960-character buffer format by printers are not supported.
 - (Canada only > 3278/3279 PC Attachment features (#5315, #5316/#5325, #5326) are not supported. <)
- New features and functions:
 - Model for attachment to the IBM Token-Ring Network.
 - Multiple Logical Terminals support for interaction with up to five host sessions in base microcode. Four levels of MLT support are selectable at customization: MLT Level 0 allows no MLT; MLT Levels 1, 2, and 3 reserve specific amounts of storage which allow various combinations of displays and session counts to be defined. (Refer to Customization documentation.) See the Configuration Support-A Multiple Sessions and Storage Considerations under Special Features for storage requirements for MLT and other features/functions.
 - Support for up to 180 SNA LUs.
 - Teleprocessing Communication Adapter Features that allow the 3174 Models 1L and 3R to operate alternatively as a 3174 Model 1R or as a Model 2R.
 - Response Time Monitor in 3174 base hardware.
 - IBM Token Ring Network 3270 Gateway feature for the Models 1L, 1R, or 2R to provide data passage between an IBM SNA host and terminals attached to an IBM Token-Ring Network downstream of the 3174.
 - Asynchronous Emulation Adapter feature that provides 3270 terminal emulation for communication between ASCII terminals and IBM hosts, and ASCII terminal emulation for communication between IBM control unit terminals (CUTs) or IBM PCs operating in CUT mode and ASCII hosts.
 - Connectivity to OEM devices and subsystems via the Serial OEM Interface (SOEMI) through the Model 1L operating in non-SNA mode. This function is supported in 3174 Configuration Support-A, Release 2 or higher microcode.
 - Single-tag Interlocked and two-tag High-Speed-Transfer channel operational modes for the Model 1L, for channel data rates up to 1.25Mb per second.
 - Channel cabling up to 122m (400 ft) for the Model 1L, as specified in S/370 channel architecture.
 - Channel attachment for the Model 1L via IBM Reduced Diameter Channel Cable.
 - 3178 Model C30 and C40 keyboard support in base microcode.
 - X.21 Short Hold Mode support in base microcode.
 - ASCII-8 and ASCII-International character set support in base microcode.
 - (APG only > Support for Thai language in base microcode of Configuration Support-A. <)
 - Support for the IBM Enhanced Keyboard, available on recent IBM displays, in base microcode.
 - X.25 support without the need for additional storage.
 - Mix and match IBM 3299 attachment with direct terminal attachment.
 - Cabling to devices via direct attachment to IBM Cabling System media. A balun cable assembly is not required.
 - A basic 5.25-inch, high-capacity diskette drive, and capacity for another as an optional feature.
 - Accommodation for up to 10 microcode RPQs per control unit.
- CMOS technology and VLSI circuitry for better RAS characteristics, lower power consumption, and a smaller footprint than 3274 Control Units.

- Increased internal performance compared to the 3274, resulting in less sub-system delay for most transactions.
- TP link speeds up to 64K bps.
- 1.0Mb of control storage to accommodate the control program and microcode-selectable functions. Control storage features in increments of 512Kb and 1.0Mb are provided for features and functions, require that more than the 1.0Mb base storage.
- 20Mb Fixed Disk Drive optional feature.
- Improved RAS characteristics:
 - Reliability and availability of the 3174 are enhanced by the following elements:
 - ▲ Built-in microcode and hardware error recovery.
 - ▲ Self-identifying adapters by type number and location at both IML and control unit diagnostic operation.
 - ▲ Uninterrupted IML for non-critical conditions. Complements host-initiated IML under Central Site Change Management.
 - ▲ Continued control unit operation by unaffected portions during faults in the Terminal Adapter, Asynchronous Emulation Adapter, and IBM Token-Ring Network 3270 Gateway Adapter (with Configuration Support-S, Release 2.1)
 - ▲ Hardware error correction code for storage.
 - ▲ Dynamic storage reconfiguration.
 - ▲ Automatic retry of channel command (Model 1L).
 - ▲ Fewer field-replaceable units.
 - Serviceability of the 3174 is enhanced by the following elements:
 - ▲ Self-configuring offline diagnostics, with automatic or manual selection.
 - ▲ FRU call out at operator's panel and/or display terminal.
 - ▲ Error status codes reported on four, 7-segment light emitting diodes (LED).
 - ▲ Errors time-stamped and logged to the diskette.
 - ▲ Expanded Alerts, including type and location of failing components, specifics of Bind failures, and specifics of failing data streams.
 - ▲ Device attachment media threshold Alerts without the need for a timer special feature.
 - ▲ Logging of executing task and microprocessor priority level upon control unit failures.
 - ▲ Terminal interface driver/receiver wrap capability.
- Improved Customization. Customization of subsystem control units is enhanced through the following elements:
 - A central site customization facility (see "Central Site Customizing", below, under "Offline Utility Procedures".)
 - Electronic distribution of customization parameters and/or data via the Central Site Change Management function.
 - Use of words and phrases on the customization panels, as opposed to only numbers and symbols.
 - Error messages presented on screen.
 - Optional selection of Printer Authorization Matrix definition panel, with self-explanatory prompts.
 - Reduced number of questions for equivalent function.
 - Reduced diskette swapping.
 - Expanded use of defaults.
 - Reduced machine execution time.
 - Use of full screen with a CUT-mode terminal Model 3 or 4, rather than presentation in a Model 2 format.
- Offline Utility Procedures. 3174-based offline utility procedures to aid in configuring and managing of 3174 microcode and to provide offline diagnostic functions are provided on a Utility/Diagnostic diskette. The procedures are invoked from a 'Master Menu' panel that is displayed on a Control Unit Terminal (CUT) attached to port 0. 3174 offline utility procedures include:
 - Customize the Control Diskette. Provides facilities to configure control unit microcode, define printer authorization matrix, merge RPOs, and modify keyboards.
 - Merge Downstream Load. Provides the ability to merge the microcode provided on individual auxiliary microcode diskettes for the Asynchronous Emulation Adapter feature (#3020) and downstream-load terminals, such as the 3192 "G" Models, on to one downstream load diskette. Use of this procedure requires the 1.2Mb Diskette Drive optional feature (#1046) or 20Mb Fixed Disk Drive optional feature (#1056).
- Copy Files. Through its seven variations, provides a means of duplicating diskettes, copying specific data areas, and copying with configuration modifications from one control diskette to another. The functions of the 3274 "Diskette Processing Aid" RPO 8K1071 are included in this procedure. The 'Full Copy' and 'Modify and Copy' facilities require the 1.2Mb Diskette Drive optional feature (#1046) or the 20Mb Fixed Disk Drive optional feature (#1056). The feature is not required for the other Copy Files options, but their usage is enhanced with it, since the need for diskette swapping is reduced.
- Diagnostics. Provides a full range of offline diagnostics. They are selected from a menu panel when this procedure is invoked.
- Microcode Upgrade. Provides a process to update a newly released control diskette with the configuration data from a down level control diskette, thus reducing the time required to execute this task.
- Encrypt/Decrypt. Provides facilities to load a master key value into the Encrypt/Decrypt adapter, display the Verify Pattern that is resident on the Encrypt/Decrypt diskette, verify the current master key value, and test the Encrypt/Decrypt feature. It is applicable only to Models 1R, 2R, and 3R that have the Encrypt/Decrypt optional feature (#3680).
- Identify Customizing Keyboard. Expands the types and configurations of keyboards from which the 3174 customization process can be executed.
- Central Site Customization. Enhances the management, distribution, and control of microcode for 3174 control units in a network. It provides the ability to create offline, a Central Site Library (CSL) of network control unit data; create, modify, browse, or delete library members; and generate customized control diskettes for mailing to network 3174s. The 1.2Mb Diskette Drive optional feature (#1046) or 20Mb Fixed Disk Drive optional feature (#1056) is required to use this procedure. Although not required, additional storage is recommended to facilitate generating diskettes for network control units by reducing the time and manual intervention required to read individual, duplicate control diskettes. (See "Configuration Support-A Multiple Sessions and Storage Considerations" for details.) This procedure is a prerequisite for Central Site Change Management. It does not support microcode management, distribution, or control for a 3174 Model 1L with the IBM Token-Ring Network 3270 Gateway optional feature (#3025) Release 2.0 or lower.
- Central Site Change Management. Provides electronic distribution of customization parameters and/or data to network 3174s. The Central Site Customizing Utility function in Configuration Support-A, Release 3 is required on a 3174 Model 1L, 1R, 2R, or 3R that is designated as the central site control unit. The customization parameters and/or data for control units in the network are electronically distributed via the required version/release of Distributed Systems Executive (DSX) 1 in the IBM central site host using the LU 6.2 support provided in the ACF/VTAM Version 3, Release 2. Electronic distribution of customization parameters is to any model of the 3174 in a non-disruptive mode. Electronic distribution of other data may require network site intervention depending on that network 3174s model and/or hardware features installed. The 20Mb Fixed Disk Drive feature is not a prerequisite but is desirable for some 3174s participating in Central Site Change Management. Additional storage may be required when combined with other functions (see "Configuration Support-A Multiple Sessions and Storage Chart"). In addition to providing the electronic distribution support for central site control units, CSCM also provides the complementary support to receive customization parameters and/or data at the network control units. Central Site Change Management is not available in 3174s with the IBM Token-Ring Network Gateway feature (#3025) installed.
- Improved Usability:
 - Operator's panel with 10-key numeric pad and four 7-segment light emitting diode (LED) readouts.

- User-friendly problem determination tools, including self-configuring diagnostics, extensive use of program function keys, and formatted displays of configuration data.
- Multi-purpose channel-attachment adapter that accommodates either SNA or non-SNA host attachment protocol.
- Multi-purpose teleprocessing adapters that provide variable operating speeds, host attachment interfaces, and protocol support.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system, and other vendor preparation.
2. Price quotations, installation, and costs (initial and recurring) of common carrier equipment and service.
3. Procuring bus/tag (and optional power control) cables for Model 1L.
4. Receipt at the customer's receiving dock, unpacking, and placement of the unit.
5. Procuring and attaching appropriate cables for connections between the Asynchronous Emulation Adapter and terminals/modems.
6. Physical setup, connection of cables to communication lines/modems and IBM CSU devices, setting switches, and check out.
7. Contacting CE to accomplish the channel connection tasks for the Model 1L.
8. Performing customization in accordance with IBM-supplied procedures:
 - For initial setup.
 - When made necessary by changes in configuration.
 - For updating control unit diskettes (at customer option).
 - When initializing and updating the keyboard tables using the Keyboard Definition facility of the customization procedure.
9. Contacting Customer Engineering to make 3174 cable connections to non-CSU IBM units.
10. Setup of model conversions and features ordered after the unit is shipped from IBM.
11. Using the problem determination procedures provided with the unit prior to calling IBM for service.
12. Following instructions provided by IBM regarding relocation.

Publications: See "KWIC Index", G320-1621, or applicable system bibliography.

- 3270 - GA23-0058
- 4300 - GC20-0001
- 8100 - GC20-8100

HONE: Use the HONE configurator (CF3270) to assist in configuring the 3174 before entering an order.

TERMINAL ATTACHMENT

All 3174 models use the same terminal attachment interface architectures; they are the same as used by the 3274. Documentation describing the interface between 3X74 control units and their attached terminals is available.

The displays, printers, 3270-PCs, and IBM PCs (and associated emulation software) supported for attachment to the 3174 are listed below. Products and software not specifically listed should be tested by the customer to verify correct operation. Continued improvements in the 3174 and attaching terminals may require micro-code or hardware updates to the attaching products. Refer to RETAIN for information on product compatibility.

Terminals can attach to 3174 Models 1L, 1R, 2R, or 3R via 3299 Terminal Multiplexers, or via 5209 3270-5250 Link Protocol Converters, or via optional Terminal Multiplexer Adapter feature (#3103).

Either RG-62A/U coaxial cable, IBM Cabling System media (Canada, Australia, Japan only) or specified telephone twisted-pair wire (IBM Cabling System Type 3 media) can be used for connections to the 3174. Depending on the type of wire used, the distance between the 3174 and its attached terminals can be up to 1,500m (4,920 ft); when a 3299 is used, the maximum distance can be up to 3,000m (9,840 ft). The 3174 ports are Dual Purpose Connectors (DPC), which do not require a balun cable assembly to connect terminals via IBM Cabling System Types 1, 2, or 9 media, but some terminals may. (Refer to the appropriate terminal pages.) Using a Balun assembly reduces the maximum allowable wire lengths as shown below.

3174 Terminal Attachment Maximum Wire Lengths:

Number of Baluns	RG-62A/U Coaxial Cable		IBM CABLING SYSTEM MEDIA			
			Types 1 & 2		Type 9	
	m	ft	m	ft	m	ft
0	1500	4920	1500	4920	1000	3280
1	N/A	N/A	1000	3280	667	2186

(Canada only) IBM Cabling System Type 3 Media (specified telephone twisted-pair wire) can also be used for connections to the 3174. Connection to the telephone twisted-pair can be via an IBM/ROLM Coax to Twisted-Pair Adapter (CTPA) or equivalent. When one end of the telephone twisted-pair is attached to a CTPA, the maximum wire length is 275m (900 ft). <

DISPLAY AND PRINTER ATTACHMENT

The following displays and printers are supported for attachment to the 3174. (See Note 1.) The Type-Models (prerequisites) Names are:

- *3178-C10, C20, C30, C40 Display Station
- *3179-1 Color Display Station
- *3179-G1, G2 Color Display Station
- *3180-1 Display Station
- *3191-A1X, B1X, D1X, E1X, L1X, A2X, A3X, B2X, B3X, D2X, D3X, E2X, E3X, L2X, L3X Display Station
- *3192-C1X, F1X, C2X, C3X, F2X, F3X Color Display Station
- *3192-D1X, L1X, D2X, D3X, L2X, L3X Display Station
- 3192-G10, G20, G30, G40 Color Graphics Display Station
- 3193-1, 2 (Note 2) Display Station
- *3194-C10, C20, D10, D20, H10, H20, H50 Display Terminal
- 3262-3, 13 Line Printer
- 3268-2 Printer
- 3268-2C Color Printer
- *3278-2, 3, 4, 5 Display Station
- *3279-S2A, S2B, S3G, 2X, 3X Color Display Station
- 3287-1, 2 (#8331) Printer
- 3287-1C, 2C Printer
- 3290-220, 230, T30 Information Panel
- 3812-2 (#3190) Pageprinter
- 3814-A1, A2, A3, A4 (#1440) Switching Management System
- 4224-201, 202, 2E2, 2C2 Printer
- 4234-1 Dot Band Printer
- 4245-D12, D20 (Note 2) Line Printer
- 4250-1 (Notes 2, 3) Printer
- 4250-2 (Notes 2, 3) 4250 II ElectroCompositor
- 5210-G1, G2 Printer
- (APG only) 5227-11 Printer
- 5578 (Note 5) Japanese Workstation <
- OEM Devices & Subsystems (Note 4) Serial OEM Interface (SOEMI)

* Control unit terminal (CUT) or terminal that can operate in CUT mode and be used for customization, running 3174 offline

diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions.

Notes:

- 3278 Model 1 displays (960-character buffer) and the "960-Character Print Operation" option that is available on some printers are not supported.
- The high data volumes possible with this device may not be realized when attached to Models 1R and 2R via TP links. It is strongly recommended that the "Performance Guidelines for IBM 3X74 Attached Workstations", ZZ20-4167, be consulted to determine what performance may be expected.
- Attachment to Models 1R, 2R, or 3R requires 4250 RPQ 7B0980. Supported only on Model 1L and only when operating with non-SNA protocol. The high data volumes possible through this attachment may affect subsystem performance. It is strongly recommended that the "Performance Guidelines for IBM 3X74 Attached Workstations", ZZ20-4167, be consulted to determine what performance may be expected.
- (APG only) This terminal can operate in CUT mode and be used for customization. <

PERSONAL COMPUTER ATTACHMENT

3270-Personal Computers: The 3270-PCs supported for attachment to the 3174 are listed below. Current host communications programs that support a 3270-PC attached to a 3174 will work unchanged with a 3270-PC attached to a 3174. Any 3270-PC operating in CUT mode can be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions. The Type/Model(s) (Names) are:

5271 AII (3270-PC)
5273 AII (3270-PC AT)
5371 AII (3270-PC/G, GX)
5373 AII (3270-PC AT/G, AT/GX)

IBM Personal Computers: The following IBM PCs are supported for attachment to the 3174 when emulating the functions of a 3278 Display Station Model 2 or a 3279 Color Display Station Model 2A or S2A through the software listed below. IBM PCs operating in CUT mode (APG only) except for the 5550 family < can be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions. The Type/Model(s) /Prerequisite/ (Names) are:

- 5150 AII /#5050/ (Personal Computer)
- 5160-068, 078, 086, 087, 088, 089, 267, 268, 277, 278 /#2507 or #5050/ (Personal Computer XT)
- 5170-068, 099, 239, 319, 339 /#2507 or #5050/ (Personal Computer AT)
- 5170-599, 739, 919, 939 (Personal Computer AT/370)
- (APG only) > 5540/5550/5560 System (Notes 1, 2) (5550 Family (as 3270)) <
- 6150-20, 25, A25 (RT Personal Computer)
- 6151-10 (RT Personal Computer)
- 8530-021 /#5050/ (Personal System/2 Model 30)
- 8550-021 /#2000/ (Personal System/2 Model 50)
- 8560-041, 071 /#2000/ (Personal System/2 Model 60)
- 8580-041, 071 /#2000/ (Personal System/2 Model 80)
- 9370 (Processor Console)

(APG only) Notes:

- Requires 3174 RPQ 8K1349, which is shipped with each machine in Japan, for 5550 printer sharing.
- Can operate in CUT mode and be used for customization. <

PC 3278/79 Emulation and File Transfer Software: The IBM PCs listed above are supported for attachment to the 3174 when configured to operate with:

- Personal Computer 3278/79 Emulation Control Program Version 2 (P/N 8665780)
- IBM PC 3270 Emulation Program, Entry Level (P/N 59X9904)
- IBM PC 3270 Emulation Program Version 3 (P/N 59X9969)
- 3270 Workstation Program Version 1.0 (P/N 74X9921) and Version 1.1 (P/N 75X1088)

- RT Personal Computer 3278/79 Emulation Program (PP 5669-052)
- IBM Virtual Machine/Personal Computer Release 2 (P/N 6467040)
- Personal Services/PC Release 1.04 (P/N 6403826) or higher
- VM Bond Release 2 (P/N 6467022)

IBM PC Host File Transfer Software: The 3174 supports the following host file transfer programs that allow the IBM PCs listed above to perform file transfers. Refer to the appropriate product documentation for details on the supported configurations.

- PC Bond (PP 5664-298)
- Virtual Machine/Personal Computer Release 2 (PP 5664-319)
- MVS/TSO (PP 5665-311)
- VM/SP (PP 5664-281)
- DISOSS - for MVS (PP 5665-290)
- DISOSS - for VSE (PP 5666-270)
- PROFS Version 2 (PP 5664-309) (Personal Computer Connection Extended)

SYSTEM ATTACHMENT

Processors: The 3174 communicates with the following IBM systems and processors using SNA and non-SNA protocols:

SYSTEM/PROCESSOR COMMUNICATION

SYSTEM PRO- CESSOR	Channel		REMOTE LINK			TOKEN- RING NETWORK (Mdl 3R)
	Mdl 1L		---Model---			
			1R	2R		
	SNA	NON SNA	SNA	BSC	SNA	SNA
S/1	-	-	X	X	X	-
S/36	-	-	X	-	X	-
S/38	-	-	X	-	X	-
S/88	-	-	X	X	X	-
308X	X	X	X	X	X	X
3090	X	X	X	X	X	X
4361	X	X	X	X	X	X
4381	X	X	X	X	X	X
8100	-	-	X	-	X	-
(DPPX Only)						
9370	X	X	X	X	X	X

Other system/processor attachments may be supported by RPQ, as appropriate. Use the HONE/INFO RPQ application to review for any additional supported systems. Use a search argument of "3174".

Channel Attachment: The 3174 Model 1L attaches to a byte multiplexer, block multiplexer, or selector channel of the processors listed above. The channel cable may be up to 122m (400 ft) long, under the conditions described in S/370 channel architecture. The Model 1L also attaches to the IBM 3044 Fiber Optic Channel Extender Link. Single-tag interlocked and two-tag High-Speed-Transfer channel operational modes are supported, for data rates up to 1.25Mb per second. When attached to 4361 high-speed channels via an IBM 3044 Fiber Optics Channel Extender Link, the Model 1L must be configured for Single-tag interlocked mode.

Remote Link Attachment: 3174 Models 1R and 2R can attach to a 308X, 3090, 4361/4381, or 9370 via a 3720 or 3725 Communications Controller. Attachment to S/1, S/36, S/38, S/88 and 8100 (DPPX only) is via communications features in those products. Refer to their "Machines" pages. Attachment to the 4361 and 937X may also be via its Communications Adapter or to the 9370 Telecommunication Subsystem Controller. A modem or other Data Circuit-Terminating Equipment (DCE) is required, unless the host processor or system

provides a method of direct-connection attachment, without the need for a DCE. The Model 1R can also attach via the 3710 Network Controller.

IBM Token-Ring Network Attachment: The 3174 Model 3R transmits and receives at four million bits per second using media access protocols conforming with IEEE 802.5 and ECMA 89 standards, and logical-link protocols conforming with IEEE 802.2 standard, over a baseband token-ring. It can attach to a 308X, 3090, 4361/4381 or 9370 via a 3720 or 3725 Communications Controller with the NCP/Token-Ring Interconnection (NTRI) facility of ACF/NCP Version 4 Release 2, or via a 3174 with the IBM Token-Ring Network 3270 Gateway optional feature (#3025).

Communications Facilities: 3174 Models 1R and 2R operate in data half-duplex point-to-point or multipoint modes on duplex or half-duplex nonswitched facilities, and in half-duplex point-to-point mode on switched facilities as listed below. Operation on switched network facilities is supported only through SNA/SDLC. See the M2700 pages for specific country networks that are supported.

3174 MODEL 1R:

ELECTRICAL INTERFACE	FACILITY (See M2700 Pages)	LINK/ NETWORK PROTOCOL	MAX. SPEED (bps)
EIA RS-232-C/ CCITT V.24/28 (External clocking required)	D,G	BSC	9.6K
	C,D,E,G	SNA/SDLC	19.2K
		SNA/SDLC (X.21bis)	19.2K
	K M		
	P	X.25 (X.21bis)	19.2K
CCITT V.35 (External clocking required)	D,G	BSC	9.6K
	D,E,G	SNA/SDLC	64K
	M	SNA/SDLC (X.21bis)	64K
	P	X.25 (X.21bis)	19.2K

3174 MODEL 2R:

CCITT X.21	L	SNA/SDLC	48K
	N	SNA/SDLC	64K
	Q	X.25	19.2K

Modems: IBM modems to which the 3174 Model 1R can attach include:

Nonswitched Modems:

3833	2400 bps
3834	4800 bps
3863-1	2400 bps
3864-1	4800 bps
3865	9600 bps
3868-1	2400 bps
3868-2	4800 bps
3868-3	9600 bps
3868-4	9600 bps
5811	2.4/4.8/9.6/19.2K bps

(Baseband)

5865	9600 bps
5866	14400 bps
5868	9600 bps
5868	14400 bps

Switched network backup (SNBU) mode of operation is possible using an appropriately featured external modem.

Switched Network Backup Modems:

3863	2400 bps
3864	4800 bps
3865	9600 bps
5865	9600 bps
5866	14400 bps

Switched Network Modems (SNA/SDLC only):

3863-2	2400 bps
3864-2	4800 bps

PTT-Mandatory DCEs: The 3174 Model 1R attaches to PTT-mandatory DCEs meeting CCITT Recommendation V.24, V.28, ISO Standard 2110, and relevant CCITT Recommendations for data transmission speeds. The Model 1R attaches to PTT-mandatory DCEs meeting CCITT Recommendation V.35 and ISO standard 2593.

Non-IBM DCEs: Non-IBM DCEs complying with EIA RS-232-C, CCITT Recommendations V.24/V.28, V.35, or X.21 may be attached to Models 1R and 2R under provisions of the IBM Multiple Supplier Systems Bulletin.

Public Data Networks: Models 1R and 2R attach to X.21 switched, X.21 nonswitched, and X.25 Public Data Networks as listed in Charts K, L, M, N, P, and Q of the M2700 pages. Keyboard labels are provided with every 3174 Model 1R and Model 2R to facilitate X.21 switched network and X.25 session setup and termination. Extra labels are available; see "SUPPLIES".

3710 Network Controller: The 3174 Model 1R can attach to the 3710 Network Controller as indicated in the chart below. The maximum total cable length permitted between the 3174 and the 3710 is 15m (50 ft).

3710 ATTACHMENT:

SPEED (K bps)	B S C	S D L C	3174 MODEL 1R INTERFACE
3710 FEATURE #7001:			
2.4/3.6/4.8/ 7.2/9.6	X	X	RS-232-C (V.24/28)
14.4/19.2	-	X	
3710 FEATURE #7005:			
2.4/3.6/4.8 7.2/9.6	X	X	CCITT V.35
14.4/19.2/ 48/56/64	-	X	

Direct-Connection Attachment: 3174 Models 1R and 2R can communicate with IBM hosts without the need for modems or other data circuit-terminating equipment. This method of 'direct-connection' attachment is made through the 3174 EIA RS-232-C (CCITT V.24/V.28), CCITT X.21, or CCITT V.35 interface, via appropriate connecting cables, to the direct-connection product's interface. The direct-connection product must provide bit clocking to the 3174.

Products that support direct-connection attachment of the 3174 are listed in the following table. Only the interface features needed by the direct-connection products are listed; they may have prerequisites, therefore the "Machines" pages for those products should be reviewed.

The maximum, total cable length allowed between the 3174 interface and the host product interface is 122m (400 ft), unless the host product imposes a shorter limit. The physical planning manuals for those products can provide cabling data and other information necessary for direct-connection attachment.

HOST PRO- DUCT	HOST PRODUCT FEATURE NUMBER	SPEED (K bps)	B S C	S D L C	3174 MODEL/ INTER- FACE

	#1614	56	-	X	1R/ V.35
8150	#1733 or #1734	4.8/9.6	-	X	1R/ V.24
	#1742 or #1745	56	-	X	1R/ V.35
9370	#6031	2.4/4.8/9.6	X	X	1R/ V.24

BASIC CONFIGURATION

The machine is shipped as follows if only mandatory specify codes are selected:

- Power (AC, 1-phase, 50/60 Hz):

Argentina	200-240V
Australia	200-240V
Brazil	100-127V
Canada	100-127V
	(Models 1R, 2R, 3R)
Canada	200-240V (Model 1L)
Chile	200-240V
Japan	100-127V
Mexico	100-127V
New Zealand	200-240V
Venezuela	100-127V
All Others	(Must specify desired power)

- (Except Canada, Mexico, Nicaragua, Japan > Power Cord Plug. Determined by the 3-digit DPMO WT country code. The plug most commonly used in the country is shipped. <)
- (Canada, Mexico, Nicaragua only > Power Cord Plug. A non-locking plug is shipped. <)
- (Japan only > Power Cord Plug. A locking plug is shipped. <)
- Nomenclature: The country code is used to select the language of the nomenclature provided on the operator and power control panels, based on the language most commonly used in that country. The following languages are available:

English	Portuguese
Japanese	Spanish
French	
- Communications Cable: (Model 1R) For the EIA RS-232-C/CCITT V.24 Electrical Interface.
- Two control diskettes containing 3174 Configuration Support A microcode and one utility/diagnostic diskette, which is required for 3174 subsystem on-site problem determination.

SPECIFY

- Specify #2998 (mandatory specify).

The remainder of the "Specify" section can be ignored if the options described in the "Basic Configuration" section are satisfactory. These specify features are shipped in lieu of the corresponding item(s) listed above. Unless indicated otherwise, these specify features are available only at the time of manufacture.

- (Canada only > Voltage (AC, 1-phase, 60 Hz): (Model 1L) Specify #0802 for 120V power.
- Power Cord Plug. Specify one of the following:
 - Locking Plug: #9890
 - Waterproof Plug: (Model 1L) #9801. Limitations: Cannot be installed with 120V power (#0802). <)
- (Except Canada > Power (AC, 1-phase, 50/60 Hz). Specify one of the following:
 - 100-127V: #0802
 - 200-240V: #0801 <)
- (Canada, Nicaragua only > Power Cord Plug. Specify #9890 for locking plug. <)
- (Mexico only > Power Cord Plug. Specify #9890 for locking plug. Prerequisites: 200-240V Power (#0801). <)

- (Japan only > Power Cord Plug. Specify #9891 for non-locking plug. Limitations: Cannot be installed with 200-240V Power (#0801). <)
- Machine Nomenclature. Specify one of the following:

English #2924	Portuguese #2933
Japanese #2930	Spanish #2931
French #2928	
- CCITT V.35 Communications Cable: (Model 1R) Specify #9000 for CCITT V.35 Electrical Interface Cable. (This code causes a CCITT V.35 communication cable to be shipped instead of an EIA RS-232/CCITT V.24 cable.)
- Auxiliary Microcode Diskettes: Provides a diskette containing the operational microcode for each of the Distributed Function Terminals (DFTs) and 3174 features listed below. The diskette must be placed in the optional 1.2Mb Diskette Drive feature (#1046) or loaded on the optional 20Mb Fixed Disk Drive feature (#1056) and be available at all times to automatically provide the DFTs with downstream load services. A merge procedure is provided to combine multiple auxiliary microcode diskettes including that for the Asynchronous Emulation Adapter optional feature (#3020), onto one downstream load diskette. (Auxiliary microcode diskettes are available via MES.)
 - Asynchronous Emulation Adapter Microcode Diskette (#9015): For 3174 Subsystem Control Units that provide Central Site Library and Customization facilities and do not require the Asynchronous Emulation Adapter function or hardware.
 - 3179-G/3192-G Color Graphics Display Station Downstream Load Microcode Diskette (#9016).
 - 3193 Display Station Downstream Load Microcode Diskette (#9017).
 - 3290 Information Panel Downstream Load Microcode Diskette (#9021).
 - (Japan only > Specify #9025 for Katakana language. <)

Prerequisites/Corequisites: 1.2Mb Diskette Drive or 20Mb Fixed Disk (#1046 or #1057) for use with any Auxiliary Microcode Diskette.

- Central Site Diskette Distribution Aid: Specify #9006 for the designated central site 3174, allowing it to obtain all levels and combinations of 3174 microcode, microcode RPQs, and DSL device microcode. It can then customize for any network 3174 serviced from the central site. (This feature is available via MES.)

SPECIAL FEATURES

Special features ordered before a machine is shipped are set up by IBM. Special features ordered after a machine is shipped are set up in the field by the customer; instructions are provided.

Configuration Support-A Multiple Sessions and Storage Considerations

- Multiple Sessions Using the MLT Function:

For each terminal attached to the 3174, select the appropriate weighting factor in the following table. The sum of the weighting factors for a given 3174 determines the required level of MLT (level 0, 1, 2, or 3) to support the selected MLT sessions.

MLT Weighting Factors Based on Display Characteristics	Number of MLT Sessions/Display				
	1	2	3	4	5
Model 2; w/o EAB	0	3	6	9	12
Model 2; with EAB	0	5	10	15	20

Model 3, 4, or 5; w/o EAB	0	5	10	15	20
Model 3, 4, or 5; with EAB	0	9	18	27	36

For MLT level 0, the sum of weighting factors is 0.

For MLT level 1, the sum of weighting factors must not exceed 45.

For MLT level 2, the sum of weighting factors must not exceed 90.

For MLT level 3, the sum of weighting factors must not exceed 291.

- Storage Requirements by Feature and Function Combinations:

Any one of following feature combinations is operable within its listed storage requirement. (Features/functions not shown in the following lists, do not increase storage requirements above that listed below.)

Legend For Storage Figure:

AEA = Asynchronous Emulation Adapter (#3020)
 CSCU CC = Central Site Customizing Utility at a "Central Site Control Unit" (offline)
 CDIS = Control Diskette In Storage (optional function of CSCU)
 CSCM CC = Central Site Change Management at a "Central Site Control Unit"
 CSCM NC = Central Site Change Management at a "Network Control Unit"
 DSK = 1.2Mb Diskette Drive (either base or feature)
 FD1 = One 20Mb Fixed Disk Drive (#1056)
 FD2 = Two 20Mb Fixed Disk Drives
 FD1/2 = Either one or two 20Mb Fixed Disk Drives
 MLTn = Multiple Logical Terminal Level 1, 2, or 3
 BASE = All except functions listed above

- Function Combinations That Fit Within 1Mb of Storage:

* CSCU CC (DSK or FD1)
 * (BASE)
 * (BASE) + MLT1
 * (BASE) + MLT2
 * (BASE) + CSCM NC (DSK or FD1/2)
 * (BASE) + CSCM CC (DSK only)
 * (BASE) + MLT1 + CSCM NC (DSK or FD1/2)
 * (BASE) + MLT1 + CSCM CC (DSK only)
 * (BASE) + AEA
 * (BASE) + MLT1 + AEA

- Function Combinations That Require 1.5Mb of Storage:

* CSCU CC (FD2)
 * (BASE) + MLT3
 * (BASE) + CSCM CC (FD1/2)
 * (BASE) + MLT1 + CSCM CC (FD1/2)
 * (BASE) + MLT2 + CSCM NC (DSK or FD1/2)
 * (BASE) + MLT2 + CSCM CC (DSK or FD1)
 * (BASE) + MLT3 + CSCM NC (DSK or FD1/2)
 * (BASE) + MLT3 + CSCM CC (DSK only)
 * (BASE) + MLT2 + AEA
 * (BASE) + MLT3 + AEA
 * (BASE) + AEA
 * (BASE) + CSCM NC (DSK or FD1/2)
 * (BASE) + AEA
 * (BASE) + CSCM CC (DSK or FD1/2)
 * (BASE) + MLT1 + AEA
 * (BASE) + MLT1 + CSCM NC (DSK or FD1/2)
 * (BASE) + MLT1 + AEA

- * (BASE) + MLT2 + CSCM CC (DSK or FD1) + AEA
- * (BASE) + MLT2 + CSCM NC (DSK or FD1/2) + AEA
- * (BASE) + MLT2 + CSCM CC (DSK or FD1)

● Function Combinations That Require 2Mb of Storage:

- * CSCU CC + CDIS (DSK)
- * (BASE) + MLT2 + CSCM CC (FD2)
- * (BASE) + MLT3 + CSCM CC (FD1/2)
- * (BASE) + MLT1 + AEA + CSCM CC (FD2)
- * (BASE) + MLT2 + AEA + CSCM CC (FD2)
- * (BASE) + MLT3 + AEA + CSCM NC (DSK or FD1/2)
- * (BASE) + MLT3 + AEA + CSCM CC (DSK or FD1/2)

● Functions Combinations that require 2.5Mb of Storage:

- * CSCU CC + CDIS (HF1/2)

512Kb Storage Expansion (#1011): Provides an additional 512Kb of control storage for features, functions, and RPQs that use more than the 1.0Mb base storage. Maximum: Two (see "Limitations"). Limitations: Two card slots are provided for storage expansion. The slots can be used for this feature or #1012, therefore the sum of #1011 and #1012 cannot exceed two. 32K addresses between 2.0M and 2.5M are reserved for control unit usage. The 1.0Mb Storage Expansion feature (#1012) should be considered, in lieu of this feature, to accommodate future functional growth and for the most efficient use of the available card slots.

1.0Mb Storage Expansion (#1012): Provides an additional 1,024Kb of control storage for features, functions and RPQs that use more than the 1.0Mb base storage. This feature is recommended to facilitate generating customized control diskettes for network 3174 Control Units through the Central Site Customizing procedure. Maximum: Two (see "Limitations"). Limitations: Two card slots are provided for storage expansion. The slots can be used for this feature or #1011, therefore the sum of #1011 and #1012 cannot exceed two. 32K addresses between 2.0M and 2.5M are reserved for control unit usage.

1.2Mb Diskette Drive (#1046): Provides approximately 1.2Mb of additional diskette storage via a second diskette drive for high-capacity diskettes. This feature or the 20Mb Fixed Disk Drive feature (#1056) is a prerequisite to support the following features and functions of the 3174 subsystem: Asynchronous Emulation Adapter feature (#3020), attachment of any terminal that requires downstream load of microcode from the control unit (e.g., 3179-G), use of the Central Site Customization procedure, use of the Merge Downstream Load procedure, and use of the Full Copy or Modify and Copy facilities of the Copy Files procedure. This feature is not required to support other procedures, but can enhance their usability and reduce the time required to execute many of them due to the reduction or elimination of diskette swapping on a single-drive control unit. Maximum: One. See "Supplies" section for additional diskettes.

20Mb Fixed Disk Drive (#1056): Provides 20Mb of file storage. It supports all the functions provided by the 1.2Mb diskette drives, including control unit microcode IML, microcode downstream load to terminals and features that require it, and full support of all utility procedures. This feature is not a prerequisite for the Central Site Customizing Utility or Central Site Change Management, but their usability is significantly improved when it is used. Maximum: Two. Limitation: 3174 Configuration Support-S microcode for the IBM Token-Ring Network 3270 Gateway feature does not support the 20Mb Fixed Disk Drive feature.

Asynchronous Emulation Adapter (#3020): Provides an adapter with a microprocessor, storage and control logic, an I/O panel with eight EIA 232-C connectors and a diskette containing the microcode for the adapter. (This microcode is the same that is provided on Auxil-

iary Microcode Diskette #9015, which should not be ordered when #3020 is ordered.) An ASCII terminal or host may be attached to each port using switched or nonswitched (direct connect or dedicated line) transmission facilities. The adapter supports:

- ASCII Terminal Emulation: 3270 Displays can emulate a 3101 or DEC VT100 display and 3270 Printers can emulate an ASCII printer for connection to ASCII hosts or public data networks.
- 3270 Terminal Emulation: ASCII displays can emulate a 3178 Model C2 or 3279 Model 2A (4-color display) and ASCII printers can emulate a 3287 Model 2 for connection to an IBM host.
- ASCII Pass-Through: ASCII displays and printers can connect to ASCII hosts and public data networks through the adapter.

The adapter supports full-duplex, character mode, asynchronous transmission of seven-bit ASCII (ANSI 3.4, 1977) data with parity. Odd, even, mark, space, and no-parity coding are supported. Each port provides an EIA 232-C electrical interface and supports transmission speeds of 300, 600, 1200, 2400, 4800, 9600 and 19,200 bps via modems over nonswitched and switched communications facilities or via direct connection without modems. Transmit and receive speeds must be the same. Autobaud detect and XON/XOFF, DTR, and CTS asynchronous flow controls are supported.

Ports are configurable in any combination of ASCII Terminal Emulation, 3270 Terminal Emulation and ASCII Pass-Through.

ASCII Terminal Emulation for display terminals: 3270 CUT mode displays with a 1920 byte or larger buffer and 3270 PCs operating in CUT mode are supported for 3101 and DEC VT100* display emulation.

* Registered trademark for Digital Equipment Corporation.

ASCII display emulation provides the following support:

- Full-duplex character mode data transmission.
- 24 lines at 80 character per line.
- Operator indicator line.
- Mapping of the 3270 Display keyboard.
- Data stream mapping.
- Function keys.
- Typematic keys.
- ALT key (3101).
- Caps Lock key (VT100).
- CTRL key (VT100).
- Break key (long and short for VT100).
- ASCII display keyboard setup options that have equivalent 3270 keyboard setup functions.
- Specification by controller customization of terminal setup options which can be supported on the 3270 Display.

The 3101 functions and keys that are not supported are:

- Half-duplex transmission and functions associated with half-duplex operation.
- Block Mode and keys active in Block Mode.
- Reverse video.
- Local mode.
- Transparent mode.
- Auxiliary printer port and associated keys.

The DEC VT100 functions and keys that are not supported are:

- Keys associated with setup mode which do not have equivalent 3270 keys.
- Interface Mode.
- Screen Mode (Reverse and Normal).
- Set Character Set.
- Invoke Confidence Test.
- Attached printer and Hard Copy key.

IBM typewriter, APL, and text keyboards are supported via specific keyboard maps for emulating the 3101 or the DEC VT100. Keys that are not applicable to ASCII display emulation are not active.

See the "3174 Subsystem Control Unit Asynchronous Emulation Adapter Introduction", GA23-0331, for more detailed information on supported keyboards and their mapping.

ASCII Terminal Emulation for printers: The 3287 Models 1 and 2, 3262 Models 3 and 13, 3268 Model 2 and 4224 Models 201 and 202

are supported for ASCII printer emulation. ASCII control codes for the following functions are supported: Line feed, form feed, carriage return, bell, and tab-skip to the next multiple of eight characters.

3270 Terminal Emulation for displays terminals: The following ASCII displays are supported for 3270 Terminal Emulation: 3101, 3151 as a 3161 or 3162 depending on the model, 3161, 3162, and 3163, DEC VT52, VT100 and VT200 (emulating a VT100), TeleVideo(1) 912 and 970, Lear Siegler ADM(2) 3A, ADM 5, ADM 11, ADM 12 and 1178, ADDS Viewpoint(3) A-2 and Viewpoint 78, Esprit-Hazeltine(4) 1500, and Esprit(5) 78, and Hewlett Packard(6) 2621. The 3164 is supported for 3279 Model 2A emulation (four colors). The DEC VT241 operates in two colors only.

1. Registered trademark of TeleVideo Systems, Inc.
2. Registered trademark of Lear Siegler, Inc.
3. Registered trademark of Applied Digital Systems, Inc.
4. Registered trademark of Hazeltine Systems, Inc.
5. Registered trademark of Esprit Systems, Inc.
6. Registered trademark of Hewlett Packard.

The user has the choice of a specific map designed for each ASCII display or a universal keyboard map. The ASCII display keyboards are not locked during a screen write. This enables keystrokes to be entered while the screen is being updated for greater keying productivity.

An operator indicator status line is provided on the 25th line for the ASCII displays that provide an accessible 25th line. For the others, an escape sequence is provided to display the operator indicator information on the 24th line. The indicator line can be toggled on and off when the 24th line is used.

IBM Personal System/2 systems and IBM Personal Computers meeting the attachment requirements and using a program that emulates one of the supported displays will be supported for 3270 Terminal Emulation. Other personal computers using a program that emulates one of the supported displays and other displays meeting the attachment requirements and matching the keyboard map, the graphics codes and the control sequences for a supported display for cursor positioning, line erase, screen erase, terminal setup and reset, highlighting (if supported), and operator status line control (if supported) will be supported.

Non-IBM devices may be attached to this emulation adapter under the provisions of the IBM Multiple Supplier Systems Bulletin. It is the customer's responsibility to determine that the emulation program provides identical function and operation as the emulated supported display.

3270 Terminal Emulation for printers: The 4201 Proprinter and Proprinter II, 4202 Proprinter XL, 4207 Proprinter X24 and 4208 Proprinter XL24 are supported for 3270 Terminal Emulation. The serial interface feature is required in order to attach to the Asynchronous Emulation Adapter.

Other ASCII printers that meet the attachment requirements and conform to the following characteristics will be supported for 3270 Terminal Emulation. Supports uppercase and lowercase alphabets or, if not, folds lowercase to uppercase. The printer must have a minimum of 80 print positions and should support the maximum line length sent by the application program. The following ANSI commands must be supported: Carriage Return (Control M, hex 0D), Line Feed (Control H, hex 0A), and Bell (Control G, hex 07). Carriage Return must not generate a Line Feed nor can a Line Feed generate a Carriage Return. The printer must not be dependent on any delay characters to allow for mechanical motion. Printers must use one of the flow control procedures supported by the adapter or be able to print at the full line speed.

ASCII Pass-Through: This option provides the connection of an ASCII terminal to an ASCII host or network through the adapter. The 7-bit data character is unchanged. The adapter flow controls must be used. The terminal and host lines can use different transmission speeds, parity options, number of stop bits, and flow controls.

Host Attachment: ASCII host attachment is via any port of any adapter on the same 3174 as the ASCII or 3270 terminals. IBM host attachment is via the host attachment interface of the 3174 in which the adapter is installed. A specific path can be specified through

control unit customization or a Destination Menu is provided to enable the terminal operator to select the desired host attachment.

Switched line ports can be collected into pools to provide more efficient utilization of dial facilities. Access to an ASCII host or public data network can be provided dynamically through switched port selection when a request is received from a 3270 or ASCII display. ASCII display dial-in ports may be included in the switched port pools for increased utilization if desired.

Camp-on (restarting a connection request when a port becomes available is supported for access requests to the 3270 host.

Online Tests, Error Logs and Alerts: Online tests will be available at the controller to provide status and error information for the adapter. Errors that can arise during asynchronous device operation will be logged and ALERTS generated in the same fashion as for 3270 devices.

Modems: In general, all leased lines, limited distance and switched line modems that provide full-duplex asynchronous transmission, support equal transmit and receive speeds and conform to EIA 232-C specification on the pins shown below should operate satisfactorily.

- 1 - GND - Frame Ground
- 2 - TD - Transmit Data
- 3 - RD - Receive Data
- 4 - RTS - Request to Send
- 5 - CTS - Clear to Send (optional)
- 6 - DSR - Data Set Ready
- 7 - SG - Signal Ground
- 8 - CD - Carrier Detect
- 20 - DTR - Data Terminal Ready
- 22 - RI - Ring Indicate
- 25 - BSY - Busy Out (optional)

The IBM 5841 and 5842, the Hayes 300 and 1200 and the Micom 3012 and 3024 intelligent modems are supported for autodial to ASCII hosts via CBXs, PBXs and the public switched network. The dial strings may be stored in the 3174 at customization or entered from the 3270 or ASCII display keyboard.

The 5841 cannot be used in switched port pools described in the "Host Attachment" section.

Other intelligent modems that use the "AT" or the Micom command set and meet the proceeding requirements will also be supported for autodial. Non-IBM modems may be attached to this emulation adapter under the provisions of the IBM Multiple Supplier Systems Bulletin.

Manual dial from a 3270 or ASCII display keyboard is supported for modems which accept dial commands as sequences of ASCII codes over the data leads and which return responses through the data leads. No lead changes are permitted during dialing.

Security: The Asynchronous Emulation Adapter provides password protection for access from ASCII displays via switched line ports. In addition, the adapter provides features that can be used with host application systems and programs to implement security and control functions at the host.

User management is responsible for evaluation, selection and implementation of security features, administrative procedures and appropriate controls in application systems and communication facilities.

Maximum: Three. Prerequisite/Corequisite: (1) 1.2Mb Diskette Drive or 20Mb Fixed Disk optional feature (#1046 or #1056), and (2) Base configuration support microcode released in conjunction with this feature. Limitations: (1) Cannot be installed with the IBM Token-Ring Network 3270 Gateway optional feature (#3025). (2) When non-SNA protocols are used to communicate with an IBM host, the maximum number of terminals supported for concurrent communications is 32. This limitation includes both IBM 3270 terminals and ASCII terminals emulating 3270 terminals. Performance Considerations: Response times when this feature is used will depend on many variables including the number and types of terminals attached, the transaction rates and contents, and system parameters such as RU lengths, pacing, etc. "Performance Guide-

lines for IBM 3X74 Attached Workstations", ZZ20-4167, will be updated to include Asynchronous Emulation Adapter information.

IBM Token-Ring Network 3270 Gateway (#3025): (Models 1L, 1R, 2R) Provides for data passage between an IBM host and Token-Ring Network. It includes an adapter, a 2.4m (8 ft) communications cable, and 3174 Configuration Support-S microcode, which consists of two control diskettes containing microcode to connect and manage an IBM Token-Ring Network downstream of the control unit, and one Utility/Diagnostic diskette for on-site subsystem problem determination. This feature provides the capability of up to 140 Token-Ring attached devices, as PU 2.0 nodes, to communicate with an IBM host. Any combination of the following Token-Ring attached devices are supported by this feature:

- 3174 Models 3R or 53R
- IBM PC using IBM PC Emulation Program Version 3
- IBM PC using APPC/PC (as a PU 2.0 node)
- System/36 with the LAN Attachment Feature, and using 3270 emulation or APPC (as a PU 2.0 node)
- IBM PC using IBM Operating System/2 Extended Edition Version 1.1
- IBM PC or 3270 PC using 3270 Workstation Program Version 1.1

The number of SNA logical units supported by each PU and the protocols used by these LUs are transparent to this feature. Using the Model 1L, each PU Type 2.0 attached to the Token-Ring appears to the host as a channel-attached 3270 SNA control unit having its own subchannel address. On a Model 1R or 2R, these PU Type 2.0s on the Token-Ring appear as SDLC multi-dropped 3270 SNA control units. 3174 Models 3R and 53R attached to the Token-Ring can attach up to 32 and 16 workstations, respectively. This capability is available in Release 2.0 on Models 1R and 2R using SNA/SDLC protocol in data half-duplex point-to-point or multipoint modes on duplex or half-duplex nonswitched facilities. SNA/X.25 protocol is not supported. The remote gateway can attach to a 308X, 3090, 4361, 4381, or 9370 via a 3270 or 3725 Communications Controller. The 3174 can also attach to the 4361 via its Communication Adapter or to the 9370 via the Telecommunications Subsystem Controller.

The number of devices using this capability is dependent on available 3174 storage and end-user response time requirements. The performance of the remote gateway is affected by the polling overhead of the SDLC multidrop implementation; factors affecting performance are line speed, distance from the Communications Controller or Adapter, application transaction characteristics, and the number of PUs being polled.

Except for response time considerations, this feature does not affect the operation of the displays, printers, or workstations directly attached to the 3174.

Maximum: One. **Prerequisites/Corequisites:** At least one Storage Expansion feature (#1011 or #1012). The amount of storage expansion is determined by the number of SNA PUs on the Token-Ring that are defined to the ACF/VTAM for host sessions. The maximum number of PUs that can be defined is 140. **Storage Requirements:**

- For the Model 1L:
 - Up to 28 PUs: One #1011 (Minimum required)
 - Up to 72 PUs: One #1012 (Minimum required)
 - Up to 116 PUs: One #1011 plus one #1012
 - Up to 140 PUs: Two #1012 (Maximum supported)
- For the Model 1R and 2R:
 - Up to 72 PUs: One #1011 (Minimum required)
 - Up to 140 PUs: One #1012 (Maximum supported)

Limitations: (1) Configuration Support-A, Release 1 will not operate in a machine that has the Token-Ring adapter associated with this feature installed; Release 2, or higher, is required. The Gateway function is not available when Configuration Support-A is loaded. (2) 3174 Configuration Support-S Release 2, which is shipped with this feature and provides the gateway function, contains all the applicable functions of the 3174 Configuration Support-A, Release 2. The enhancements announced for Release 3 are not provided. Release 2.1 of Configuration Support-S adds the Central Site Customizing Utility procedure. (3) The 3174 Configuration Support-S

microcode which is shipped with this feature does not support the 20Mb Fixed Disk Drive, Multiple Logical Terminal, or Central Site Change Management functions. (4) Cannot be installed with Asynchronous Emulation Adapter optional feature (#3020).

Performance considerations: For performance reasons, a customer may elect to limit the number of SNA PUs that concurrently pass traffic through the gateway to a number less than the number shown above. Consult "Performance Guidelines for IBM 3X74 Attached Workstations", ZZ20-4167, or use the HONE AID FIVE3270 to evaluate the actual performance to be expected in a desired configuration and user application/host environment.

Type 1 Teleprocessing Communication Adapter (#3040): (Models 1L, 3R) Provides a Type 1 communication adapter and a 6m (20 ft) EIA RS-232-C/CCITT V.24 communication cable. This feature, together with the appropriately configured microcode, enables these 3174 models to operate in an alternate configuration on teleprocessing facilities as a Model 1R. The host appearance of this configuration is also as a 3174 Model 1R. When this feature is installed in a 3174 that also has the IBM Token-Ring Network 3270 Gateway feature (#3025) installed and Configuration Support-S, Release 2.0 or 2.1 loaded, the gateway facilities provided in that feature are fully available. **Maximum:** One. **Prerequisites:** Two appropriately configured Control diskettes (one for the primary configuration, and one for the alternate configuration as a Model 1R). **Limitations:** (1) Cannot be installed with #3041, or 3043, (2) Cryptographic sessions via the Encrypt/Decrypt feature (#3680) are not supported, (3) IML of multiple configurations (i.e., the primary and the alternate) cannot be from the 20Mb Fixed Disk Drive (#1056), (4) Concurrent operation through this feature and the host interface provided in the base product is not supported, (5) Management and transmission of microcode for the alternate Model 1R configuration via Central Site Change Management are not supported.

Type 1 Teleprocessing Communication Adapter (#3041): (Models 1L, 3R) Provides a Type 1 communication adapter and a 6m (20 ft) CCITT V.35 communication cable. This feature, together with the appropriately configured microcode, enables these 3174 models to operate in an alternate configuration on teleprocessing facilities as a Model 1R. The host appearance of this configuration is also as a 3174 Model 1R. When this feature is installed in a 3174 that also has the IBM Token-Ring Network 3270 Gateway feature (#3025) installed and Configuration Support-S, Release 2.0 or 2.1 loaded, the gateway facilities provided in that feature are fully available. **Maximum:** One. **Prerequisites:** Two appropriately configured Control diskettes (one for the primary configuration, and one for the alternate configuration as a Model 1R). **Limitations:** (1) Cannot be installed with #3040, or 3043, (2) Cryptographic sessions via the Encrypt/Decrypt feature (#3680) are not supported, (3) IML of multiple configurations (i.e., the primary and the alternate) cannot be from the 20Mb Fixed Disk Drive (#1056), (4) Concurrent operation through this feature and the host interface provided in the base product is not supported, (5) Management and transmission of microcode for the alternate Model 1R configuration via Central Site Change Management are not supported.

Type 2 Teleprocessing Communication Adapter (#3043): (Models 1L, 3R) Provides a Type 2 communication adapter and a 6m (20 ft) CCITT X.21 (V.11) communication cable. This feature, together with the appropriately configured microcode, enables these 3174 models to operate in an alternate configuration on teleprocessing facilities as a Model 2R. The host appearance of this configuration is also as a 3174 Model 2R. When this feature is installed in a 3174 that also has the IBM Token-Ring Network 3270 Gateway feature (#3025) installed and Configuration Support-S, Release 2.0 or 2.1 loaded, the gateway facilities provided in that feature are fully available. **Maximum:** one. **Prerequisites:** Two appropriately configured Control diskettes (one for the primary configuration, and one for the alternate configuration as a Model 2R). **Limitations:** (1) Cannot be installed with #3040, 3041, (2) Cryptographic sessions via the Encrypt/Decrypt feature (#3680) are not supported, (3) IML of multiple configurations (i.e., the primary and the alternate) cannot be from the 20Mb Fixed Disk Drive (#1056), (4) Concurrent operation through this feature and the host interface provided in the base product is not supported, (5) Management and transmission of microcode for the alternate Model 2R configuration via Central Site Change Management are not supported.

Terminal Multiplexer Adapter (#3103): Provides an 8-port adapter to attach category "A" displays, printers, or workstations via RG-62A/U coaxial cable or IBM Cabling System media. Maximum: Four. Limitations: The maximum distance between the control unit and terminals attached via this feature is 1.5km (4,920 ft) when RG-62A/U coaxial cable is used, or 1.0km (3,280 ft) when IBM Cabling System Data Grade Media is used (assuming a balun is used at the terminal end of the cable). (Canada only) The maximum distance is 274m (900 ft) when using twisted-pair telephone wire. <)

Encrypt/Decrypt Adapter (#3680): (Models 1R, 2R, 3R) Provides an adapter to encrypt and decrypt data between SNA nodes. Encryption conforms with the United States National Bureau of Standards Data Encryption Standard (DES). Maximum: One. Prerequisites/Corequisites: 4.14V Mercury battery, P/N 1743456. (One is shipped with feature.) Limitations: Not for use with distributed function terminals. See "SUPPLIES" for additional or replacement batteries.

MODEL CONVERSIONS

Model conversions are available as indicated below. No other changes are possible. They are set up by the customer, using the instructions supplied.

Conversion to Model 1R: (Applicable to Models 2R and 3R) Provides a Type 1 communications adapter and a Model 1R nameplate. A 6m (20 ft) EIA RS-232-C/CCITT V.24 communications cable is shipped, unless a CCITT V.35 communications cable is specified.

- Specify #9000 for CCITT V.35 Communications Cable.

Conversion to Model 2R: (Applicable to Models 1R and 3R) Provides a Type 2 communications adapter, a Model 2R nameplate, and a 6m (20 ft) communications cable.

Conversion to Model 3R: (Applicable to Models 1R and 2R) Provides a Type 3 communications adapter, 3174 Configuration Support-A microcode (Release 2 or higher), a Model 3R nameplate, and a 2.4m (8 ft) communications cable.

ACCESSORIES

Accessories can be ordered from country Direct Marketing Centers or other responsible supplies marketing group.

Communication Cables: A communication cable connects the 3174 to a modem or other data circuit-terminating equipment (DCE). Accessory communication cables for the EIA RS-232/CCITT V.24 and CCITT V.35 electrical interfaces are available for 3174 Model 1R; accessory communication cables for the CCITT X.21 electrical interface are available for the 3174 Model 2R. Cables in 6m (20 ft) and 12m (40 ft) lengths are available. Order both the cable (by part number), and the "3174 Model and Interface Conversion Customer Setup Instructions" (by publication order number).

- Cable, RS-232/V.24, 6m (20 ft) - P/N 6423153
- Cable, V.35, 6m (20 ft) - P/N 6423325
- Cable, X.21, 6m (20 ft) - P/N 6168155
- Cable, RS-232/V.24, 12m (40 ft) - P/N 6423154
- Cable, V.35, 12m (40 ft) - P/N 6423327
- Cable, X.21, 12m (40 ft) - P/N 6168156
- CSU Instructions, Canadian/French - GA09-0371
- CSU Instructions, English - GA23-0295
- CSU Instructions, French - GA11-0509
- CSU Instructions, Spanish - GA10-8843
- CSU Instructions, Japanese - N: GA23-0295

Charges: For local charges, consult your IBM marketing representative.

IBM 3270 DPC-T3 Adapter (P/N 83X9758): A cable adapter assembly that permits direct attachment to telephone twisted pair wire, that meets the IBM Cabling System Type 3 specifications, up to a maximum distance of 275m (900 ft.). It is 4.6m (15 ft.) in length with an IBM Dual Purpose Connector (DPC) at one end and a miniature six-pin modular telephone connector on the other end. The telephone connector can be cut off, and the wire inserted directly into telephone punch-down blocks that are capable of accepting stranded telephone wire. The accessory can also be used at the terminal end of the wire provided the terminal has an IBM Dual Purpose Connector (DPC). (Canada only) Otherwise, a CTPA is required. <)

Ordering: Order via NDD DRO or via Distributors authorized to market the IBM Cabling System components. Minimum order quantity is one package which contains ten IBM 3270 DPC-T3 Adapter assemblies.

MACHINE ELEMENTS (NONE)

SUPPLIES

None required with the machine order.

Supplies can be ordered from country Direct Marketing Centers or other responsible supplies marketing group.

Battery, Mercury (P/N 1743456): Provides 4.14V mercury battery for the Encrypt/Decrypt Adapter (#3680).

Diskettes (P/N 6109660): Provides a slipcase (SC) containing ten blank 5-1/4 inch diskettes with 1.2Mb of usable capacity for 3174 Diskette Drives.

IBM 3174 Diskette Identification Labels (GX23-0389): Provides five labels to uniquely identify diskettes used with the 3174.

Diskette Mailer (P/N 2656102): Provides one diskette mailing container.

X.21/X.25 Keyboard Labels: Provides 12 sets of seven keyboard stick-on labels (on one sheet) for X.21 switched network or X.25 network operation via a 3174 Model 1R or 2R. Order both the labels (by part number), and installation instructions (by publication order number).

- Sheet of Labels - P/N 1743595
- Instructions, English - G126-0158
- Instructions, Canadian/French - G509-2504

Charges: For local charges, consult your IBM marketing representative.

CABLING INFORMATION

Coaxial Cable: For proper identification, installation, and application of cable and associated accessories, refer to "Installation and Assembly of Coaxial Cable and Accessories" for Attachment to IBM Products, GA27-2805.

IBM Cabling System: For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System Planning and Installation Guide", GA27-3361.

(Canada, Australia, Japan only) Twisted Pair Telephone Wire: For proper identification, installation, and application of cable, refer to "IBM/Rolm Planning and Installation Guide for 3270 Coax to Twisted Pair Adapter", GA27-3722. <)

3174 SUBSYSTEM CONTROL UNIT MDLS 51R, 52R, 53R

PURPOSE

Small-cluster control units for remote or local area network attachment of up to 16 IBM 3270 Information Display System displays, printers, and workstations to IBM host processors via telecommunications links or IBM Token-Ring Networks. An optional feature provides for attachment to ASCII terminals and hosts via telecommunications links.

MODELS 51R, 52R, 53R

Model 51R: EIA RS-232-C/CCITT V.24 and CCITT V.35 interfaces for SNA/SDLC, BSC, or X.25 remote link attachment.

Model 52R: CCITT X.21 interface for SNA/SDLC or X.25 remote link attachment.

Model 53R: IBM Cabling System interface (IEEE 802.5/ECMA 89) for IBM Token-Ring Network attachment.

Prerequisites:

1. A control unit terminal (CUT) or 3270-PC operating in CUT mode attached to port 0 is required to customize subsystem microcode or to run offline diagnostics from a display.
2. A CUT or 3270-PC operating in CUT mode attached to any port is required to perform subsystem RAS tests.
3. A CUT or 3270-PC operating in CUT mode attached to any port is required to establish X.21 switched network and X.25 sessions. After session establishment, all terminals, CUT and DFT, can use the established session.
4. An IBM 3299 Terminal Multiplexer is required to attach more than nine terminals to these models.
5. The Model 53R requires 3174 Configuration Support-A, Release 2 (or higher) microcode, which is shipped with each machine.

Customer Setup (CSU): All models and features ordered via MES after the machine is shipped from IBM are designated as Customer Setup.

HIGHLIGHTS

The 3174 is a non-programmable subsystem control unit to attach IBM 3270 Information Display System displays, printers, and workstations to IBM host processors. An optional feature provides for attachment to ASCII terminals and hosts. The 3174 runs under control of its integrated microprocessor and associated control program, which can be customized by the user to meet specific requirements.

Units are shipped with a host-attachment interface, 1.0Mb of control storage, a 1.2Mb diskette drive, and a 9-port terminal adapter to attach supported devices (see "Terminal Attachment") either directly (nine terminals), or via two IBM 3299 Terminal Multiplexers (16 terminals), or via a combination of one terminal multiplexer (eight terminals) and eight directly attached. The Model 51R provides both EIA RS-232 (CCITT V.24) and CCITT V.35 interfaces. The desired interface is enabled during IML of the control unit, based on the type of communication cable (RS-232 or V.35) that is attached. Models 51R and 52R are shipped with a 6m (20 ft) communications cable, and Model 53R is shipped with a 2.4m (8 ft) communications cable. All units are shipped with a 4.3m (14 ft) power cord.

Characteristics of the 3174 Models 51R, 52R, and 53R include:

- Function base equivalent to the 3274 Model 61C with Configuration Support D microcode, except:

- A Loop Adapter is not offered.
- An Encrypt/Decrypt Adapter is not offered.
- IBM 3278 Model 1 displays (960-character buffer) and use of the 960-character buffer format by printers are not supported.
- (Canada only > IBM 3278/3279 PC Attachment features (#5315, #5316/#5325, #5326) are not supported. <)

• New features and functions, including:

- Model for attachment to the IBM Token-Ring Network.
- Multiple Logical Terminals support for interaction with up to five host sessions in base microcode. Four levels of MLT support are selectable at customization: MLT Level 0 allows no MLT; MLT Level 1 allows up to 16 Model 2 non-EAB (Extended Attribute Buffer - display characteristic) displays, each with two sessions; MLT Level 2 allows up to 16 EAB displays, each with two sessions; MLT Level 3 allows up to 32 EAB displays, each with two sessions. Other combinations are possible (refer to Customization documentation). The maximum number of devices for Models 51X, 52X, or 53X is 16. See the Configuration Support-A Storage Chart under Special Features for storage requirements for MLT and other features/functions.
- Support for up to 84 SNA LU's.
- Response Time Monitor in 3174 base hardware.
- IBM Token Ring Network 3270 Gateway feature (Release 2.0) for Models 51R and 52R to provide data passage between an IBM SNA host and terminals attached to an IBM Token-Ring Network downstream of the 3174.
- Asynchronous Emulation Adapter feature that provides 3270 terminal emulation for communication between ASCII terminals and IBM hosts, and ASCII terminal emulation for communication between IBM control unit terminals (CUTs) or IBM PCs operating in CUT mode and ASCII hosts.
- 3178 Model C30 and C40 keyboard support in base microcode.
- X.21 Short Hold Mode support in base microcode.
- ASCII-8 and ASCII-International character set support in base microcode.
- (APG only > Support for Thai language in base microcode. <)
- Support for the IBM Enhanced Keyboard, available on recent IBM displays, in base microcode.
- X.25 support without the need for additional storage.
- Cabling to devices via direct attachment to IBM Cabling System media. A balun cable assembly is not required.
- A basic 5.25-inch, high-capacity diskette drive, and capacity for another as an optional feature.
- Accommodation for up to 10 microcode RPQs per control unit.
- Mountable in an industry standard rack or on a table top.
- CMOS technology and VLSI circuitry for better RAS characteristics, lower power consumption, and a smaller footprint than 3274 Control Units.
- TP link speeds up to 64K bps.

- 1.0Mb of control storage to accommodate the control program and microcode-selectable functions. Control storage features in increments of 512Kb and 1.0Mb are provided for features, functions, and RPQs that use more than the 1.0Mb base storage.
- 20Mb Fix Disk Drive feature for specified models.
- Improved RAS characteristics:
 - Reliability and availability of the 3174 are enhanced by the following elements:
 - ▲ Built-in microcode and hardware error recovery.
 - ▲ Self-identifying adapters by type number and location at both IML and control unit diagnostic operation.
 - ▲ Uninterrupted IML for non-critical conditions. Complements host-initiated IML under Central Site Change Management.
 - ▲ Continued control unit operation by unaffected portions during faults in the Terminal Adapter, Asynchronous Emulation Adapter, and IBM Token-Ring Network 3270 Gateway Adapter.
 - ▲ Hardware error correction code for storage.
 - ▲ Dynamic storage reconfiguration.
 - ▲ Fewer field-replaceable units.
 - Serviceability of the 3174 is enhanced by the following elements:
 - ▲ Self-configuring offline diagnostics, with automatic or manual selection.
 - ▲ FRU call out at operator's panel and/or display terminal.
 - ▲ Error status codes reported on four, 7-segment light emitting diodes (LED).
 - ▲ Errors time-stamped and logged to the diskette.
 - ▲ Expanded Alerts, including type and location of failing components, specifics of Bind failures, and specifics of failing data streams.
 - ▲ Device attachment media threshold Alerts without the need for a timer special feature.
 - ▲ Logging of executing task and microprocessor priority level upon control unit failures.
 - ▲ Terminal interface driver/receiver wrap capability.
- Improved Customization. Customization of subsystem control units is enhanced through the following elements:
 - A central site customizing facility (see "Central Site Customizing", below, under "Offline Utility Procedures".)
 - Electronic distribution of customization parameters and/or data via the Central Site Change Management function.
 - Use of words and phrases on the customization panels, as opposed to only numbers and symbols.
 - Error messages presented on screen.
 - Optional selection of Printer Authorization Matrix definition panel, with self-explanatory prompts.
 - Reduced number of questions for equivalent function.
 - Reduced diskette swapping.
 - Expanded use of defaults.
 - Reduced machine execution time.
 - Use of full screen with a CUT-mode terminal Model 3 or 4, rather than presentation in a Model 2 format.
- Offline Utility Procedures. 3174-based offline utility procedures to aid in configuring and managing of 3174 microcode and to provide offline diagnostic functions are provided on a Utility/Diagnostic diskette. The procedures are invoked from a 'Master Menu' panel that is displayed on a Control Unit Terminal (CUT) attached to port 0. 3174 offline utility procedures include:
 - Customize the Control Diskette. Provides facilities to configure control unit microcode, define printer authorization matrix, merge RPQs, and modify keyboards.
 - Merge Downstream Load. Provides the ability to merge the microcode provided on individual auxiliary microcode diskettes for the Asynchronous Emulation Adapter feature (#3020) and downstream-load terminals, such as the 3192 "G" Models, on to one downstream load diskette. Use of this procedure requires the 1.2Mb Diskette Drive optional feature (#1046) or 20Mb Fixed Disk Drive optional feature.
 - Copy Files. Through its seven variations, provides a means of duplicating diskettes, copying specific data areas, and copying with configuration modifications from one control diskette to another. The functions of the 3274 "Diskette Processing Aid" RPQ 8K1071 are included in this procedure. The 'Full Copy' and 'Modify and Copy' facilities require the 1.2Mb Diskette Drive optional feature (#1046) or the 20Mb Fixed Disk Drive optional feature A feature is not required for the other Copy Files options, but their usage is enhanced with one, since the need for diskette swapping is reduced.
 - Diagnostics. Provides a full range of offline diagnostics. They are selected from a menu panel when this procedure is invoked.
 - Microcode Upgrade. Provides a process to update a newly released control diskette with the configuration data from a down level control diskette, thus reducing the time required to execute this task.
 - Identify Customizing Keyboard. Expands the types and configurations of keyboards from which the 3174 customization process can be executed.
 - Central Site Customizing. Enhances the management, distribution, and control of microcode for 3174 control units in a network. It provides the ability to create offline, a Central Site Library (CSL) of network control unit data; create, modify, browse, or delete library members; and generate customized control diskettes for mailing to network 3174s. The 1.2Mb Diskette Drive optional feature (#1046) or 20Mb Fixed Disk Drive optional feature (#1056) is required to use this procedure. Although not required, additional storage is recommended to facilitate generating diskettes for network control units by reducing the time and manual intervention required to read individual, duplicate control diskettes. (See "Configuration Support-A Multiple Sessions and Storage Considerations" for details.) This procedure is a prerequisite for Central Site Change Management. It does not support microcode management, distribution, or control for a 3174 Model 1L with the IBM Token-Ring Network 3270 Gateway optional feature (#3025) Release 2.0 or lower.
 - Central Site Change Management. Provides electronic distribution of customization parameters and/or data to network 3174's. The Central Site Customizing Utility function in Configuration Support-A, Release 3 is required on a 3174 Model 51R, 52R, or 53R that is designated as the central site control unit. Electronic distribution is via Distributed Systems Executive (DSX) Version 4, Release 1 in the IBM central site host via support in ACF/VTAM Version 3, Release 2. Electronic distribution of customization parameters is to any model of the 3174 in a non-disruptive mode. Electronic distribution of other data may require network site intervention depending on that network 3174's model and/or hardware features installed. The 20Mb Fixed Disk Drive feature is not a prerequisite but is desirable for some 3174's participating in Central Site Change Management. Additional storage may be required when combined with other features (see Configuration Support-A Storage Chart). In addition to providing the electronic distribution support for central site control units, CSCM also provides the complementary support to receive customization parameters and/or data at the network control units. Central

Site Change Management is not available in 3174's with the IBM Token-Ring Network Gateway feature (#3025) installed.

- Improved Usability:
 - Operator's panel with 10-key numeric pad and four 7-segment light emitting diode (LED) readouts.
 - User-friendly problem determination tools, including self-configuring diagnostics, extensive use of program function keys, and formatted displays of configuration data.
 - Multi-purpose teleprocessing adapters that provide variable operating speeds, host attachment interfaces, and protocol support.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system, and other vendor preparation.
2. Price quotations, installation, and costs (initial and recurring) of common carrier equipment and service.
3. Receipt at the customer's receiving dock, unpacking, and placement of the unit.
4. Procuring and attaching appropriate cables for connections between the Asynchronous Emulation Adapter and terminals/modems.
5. Physical setup, connection of cables to communication lines/modems and IBM CSU devices, setting switches, and check out.
6. Contacting Customer Engineering to make 3174 cable connections to non-CSU IBM units.
7. Performing customization in accordance with IBM-supplied procedures:
 - For initial setup.
 - When made necessary by changes in configuration.
 - For updating control unit diskettes (at customer option).
 - When initializing and updating the keyboard tables using the Keyboard Definition facility of the customization procedure.
8. Setup of features ordered after the unit is shipped from IBM.
9. Using the problem determination procedures provided with the unit prior to calling IBM for service.
10. Following instructions provided by IBM regarding relocation.

Publications: See "KWIC Index", G320-1621, or applicable system bibliography.

3270 - GA23-0058
4300 - GC20-0001
8100 - GC20-8100

HONE: Use the HONE configurator (CF3270) to assist in configuring the 3174 before entering an order.

TERMINAL ATTACHMENT

All 3174 models use the same terminal attachment interface architectures; they are the same as used by the 3274. Documentation describing the interface between 3X74 control units and their attached terminals is available.

The displays, printers, 3270-PCs, and IBM PCs (and associated emulation software) supported for attachment to the 3174 are listed below. Products and software not specifically listed should be tested by the customer to verify correct operation. Continued improvements in the 3174 and attaching terminals may require micro-

code or hardware updates to the attaching products. Refer to RETAIN for information on product compatibility.

Terminals can attach to 3174 Models 51R, 52R, or 53R via IBM 3299 Terminal Multiplexers, or via IBM 5209 3270-5250 Link Protocol Converters, or via the terminal attachment ports provided on the 3174.

Either RG-62A/U coaxial cable, IBM Cabling System media (Canada, Australia, Japan only) or specified telephone twisted-pair wire (IBM Cabling System Type 3 media) can be used for connections to the 3174. Depending on the type of wire used, the distance between the 3174 and its attached terminals can be up to 1,500m (4,920 ft); when an IBM 3299 is used, the maximum distance can be up to 3000m (9840 ft). The 3174 ports are Dual Purpose Connectors (DPC), which do not require a balun cable assembly to connect terminals via IBM Cabling System Types 1, 2, or 9 media, but some terminals may. (Refer to the appropriate terminal pages.) Using a balun assembly reduces the maximum allowable wire lengths as shown below.

3174 Terminal Attachment Maximum Wire Lengths

Number of Baluns	RG-62A/U Coaxial Cable		IBM CABLING SYSTEM MEDIA			
			Types 1 & 2		Type 9	
	m	ft	m	ft	m	ft
0	1500	4920	1500	4920	1000	3280
1	N/A	N/A	1000	3280	667	2186

(Canada Only) IBM Cabling System Type 3 Media (specified telephone twisted-pair wire) can also be used for connections to the 3174. Connection to the telephone twisted pair can be via an IBM/Rolm Coax to Twisted Pair Adapter (CTPA) or equivalent. When one end of the telephone twisted pair is attached to a CTPA, the maximum wire length is 275m (900 ft). <)

DISPLAY AND PRINTER ATTACHMENT

The following displays and printers are supported for attachment to the 3174. (See Note 1.) The Type-Models (prerequisites) Names are:

- *3178-C10, C20 Display Station
- *3179-1 Color Display Station
- 3179-G1, G2 Color Display Station
- *3180-1 Display Station
- *3191-A1X, B1X, D1X, E1X, L1X, , A2X, A3X, B2X, B3X, D2X, D3X, E2X, E3X, L2X, L3X Display Station
- *3192-C1X, F1X, , C2X, C3X, F2X, F3X, Color Display Station
- *3192-D1X, L1X, , D2X, D3X, L2X, L3X Display Station
- 3192-G10, G20, G30, G40 Color Graphics Display Station
- 3193-1, 2 (Note 2) Display Station
- *3194-C10, C20, D10, D20, H10, H20, H50 Display Terminal
- 3262-3, 13 Line Printer
- 3268-2 Printer
- 3268-2C Color Printer
- *3278-2, 3, 4, 5 Display Station
- *3279-S2A, S2B, S3G, 2X, 3X Color Display Station
- 3287-1, 2 (#8331) Printer
- 3287-1C, 2C Printer
- 3290-220, 230, T30 Information Panel
- 3812-2 (#3190) Pageprinter
- 3814-A1, A2, A3, A4 (#1440) Switching Management System
- 4224-201, 202, 2E2, 2C2 Printer
- 4234-1 Dot Band Printer
- 4245-D12, D20 (Note 2) Line Printer
- 4250-1 (Notes 2, 3) Printer
- 4250-2 (Notes 2, 3) 4250/II ElectroCompositor
- 5210-G1, G2 Printer
- (APG only) 5227-11 Printer
- 5578 (Note 4) Japanese Workstation <)

* Control unit terminal (CUT) or terminal that can operate in CUT mode and be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions.

Notes:

1. IBM 3278 Model 1 displays (960-character buffer) and the "960 Character Print Operation" option that is available on some printers are not supported.
2. The high data volumes possible with this device may not be realized when attached to Models 51R and 52R via TP links. It is strongly recommended that the "Performance Guidelines for IBM 3X74 Attached Workstations", ZZ20-4167, be consulted to determine what performance may be expected.
3. Requires 4250 RPQ 7B0980.
4. (APG only) This terminal can operate in CUT mode and be used for customization. <

PERSONAL COMPUTER ATTACHMENT

IBM 3270-Personal Computers: The IBM 3270-PCs supported for attachment to the 3174 are listed below. Current host communications programs that support a 3270-PC attached to a 3274 will work unchanged with a 3270-PC attached to a 3174. Any 3270-PC operating in CUT mode can be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions. The Type/Model(s) (Names) are:

5271 All (3270-PC)
5273 All (3270-PC AT)
5371 All (3270-PC/G, GX)
5373 All (3270-PC AT/G, AT/GX)

IBM Personal Computers: The following IBM PCs are supported for attachment to the 3174 when emulating the functions of a 3278 Display Station Model 2 or a 3279 Color Display Station Model 2A or S2A through the software listed below. IBM PCs operating in CUT mode (APG only) except for the IBM 5550 family < can be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions. The Type/Model(s) /Prerequisite/ (Names) are:

- 5150 All /#5050/ (Personal Computer)
- 5160-068, 078, 086, 087, 088, 089, 267, 268, 277, 278 /#2507 or #5050/ (Personal Computer XT)
- 5170-068, 099, 239, 319, 339 /#2507 or #5050/ (Personal Computer AT)
- 5170-599, 739, 919, 939 (Personal Computer AT/370)
- (APG only) > 5540/5550/5560 System (Notes 1, 2) (IBM 5550 Family (as 3270)) <
- 6150-20, 25, A25 (RT Personal Computer)

- 9370 (Processor Console)

(APG only) Notes:

1. Requires 3174 RPQ 8K1349, which is shipped with each machine in Japan, for 5550 printer sharing.
2. Can operate in CUT mode and be used for customization. <

IBM PC 3278/79 Emulation and File Transfer Software: The IBM PCs listed above are supported for attachment to the 3174 when configured to operate with:

- IBM Personal Computer 3278/79 Emulation Control Program Version 2 (P/N 8665780)
- IBM PC 3270 Emulation Program, Entry Level (P/N 59X9904)
- IBM PC 3270 Emulation Program Version 3 (P/N 59X9969)
- IBM 3270 Workstation Program Version 1.0 (P/N 74X9921) and Version 1.1 (P/N 75X1088)
- IBM RT Personal Computer 3278/79 Emulation Program (PP 5669-052)

- IBM Virtual Machine/Personal Computer Release 2 (P/N 6467040)
- Personal Services/PC Release 1.04 (P/N 6403826) or higher
- VM Bond Release 2 (P/N 6467022)

IBM PC Host File Transfer Software: The 3174 supports the following host file transfer programs that allow the IBM PCs listed above to perform file transfers. Refer to the appropriate product documentation for details on the supported configurations.

- PC Bond (PP 5664-298)
- IBM Virtual Machine/Personal Computer Release 2 (PP 5664-319)
- MVS/TSO (PP 5665-311)
- VM/SP (PP 5664-281)
- DISOSS - for MVS (PP 5665-290)
- DISOSS - for VSE (PP 5666-270)
- PROFS Version 2 (PP 5664-309) (Personal Computer Connection Extended)

SYSTEM ATTACHMENT

Processors: The 3174 communicates with the following IBM systems and processors using SNA and non-SNA protocols:

SYSTEM/PROCESSOR COMMUNICATION

SYSTEM PRO- CESSOR	REMOTE LINK			TOKEN-RING NETWORK (Model 53R)
	Mdl 51R	Mdl 52R		
	SNA	BSC	SNA	SNA
S/1	X	X	X	-
S/36	X	-	X	-
S/38	X	-	X	-
S/88	X	X	X	-
308X	X	X	X	X
3090	X	X	X	X
4361	X	X	X	X
4381	X	X	X	X
8100	X	-	X	-
(DPPX Only)				
9370	X	X	X	X

Other system/processor attachments may be supported by RPQ, as appropriate. Use the HONE/INFO RPQ application to review for any additional supported systems. Use a search argument of "3174".

Remote Link Attachment: 3174 Models 51R and 52R can attach to a 308X, 3090, 4361/4381 or 9370 via an IBM 3720 or 3725 Communications Controller. Attachment to S/1, S/36, S/38, S/88 and 8100 (DPPX only) is via communications features in those products. Refer to their "Machines" pages. Attachment to the 4361 and 937X may also be via its Communications Adapter or to the 9370 Telecommunication Subsystem Controller. A modem or other Data Circuit-Terminating Equipment (DCE) is required, unless the host processor or system provides a method of direct-connection attachment, without the need for a DCE. The Model 51R can also attach via the IBM 3710 Network Controller.

IBM Token-Ring Network Attachment: The 3174 Model 53R transmits and receives at four million bits per second using media access protocols conforming with IEEE 802.5 and ECMA 89 standards, and logical-link protocols conforming with IEEE 802.2 standard, over

a baseband token-ring. It can attach to a 308X, 3090, 4361/4381 or 9370 via an IBM 3720 or 3725 Communications Controller with the NCP/Token-Ring Interconnection (NTRI) facility of ACF/NCP Version 4 Release 2, or via a 3174 with the IBM Token-Ring Network 3270 Gateway optional feature (#3025).

Communications Facilities: 3174 Models 51R and 52R operate in data half-duplex point-to-point or multipoint modes on duplex or half-duplex nonswitched facilities, and in half-duplex point-to-point mode on switched facilities as listed below. Operation on switched network facilities is supported only through SNA/SDLC. See the M2700 pages for specific country networks that are supported.

3174 MODEL 51R:

ELECTRICAL INTERFACE	FACILITY (See M2700 Pages)	LINK/ NETWORK PROTOCOL	MAX. SPEED (bps)
EIA RS-232-C/ CCITT V.24/28 (External clocking required)	D,G	BSC	9.6K
	C,D,E,G	SNA/SDLC	19.2K
		SNA/SDLC (X.21bis)	19.2K
	P	X.25 (X.21bis)	19.2K
CCITT V.35 (External clocking required)	D,G	BSC	9.6K
	D,E,G	SNA/SDLC	64K
	M	SNA/SDLC (X.21bis)	64K
	P	X.25 (X.21bis)	19.2K

3174 MODEL 52R:

CCITT X.21	L	SNA/SDLC	48K
	N	SNA/SDLC	64K
	Q	X.25	19.2K

Modems: IBM modems to which the 3174 Model 51R can attach include:

Nonswitched Modems:

3833	2400 bps
3834	4800 bps
3863-1	2400 bps
3864-1	4800 bps
3865	9600 bps
3868-1	2400 bps
3868-2	4800 bps
3868-3	9600 bps
3868-4	9600 bps
5811	2.4/4.8/9.6/19.2K bps (Baseband)
5865	9600 bps
5866	14400 bps
5868	9600 bps
5868	14400 bps

Switched network backup (SNBU) mode of operation is possible using an appropriately featured external modem.

Switched Network Backup Modems:

3863	2400 bps
3864	4800 bps
3865	9600 bps
5865	9600 bps
5866	14400 bps

Switched Network Modems (SNA/SDLC only):

3863-2	2400 bps
3864-2	4800 bps

PTT-Mandatory DCEs: The 3174 Model 51R attaches to PTT-mandatory DCEs meeting CCITT Recommendation V.24, V.28, ISO Standard 2110, and relevant CCITT Recommendations for data transmission speeds. The Model 51R attaches to PTT-mandatory DCEs meeting CCITT Recommendation V.35 and ISO standard 2593.

Non-IBM DCEs: Non-IBM DCEs complying with EIA RS-232-C, CCITT Recommendations V.24/V.28, V.35, or X.21 may be attached to Models 51R and 52R under provisions of the IBM Multiple Supplier Systems Bulletin.

Public Data Networks: Models 51R and 52R attach to X.21 switched, X.21 nonswitched, and X.25 Public Data Networks as listed in Charts K, L, M, N, P, and Q of the M2700 pages. Keyboard labels are provided with every 3174 Model 51R and Model 52R to facilitate X.21 switched network and X.25 session setup and termination. Extra labels are available; see "Supplies".

IBM 3710 Network Controller: The 3174 Model 51R can attach to the IBM 3710 Network Controller as indicated in the chart below. The maximum total cable length permitted between the 3174 and the 3710 is 15m (50 ft).

3710 ATTACHMENT:

SPEED (K BPS)	B S C	S D L C	3174 MODEL 51R INTERFACE
3710 FEATURE #7001: 2.4/3.6/4.8/ 7.2/9.6	X	X	RS-232-C (V.24/28)
14.4/19.2	-	X	
3710 FEATURE #7005: 2.4/3.6/4.8 7.2/9.6	X	X	CCITT V.35
14.4/19.2/ 48/56/64	-	X	

Direct-Connection Attachment: 3174 Models 51R and 52R can communicate with IBM hosts without the need for modems or other data circuit-terminating equipment. This method of 'direct-connection' attachment is made through the 3174 EIA RS-232-C (CCITT V.24/V.28), CCITT X.21, or CCITT V.35 interface, via appropriate connecting cables, to the direct-connection product's interface. The direct-connection product must provide bit clocking to the 3174.

Products that support direct-connection attachment of the 3174 are listed in the following table. Only the interface features needed by the direct-connection products are listed; they may have prerequisites, therefore the Machines pages for those products should be reviewed.

The maximum, total cable length allowed between the 3174 interface and the host product interface is 122m (400 ft), unless the host product imposes a shorter limit. The physical planning manuals for those products can provide cabling data and other information necessary for direct-connection attachment.

HOST PRO- DUCT	HOST PRODUCT FEATURE NUMBER	SPEED (K bps)	B S C	S D L C	3174 MODEL/ INTER- FACE

BASIC CONFIGURATION

The machine is shipped as follows if only mandatory specify codes are selected:

- Power (AC, 1-phase, 50/60 Hz):

Argentina	200-240V
Australia	200-240V
Brazil	100-127V
Canada	100-127V
Chile	200-240V
Japan	100-127V
Mexico	100-127V
New Zealand	200-240V
Venezuela	100-127V
All Others	(Must specify desired power)

- (Except Canada, Mexico, Nicaragua, Japan > Power Cord Plug. Determined by the 3-digit DPMO WT country code. The plug most commonly used in the country is shipped. <)
- (Canada, Mexico, Nicaragua only > Power Cord Plug. A non-locking plug is shipped. <)
- (Japan only > Power Cord Plug. A locking plug is shipped. <)
- Nomenclature: The country code is used to select the language of the nomenclature provided on the operator and power control panels, based on the language most commonly used in that country. The following languages are available:

English	Portuguese
Japanese	Spanish
French	

- Communications Cable: (Model 51R) For the EIA RS-232-C/CCITT V.24 Electrical Interface.
- Two control diskettes containing 3174 Configuration Support A microcode and one Utility/Diagnostic diskette, which is required for 3174 subsystem on-site problem determination.

SPECIFY

- Specify #2998 (mandatory specify).
- The remainder of the "Specify" section can be ignored if the options described in the "Basic Configuration" section are satisfactory. These specify features are shipped in lieu of the corresponding item(s) listed above. Unless indicated otherwise, these specify features are available only at the time of manufacture.
- (Except Canada > Power (AC, 1-phase, 50/60 Hz). Specify one of the following:
 - 100-127V: #0802
 - 200-240V: #0801 <)
- (Canada, Nicaragua only > Power Cord Plug. Specify #9890 for locking plug. <)
- (Mexico only > Power Cord Plug. Specify #9890 for locking plug. Prerequisites: 200-240V Power (#0801). <)
- (Japan only > Power Cord Plug. Specify #9891 for non-locking plug. Limitations: Cannot be installed with 200-240V Power (#0801). <)
- Machine Nomenclature. Specify one of the following:

English	#2924	Portuguese	#2933
Japanese	#2930	Spanish	#2931
French	#2928		
- CCITT V.35 Communications Cable: (Model 51R) Specify #9000 for CCITT V.35 Electrical Interface Cable. (This code causes a CCITT V.35 communication cable to be shipped instead of an EIA RS-232/CCITT V.24 cable.)
- Auxiliary Microcode Diskettes: Provides a diskette containing the operational microcode for each of the Distributed Function Terminals (DFTs) and 3174 features listed below. The diskette

must be placed in the optional 1.2Mb Diskette Drive feature (#1046) or loaded on the optional 20Mb Fixed Disk Drive feature (#1056) and be available at all times to automatically provide the DFTs with downstream load services. A merge procedure is provided to combine multiple auxiliary microcode diskettes including that for the Asynchronous Emulation Adapter optional feature (#3020), on to one downstream load diskette. (Auxiliary microcode diskettes are available via MES.)

- Asynchronous Emulation Adapter Microcode Diskette (#9015): (51R, 52R). For 3174 Subsystem Control Units that provide Central Site Library and customizing facilities and do not require the Asynchronous Emulation Adapter function or hardware.
- IBM 3179-G/3192-G Color Graphics Display Station Downstream Load Microcode Diskette (#9016).
- IBM 3193 Display Station Downstream Load Microcode Diskette (#9017).
- IBM 3290 Information Panel Downstream Load Microcode Diskette (#9021).

(Japan only > Specify #9025 for Katakana language. <)

Prerequisites/Corequisites: 1.2Mb Diskette Drive or 20Mb Fixed Disk (#1046 or 1057) for use with any Auxiliary Microcode Diskette.

- Central Site Diskette Distribution Aid. Specify #9006 for the designated central site 3174, allowing it to obtain all levels and combinations of 3174 microcode, microcode RPQs, and DSL device microcode. It can then customize for any network 3174 serviced from the central site. (This feature is available via MES.)

SPECIAL FEATURES

Special features ordered before a machine is shipped are set up by IBM. Special features ordered after a machine is shipped are set up in the field by the customer; instructions are provided.

CONFIGURATION SUPPORT-A MULTIPLE SESSIONS AND STORAGE CONSIDERATIONS

- Multiple Sessions Using the MLT Function

For each terminal attached to the 3174, select the appropriate weighting factor in the following table. The sum of the weighting factors for a given 3174 determines the required level of MLT (level 0, 1, 2, or 3) to support the selected MLT sessions.

MLT Weighting Factors Based on Display Characteristics	Number of MLT Sessions/Display				
	1	2	3	4	5
Model 2; w/o EAB	0	3	6	9	12
Model 2; with EAB	0	5	10	15	20
Model 3, 4, or 5; w/o EAB	0	5	10	15	20
Model 3, 4, or 5; with EAB	0	9	18	27	36

For MLT level 0, the sum of weighting factors is 0.

For MLT level 1, the sum of weighting factors must not exceed 45.

For MLT level 2, the sum of weighting factors must not exceed 90.

For MLT level 3, the sum of weighting factors must not exceed 291.

- Storage Requirements by Feature and Function Combinations

Any one of following feature combinations is operable within its listed storage requirement. (Features/functions not shown in the following lists, do not increase storage requirements above that listed below.)

LEGEND for Storage Figure

AEA = Asynchronous Emulation Adapter (#3020)
CSCU CC = Central Site Customizing Utility at a "central site control unit" (off line)
CDIS CC = Control Diskette In Storage (opt. function of CSCU)
CSCM NC = Central Site Change Management at a "Network Site Control unit"
CSCM CC = Central Site Change Management at a "Central Site Control unit"
DSK = 1.2Mb Diskette Drive (either base or feature)
FD = One 20Mb Fixed Disk Drive (#1056)
MLTn = Multiple Logical Terminal Level 1, 2, or 3
BASE = All except functions listed above

- Function Combinations that fit within 1Mb of Storage:

* CSCU CC (DSK or FD)
* (BASE)
* (BASE) + MLT1
* (BASE) + MLT2
* (BASE) + CSCM NC (DSK or FD)
* (BASE) + CSCM CC (DSK only)
* (BASE) + MLT1 + CSCM NC (DSK or FD)
* (BASE) + MLT1 + CSCM CC (DSK only)
* (BASE) + AEA
* (BASE) + MLT1 + AEA

- Function Combinations that Require 1.5Mb of Storage:

* (BASE) + MLT3
* (BASE) + CSCM CC (FD)
* (BASE) + MLT1 + CSCM CC (FD)
* (BASE) + MLT2 + CSCM NC (DSK or FD)
* (BASE) + MLT2 + CSCM CC (DSK or FD)
* (BASE) + MLT3 + CSCM NC (DSK or FD)
* (BASE) + MLT3 + CSCM CC (DSK only)
* (BASE) + MLT2 + AEA
* (BASE) + MLT3 + AEA
* (BASE) + AEA + CSCM NC (DSK or FD)
* (BASE) + AEA + CSCM CC (DSK or FD)
* (BASE) + MLT1 + AEA + CSCM NC (DSK or FD)
* (BASE) + MLT1 + AEA + CSCM CC (DSK or FD)
* (BASE) + MLT2 + AEA + CSCM NC (DSK or FD)
* (BASE) + MLT2 + AEA + CSCM CC (DSK or FD)

- Function Combinations that Require 2Mb of Storage:

* CSCU CC + CDIS (DSK)
* (BASE) + MLT2 + CSCM CC (FD)
* (BASE) + MLT3 + CSCM CC (FD)
* (BASE) + MLT1 + AEA + CSCM CC (FD)
* (BASE) + MLT2 + AEA + CSCM CC (FD)
* (BASE) + MLT3 + AEA + CSCM NC (DSK or FD)
* (BASE) + MLT3 + AEA + CSCM CC (DSK or FD)

512Kb Storage Expansion (#1011): Provides an additional 512Kb of control storage for features, functions, and RPQs that use more than the 1.0Mb base storage. Maximum: Two (See "Limitations"). Limitations: Two card slots are provided for storage expansion. The

slots can be used for this feature or #1012, therefore the sum of #1011 and #1012 cannot exceed two. The 1.0Mb Storage Expansion feature #1012 should be considered, in lieu of this feature, to accommodate future functional growth and for the most efficient use of this available card slot.

1.0Mb Storage Expansion (#1012): (51R, 53R). Provides an additional 1,024Kb of control storage for features, functions and RPQs that use more than the 1.0Mb base storage. It is recommended to facilitate generating customized control diskettes for network 3174 Subsystem Control Units through the Central Site Customizing procedure. Maximum: One. Limitations: This feature cannot be installed on the Model 52R and some early production Models 51R. To determine if the feature can be installed, refer to the section of the 3174 Subsystem Control Unit User's Guide that describes the offline procedures. Select Online Test #2, Option #1. This feature cannot be installed on machines that show type number 9021 associated with hardware group (HG) 09.

1.2Mb Diskette Drive (#1046): Provides approximately 1.2Mb of additional diskette storage via a second diskette drive for high-capacity diskettes. This feature or the 20Mb Fixed Disk Drive feature (#1056) is a prerequisite to support the following features and functions of the 3174 subsystem: Asynchronous Emulation Adapter feature (#3020), attachment of any terminal that requires downstream load of microcode from the control unit (e.g., 3179-G), use of the Central Site Customizing procedure, use of the Merge Downstream Load procedure, and use of the Full Copy or Modify and Copy facilities of the Copy Files procedure. This feature is not required to support other procedures, but can enhance their usability and reduce the time required to execute many of them due to the reduction or elimination of diskette swapping on a single-drive control unit. Maximum: One. See "SUPPLIES" section for additional diskettes. Limitation: Cannot be installed with 20Mb Fixed Disk Drive (#1056).

20Mb Fixed Disk Drive (#1056): Provides 20Mb of file storage. It supports all the functions provided by the 1.2Mb diskette drives, including control unit microcode IML, microcode downstream load to terminals and features that require it, and full support of all utility procedures. This feature is not a prerequisite for the Central Site Customizing Utility or Central Site Change Management, but their usability is significantly improved when it is used. Maximum: One. Limitation: (1) Cannot be installed with 1.2Mb Diskette Drive (#1046) (2) 3174 Configuration Support-S microcode for the IBM Token-Ring Network 3270 Gateway does not support this feature.

Asynchronous Emulation Adapter (#3020): (51R, 52R) Provides an adapter with a microprocessor, storage and control logic, an I/O panel with eight EIA 232C connectors and a diskette containing the microcode for the adapter. (This microcode is the same that is provided on Auxiliary Microcode Diskette #9015, which should not be ordered when #3020 is ordered.) An ASCII terminal or host may be attached to each port using switched or non-switched (direct connect or dedicated line) transmission facilities. The adapter supports:

- ASCII Terminal Emulation - IBM 3270 displays can emulate an IBM 3101 or DEC VT100 display and IBM 3270 printers can emulate an ASCII printer for connection to ASCII hosts or public data networks.
- 3270 Terminal Emulation - ASCII displays can emulate an IBM 3178 Model C2 or 3279 Model 2A (four color display) and ASCII printers can emulate an IBM 3287 Model 2 for connection to an IBM host.
- ASCII Pass Through - ASCII displays and printers can connect to ASCII hosts or public data networks through the adapter.

The adapter supports full-duplex, character-mode, asynchronous transmission of seven-bit ASCII (ANSI 3.4,1977) data with parity. Odd, even, mark, space, and no-parity coding are supported. Each port provides an EIA 232C electrical interface and supports transmission speeds of 300, 600, 1200, 2400, 4800, 9600 and 19200 bps via modems over non-switched and switched communications facilities or via direct connection without modems. Transmit and receive speeds must be the same. Autobaud detect and XON/XOFF, DTR, and CTS asynchronous flow controls are supported.

Ports are configurable in any combination of ASCII Terminal Emulation, 3270 Terminal Emulation and ASCII Pass Through

ASCII Terminal Emulation for display terminals: 3270 CUT mode displays with a 1920 byte or larger buffer and 3270-PCs operating in CUT mode are supported for IBM 3101 and DEC VT100 display emulation.

(VT100 is a registered trademark of Digital Equipment Corporation.)

ASCII display emulation provides the following support:

- Full duplex character mode data transmission.
- 24 lines at 80 characters per line.
- Operator indicator line.
- Mapping of the 3270 display keyboard.
- Data stream mapping.
- Function keys.
- Typematic keys.
- ALT key (3101).
- Caps Lock key (VT100).
- CTRL key (VT100).
- Break key (long and short for VT100).
- ASCII display keyboard setup options that have equivalent 3270 keyboard setup functions.
- Specification by controller customization of terminal setup options which can be supported on the 3270 display.

The IBM 3101 functions and keys that are not supported are:

- Half-duplex transmission and functions associated with half-duplex operation.
- Block Mode and keys active in Block Mode.
- Reverse video
- Local mode
- Transparent mode
- Auxiliary printer port and associated keys.

The DEC VT100 functions and keys that are not supported are:

- Keys associated with setup mode which do not have equivalent 3270 keys.
- Interlace Mode
- Screen Mode (Reverse and Normal)
- Set Character Set
- Invoke Confidence Test
- Attached printer and Hard Copy key.

IBM typewriter, APL, and text keyboards are supported via specific keyboard maps for emulating the IBM 3101 or the DEC VT100. Keys that are not applicable to ASCII display emulation are not active.

See the IBM 3174 Subsystem Control Unit Asynchronous Emulation Adapter Introduction, GA23-0331, for more detailed information on supported keyboards and their mapping.

ASCII Terminal Emulation for printers: The IBM 3287 Models 1 and 2, 3262 Models 3 and 13, 3268 Model 2 and 4224 Models 201 and 202 are supported for ASCII printer emulation. ASCII control codes for the following functions are supported: line feed, form feed, carriage return, bell, and tab-skip to the next multiple of eight characters.

3270 Terminal Emulation for displays terminals: The following ASCII displays are supported for 3270 Terminal Emulation: IBM 3101, 3151 as a 3161 or 3162 depending on the model, 3161, 3162 and 3163, DEC VT52, VT100 and VT220 (emulating a VT100), TeleVideo 912 and 970, Lear Siegler ADM 3A, ADM 5, ADM 11, ADM 12 and 1178, ADDS Viewpoint A-2 and Viewpoint 78, Esprit-Hazeltine 1500 and Esprit 78 and Hewlett Packard 2621. The IBM 3164 is supported 3279 Model 2A emulation (four colors). The DEC VT241 operates in two colors only.

(TeleVideo is a registered trademark of TeleVideo Systems, Inc. ADM is a registered trademark of Lear Siegler, Inc. Viewpoint is a registered trademark of Applied Digital Systems, Inc. ESPRIT 78 is a trademark of Esprit Systems, Inc. Hazeltine is a trademark of Hazeltine Systems, Inc. Hewlett Packard is a registered trademark of Hewlett Packard.)

The user has the choice of a specific map designed for each ASCII display or a universal keyboard map. The ASCII display keyboards are not locked during a screen write. This enables keystrokes to be

entered while the screen is being updated for greater keying productivity.

An operator indicator status line is provided on the 25th line for the ASCII displays that provide an accessible 25th line. For the others, an escape sequence is provided to display the operator indicator information on the 24th line. The indicator line can be toggled on and off when the 24th line is used.

IBM Personal System/2 systems and IBM Personal Computers meeting the attachment requirements and using a program that emulates one of the supported displays will be supported for 3270 Terminal Emulation. Other personal computers using a program that emulates one of the supported displays and other displays meeting the attachment requirements and matching the keyboard map, the graphics codes and the control sequences for a supported display for cursor positioning, line erase, screen erase, terminal setup and reset, highlighting (if supported) and operator status line control (if supported) will be supported.

Non-IBM devices may be attached to this emulation adapter under the provisions of the IBM Multiple Supplier Systems Bulletin. It is the customer's responsibility to determine that the emulation program provides identical function and operation as the emulated supported display.

3270 Terminal Emulation for printers: The IBM 4201 Proprinter and Proprinter II, 4202 Proprinter XL, 4207 Proprinter X24 and 4208 Proprinter XL24 are supported for 3270 Terminal Emulation. The serial interface feature is required in order to attach to the Asynchronous Emulation Adapter.

Other ASCII printers that meet the attachment requirements and conform to the following characteristics will be supported for 3270 Terminal Emulation. Supports upper and lower case alphabetics or, if not, folds lower case to upper case. The printer must have a minimum of 80 print positions and should support the maximum line length sent by the application program. The following ANSI commands must be supported: Carriage Return (Control M, hex 0D), Line Feed (Control H, hex 0A), and Bell (Control G, hex 07). Carriage Return must not generate a Line Feed nor can a Line Feed generate a Carriage Return. The printer must not be dependent on any delay characters to allow for mechanical motion. Printers must use one of the flow control procedures supported by the adapter or be able to print at the full line speed.

ASCII Pass Through: This option provides the connection of an ASCII terminal to an ASCII host or network through the adapter. The 7-bit data character is unchanged. The adapter flow controls must be used. The terminal and host lines can use different transmission speeds, parity options, number of stop bits and flow controls.

Host Attachment: ASCII host attachment is via any port of any adapter on the same 3174 as the ASCII or 3270 terminals. IBM host attachment is via the host attachment interface of the 3174 in which the adapter is installed. A specific path can be specified through control unit customization or a Destination Menu is provided to enable the terminal operator to select the desired host attachment.

Switched line ports can be collected into pools to provide more efficient utilization of dial facilities. Access to an ASCII host or public data network can be provided dynamically through switched port selection when a request is received from a 3270 or ASCII display. ASCII display dial-in ports may be included in the switched port pools for increased utilization if desired.

Camp-on (restarting a connection request when a port becomes becomes available) is supported for access requests to the 3270 host.

Online Tests, Error Logs and Alerts: Online tests will be available at the controller to provide status and error information for the adapter. Errors that can arise during asynchronous device operation will be logged and ALERTS generated in the same fashion as for 3270 devices.

Modems: In general, all leased line, limited distance and switched line modems that provide full duplex asynchronous transmission, support equal transmit and receive speeds and conform to EIA 232C specification on the pins shown below should operate satisfactorily.

- 1 - GND - Frame Ground
- 2 - TD - Transmit Data
- 3 - RD - Receive Data
- 4 - RTS - Request to Send
- 5 - CTS - Clear to Send (optional)
- 6 - DSR - Data Set Ready
- 7 - SG - Signal Ground
- 8 - CD - Carrier Detect
- 20 - DTR - Data Terminal Ready
- 22 - RI - Ring Indicate
- 25 - BSY - Busy Out (optional)

The IBM 5841 and 5842, the Hayes 300 and 1200 and the Micom 3012 and 3024 intelligent modems are supported for autodial to ASCII hosts via CBXs, PBXs and the public switched network. The dial strings may be stored in the 3174 at customization or entered from the 3270 or ASCII display keyboard.

The IBM 5841 cannot be used in switched port pools described in the "Host Attachment" section.

Other intelligent modems that use the "AT" or the Micom command set and meet the preceding requirements will also be supported for autodial. Non-IBM modems may be attached to this emulation adapter under the provisions of the IBM Multiple Supplier Systems Bulletin.

Manual dial from a 3270 or ASCII display keyboard is supported for modems which accept dial commands as sequences of ASCII codes over the data leads and which return responses through the data leads. No lead changes are permitted during dialing.

Security: The Asynchronous Emulation Adapter provides password protection for access from ASCII displays via switched line ports. In addition, the adapter provides features that can be used with host application systems and programs to implement security and control functions at the host.

User management is responsible for evaluation, selection and implementation of security features, administrative procedures and appropriate controls in application systems and communication facilities.

Maximum: One. Prerequisite/Corequisite: (1) 1.2Mb Diskette Drive or 20Mb Fixed Disk optional feature (#1046 or 1056), and (2) Base configuration support microcode released in conjunction with this feature. Performance Considerations: Response times when this feature is used will depend on many variables including the number and types of terminals attached, the transaction rates and contents, and system parameters such as RU lengths, pacing, etc. "Performance Guidelines for IBM 3X74 Attached Workstations", ZZ20-4167, will be updated to include Asynchronous Emulation Adapter information.

IBM Token-Ring Network 3270 Gateway (#3025) Release 2.0: (51R, 52R) Provides for data passage between an IBM host and Token-Ring Network. It includes an adapter, a 2.4m (8 ft) communications cable, a Utility/Diagnostic diskette, and a configuration support control diskette with microcode needed to connect and manage an IBM Token-Ring Network downstream of the control unit. This feature provides the capability of up to 140 defined Token-Ring attached devices, as PU 2.0 nodes, to communicate with an IBM host. Any combination of the following Token-Ring attached devices are supported by this feature:

- IBM 3174 Models 3R or 53R
- IBM PC using IBM PC Emulation Program Version 3
- IBM PC using APPC/PC (as a PU 2.0 node)
- IBM System/36 with the LAN Attachment Feature, and using 3270 emulation or APPC (as a PU 2.0 node)
- IBM PC using IBM Operating System/2 Extended Edition Version 1.1
- IBM PC or 3270 PC using IBM 3270 Workstation Program Version 1.1

The number of SNA logical units supported by each PU and the protocols used by these LUs are transparent to this feature. Each PU 2.0 attached to the Token-Ring appears to the host as an SDLC multidropped 3270 SNA Control Unit. 3174 Models 3R and 53R attached to the Token-Ring can attach up to 32 and 16 workstations, respectively.

This capability is available on Models 51R and 52R using SNA/SDLC protocol in data half-duplex point-to-point or multipoint modes on duplex or half-duplex non-switched facilities. SNA/X.25 protocol is not supported. The remote gateway can attach to a 308X, 3090, 4361/4381 or 9370 via an IBM 3270 or 3725 Communications Controller. The 3174 can also attach to the 4361 via its Communication Adapter or to the 9370 via the Telecommunications Subsystem Controller.

The number of devices using this capability is dependent on available 3174 storage and end user response time requirements. The performance of the remote gateway is affected by the polling overhead of the SDLC multidrop implementation; factors affecting performance are line speed, distance from the Communications Controller or Adapter, application transaction characteristics, and the number of PUs being polled.

Except for response time considerations, this feature does not affect the operation of the displays, printers, or workstations directly attached to the 3174 Models 51R or 52R.

Maximum: One. Prerequisites/Corequisites: At least one Storage Expansion feature (#1011 or #1012). The amount of storage expansion is determined by the number of SNA PUs on the Token-Ring that are defined to the ACF/VTAM for host sessions. The maximum number of PUs that can be defined is 140. Storage Requirements:

- Up to 72 PUs: One #1011 (Minimum required)
- Up to 140 PUs: One #1012 (Maximum supported)

Note: Feature #1012 is not available on the Model 52R or some early production Models 51R.

Limitations: (1) Configuration Support-A, Release 1 will not operate in a machine that has the Token-Ring adapter associated with this feature installed. Release 2, or higher, is required. The Gateway function is not available when Configuration Support-A is loaded. (2) 3174 Configuration Support-S Release 2, which is shipped with this feature and provides the gateway function, contains all the applicable functions of the 3174 Configuration Support-A, Release 2. The enhancements announced for Release 3 are not provided. Release 2.1 of Configuration Support-S adds the Central Site Customizing Utility procedure. (3) The Configuration Support-S microcode which is shipped with this feature does not support the 20Mb Fixed Disk Drive, Multiple Logical Terminal, or Central Site Change Management functions. (4)

Performance considerations: For performance reasons, a customer may elect to limit the number of SNA PUs that concurrently pass traffic through the gateway to a number less than the number shown above. Consult "Performance Guidelines for IBM 3X74 Attached Workstations" (ZZ20-4167), or use the HONE AID FIVE3270 to evaluate the actual performance to be expected in a desired configuration and user application/host environment.

MODEL CONVERSIONS (NONE)

ACCESSORIES

Accessories can be ordered from country Direct Marketing Centers or other responsible supplies marketing group.

Communication Cables: A communication cable connects the 3174 to a modem or other data circuit-terminating equipment (DCE). Accessory communication cables for the EIA RS-232/CCITT V.24 and CCITT V.35 electrical interfaces are available for 3174 Model 51R; accessory communication cables for the CCITT X.21 electrical interface are available for the 3174 Model 52R. Cables in 6m (20 ft) and 12m (40 ft) lengths are available. Order both the cable (by part number), and the "3174 Model and Interface Conversion Customer Setup Instructions" (by publication order number).

- Cable, RS-232/V.24, 6m (20 ft) - P/N 6423153
- Cable, V.35, 6m (20 ft) - P/N 6423325
- Cable, X.21, 6m (20 ft) - P/N 6168155
- Cable, RS-232/V.24, 12m (40 ft) - P/N 6423154
- Cable, V.35, 12m (40 ft) - P/N 6423327

- Cable, X.21, 12m (40 ft) - P/N 6168156
- CSU Instructions, Canadian/French - GA09-0371
- CSU Instructions, English - GA23-0295
- CSU Instructions, French - GA11-0509
- CSU Instructions, Spanish - GA10-8843
- CSU Instructions, Japanese - N: GA23-0295

Charges: For local charges, consult your IBM marketing representative.

IBM 3270 DPC-T3 Adapter (P/N 83X9758): A cable adapter assembly that permits direct attachment to telephone twisted pair wire, that meets the IBM Cabling System Type 3 specifications, up to a maximum distance of 275m (900 ft.). It is 4.6m (15 ft.) in length with an IBM Dual Purpose Connector (DPC) at one end and a miniature six-pin modular telephone connector on the other end. The telephone connector can be cut off, and the wire inserted directly into telephone punch-down blocks that are capable of accepting stranded telephone wire. The accessory can also be used at the terminal end of the wire provided the terminal has an IBM Dual Purpose Connector (DPC). (Canada only) Otherwise, a CTPA is required. <

Ordering: Order via NDD DRO or via Distributors authorized to market the IBM Cabling System components. Minimum order quantity is one package which contains ten IBM 3270 DPC-T3 Adapter assemblies.

MACHINE ELEMENTS (NONE)

SUPPLIES

None required with the machine order.

Supplies can be ordered from country Direct Marketing Centers or other responsible supplies marketing group.

Diskettes (P/N 6109660): Provides a slipcase (SC) containing ten blank 5-1/4 inch diskettes with 1.2Mb of usable capacity for 3174 Diskette Drives.

IBM 3174 Diskette Identification Labels (GX23-0389): Provides five labels to uniquely identify diskettes used with the 3174.

Diskette Mailer (P/N 2656102): Provides one diskette mailing container.

X.21/X.25 Keyboard Labels: Provides 12 sets of seven keyboard stick-on labels (on one sheet) for X.21 switched network or X.25 network operation via a 3174 Model 51R or 52R. Order both the labels (by part number), and installation instructions (by publication order number).

- Sheet of Labels - P/N 1743595
- Instructions, English - G126-0158
- Instructions, Canadian/French - G509-2504

Charges: For local charges, consult your IBM marketing representative.

CABLING INFORMATION

Coaxial Cable: For proper identification, installation, and application of cable and associated accessories, refer to "Installation and Assembly of Coaxial Cable and Accessories" for Attachment to IBM Products, GA27-2805.

IBM Cabling System: For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System Planning and Installation Guide", GA27-3361.

(Canada only) Twisted Pair Telephone Wire: For proper identification, installation, and application of cable, refer to "IBM/Rolm Plan-

ning and Installation Guide for 3270 Coax to Twisted Pair Adapter",
GA27-3722. <)

3174 SUBSYSTEM CONTROL UNIT MODELS 81R, 82R

PURPOSE

3174 Subsystem Control Unit models for remote attachment of very small clusters of 3270 Information Display System displays, printers, and workstations to IBM host processors via telecommunication links. Up to four non-downstream load (DSL) terminals can attach to each basic model, up to eight non-DSL terminals can attach when a 3299 Terminal Multiplexer is used, and up to seven non-DSL terminals can attach when a 5209 3270-5250 Link Protocol Converter is used.

MODELS 81R, 82R

Model 81R: Provides EIA RS-232-C/CCITT V.24 and CCITT V.35 interfaces for remote link attachment. Supports binary synchronous (BSC) communication up to 9.6K bps, SNA/X.25 communication up to 19.2K bps, and SNA/SDLC communication up to 64K bps.

Model 82R: Provides a CCITT X.21 interface for remote link attachment. Supports SNA/X.25 communication up to 19.2K bps and SNA/SDLC communication up to 64K bps.

Prerequisites:

- A control unit terminal (CUT) or 3270 PC operating in CUT mode attached to port 0 is required to customize subsystem microcode or to run offline diagnostics from a display.
- A CUT or 3270 PC operating in CUT mode attached to any port is required to perform subsystem RAS tests.
- A CUT or 3270 PC operating in CUT mode attached to any port is required to establish X.21 switched network and X.25 sessions. After session establishment, all terminals, CUT and DFT, can use the established session.

Customer Setup (CSU): All models are designated as customer setup. This offers the customer early availability and relocation flexibility. Setup procedures for the customer are shipped with each machine as part of the "User's Guide". A clear indication that the machine is operational is given.

HIGHLIGHTS

The 3174 Models 81R and 82R are non-programmable subsystem control units for remote attachment of 3270 Information Display System displays, printers, and workstations to IBM host processors via telecommunication links. The 3174 runs under control of an integrated microprocessor and associated control program, which can be customized by the user to meet specific requirements.

Units are shipped with a host-attachment interface, 1.0Mb of control storage, a 1.2Mb diskette drive, and a four-port terminal adapter to attach supported devices (see "Terminal Attachment") either directly (four terminals), or via a 3299 Terminal Multiplexer (eight terminals), or via a 5209 3270-5250 Link Protocol Converter (seven terminals). The Model 81R provides both EIA RS-232-C (CCITT V.24) and CCITT V.35 electrical interfaces. The desired interface is enabled during initial microcode load of the control unit, based on the type of communication cable (RS-232-C or V.35) that is attached. The Model 82R provides a CCITT X.21 interface. A 6m (20 ft) communication cable is shipped with each unit. (See "Basic Configuration" and "Specify" for communication cable options.) All units are shipped with a 4.3m (14 ft) power cord with appropriate plug, and Configuration Support-A microcode (two Control diskettes, and one Utility/Diagnostic diskette).

Product characteristics include:

- Hardware Characteristics:
 - CMOS technology, VLSI circuitry, and surface mount devices (SMD) for high RAS characteristics, low power consumption, and a very small footprint.

- 1.0Mb control storage (IBM million-bit technology) to accommodate the control program and microcode-selectable functions.
- 5.25-inch, high-capacity (1.2Mb) diskette drive.
- Direct attachment to IBM Cabling System types 1, 2, and 9 media for terminal connections (A balun cable assembly is not required).
- Response time monitor.
- TP link speeds up to 64K bps.
- Mountable in an industry standard rack or on a table top.
- No special feature options.
- Accommodation for up to 10 microcode RPQs per control unit.

- Microcode Function Base. 3174 Configuration Support-A, Release 2 was the original microcode function base for these models. Configuration Support-A is the same microcode that is used by all other 3174 models. The original microcode function base was equivalent to 3274 Configuration Support-D, except for the following functions that are not supported on these models:

- 3278 Model 1 displays (960-character buffer) and use of the 960-character buffer format by printers.
- (Canada Only) 3278/3279 PC Attachment features (#5315, #5316/#5325, #5326) <

The following 3174 Configuration Support-A, Release 2 functions that are applicable to other 3174 teleprocessing control unit models and require features not available on the Models 81R and 82R are not supported:

- Downstream load of microcode to attached terminals.
- Merge Downstream Load utility procedure.
- Full Copy and Modify and Copy routines of the Copy Files utility procedure.
- Central Site Customization utility procedure.
- RPQ functions that use more than 1.0Mb control storage (See RPQ Description Price Transmittals for RPQ storage requirements.)

- Configuration Support-A, Release 3 Functions. A subset of the functions provided in 3174 Configuration Support-A, Release 3 microcode apply to these models.

- Multiple Logical Terminals (MLT) support for interaction with up to five host sessions in base microcode. Three levels of MLT support are selectable at customization: MLT Level 0 allows no MLT; MLT Levels 1 and 2 reserve specific amounts of storage which allow various combinations of displays and session counts to be defined. (Refer to Customization documentation.) (Due to the storage limitation of these models, MLT Level 2 cannot co-exist with Central Site Change Management.)
- Central Site Change Management. These models can non-disruptively receive new customization parameters that are distributed electronically through the communications network from a central site that uses the facilities of the appropriate releases of Distributed Systems Executive (DSX) and ACF/VTAM. (Due to the storage limitation of these models, this function cannot co-exist with Multiple Logical Terminals Level 2.)

- Reliability and Availability Characteristics:

- Built-in microcode and hardware error recovery.
- Self-identifying communication cable and logic circuitry at both IML and control unit diagnostic operation.
- Uninterrupted IML for non-critical conditions. Complements host-initiated IML under Central Site Change Management.
- Continued control unit operation by unaffected portions during faults in the Terminal Adapter.
- Hardware error correction code for storage.
- Dynamic storage reconfiguration.
- Few field-replaceable units (FRUs).

- Serviceability Characteristics:

- Self-configuring offline diagnostics, with automatic or manual selection of routines.
- FRU call-out at operator's panel and/or display terminal.
- Error status codes reported on four 7-segment light-emitting diodes (LED).

- Errors time-stamped and logged to the diskette.
- Extensive Alerts, including identification of failing components, specifics of Bind failures, and specifics of failing data streams.
- Device attachment media threshold Alerts.
- Logging of executing task and microprocessor priority level upon control unit failures.
- Terminal interface driver/receiver wrap capability.
- Customization Characteristics:
 - Use of words and phrases on the customization panels.
 - Error messages presented on screen.
 - Optional selection of Printer Authorization Matrix definition panel, with self-explanatory prompts.
 - Few configuration questions for 3274-equivalent function.
 - Extensive use of defaults.
 - Short machine execution time.
 - Same operational procedures as on larger 3174 models without the optional 1.2Mb Diskette Drive feature.
 - Use of full screen with a CUT-mode terminal Model 3 or 4, rather than presentation in a Model 2 format.
 - Electronic receipt of customization parameters and/or data via the Central Site Change Management function at the host site. (Due to the storage limitation of these models, this function cannot co-exist with Multiple Logical Terminals Level 2.)
- Usability Characteristics:
 - Operator's panel with four seven-segment light-emitting diode (LED) readouts.
 - User-friendly problem determination tools, including self-configuring diagnostics, extensive use of program function keys, and formatted displays of configuration data.
 - Multi-purpose teleprocessing adapters that provide variable operating speeds, host attachment interfaces, and protocol support.
- Offline Procedures: 3174-based offline utility procedures to aid in configuring and managing of 3174 microcode and to provide offline diagnostic functions are provided on a Utility/Diagnostic diskette. The procedures are invoked from a "Master Menu" panel that is displayed on a Control Unit Terminal (CUT) attached to port 0. The procedures are provided on a Utility/Diagnostic diskette that is shipped with each machine. The 3174 offline procedures that are applicable to Models 81R and 82R include:
 - Customize the Control Diskette. Provides facilities to configure control unit microcode, define printer authorization matrix, merge RPQs, and modify keyboards.
 - Copy Files. Five variations of this procedure provide the means to copy configuration data, Printer Authorization Matrix, Patches, RPQs, and modified keyboard definitions from one Control diskette to another. The "Full Copy" and "Modify and Copy" facilities of this procedure, which require two diskette drives, are not applicable to Models 81R and 82R.
 - Microcode Upgrade. Provides a process to update a newly released control diskette with the configuration data from a down-level control diskette, thus reducing the time required to execute this task.
 - Identify Customizing Keyboard. Expands the types and configurations of keyboards from which the 3174 customization process can be executed.
 - Diagnostics. Provides a full range of offline diagnostics. They are selected from a menu panel displayed on the port-0 CUT-mode terminal when this procedure is invoked.

Customer Responsibilities:

1. Adequate site, system, and other vendor preparation.
2. Price quotations, installation, and costs (initial and recurring) of common carrier equipment and service.
3. Receipt at the customer's receiving dock, unpacking, and placement of the unit.

4. Physical setup, connection of cables to communication lines/modems and IBM customer setup (CSU) devices, and check out.
5. Contacting CE to make 3174 cable connections to non-CSU IBM units.
6. Performing customization in accordance with IBM-supplied procedures:
 - For initial setup.
 - When made necessary by changes in configuration.
 - For updating control unit diskettes (at customer option).
 - When initializing and updating the keyboard tables using the Keyboard Definition facility of the customization procedure.
7. Using the problem determination procedures provided with the unit prior to calling IBM for service.
8. Following instructions provided by IBM regarding relocation.

Publications: See KWIC Index, G320-1621, or applicable system bibliography.

- 3270 - GA23-0058
- 4300 - GC20-0001
- 8100 - GC20-8100

HONE: Use the HONE configurator (CF3270) to assist in configuring the 3174 before entering an order.

TERMINAL ATTACHMENT

All 3174 models use the same terminal attachment interface architectures; they are the same as used by the 3274. Documentation describing the interface between 3X74 control units and their attached IBM devices is available.

The IBM displays, printers, 3270 PCs, and IBM PCs (and associated emulation software) supported for attachment to Models 81R and 82R are listed below. Products and software not specifically listed should be tested by the customer to verify correct operation. Continued improvements in the 3174 and attaching terminals may require microcode or hardware updates to the attaching products. Consult RETAIN for information on product compatibility.

Up to four terminals can attach to 3174 Models 81R or 82R via the terminal adapter ports provided, up to eight can attach via a 3299 Terminal Multiplexer, or up to seven can attach via a 5209 3270-5250 Link Protocol Converter. Using a 5209 provides the additional benefit of allowing terminals to attach to both a 3174 and a System/36-38. See M5209 pages for details of attachment.

Either RG-62A/U coaxial cable, IBM Cabling System media (Canada, Australia, Japan only) or specified telephone twisted-pair wire (IBM Cabling System Type 3 media) < can be used for connections to the 3174. Depending on the type of wire used, the distance between the 3174 and its attached terminals can be up to 1,500m (4,920 ft); when a 3299 is used, the maximum distance can be up to 3,000m (9,840 ft). The 3174 ports are Dual Purpose Connectors (DPC), which do not require a balun cable assembly to connect terminals via IBM Cabling System Types 1, 2, or 9 media, but some terminals may. (Refer to the appropriate terminal pages.) Using a balun assembly reduces the maximum allowable wire lengths as shown below.

3174 Terminal Attachment Maximum Wire Lengths:

Number of Baluns	RG-62A/U Coaxial Cable		IBM CABLING SYSTEM MEDIA			
	Cable		Types 1 & 2		Type 9	
	m	ft	m	ft	m	ft
0	1500	4920	1500	4920	1000	3280

| 1 | N/A | N/A | 1000 | 3280 | 667 | 2186 |

(Canada) IBM Cabling System Type 3 Media (specified telephone twisted-pair wire) can also be used for connections to the 3174. Connection to the telephone twisted-pair can be via an IBM/ROLM Coax to Twisted-Pair Adapter (CTPA), or equivalent. When one end of the telephone twisted-pair is attached to a CTPA, the maximum length is 275m (900 ft). <)

Display and Printer Attachment

The following displays and printers are supported for attachment to the 3174. (See Note 1.) The Type-Model(S) (prerequisites) Names are:

- *3178-C1,C2, C3, C4 Display Station
- *3179-1 Color Display Station
- 3180-1 Display Station
- *3191-A1X, B1X, D1X, E1X, L1X, A2X, B2X, D2X, E2X, L2X, A3X, B3X, D3X, E3X, L3X Display Station
- *3192-C1X, F1X, C2X, C3X, F2X, F3X Color Display Station
- *3192-D1X, L1X, D2X, D3X, L1X, L2X, L3X Display Station
- *3194-C10, C20, D10, D20, H10, H20,, H50 Display Terminal
- 3262-3, 13-Line Printer
- 3268-2 Printer
- 3268-2C Color Printer
- *3278-2, 3, 4, 5 Display Station
- *3279-S2A, S2B, S3G, 2X, 3X Color Display Station
- 3287-1, 2 (#8331) Printer
- 3287-1C, 2C Printer
- 3812-2 (#3190) Pageprinter

- 4250-2 (Notes 2, 3) 4250 II ElectroCompositor
- 5210-G1, G2 Printer
- (APG Only) 5227-11 Printer
- 5578 (Note 4) Japanese Workstation <)

* Control unit terminal (CUT) or terminal that can operate in CUT mode and be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions.

Notes:

1. 3278 Model 1 displays (960-character buffer) and the "960-Character Print Operation" option that is available on some printers are not supported.
2. The high data volumes possible with this device may not be realized because of host TP communication facility limitations. It is strongly recommended that the "Performance Guidelines for IBM 3X74 Attached Workstations", ZZ20-4167, be consulted to determine what performance may be expected.
3. Requires 4250 RPQ 7B0980.
4. (APG Only) This terminal can operate in CUT mode and be used for customization. <)

Personal Computer Attachment

IBM 3270 Personal Computers: The IBM 3270 PCs supported for attachment are listed below. Current host communications programs that support a 3270 PC attached to a 3274 will work unchanged with a 3270 PC attached to a 3174. Any 3270 PC operating in CUT mode can be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions.

Type-Model(s)	Name
5271 All	3270 PC
5273 All	3270 PC AT
5371 All	3270 PC/G, GX
5373 All	3270 PC AT/G, AT/GX

IBM Personal Computers: The following IBM PCs are supported for attachment when emulating the functions of a 3278 Display Station

Model 2 or a 3279 Color Display Station Model 2A or S2A through the software listed below. IBM PCs operating in CUT mode (APG Only), except for the 5550 family, <) can be used for customization, running 3174 offline diagnostics, performing RAS tests, and/or establishing X.21/X.25 sessions. The Type/Model(s) (Prerequisite) Names are:

- 5150 All (#5050) Personal Computer
- 5160-068, 078, 086, 087, 088, 089, 267, 268, 277, 278 (#2507 or #5050) Personal Computer XT
- 5162-286 Personal Computer XT
- 5170-068, 099, 239, 319, 339 (#2507 or #5050) Personal Computer AT
- 5170-599, 739, 919, 939 Personal Computer AT/370
- (APG Only) 5540/5550/5560 System (Note) 5550 Family (as 3270) <)
- 6150-20, 25, A25 RT Personal Computer
- 6151-10, 15 RT Personal Computer
- 8530-021 (#5050) Personal System/2 Model 30
- 8550-021 (#2000) Personal System/2 Model 50
- 8560-041, 071 (#2000) Personal System/2 Model 60
- 8580-041, 071 (#2000) Personal System/2 Model 80
- 9370 Processor Console

Note: (APG Only) Can operate in CUT mode and be used for customization; requires 3174 RPQ 8K1349, which is shipped with each machine in Japan, for 5550 printer sharing. <)

IBM PC 3278/79 Emulation and File Transfer Software: The IBM PCs listed above are supported for attachment when configured to operate with:

- IBM Personal Computer 3278/79 Emulation Control Program Version 2 (P/N 8665780)
- IBM PC 3270 Emulation Program, Entry Level (P/N 59X9904)
- IBM PC 3270 Emulation Program Version 3 (P/N 59X9969)
- 3270 Workstation Program Version 1.0 (P/N 74X9921) and Version 1.1 (P/N 75X1088)
- RT PC 3278/79 Emulation Program (PP 5669-052)
- Virtual Machine/Personal Computer Release 2 (P/N 6467040)
- Personal Services/PC Release 1.04 (P/N 6403826, or higher)
- VM Bond Release 2 (P/N 6467022)

IBM PC Host File Transfer Software: The 3174 supports the following host file transfer programs that allow the IBM PCs listed above to perform file transfers. Refer to the appropriate product documentation for details on the supported configurations.

- PC Bond (PP 5664-298)
- Virtual Machine/Personal Computer Release 2 (PP 5664-319)
- MVS/TSO (PP 5665-311)
- VM/SP (PP 5664-281)
- DISOSS - for MVS (PP 5665-290)
- DISOSS - for VSE (PP 5666-270)
- PROFS Version 2 (PP 5664-309) (Personal Computer Connection Extended)

SYSTEM ATTACHMENT

Processors: The 3174 communicates with the following IBM systems and processors using SNA and non-SNA protocols:

System/Processor Communication Table:

SYSTEM/ PROCESSOR	Model 81R			Model 82R		
	BSC	SNA/ SDLC	SNA/ X.25	SNA/ SDLC	SNA/ X.25	
S/1	X	X	-	X	-	
S/36	-	X	X	X	X	
S/38	-	X	X	X	X	
S/88	X	X	-	X	-	
308X	X	X	X	X	X	
3090	X	X	X	X	X	
4361	X	X	X	X	X	

MACHINES

4381	X	X	X	X	X
8100/DPPX	-	X	X	X	X
937X	X	X	X	X	X

Other system/processor attachments may be supported by RPQ, as appropriate. Use the HONE/INFO RPQ application to review for any additional supported systems. Use a search argument of "3174".

Remote Link Attachment: 3174 Models 81R and 82R can communicate with a 308X, 3090, 4361/4381, or 937X via a 3720 or 3725 Communications Controller. Communication with S/1, S/36, S/38, S/88, and 8100 (DPPX only) is via features in those products; communication with the 4361 and 937X may also be via communications features in those processors. Refer to the specific product Machines pages for details. A modem or other data circuit-terminating equipment (DCE) is required, unless the host processor or system provides a method of direct-connection attachment, without the need for a DCE. The Model 81R can also communicate via the 3710 Network Controller.

Communications Facilities: 3174 Models 81R and 82R operate in data half-duplex point-to-point or multipoint modes on duplex or half-duplex nonswitched facilities, and in half-duplex point-to-point mode on switched facilities as listed below. Operation on switched network facilities is supported only through SNA/SDLC. See the M2700 pages for specific country networks that are supported.

Communications Facilities Table:

3174 MOD- EL	ELECTRICAL INTERFACE	FAC. See M2700 PGS	LINK/ NETWORK PROTOCOL	MAX. SPEED (bps)
81R	EIA RS-232-C/ CCITT V.24/28 (External clocking re- quired.)	D,G	BSC	9.6K
		C,D, E,G	SNA/SDLC	19.2K
		K M	SNA/SDLC X.21bis)	19.2K
		P,	X.25 X.21bis)	19.2K
	CCITT V.35 (External clocking re- quired.)	D,G	BSC	9.6K
		D,E, G	SNA/SDLC	64K
		M	SNA/SDLC X.21bis)	64K
		P	X.25 X.21bis)	19.2K
82R	CCITT X.21	L	SNA/SDLC	48K
		N	SNA/SDLC	64K
		Q	X.25	19.2K

Modems: IBM modems to which the 3174 Model 81R can attach include:

Nonswitched Modems:

3833	2400 bps
3834	4800 bps
3863-1	2400 bps
3864-1	4800 bps

3865	9600 bps
3868-1	2400 bps
3868-2	4800 bps
3868-3	9600 bps
3868-4	9600 bps
5811	2.4/4.8/9.6/19.2K bps (Baseband)
5865	9600 bps
5866	14400 bps
5868	9600 bps
5868	14400 bps

Switched network backup (SNBU) mode of operation is possible using an appropriately-featured external modem.

Switched Network Backup Modems:

3863	2400 bps
3864	4800 bps
3865	9600 bps
5865	9600 bps
5866	14400 bps

Switched Network Modems (SNA/SDLC only):

3863-2	2400 bps
3864-2	4800 bps

PTT-Mandatory DCEs: The 3174 Model 81R attaches to PTT-mandatory DCEs meeting CCITT Recommendation V.24, V.28, ISO Standard 2110, and relevant CCITT Recommendations for data transmission speeds. The Model 81R also attaches to PTT-mandatory DCEs meeting CCITT Recommendation V.35 and ISO standard 2593.

Non-IBM DCEs: Non-IBM DCEs complying with EIA RS-232-C, CCITT Recommendations V.24/V.28, V.35, or X.21 may be attached under provisions of the IBM Multiple Supplier Systems Bulletin.

Public Data Networks: Models 81R and 82R attach to X.21 switched, X.21 nonswitched, and X.25 Public Data Networks as listed in M2700 Charts K, L, M, N, P, and Q. 12 sets of seven keyboard stick-on labels (on one sheet) are provided with every 3174 Model 81R and 82R to facilitate X.21 switched network and X.25 session setup and termination.

3710 Network Controller: The Model 81R can attach to the 3710 Network Controller as indicated in the chart below. The maximum total cable length permitted between the 3174 and the 3710 is 15m (50 ft).

3710 Attachment Table:

3710 Feature Number	Speed (K bps)	B S S D C L C	3174 Model 81R Interface
#7001	2.4/3.6/4.8/ 7.2/9.6 14.4/19.2	X X - - - X	RS-232-C (V.24/28)
#7005	2.4/3.6/4.8 7.2/9.6 14.4/19.2/ 48/56/64	X X - - - X	CCITT V.35

Direct-Connection Attachment: The 3174 can communicate with IBM hosts without the need for modems or other data circuit-terminating equipment. This method of "direct-connection" attachment is made through the 3174 EIA RS-232-C (CCITT V.24/V.28), CCITT X.21, or CCITT V.35 interface, via appropriate connecting cables, to the

direct-connection product's interface. The direct-connection product must provide bit clocking to the 3174.

Products that support direct-connection attachment of the 3174 are listed below. Only the interface features needed by the direct-connection products are listed; they may have prerequisites, therefore the "Machines" pages for those products should be reviewed.

The maximum, total cable length allowed between the 3174 interface and the host product interface is 122m (400 ft), unless the host product imposes a shorter limit. The physical planning manuals for those products can provide cabling data and other information necessary for direct-connection attachment.

Direct-Connection Attachment Table:

HOST PROD.	HOST FEATURE	SPEED (K bps)	B S C	D L C	3174 MODEL/ INTER- FACE
3720/ 3721	#4911 (LIC-1)	2.4/4.8/9.6 19.2	X	X	81R/ V.24

------	-------	-------------	---	---	--------------

BASIC CONFIGURATION

The machine is shipped as follows if only mandatory specify codes are selected:

- Communication Cable: (Model 81R) For the EIA RS-232-C/CCITT V.24 Electrical Interface.
- Power (AC, 50/60 Hz, 1-phase):
 - Argentina - 200-240V
 - Australia - 200-240V
 - Brazil - 100-127V
 - Canada - 100-127V
 - Chile - 200-240V
 - Japan - 100-127V
 - Mexico - 100-127V
 - New Zealand - 200-240V
 - Venezuela - 100-127V
 - All Others - (Must specify desired power)
- (Except Canada, Mexico, Nicaragua, Japan > Power Cord Plug. Determined by the 3-digit DPMO WT country code. The plug most commonly used in the country is shipped. <)
- (Canada, Mexico, Nicaragua Only > Power Cord Plug. A non-locking plug is shipped. <)
- (Japan only > Power Cord Plug. A locking plug is shipped.
- RPQ 8K1349. This RPQ for 5550 printer sharing is shipped with each machine. <)
- Machine Nomenclature: The country code is used to select the language of the nomenclature provided on the operator and power control panels, based on the language most commonly used in that country. The following languages are available:
 - English
 - French
 - Japanese
 - Portuguese
 - Spanish

SPECIFY

- Specify #2998 (mandatory specify).

The remainder of the "Specify" section can be ignored if the options described in the "Basic Configuration" section are satisfactory. These specify features are shipped in lieu of the corresponding item(s) described above. Unless indicated otherwise, they are available only at the time of manufacture.

- Communication Cable (Model 81R). Specify #9000 for CCITT V.35 Electrical Interface Cable. (This code causes a CCITT V.35 cable to be shipped instead of an EIA RS-232/CCITT V.24 cable.)
- (Except Canada > Power (AC, 50/60 Hz, 1-Phase). Specify one of the following:
 - 100-127V: #0802
 - 200-240V: #0801 <)
- (Canada, Nicaragua Only > Power Cord Plug. Specify #9890 for locking plug. <)
- (Mexico Only > Power Cord Plug. Specify #9890 for locking plug.
 - Prerequisite: 200-240V Power (#0801). <)
- (Japan only > Power Cord Plug. Specify #9891 for non-locking plug.
 - Limitation: Cannot be installed with 200-240V Power (#0801). <)
- Machine Nomenclature. Specify one of the following:
 - English - #2924
 - French - #2928
 - Japanese - #2930
 - Portuguese - #2933
 - Spanish - #2931

MACHINES**SPECIAL FEATURES (NONE)****MODEL CONVERSIONS (NONE)****ACCESSORIES**

Accessories can be ordered from country Direct Marketing Centers or other responsible supplies marketing group.

Communication Cables: A communication cable connects the 3174 to a modem or other data circuit-terminating equipment (DCE). Accessory communication cables for the EIA RS-232/CCITT V.24 and CCITT V.35 electrical interfaces are available for 3174 Model 81R; accessory communication cables for the CCITT X.21 electrical interface are available for the 3174 Model 82R. Cables in 6m (20 ft) and 12m (40 ft) lengths are available. Order both the cable (by part number), and the "3174 Model and Interface Conversion Customer Setup Instructions" (by publication order number).

- Cable, RS-232/V.24, 6m (20 ft) - P/N 6423153
- Cable, V.35, 6m (20 ft) - P/N 6423325
- Cable, X.21, 6m (20 ft) - P/N 6168155
- Cable, RS-232/V.24, 12m (40 ft) - P/N 6423154
- Cable, V.35, 12m (40 ft) - P/N 6423327
- Cable, X.21, 12m (40 ft) - P/N 6168156
- CSU Instructions, Canadian French - GA09-0371
- CSU Instructions, English - GA23-0295
- CSU Instructions, French - GA11-0509
- CSU Instructions, Spanish - GA10-8843
- CSU Instructions, Japanese - N:GA23-0295

IBM 3270 DPC-T3 Adapter (P/N 83X9758): A cable adapter assembly that permits direct attachment to telephone twisted pair wire, that meets the IBM Cabling System Type 3 specifications, up to a maximum distance of 275m (900 ft.). It is 4.6m (15 ft.) in length with an IBM Dual Purpose Connector (DPC) at one end and a miniature six-pin modular telephone connector on the other end. The telephone connector can be cut off, and the wire inserted directly into telephone punch-down blocks that are capable of accepting stranded telephone wire. The accessory can also be used at the

terminal end of the wire provided the terminal has an IBM Dual Purpose Connector (DPC). (Canada only>Otherwise, a CTPA is required.<)

Ordering: Order via NDD DRO or via Distributors authorized to market the IBM Cabling System components. Minimum order quantity is one package which contains ten IBM 3270 DPC-T3 Adapter assemblies.

SUPPLIES

None required with the machine order.

Supplies can be ordered from country Direct Marketing Centers or other responsible supplies marketing group.

X.21/X.25 Keyboard Labels: Provides 12 sets of seven keyboard stick-on labels (on one sheet) for X.21 switched network or X.25 network operation via a 3174 Model 81R or 82R. Order both the labels (by part number) and installation instructions (by publication order number).

- Sheet of Labels - P/N 1743595
- Instructions, English - G126-0158
- Instructions, Canadian/French - G509-2504

Cabling Information

Coaxial Cable: For proper identification, installation, and application of cable and associated accessories, refer to "Installation and Assembly of Coaxial Cable and Accessories for Attachment to IBM Products", GA27-2805.

IBM Cabling System: For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System Planning and Installation Guide", GA27-3361.

(Canada only> Twisted-Pair Telephone Wire: For proper identification, installation, and application of cable, refer to "IBM/ROLM Planning and Installation Guide for 3270 Coax to Twisted-Pair Adapter, GA27-3722.<)

3178 DISPLAY STATION

PURPOSE

A cathode-ray tube (CRT) display station used in clusters with the 3274, the 3276, the 4701 Controller, or the 4331 Processor with Display Printer Adapter or the 4361 Processor with Display Printer Adapter and Workstation Adapter, for displaying alphanumeric data, and for entering data into and retrieving data from S/360, S/370, a 4300 Processor, 8100 System or 9370 Processor with Workstation Subsystem Controller. A keyboard permits an operator to display and manipulate data on the screen. The 3178 meets both general-purpose and unique display requirements.

MODELS

Model C1X: Displays up to 1,920 characters and provides a 75-key Data Entry Keyboard or 76-key Japanese Katakana Data Entry keyboard.

Model C2X: Displays up to 1,920 characters and provides a 87-key Typewriter Keyboard or 88-key Japanese Katakana Typewriter Keyboard.

Model C30: Displays up to 1,920 characters and provides a 87-key Typewriter Keyboard which, with its numeric pad, is identical in layout to the keyboard provided with RPQ 8K1038 for the 3278. This model attaches to the 3274 or 3276 and requires a no-charge RPQ in the control unit.

Model C40: Displays up to 1,920 characters and provides a 87-key Typewriter Keyboard which, with its numeric pad, is identical in layout to the keyboard provided with RPQ 8K0932 for the 3278. This model attaches to the 3274 or 3276 and requires a no-charge RPQ in the control unit.

Language option selected will be designated by the third character of the model number as follows:

Y	English US
D	Canadian Bilingual/French
K	Japanese Katakana
S	Spanish Speaking

Prerequisites

Attachment Required on Control Unit

- 3274: Available Category A terminal port.

Mdl C3 attachment to a 3274 requires one of four no-charge microcode RPQs in the 3274: For 3274s with Configuration Support A, B, or C use 8K1034 if the numeric lock feature is not desired, or 8K1035 if the feature is desired; for 3274s with Configuration Support D use 8K1164 if the numeric lock feature is not desired, or 8K1165 if the feature is desired. Caution: RPQs must be ordered well in advance of the mdl C3 to assure receipt prior to receipt of the mdl C3.

Mdl C4 attachment to a 3274 requires one of two no-charge microcode RPQs in the 3274: 8K0931 for 3274s with Configuration Support A, B, or C; or 8K1163 for 3274s with Configuration Support D. Caution: RPQs must be ordered well in advance of the mdl C4 to assure receipt prior to receipt of the mdl C4. Mdl C4 and C2 are mutually exclusive; and C2 are mutually exclusive; they can not be accommodated together on the same 3274. Likewise, the mdl C4 cannot coexist with 3278s or 3279s which use any of these keyboards: #4624, #4627, #4628, #4628, #4640, #4651 or #4652. However, the mdl C4 can be intermixed on the same 3274 with C1s, C3s, and 3278s and 3279s with other standard (non-RPQ) keyboards.

- 3276: Available port or added #3255, #3256 or #3257.

Mdl C3 attachment to a 3276 requires one of two no-charge RPQs in the 3276: use 8K1059 if the numeric lock feature is not

desired, or 8K1060 if the feature is desired. Caution: RPQs must be ordered well in advance of the mdl C3 to assure receipt prior to receipt of the mdl C3.

Mdl C4 attachment to a 3276 requires RPQ 8K0930, a no-charge RPQ, in the 3276. Caution: RPQs must be ordered well in advance of the mdl C4 to assure receipt prior to receipt of the mdl C4. Mdl C4 and mdl C2 are mutually exclusive; they cannot be accommodated together on the same 3276. Likewise, the mdl C4 cannot coexist with 3278s and 3279s which use any of these keyboards: #4624, #4627, #4628, #4640, #4651, or #4652. However, the mdl C4 can be intermixed on the same 3276 with C1s, C3s, and 3278s and 3279s with other standard (non-RPQ) keyboards.

- 4331: Standard Display/Printer Adapter on 4331 or Display/Printer Adapter Expansion (#2001) on a 4331 mdl group 1 or 2.

- 4361: Standard Display Printer Adapter or Workstation Adapter (optional).

Attachment of the 3178 mdl C3 or C4 to the 4331/4361 is not supported.

- 9370: Workstation Subsystem Controller (optional).

- 4701: Available port on optional DCA adapter.

Attachment of the 3178 mdl C3 or C4 to the 4701 is not supported.

A 3178 with Canadian Bilingual/French keyboard requires the following RPQs on the 3274 or 3276:

3274 Configuration Support A & B:	8K1012
-----------------------------------	--------

3274 Configuration Support C:	8K1013
-------------------------------	--------

3276 without feature code #1068:	8K1014 or 8K1055
----------------------------------	------------------------

3276 with feature code #1068:	8K1015 or 8K1054
-------------------------------	------------------------

Note: Canadian Bilingual/French Machine cannot be attached to 4331/4361 Display Printer Adapter or the 4361 Workstation Adapter.

Following printer RPQs are available for the full compatibility with 3178 with Canadian Bilingual/French keyboard:

3262 Line Printer:	S00470 or S00454
3287 Printer:	8Q0164 or 8Q0229

Note: Full compatibility with 3178 Canadian Bilingual/French keyboard is provided for 3268 as a standard function.

HIGHLIGHTS

Displays up to 1,920 characters in 24 rows of 80 characters each. Each character is represented in a maximum 7 X 14 dot matrix in the 9 X 16 contiguous box matrix. Displays a 94 character set: 26 uppercase alphabetic, 26 lowercase alphabetic, 10 numeric and 32 special characters.

(Canada only) With Canadian Bilingual/French keyboard, displays additional 30 unique Canadian French characters (total 124-character set). (<) (Japan only) With Japanese Katakana keyboards, displays 127-character set). (<)

The 3178 offers functions equivalent to the 3278 mdl 2 with features of an 87-key/75-key Keyboard, Keyboard Numeric Lock, Audible Alarm and Security Keylock. The mdl C3 provides a keyboard layout like that provided with RPQ 8K1038 for the 3278.

The mdl C4 provides a keyboard layout like that provided with RPQ 8K0932 for the 3278.

A monospace switch, located on the keyboard, provides the capability of switching to uppercase alphameric mode for 3277 compatibility. Uses 3270 field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphameric, normal/intensified, and displayable/non-displayable.

The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of 3178. When the 3178 is attached to a 3274 or 4300 Processor Display Printer Adapter, a 4361 Workstation Adapter or 9370 Workstation Subsystem Controller, the printer designation is controlled by operator use of the IDENT key and by: (a) a printer authorization matrix which is loaded into the 3274 through a user written host application program, or, (b) a customer definable matrix loaded from the System Diskette at IML time. For further details, see the "IBM 3270 Information Display System Planning and Setup Guide", GA27-2827.

When the 3178 is attached to a 3276, the printer designation is controlled by operator use of the IDENT Key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276. (The host can perform a copy in a manner compatible with 3271/3272 support.)

The 3178 consists of three workstation elements (WSEs): video, keyboard elements. With optional extension cables, provided as accessory, the logic unit may be placed away from the video unit and the keyboard. The logic unit may be mounted on a vertical surface such as the side of a desk or a wall using a mounting bracket provided as a separate accessory.

Operator Factors: The 3178 has an etched screen, which minimizes glare and fingerprint. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option, are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard is light and thin, and the keyboard can be adjusted to either 12 degrees by attaching or 6 degrees by detaching the keyboard foot assembly offered as basic.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphameric, special symbol, and cursor move keys have typamatic capability. Double speed cursor typamatic is attached with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. Ten Program Function (PF) keys are available on the Data Entry Keyboard; 24 PF keys are available on the Type-writer Keyboard.

When attached to a 3274 with Configuration Support C with Entry Assist RPQ or with Configuration Support D and with a typewriter keyboard (3178 mdl C2), it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 pages for languages supported.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the

screen. A Security Keylock prevents modification or display of data in the display terminal unless the key is turned to the "on" position.

These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to control access to data and audit of actions.

Customer Problem Analysis and Resolution: Functions have been designed into the 3178 to enhance the availability to the customer. This has been done through the use of customer problem analysis and resolution (CPAR) routines and procedures that are used by the operator. See "Customer Responsibilities".

Customer Setup (CSU): The 3178 is designated as a customer setup machine except for the Logic Unit Mounting Bracket accessory. The customer is responsible for arranging for the attachment of the Mounting Bracket to the desk, wall or other surface. Setup instructions are included with each machine, as a part of the "IBM 3178 Display Station Operator Reference Guide".

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at customer's receiving dock, unpacking and placement of unit.
- Physical setup, connection of cables in customer access areas, switch settings and checkout.
- Contacting an IBM customer service coordinator for attachment of the 3178 communications cable to an on-site serviced IBM control unit where customer access area is not provided.
- Determination of the required number of spares.
- Performing customer problem analysis and resolution (CPAR).
- Returning failing workstation element to the Repair Center or to the Service/Exchange Center with a completed Service/Replacement Order Form for repairs.
- Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
- Each customer must order the IBM 3178 Display Station Description Manual, GA18-2127, for site planning and preparation work since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3178 units for such use. The number of spare units is dependent upon the number of the 3178 units the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Warranty Service and Maintenance: Customer Carry-In/Repair is available through April 20, 1984 for a five-year maintenance charge. After that time only a one-year plan will be available for new orders. However, in cases where 5-year maintenance contracts have already been signed for the 3178, only those 3178s with warranty periods that expire prior to December 31, 1984 can be included in the 5-year-coverage plan. After December 31, only 1-year coverage will be available.

The following services are available for an annual charge:

IBM On-Site Exchange
 Customer On-Site Exchange
 Customer Carry-In Exchange
 Customer Carry-In Repair

Note: Not all service options are available in each country. Contact country Service Department for available service options and applicable terms and conditions of the warranty in your country.

The warranty period is 3 months following the date of installation. The warranty covers each of the five workstation elements. There is no regularly scheduled preventive maintenance recommended by IBM on these units.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center or IBM Service/Exchange Center for repair on a time-and-material basis. The Service/Replacement Order Form is to be completed with all shipments to the Repair Center. Upon request, IBM will provide, for a minimum charge, an estimate of repair charges. This charge covers handling, inspection, cleaning, testing, estimating of repair charges and return shipping charges. The 3178 qualifies for an IBM maintenance agreement immediately following expiration of the service and parts of the service and parts warranty.

If an IBM maintenance agreement is not contracted for immediately following expiration of the service and parts warranty and the customer subsequently wants maintenance coverage, the customer must ship the machine(s) to the designated IBM Repair Center or Service/Exchange Center for an inspection. A minimum charge to cover handling, inspection, cleaning, testing and return shipping charges will be applied. In addition, all time and parts required to qualify the machine for maintenance agreement acceptability will be billed at IBM's then current rates and terms. The machine will then qualify for an IBM maintenance agreement coverage. If on the basis of an inspection, IBM concludes that a machine is not repairable, no further work will be performed and the machine will be returned to the customer subject to minimum charge.

IBM On-Site Exchange: This service allows the customer to call the National Support Center on a toll-free number the local CE branch office after the customer has performed CPAR, and have a representative bring a replacement element to the customer site, install and test the replacement element. The failing element becomes the property of IBM.

Customer On-Site Exchange: To use the service a customer calls the local CE branch office IBM arranges for delivery of a replacement element to the customer site specified by the customer using various deliver methods

The customer is responsible for the installation and the test of the replacement element using the customer setup (CSU) procedures. The carrier returns the defective element to IBM as instructed by IBM. The delivery transportation charge to/from the customer site is paid by IBM.

Customer Carry-In Exchange: After isolating a failing element using CPAR, the customer transports the failing element to an IBM Service/Exchange Center. IBM will provide a replacement element on an exchange basis. The customer is responsible for delivering the failing element to/from the element to/from the Service/Exchange Center. For further information on the Customer Carry-In Exchange, contact IBM.

Customer Carry-In/Repair: After isolating the failure to a workstation element, the customer carries in the failing workstation element to a Service/Exchange Center (S/EC). The S/EC will ship the workstation element to an IBM Repair Center. IBM will then ship the repaired workstation element to the S/EC to hold for customer pick-up. Alternatively, the customer may ship the failing workstation element directly to an IBM Repair Center. It is the customer's responsibility to pack the failing WSE in the original shipping container or equivalent and ship it prepaid to the designated IBM Repair Center. IBM will return the repaired unit prepaid.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or

conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged for at IBM's then applicable time and material charges. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the local CE branch office may be called for their assistance. The CE will respond a customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer.

Customer owned spare Workstation Elements (WSE) may be installed to replace defective workstation elements by the CE upon customer request. Shipping of defective WSEs to the Repair Center or Service/Exchange Center is a customer responsibility. All on-site assistance is available on a per-call basis at the applicable hourly rates and terms.

Keyboards: (See Notes 1, 2 and 3 below):

- 75-key Data Entry Keyboard, provided with the mdl C1: Movable with 35 data keys, 10 PF keys and 30 control keys.
- 87-key Typewriter Keyboard, provided with the mdl C2: Typewriter-like layout, moveable with 49 alphameric keys, 26 control keys and 12 PF keys (total 24 PF keys).
- (Japan only) > 76-key Japanese Katakana Data Entry Keyboard: Movable, 4-level shift providing 49 data keys, 10 PF keys and 27 control keys.
- 88-key Japanese Katakana Typewriter Keyboard: Typewriter-like layout, moveable. Provides 4-level shift, providing 49 data keys and 27 control keys. <)
- 87-key Typewriter Keyboard, provided with the mdl C3: Typewriter-like layout, moveable with 49 alphameric keys, 26 control keys and a block of 12 keys which are PF 1-12 in lower shift, PF 13-24 in Alt shift, and a numeric pad (0-9, plus decimal and tab) in upper shift.
- 87-Key Typewriter Keyboard, provided with the mdl C4: Typewriter-like layout, moveable with 49 alphameric keys, 26 control keys and a block of 12 keys which are a numeric pad (0-9, plus decimal and tab) in lower and upper shift and PF 13-24 in Alt shift.

Notes:

1. Keyboards used on 3101, 3104, 3275, 3276, 3277, 3278, 3279, or 8775 machines are not interchangeable with keyboards used on 3178.
2. A 0.9m (3 ft) keyboard cable is provided, as basic. The keyboard cables can be extended to 3.0m (10 ft) with a 2.1m (7 ft) Keyboard Extension Cable provided as accessory.
3. Keyboard foot assembly is provided as basic. It provides a keyboard surface angle of 12 degrees (6 degrees without the foot assembly).

Publications: "IBM 3178 Display Station Description", GA18-2127; "IBM 3178 Display Station Operator Reference Guide". For others, see KWIC Index, G320-1621, or specific system bibliography.

SPECIFY

- Voltage (100-127V, AC, 1-phase, 3-wire, 50-60 Hz or 200-240V, AC, 1-phase, 3-wire, 50-60 Hz)
- Power Cord: (Canada only) > Specify #9514 for a 3.0m (9.8 ft) cord with nonlocking plug, or #9511 for a 1.8m (6 ft) cord with nonlocking plug. For all other countries a 3.0m (9.8 ft) cord is provided with nonlocking plug. <)

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS

Field installable.

ACCESSORIES

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual- Physical Planning", GA27-2787, and Coaxial Cable and Associated Manual, GA27-2805.

The following accessories can be ordered

Extension Cables: Provides 2.1m (7 ft) Video Extension Cable, (Total 2.7m (9 ft) with 0.6m (2 ft) standard Video cable), and 2.1m (7 ft) Keyboard Extension Cable (Total 3.0m (10 ft) with 0.9m (3 ft) standard keyboard cable). With this accessory, the Logic unit can be located away from the Video unit and the Keyboard.

Extension Cables are designated as a customer setup accessory. Setup instructions are included with each accessory.

P/N 5641828

Logic Unit Mounting Bracket: Provides a mounting bracket to mount Logic unit on a vertical surface such as the side of a desk or a wall when Logic unit is placed away from Video unit and Keyboard using Extension Cables accessory. Arrangements for mounting the bracket is the customer's responsibility.

P/N 5641650

Note: Logic Unit Mounting Bracket accessory is not covered by an IBM maintenance agreement. Order as an accessory when the replacement is needed.

Switch Control Unit: Permits switching operational control of a 3178 between two different control units. The customer is responsible for procurement and installation of this accessory, and also for the replacement of a defective unit. There is no switch control unit designed specifically for the 3178, but use may be made of the unit designed for the 3278 or 3279. The 3279 switch is suggested, even though it does not fit readily under the foot of the 3178, since it is better adapted than the 3278 switch to a free standing installation.

Ordering Instructions: The 3279 switch control unit (which includes language independent setup instructions for use with the 3178) is ordered by P/N:

P/N 6052157	English
P/N 6052158	Canadian French
P/N 6052160	Japanese
P/N 6052159	Spanish

Switch control units are for field installation only.

Refer to the M3279 pages for more information about the 3279 switch control unit.

CUSTOMER REPLACEMENT PARTS

Following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Description	P/N
Keyboard Extn Cable	5641815
Video Extension Cable	5641814
Field Packaging Material	
For Logic	8665651
For Keyboard	7387286
Keys (see Note)	5641830
	for Flat key
	5641800
	for Tulular key

Note: The 3178 is shipped with two keys. Additional keys may be purchased from IBM. Key identification number must accompany each order. Note: If the key identification number is unknown, the Logic WSE should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on a time and material basis.

MACHINE ELEMENTS

Individual 3178 workstation elements may be ordered for use as replacements or spares.

3178 Workstation Elements: Order Entry: Specify MACHINE ELEMENT P/N at time of order entry.

To Fit Model	Workstation Element	P/N (See Note)
C1/C2	Video	5894000(All countries)
C3/C4	Video	5894000(All countries)
C1/C2	Logic	5640980(Low-Voltage countries)
C3/C4	Logic	5640980(Low-Voltage countries)
C1/C2	Logic	5641793(High-Voltage countries)
C3/C4	Logic	5641793(High-Voltage countries)
C1	Keyboard	5640991(English US)
C2	Keyboard	5640987(English US)
C3	Keyboard	6052101(English US)
C4	Keyboard	6052141(English US)
C1	Keyboard	4742679(Canadian Bilingual/French)
C2	Keyboard	4742683(Canadian Bilingual/French)
C1	Keyboard	4742680(Katakana)
C2	Keyboard	4742684(Katakana)
C1	Keyboard	4742681(Spanish Speaking)
C2	Keyboard	4742685(Spanish Speaking)

Note: Logic does not include a power cord for each country. Keyboard includes a pair of Keyboard Feet. Video does not include Pedestal.

The following parts are covered by the IBM maintenance agreements but may be ordered individually if spares or replacements are desired.

Description	P/N
Pedestal	5641300
Keyboard	5641297
Feet (pair)	
(Canada only)	
Power Cord	5640671 (3.0m cord)
	5640670 (1.8m cord)<)
	5640662 for Argentina/ Brunei Malaysia/ Singapore/Hong Kong
	5640663 for Indonesia
	5640664 for Australia, New Zealand
	5640668 for Chile
	5640671 for Bahamas/ Barbados Bermuda/Bolivia
	Colombia/Costa Rica
	Dominican Republic
	Ecuador/El Salvador
	Guatemala/Guyana

Honduras/Jamaica
Japan/Korea/Mexico
Netherland Antilles
Nicaragua/Panama
Philippines/Taiwan
Trinidad Tobago
Venezuela
5641389 for Sri Lanka

Customer Responsibilities: The customer's responsibilities are the same as those above under "Customer Responsibilities".

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order the IBM 3178 Display Station Description Manual (GA18-2127) for site planning and preparation work.

Warranty: Category B

Maintenance: Maintenance for individual workstation element is only available on a time-and-material basis at an IBM Repair Center or through an IBM Service/Exchange Center. Minimum charge is applied. Maintenance for workstation element is different by country. Contact country Service Department for the available maintenance in your country.

SUPPLIES (NONE)

3179 COLOR GRAPHICS DISPLAY STATION MODEL G

THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT

PURPOSE

The 3179-G Color Graphics Display Station, a new, low priced, color graphics display member of the 3270 Information Display System. The 3179-G is a compact, 8-color, 1,920- or 2,560-character, 14-inch CRT with bright, clear colors and a smudge-resistant screen surface. The graphics capabilities are significantly enhanced by the provision of an all-points-addressable (APA) screen and capability to natively attach the IBM Color Printer (3852 Model 2) for local screen copy.

The 3179-G features the 122-key or 124-key Katakana modifiable keyboard with 24 program function (PF) keys, a numeric pad, improved cursor-move function and a Selectable Field Tab function key for light-pen detectable fields.

The 3179-G is offered in two models:

1. Model G10 122-key or 124-key Katakana Typewriter keyboard
2. Model G20 122-key or 124-key Katakana Typewriter/APL2 keyboard

Host interactive graphics support on S/370, 43XX, 303X, 308X, 3090, and 9370 processors is included in an enhancement to Release 4 of GDDM (Graphical Data Display Manager). Screen management functions are extended to interact with graphics information as well as with alphanumeric information.

One 3979 Expansion Unit may be attached to the 3179-G. The 3979 allows attachment of the 5277 Mouse, 6180-2, 6184, and the 7371, or 7372 Color Plotters. The 3979 provides an alternative port for the IBM Color Printer (3852 Model 2) when the 3979 is attached to the 3179-G.

MODELS G1, G2

Model G1 G1x: Displays up to 2,560-characters in 32 lines of 80-characters each. 8 colors, APA buffer and external highlighting. Provides 122-key or 124-key Katakana Typewriter keyboard.

Model G2 G2x: Displays up to 2,560-characters in 32 lines of 80-characters each. 8 colors, APA buffer and external highlighting. Provides 122-key or 124-key Katakana Typewriter/APL2 keyboard.

Language option selected will be designated by the third character of the model number.

Specify the model number shown as follows:

GxY US English
GxD Canadian French
GxK Japanese Katakana
GxS Spanish Speaking

Where "x" denotes keyboard model specification.

Limitations:

- A 3178, 3179-1, 3180-100, 3191, 3192, 3278, or 3279 Display Station must be attached to Port 0 of the 3174, 3274 Control Unit or 9370 Workstation Subsystem Controller for customization and diagnostic support. (This display may be attached via a 3299.)
- Category "B" terminals (e.g., 3277 Display Stations) cannot be used on the same 3274 when these units are customized to support the 3192-G.
- Plotters are only supported via IEEE488 interface.
- Existing alphanumeric applications will run on the 3179-G unless the program is affected by 3274 Control Unit configuration restrictions (e.g., no Category B terminals) or required hardware functions not available with the 3179-G, e.g., magnetic readers, light-pen, triple-plane programmable symbols, encryption/decryption or unsupported screen sizes.

- BSC Copy Command is not supported.
- Programmable Symbols (PSA and PSB only) are supported in single color.

Prerequisites:

- A 3178, 3179-1, 3180-100, 3191, 3192, 3278, or 3279 Display Station must be attached to Port 0 of the 3174, 3274 Control Unit or 9370 Workstation Subsystem Controller for customization and diagnostic support.
- 3274 Control Unit Attachment: The 3179-G models must be attached to the IBM 3274 Control Unit with Configuration Support D at microcode Release Level 65 and Load Diskette #9301 or #9311 (except Katakana) or #9305 or #9315 (Katakana only).

Note: Since a feature code load diskette is used to support the 3193, 3290, 3179-G, and the 3192-G, customers should read the diskette label. Feature Code (Except APG>#9301<) (APG only>#9301, #9305<) support the 3179-G, 3192-G, and 3290. Feature Code (Except APG>#9311<) (APG only>#9311, #9315<) support the 3179-G, 3192-G, and 3193. The label will state if the 3179-G is supported.

- 3174 Control Unit Attachment: The 3179-G models attach to the 3174 Control Unit and require Load Diskette feature code #9016.
- Workstation Subsystem Controller of the IBM 9370 Processor Attachment: The 3179-G models attach to the Workstation Subsystem Controller, feature code #6020, of the 9370 Processors and require Load Diskette feature code #9016.

Note: Only one feature code Load Diskette (#6020) is required to support the 3179-G when attached to the 3174 Control Unit or to the Workstation Subsystem Controller of the 9370 Processor. Refer to the "3174 Control Unit Customization Guide" (GA23-0214).

- GDDM Release 4 must be installed on the host processor for graphic support. The following PTFs must be installed:

	OS	DOS/VSE	VM/370
GDDM	UP90176	UP90177	UP90178
Base	UP59304	UP59305	UP59306
PGF	UP90179	UP90180	UP90181
	UP59307	UP59308	UP59309

- Customers planning to use a 3179-G with ISPF Version 2 must install a prerequisite PTF as shown below:

- ISPF MVS (5665-319) Version 2 Release 1 - UZ80300
- ISPF MVS (5665-319) Version 2 Release 1.1 - UZ80301
- ISPF MVS (5665-319) Version 2 Release 1.2 - UZ80302
- ISPF VM (5664-282) Version 2 Release 1 - UV16080

BSC Users:

- Customers installing the 3179-G for use over binary synchronous communication lines should customize the IBM Control Unit with BSC Enhanced Communications Option (176).
- Customers operating under ACF/VTAM with ACF/NCP over Binary Synchronous (BSC) communication lines must be at an ACF/NCP Version 3 or higher level. Customers should contact their service representative for the following prerequisite PTFs:

NCP V3 on 3705: PTF UR12445
NCP V3 on 3725: PTF UR12446

NCP V4: PTF UR12444
SSP V1.2.2: PTF UR13293
SSP OS/MVS: PTF UR13294
SSP VM: PTF UR13295

Customer Setup (CSU): The 3179-G is designated as a Customer Setup machine. A copy of the "IBM 3179-G Color Graphics Display Station Setup Instructions", GA18-2262, is included with each machine.

HIGHLIGHTS

- The 3179-G is data stream compatible with today's 3270 displays in alphanumeric application environments. Most mainframe interactive graphics applications that run under GDDM Release 3 can be run unchanged on the 3179-G with GDDM Release 4.
- Provides significant new functions and host graphic off-load when compared to the 3279 Model S3G.

Attachment of IBM Color Printer (3852 Model 2) to logic unit of the 3179 Model G for local screen copy.

Note: Must specify printer interface cable #2058 (P/N 6342058) for Printer (3852 Model 2).

Host processing is reduced and, for most applications, controller utilization will be improved by using the 3179-G to off-load vector-to-raster conversion and symbol set usage.
- Allows attachment of one 3979 Expansion Unit. The 3979 extends the configuration capability to connect one 5277 Mouse, one Printer (3852 Model 2) and one of either the 6180-2, 6184, 7371, or 7372 Color Plotters to the 3179 Model G.

Note: Must specify printer interface cable #2058 (P/N 6342058) for the Printer (3852 Model 2). Only one plotter may attach, specify IEEE488 interface #9920 and cable #5040 for 7371 or 7372 Plotter).
- Selectable Field Tab key and Cursor Select key provide for selection of light-pen detectable fields in lieu of a light-pen.
- Improved cursor movement. When cursor keys are depressed, the cursor accelerates. Two cursor types are provided: Alphanumeric and graphic. Graphic cursor (Cross and Cross Hair) supports PEL-level resolution. The 5277 Mouse may be used to control both alphanumeric and graphics cursors on the screen. The graphics cursor controlled by the cursor positioning keys or the 5277 Mouse provides coordinate (x,y) input via the 3979 Expansion Unit.
- Screen Characteristics: 8-colors (red, green, blue, white, yellow, turquoise, pink, and black background).
- An all-points-addressable (APA), 14-inch CRT color display provides a bright, steady presentation of 720 x 384 picture elements in a viewable area of 240mm (9.4 in.) by 172mm (6.8 in.).
- Requires no color convergence adjustments.
- Transient patterns associated with buffer loading of programmed symbols (PS) are eliminated.
- Etched, enhanced contrast CRT screen designed to reduce light reflections and fingerprint smudges to produce high-quality, high-resolution output.
- 2 fixed-character fonts can be selected by host applications program for data presentation:
 - Up to 1,920-characters can be displayed as 80-characters by 24 lines.
 - Up to 2,560-characters can be displayed as 80-characters by 32 lines.
 - Keyboard Characteristics.
- Two keyboards: Typewriter and Typewriter/APL2. A modifiable keyboard with 122-keys or 124-key Katakana provides 24

individual program function keys, a numeric pad, and improved cursor-move keys.

- A keyboard definition utility is supported in the 3179-G to allow definition of customer specific keyboard layouts. A keycap removal tool is standard so that keycaps can be interchanged conveniently.
- The 3274 Downstream Load Diskette #9301 or #9311 (except Katakana), or #9305 or #9315 (Katakana only) provides space for three modifiable keyboard layouts per control unit. The diskette is supplied via microcode Release Level 65 or higher for the 3274 with Configuration Support D.

The 3174 Control Unit and the Workstation Subsystem Controller (#6020) of the 9370 Processor Downstream Load Diskette #9016 (applicable world-wide) provides space for three modifiable keyboard layouts. (Refer to the "3174 Control Unit Customization Guide", GA23-0214.)

The modified keyboard layouts are defined by switches located on the underside of the keyboard (refer to "3179-G/3192-G Color Graphics Display Station Operator Reference and Problem Solving Guide" (GA18-2591) for information) and can be set by the operator.

Low-profile keyboard with coiled cable. Keyboard provides operator adjustment for three angles of inclination: 6, 12, or 18 degrees.

- Entry Assist is standard.
- The Response Time Monitor and Alert capability are supported.
- Audible Alarm and Security Keylock are standard. Security key is removable in both LOCK and UNLOCK position.
- Video pedestal, provided as standard, provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be individually positioned.
- Through the use of error indicators, off-line tests, and the "Operator Reference and Problem Solving Guide", the customer will isolate a failing element for repair or replacement.

Operator Factors: The 3179-G has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option, are provided. An enhanced full-screen cross-hair cursor or an alternate cross cursor is featured for graphic operations. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator via switches on the keyboard underside. The cable connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard is thin and the keyboard slope can be adjusted by the user to 6, 12, or 18 degrees.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic. All alphanumeric and special symbol keys have typematic capability. Cursor move keys cause acceleration of the cursor when held down. Simultaneous depression of vertical and horizontal will cause diagonal movement. Fields of data can be selected by positioning the cursor, then using the cursor select key. If data fields are light-pen detectable, the Selectable Field Tab function key will provide more rapid location. The 24 Program Function (PF) keys are provided on the keyboard in lowercase mode. Entry assist is supported when attached to a 3274 Control Unit with Configuration Support D at Release 64 or higher, or to the 3174 Control Unit and the Workstation Subsystem Controller (#6020) of the 9370 Processors. The 3179-G Entry Assist provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, word-wrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is in-

tended for use primarily with a specific set of host editor programs. (See M3274 pages for details.)

Operating Environment: Operating environment of configurable I/O units are different.

- 3179-G, 3979, 5277, 6180-2, 6184, 7371, or 7372 Class C: 10 - 40.6 C (50-105 F); 8-80% Relative Humidity
- Printer (3852 Model 2) Class B: 15.6 - 32.2 C (60-90 F); 20-80% Relative Humidity

Security Facilities: Data security functions provided by the 3179-G are non-display field control (specified in the attribute byte) and the security keylock.

A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents display of data on the display terminal unless the key is turned to the UNLOCK position. The key is removable in either LOCK or UNLOCK positions.

User management is responsible implementation of these functions. If sensitive data is sent over external communications facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures" (G320-5649).

These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to control access to data and audit of actions.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of the unit.
3. Physical setup, connection of cables in customer access area, switch settings and checkout.
4. Contacting an IBM customer service coordinator for attachment of the 3179-G communications cable to an on-site serviced IBM control unit where customer access area is not provided.
5. Determination of the required number of spares.
6. Performing Customer Problem Analysis and Resolution (CPAR).
7. Returning a failing element to the Repair Center (for Customer Carry-In Repair maintenance) or to the Service/Exchange Center (for Customer Carry-In Exchange maintenance) with a completed Service/Replacement Order Form for repairs.
8. Contact IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service required.
9. Removing customer-owned keycaps prior to submitting a keyboard for exchange or repair service and return the standard layout keyboard to IBM.
10. Returning security keys to IBM if any exchange service of Logic Element is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
11. Ordering the "IBM 3179-G/3192-G Color Graphics Display Station Description Manual", GA18-2589, for site planning and preparation work since it is not shipped with each machine.

Spares: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3179-G units for such use. The number of spare units is dependent upon the number of the 3179-G units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares can be ordered as a complete machine or as individual elements.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3179-G to enhance the availability to the customer. This has been done through the use of Customer Problem Analysis and Resolution (CPAR) routines and procedures that are used by the operator. See "Customer Responsibilities".

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged for at IBM's then applicable hourly service rates and terms. Altered elements will not be eligible for the exchange or replacement services.

On-Site Assistance: If the customer desires assistance in performing Customer Problem Analysis and Resolution (CPAR), the customer calls local IBM service branch office. IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the customer.

Customer-owned spare elements can be installed to replace defective elements by IBM upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. All on-site assistance is provided on an hourly service basis at the applicable hourly service rates and terms.

Keyboards: (See Notes 1, 2 below)

- 122-key Typewriter Keyboard: Typewriter-like layout, with 49 alphanumeric keys, 31 control keys, 24 program function keys and 18 numeric pad keys.
 - 122-key Typewriter/APL2 Keyboard: Typewriter-like layout, with 49 alphanumeric keys, 31 control keys, 24 program function keys and 18 numeric pad keys.
 - 124-key Japanese Katakana Typewriter Keyboard: Typewriter-like layout. Provides 4-level shift, providing 50 alphanumeric keys and 32 control keys, 24 program function keys and 18 numeric pad keys.
 - 124-key Japanese Katakana Typewriter/APL2 Keyboard: Typewriter-like layout, movable. Provides 4-level shift, providing 50 alphanumeric keys and 32 control keys, 24 program function keys and 18 numeric pad keys.
1. Keyboards used on other products are not interchangeable with the keyboard used on 3179-G.
 2. A coiled keyboard cable is provided with each keyboard allowing individual keyboard positioning.

Publications:

- GA18-2262 IBM 3179-G Color Graphics Display Station Setup Instructions
- GA18-2271 IBM 3179-G Color Graphics Display Station Operator Reference and Problem Solving Guide
- GA18-2589 IBM 3179-G/3192-G Color Graphics Display Station Description
- SY18-2099 IBM 3179-G/3192-G Color Graphics Display Station Repair Center Maintenance Information
- GA18-2272 IBM 3979 Expansion Unit Setup Instructions (for low-voltage countries)
- GA18-2349 IBM 3979 Expansion Unit Setup Instructions (for high-voltage countries).

Note: These manuals can be ordered from the country publications centers. A copy of the "IBM 3179-G Color Graphics Display Station Setup Instructions", GA18-2262, and "IBM 3179-G Color Graphics Display Station Operator Reference and Problem Solving Guide", GA18-2271, will be shipped with each machine. Contact your country publication department for the order form number assigned for each country.

SPECIFY

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz, or 200-240V AC, 1-phase, 3-wire, 50-60 Hz.
- Line Cord: A 2.8m (9.0 ft) line cord with nonlocking plug. The country number of the ordering country determines the default line for line cord and shipping group.
- Maintenance Option: Warranty Option - #9799.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted-pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual - Physical Planning", GA27-2787, and "Coaxial Cable and Associated Manual", GA27-2805.

The following keyboard and switch control unit* accessories can be ordered:

- 6341707 Clear Lens Keycaps/Paper Inserts/Removal Tool
- 1351710 Blank Keycaps (Light) and Removal Tool
- 1351728 Blank Keycaps (Dark) and Removal Tool
- 1351717 Keycap Removal Tools (6 tools)
- 6341704 Paper Inserts (150 light and 150 gray)
- Keyboard overlays (10 overlays):
 - 6342112 English
 - 6342113 Spanish
 - 6342115 French
 - 6052157 English
 - 6052160 Japanese
 - 6052158 Canadian French
 - 6052159 Spanish

* Permits switching operational control of the 3179-G between two different control units. The customer is responsible for procurement and installation of this accessory, and also for the replacement of a defective unit. There is no switch control unit designed specifically for the 3179-G, but use can be made of the unit designed for the 3278 or 3279. The 3279 switch is suggested even though it does not fit readily under the foot of the 3179-G, since it is better adapted than the 3278 switch to a free-standing position.

For local charges consult your IBM marketing representative.

CUSTOMER REPLACEMENT PARTS

Following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative.

Field Packaging Material:

6317356 for Video
6316868 for Logic (or Expansion Unit)
6316883 for Keyboard

Keys (6342xxx): (See Note) 3 digits of key code numbers.

Note: The 3179-G is shipped with two keys. Additional keys can be purchased from IBM. Key identification number must accompany each order. If the key identification number is unknown, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis.

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3179-G.

Order Entry: For shipment, specify Machine Element (P/N) at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order the "IBM 3179-G/3192-G Color Graphics Display Station Description", GA18-2589, for site planning and preparation work.

The video, logic, keyboard, pedestal and line cord of the 3179-G Color Display Station can be ordered as follows:

- 8233436 Video: Canada
- 8233437 Video: Bermuda, Bahamas, Barbados, Colombia, Costa Rica, Dominican Republic, El Salvador, Guatemala, Guyana, Haiti, Honduras, Japan, Jamaica, Korea, Nicaragua, Netherlands-Antilles, Mexico, Panama, Surinam, Taiwan, Trinidad
- 8233389 Video: Bolivia, Ecuador, Philippines
- 8233440 Video: Afghanistan, Venezuela
- 8233391 Video: Australia, New Zealand
- 8233392 Video: Argentina, Burma, Brunei, Bangladesh, Chile, Hong Kong, Indonesia, Malaysia, Peru, Paraguay, Singapore, Sri Lanka, Thailand, Uruguay
- 6342040 Logic: All countries
- 1385152 Keyboard-Typewriter: Canadian French
- 1385168 Typewriter/APL2
- 1385154 Keyboard-Typewriter: Japanese Katakana
- 1385170 Typewriter/APL2
- 1385153 Keyboard-Typewriter: Spanish Speaking
- 1385169 Typewriter/APL2
- 1385151 Keyboard-Typewriter: US English
- 1385167 Typewriter/APL2
- 5954170 Pedestal: All countries
- 5881854 Video Cable: All countries
- 6952353 Line Cord: Brunei, Malaysia, Singapore, Hong Kong
- 6952317 Line Cord: Afghanistan, Indonesia, Surinam
- 6952308 Line Cord: Australia, New Zealand
- 6952371 Line Cord: Chile
- 6952285 Line Cord: Argentina, Paraguay, Uruguay
- 6952297 Line Cord: Bahamas, Barbados, Bermuda, Bolivia, Canada, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Japan, Korea, Mexico, Netherlands-Antilles, Nicaragua, Panama, Philippines, Taiwan, Trinidad
- 6952344 Line Cord: Bangladesh, Burma, Sri Lanka
- 6952397 Line Cord: Peru, Thailand, Venezuela

SUPPLIES (NONE)

3179 COLOR DISPLAY STATION

PURPOSE

A high quality, 14-inch, cathode-ray tube (CRT) color display station used in clusters with the 3274, the 3276, the 4331 or the 4361 Processor with Display/Printer Adapter or the Workstation Adapter or 9370 with Workstation Subsystem Controller for displaying alphanumeric data, and for entering data into and retrieving data from S/360, S/370, 303X, 308X, 4300 Processor, or 8100 System.

In base color operation, data fields can be displayed in four colors. A keyboard permits an operator to display and manipulate data on the screen in a flexible and efficient manner.

In extended color operation attached to a 3274, or the 4361 Workstation Adapter, data can be displayed at both character and field level in 7 colors with a choice of extended highlighting.

The 3179 meets both general-purpose and unique display requirements.

MODEL 1

Model 1 10X: Displays up to 1,920 characters and provides a 122-key Typewriter Keyboard or 124-key Japanese Katakana Typewriter Keyboard

Language option selected will be designated by the third character of the WTAAS model number as follows:

- Y US English
- D Canadian French
- K Japanese Katakana
- S Spanish Speaking

Prerequisites: A 3179 requires a 3274, 3276 with appropriate Terminal Adapter or a 4331, 4361 Processor with the standard Display/Printer Adapter or Display/Printer Adapter Expansion or the 4361 Workstation Adapter or 9370 with Workstation Subsystem Controller. See M3274, 3276, 4331, or 4361 pages.

For 3179 attachment: The 3179, in Emulation Mode, can be attached to a 3274, 3276 or the Display/Printer Adapter of the 4331/4361 or the 4361 Workstation Adapter, without a microcode change. When a 3179 keyboard is used in Emulation mode, it must be attached to the following EC or microcode Release Levels of the control unit or Display/Printer Adapter:

- 3276: Any EC level
- 3274:
 - Configuration Support A - Level 15 or higher
 - Configuration Support B - Level 26 or higher
 - Configuration Support C - Level 47 or higher
 - Configuration Support D - Level 61 or higher
 - Configuration Support P - Any level
 - Configuration Support T - Level 31 or higher

To attach the 3179 in Native Mode requires a 3274 with Configuration Support D with microcode Release Level 63. Microcode Release Level 63 is also a prerequisite for changing the layout of the Modifiable Keyboard.

Native mode is not supported on the 4331, and 4361 Display Printer Adapter and Workstation Adapter.

Canadian French keyboard requires the following I/O Interface Code Table in the 3274, 3276, 4331, or 4361:

- Emulation Mode -- Canadian French
- Native Mode -- Canadian French Bilingual

Customer Setup (CSU): The 3179 is designated as a customer setup machine. Setup instructions are included with each machine, as a part of the "3179 Color Display Station Operator Guide".

HIGHLIGHTS

Displays up to 1,920 characters in 24 rows of 80 characters each. Each character is represented in a maximum 7 X 14 dot matrix in the 9 X 16 contiguous box matrix. Displays a 94-character set: 26 uppercase alphabetic, 26 lowercase alphabetic, 10 numeric, and 32 special characters.

The 3179 consists of 5 machine elements: Video, logic, keyboard, pedestal, and line cord.

The Modifiable Keyboard is standard. Keyboard switch setting by operator allows either of two modes of keyboard operation:

- Emulation Mode: See "Prerequisites".

The 3179 keyboard emulates existing 3178, 3278, or 3279 keyboards.

- Native Mode: When a 3179 keyboard is used in Native mode, it must be attached to a 3274 with Configuration Support D (microcode Release Level 63).

If the 3274 is configured to support APL or Data Entry the necessary keycaps to appropriately change the keyboard are made available as accessories.

The 3274 Keyboard Definition Utility is used to redefine the keyboard layout. Additionally, the construction of the keyboard is such that all standard size (or square) keys have a removable keycap upon which the nomenclature is engraved. With these facilities, a customer may define the keyboard layout by swapping, moving, deleting or copying keys.

Sets of keycaps will be made available as accessories to accommodate some common layouts. Clear lens keycaps with paper inserts will also be provided for customer-unique labeling.

The 3274 Language Diskette provides space for 7 Keyboard Layout tables (3 standard and 4 modified). A maximum of 4 of these 7 may be selected from the diskette. The Language Diskette will be supplied via microcode Release Level 63 from (Canada only) Raleigh Microcode Administration (Japan only) (Except Canada) Summary (Japan only) for 3274 with Configuration Support D. The language diskette permits display of the standard layout. By using a predefined set of commands and cursor positioning, the keyboard layout can be modified from the terminal attached to port "A-0" of the 3274. The keyboard layouts are identified to the 3274 by switches located under the keyboard, which can be set by an operator. The ability to customize keyboard layouts is available on the 3179 connected to a 3274 with Configuration Support D and microcode release level 63.

When attached to the 3274 with Configuration Support D with microcode release level 63, the 3179 supports various keyboard layouts including the following keyboard layouts by using the accessory keycaps. See "Accessories", "APL Data Entry 87-key Typewriter".

Native mode is not supported on the 4331, and 4361 Display Printer Adapter and Workstation Adapter.

With Canadian French keyboard, displays additional 30 unique Canadian French characters (total 124-character set). (Japan only: With Japanese Katakana keyboards, displays 127-character set.)

The 3179 offers functions equivalent to both the 3279 Models S2A and S2B.

A monospace switch, located on the logic element, provides the capability of switching to uppercase alphabetic mode for 3277 compatibility. The 3179 uses 3270 field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphabetic, normal/intensified, and displayable/non-displayable.

The 3179 uses the 3270 formatting attributes of protect and intensify for the additional purpose of displaying individual fields in base colors according to the following:

- Protected and intensified - White
- Unprotected and intensified - Red
- Protected and normal intensity - Blue
- Unprotected and normal intensity - Green

Base color switch is provided allowing the 3179 to run in 'monochrome mode'. In this mode, fields are displayed in green for normal intensity and white for intensified.

Extensions to the 3270 data stream supported by appropriate 3274 features or the 4361 Workstation Adapter, and the 3179 provide the following field and character attributes:

- Extended Color:
 - Red
 - Blue
 - Green
 - White
 - Yellow
 - Turquoise
 - Pink
- Extended Highlighting:
 - Reverse video
 - Blink
 - Underscore

Each attribute can be specified independently of any other. Extended color and extended highlighting are supported on the 3274 Models 1A, 1C, 1D, 31A, 31C, 31D, 41A, 41C, 41D, 51C, and 61C. For extended color and extended highlighting on the 3179, the Structured Field and Attribute Processing Option of Configuration Support C or Configuration Support D is required on the 3274. For base color operation, the 3179 will attach to all models of the 3274, 3276 except Model 1, and the Display/Printer Adapter of the 4331, 4361, and 9370 Workstation Subsystem Controller.

The 3179 does not require a 3276 Color Display Attachment (#1950) for base color operation.

The operator can initiate a local display-to-printer monochrome or color copy function (i.e., without host intervention) from the keyboard of a 3179. When the 3179 is attached to a 3274 or 4300 processor Display/Printer Adapter or a 4361 Workstation Adapter or a 9370 Workstation Subsystem Controller, the printer designation is controlled by operator use of the IDENT key and by:

1. A printer authorization matrix which is loaded into the 3274 through a user-written host application program, or
2. A customer-definable matrix loaded from the System Diskette at IML time. For further details, see the "3274 Control Unit Planning, Setup and Customizing Guide", GA27-2827, (Configuration Support A, B, C, P, or T), or "3274 Customizing Guide", GA23-0065, (Configuration Support D).

When the 3179 is attached to a 3276, the printer designation is controlled by operator use of the IDENT Key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276.

Response Time Monitor (RTM) is a tool resident in the 3274 whereby inbound host attention operations from attached display terminals can be timed, recorded and displayed. The RTM function is selectable when the 3274 is customized. The ultimate purpose of RTM is to provide for evaluating and verifying the performance of a network system and its components. RTM is supported by the 3274 Configuration Support C and D.

Alert function, selectable during customization of the 3274 and supported by the 3179, reports problem determination data to the host for recording and display when NPDA Version 3 is installed in the host. The workstation operator cannot initiate an Alert message. Alert is supported by the 3274 Configuration Support C and D.

Operator Factors: The 3179 has an etched screen, which minimizes glare and fingerprint. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful

operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option, are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard is thin, and the keyboard slope can be adjusted by the user to 6, 12, or 18 degrees.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen), and cursor select keys are all basic. All alphameric, special symbol, and cursor move keys have typamatic capability. Double-speed cursor typamatic is achieved by simultaneously depressing the ALT key and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 Program Function (PF) keys are provided on the keyboard in no shift positions.

When attached to a 3274 with Configuration Support C with the Entry Assist RPQ or with Configuration Support D, the 3179 provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, word-wrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 pages for details.

Note: Keyboard Overlay may be used for the nomenclature in Native Mode. Clear lens keycaps with paper inserts accessory or sticky labels which are shipped with the 3274 or ordered as publications may be used for the nomenclature in Emulation Mode.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of data in the display terminal unless the key is turned to the "On" position.

These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to control access to data and audit of actions.

Customer Problem Analysis and Resolution: Functions have been designed into the 3179 to enhance the availability to the customer. This has been done through the use of Customer Problem Analysis and Resolution (CPAR) routines and procedures that are used by the operator. See "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. Physical setup, connection of cables in customer access areas, switch settings and checkout.
4. Contacting an IBM customer service coordinator for attachment of the 3179 communications cable to an on-site serviced IBM control unit where customer access area is not provided.
5. Determination of the required number of spares.
6. Performing CPAR.
7. Returning a failing workstation element to the Repair Center (for Customer Carry-In Repair maintenance) or to the Service/Exchange Center (for Customer Carry-In Exchange maintenance) with a completed Service/Replacement Order Form for repairs.
8. Contact IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Removing customer-owned keycaps (include IBM accessory keycaps) before any exchange service and return the standard layout keyboard to IBM.

10. Returning security keys to IBM if any exchange service of Logic Element is required. If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.
11. Ordering the "IBM 3179 Display Station Description Manual", GA18-2177, for site planning and preparation work since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3179 units for such use. The number of spare units is dependent upon the number of 3179 units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as individual workstation elements. See "Accessories" for ordering individual element.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged for at IBM's then applicable time-and-material charges. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the customer calls the local IBM service branch office. IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the customer.

Customer-owned spare elements may be installed to replace defective elements by IBM upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. All on-site assistance is available on a per-call basis at the applicable hourly rates and terms.

Keyboards: (See Notes 1, 2 below)

- 122-key Typewriter Keyboard: Typewriter-like layout, movable with 49 alphameric keys, 31 control keys, 24 program function keys and 18 numeric pad keys.
- 124-key Japanese Katakana Typewriter Keyboard: Typewriter-like layout, movable. Provides 4-level shift, providing 50 data keys and 32 control keys.

Notes:

1. Keyboards used on other products are not interchangeable with keyboards used on 3179.
2. A coiled keyboard cable is provided with each keyboard.

SPECIFY

- Power: 100-127V, AC, 1-phase, 3-wire, 50-60 Hz or 200-240V, AC, 1-phase, 3-wire, 50-60 Hz
- Line Cord: 3.0m (9.8 ft), nonlocking plug.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Cables: IBM shielded twisted-pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual - Physical Planning", GA27-2787, and "Coaxial Cable and Associated Manual", GA27-2805.

Various keyboard accessories and switch control unit accessory can be ordered.

The following accessories can be ordered:

Data Entry Keycaps and Keycap Removal Tool (1351741): US English.

PF Keycaps for 87-key Typewriter Keyboard Layout (1351742): (US English) 2 sets and keycap removal tool.

Blank Keycaps Light and Keycap Removal Tool (1351710): 60 caps.

Blank Keycaps Dark and Keycap Removal Tool (1351728): 60 caps.

Clear Lens Keycaps with Paper Inserts and Keycap Removal Tool (6341707): 60 caps, 60 light inserts, and 60 dark inserts.

Paper Inserts for Clear Lens Keycaps (6341704): 150 light and 150 dark.

Keycap Removal Tool (1351717): 6 tools.

Keyboard Overlay for Extended Select Functions (6341703): 10 sheets.

APL keycaps (US English) and Keycap Removal Tool (1351711).

APL Keycaps and Keycap Removal Tool:: 1 set.

Canadian French - 1351726
Japanese Katakana - 1351718
Spanish Speaking - 1351727

Switch Control Unit*:

English - 6052157
Japanese - 6052160
Canadian French - 6052158
Spanish - 6052159

* Permits switching operational control of a 3179 between 2 different control units. The customer is responsible for procurement and installation of this accessory, and also for the replacement of a defective unit. There is no switch control unit designed specifically for the 3179, but use may be made of the unit designed for the 3278 or 3279. The 3279 switch is suggested, even though it does not fit readily under the foot of the 3179, since it is better adapted than the 3278 switch to a free-standing installation.

CUSTOMER REPLACEMENT PARTS

Following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Field Packaging Material:

For Video - 6316869
For Logic - 6316868
For Keyboard - 6316883

Keys: (See Note) The Key Codes for the following P/Ns are:

Flat Key - 6341711: H001
Flat Key - 6341712: H002
Flat Key - 6341713: H003
Flat Key - 6341714: H004
Flat Key - 6341715: H005
Flat Key - 6341716: H006
Flat Key - 6341717: H007
Flat Key - 6341718: H008
Flat Key - 6341719: H009
Flat Key - 5641830: H010
Tubular Key - 5641800: ----

Note: The 3179 is shipped with two keys. Additional keys may be purchased from IBM. Key identification number must accompany each order. Key identification number can be found on the keylock for locks with with flat keys. If the key identification number is unknown, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on a time-and-material basis.

MACHINE ELEMENTS

Elements can be ordered to provide individual elements as needed by the customer in the use of the 3179.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry.

Customer Responsibilities: The customer's responsibilities are the same as those above under "Customer Responsibilities".

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order the "IBM 3179 Color Display Station Description Manual", GA18-2177, for site planning and preparation work.

The video, logic, keyboard, pedestal and line cord of the 3179 can be ordered as follows:

- 5954150 Video: Canada, Bermuda
- 5954940 Video: Japan, Korea, Taiwan, Mexico, Bahamas, Dominican Republic, Jamaica, Haiti, Guatemala, Nicaragua, Honduras, Panama, Costa Rica, El Salvador, Guyana, Colombia, Trinidad, Barbados, Venezuela, Netherland-Antilles
- 5954941 Video: Philippines, Burma, Ecuador, Bolivia
- 5954943 Video: Australia, New Zealand
- 5954944 Video: Argentina, Chile, Brunei, Indonesia, Singapore, Malaysia, Sri Lanka, Paraguay, Uruguay
- 5954945 Video: Thailand, Surinam, Peru, Bangladesh, Hong Kong, Afghanistan, Pakistan
- 5954160 Logic: All countries
- 6110616 Keyboard: Canadian French
- 6110617 Keyboard: Katakana
- 6110618 Keyboard: Spanish Speaking
- 6110668 Keyboard: US English
- 5954170 Pedestal: All Countries
- 5640662 Line Cord: Argentina, Brunei, Malaysia, Singapore, Hong Kong
- 5640663 Line Cord: Indonesia
- 5640664 Line Cord: Australia, New Zealand
- 5640668 Line Cord: Chile
- 5640671 Line Cord: Bahamas, Barbados, Bermuda, Bolivia, Canada, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Japan, Korea, Mexico, Netherland-Antilles, Nicaragua, Panama, Philippines, Taiwan, Trinidad, Tobago, Venezuela
- 5641389 Line Cord: Sri Lanka
- 5640666 Line Cord: Bangladesh, Burma

SUPPLIES (NONE)

3179 COLOR DISPLAY STATION MODEL 2

PURPOSE

The 3179 Model 2 is a 7-color display station plug compatible with the 5292 Model 1 Color Display Station. It can be used with S/36 and S/38 either directly or through the 5294 Remote Control Unit for entering, editing and displaying alphanumeric data. Displayable colors are red, green, blue, white, yellow, turquoise, and pink. This display station performs the same basic functions as the 5292 Model 1. The 3179 Model 2 displays up to 1,920 characters with 24 lines of 80 characters each. The display station status is shown on a 25th line. Optionally, the user can also display the cursor location (row/column) on this status line. The 3179 Model 2 is offered with no features. (Canada only > (US English only) The 3179 Model 2 is offered in 2 models:

1. Model 200 -- 122-key Typewriter Keyboard
2. Model 220 -- IBM Enhanced Keyboard <)

MODEL 2

Model 2 20X: The language option will be designated by the third character of the WTAAS model number as follows:

- Y US English
- D Canadian French
- K Japanese Katakana
- S Spanish Speaking

(Canada only > **Model 2 220:** For administrative purposes, the Model 220 is designated as Model 22Z when ordered as an optional device as part of the System/36 Total System Package (see M5360 or 5362 pages). <)

Customer Setup (CSU): The 3179 Model 2 is designated as a customer setup machine. Setup instructions are included with each machine, as a part of the "IBM 3179 Model 2 Color Display Users Guide", GA18-2387.

(Canada only > **Limitations:** The 3179 Model 220 is not supported on Port 0 with an address of 0, used as a system console. <)

HIGHLIGHTS

The standard character set includes 96 dot-matrix characters: 52 upper/lowercase alphabetic, 10 numeric, and 33 special characters in addition to 'space'. The display of colors is achieved through the use of already existing attribute codes, and can be used without program modification. (For example, the high intensity attribute code will result in white color; the blink attribute code will result in red color, etc.) For optimum use of color, changes may be desired in existing programs. (See "IBM 3179 Model 2 Color Display Station Programmer's Guide To Using Color", GA18-2389).

Cable-Through with Auto-Termination and Screen Glare Reduction are standard. 188-character Multinational Character Set is available, providing 112 alphabetic, 10 numeric, and 66 special displayable characters. See "Type Catalog" for keyboard layout. Display functions include: Non-display, blinking, underscore, column separator, and reverse image (dark characters on a color background) on a field basis. An operator-adjustable audible alarm is provided to alert the operator to special conditions. The low-profile keyboard with adjustable slope and 24 application-assigned command functions provides input and control flexibility. Easy-to-use select options, provided from the keyboard, allow the operator to utilize a block or underscore cursor, cursor blink or non-blink. The operator can also elect to display the cursor locations (row/column) and screen attribute codes being utilized as well as set the audible alarm volume.

Operator Factors: The 3179 Model 2 has an etched screen, which minimizes glare and fingerprints. Status indicators are displayed in symbols on the bottom row of the screen, outside the data area, and

provide useful operator information. An underline type cursor and a rectangular reverse video cursor, with blinking option, are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The 122-key Typewriter Keyboard slope can be adjusted by the user to 6, 12, or 18 degrees. (Canada only > The IBM Enhanced Keyboard can be adjusted by the user to 6 or 12 degrees. <)

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the LOCKED position. These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions.

User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. Physical setup and checkout.
4. Determination of required number of spares.
5. Performing CPAR.

Contact IBM Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.

Return security keys to IBM if any exchange service of Logic Element is required. If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on an hourly service basis.

Order the "IBM 3179 Model 2 Color Display Station and Pre-Installation Planning Manual", GA18-2404, for site planning and preparation work since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing element with a spare element and that the customer be advised to purchase sufficient spare 3179 Model 2 units for such use. The number of spare units is dependent upon the number of 3179 Model 2 units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as individual workstation elements. See "Accessories" for ordering individual elements.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered, or non-IBM parts will be charged for at IBM's then applicable hourly service charges. Altered elements will not be eligible for the exchange or replacement services.

IBM On-Site Assistance: If the customer desires assistance in performing CPAR, the customer calls the local IBM service branch office. IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the

customer at the applicable hourly service rates and minimum charge.

Customer-owned spare elements may be installed by IBM to replace defective elements upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. All on-site assistance is available on an hourly service basis at the applicable hourly rates and terms.

Keyboards: (See Notes 1, 2 below)

(Canada only> IBM Enhanced Keyboard, Typewriter-like layout with<) (Canada only>(US English only) 49<) (Canada only> alphanumeric keys, 24 control keys, 12 function keys and 18 numeric pad keys.<)

122-key Typewriter Keyboard: Typewriter-like layout, movable with 49 alphanumeric keys, 31 control keys, 24 command keys, and 18 numeric pad keys.

124-key Japanese Katakana Typewriter Keyboard: Typewriter-like layout, movable. Provides 4-level shift, shift lock, providing 50 data keys and 32 control keys.

Notes:

1. Keyboards used on other products are not interchangeable with keyboards used on 3179 Model 2.
2. A coiled keyboard cable is provided with each keyboard.

Note: Customers should order the "IBM 3179 Model 2 Color Display Introduction and Pre-Installation Planning Manual", GA18-2404, for site planning and preparation work prior to delivery of the 3179 Model 2.

SPECIFY

- Power (100-127V AC, 1-phase, 3-wire, 50-60 Hz or 200-240V AC, 1-phase, 3-wire, 50-60 Hz).
- Power Cord: 2.8m (9 ft) line cord with non-locking plug. The country number of the ordering country determines the default for line cord and shipping group.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Cables: IBM shielded twisted-pair cable, twinaxial cable (or equivalent) is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted-Pair Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Twinaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM 5250 Information Display System Planning and Site Preparation Guide", GA21-9337.

Keyboard Overlay:

(Canada only> For 122-Key typewriter -- 10 blank overlays (P/N 6341703); for IBM Enhanced -- 10 Blank overlays (P/N 6238085)<)

10 overlays (P/N 6341703)

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative.

Field Packaging Material:

For Video - 6317356
For Logic - 6316868
For 122-Key Keyboard - 7342987
For IBM Enhanced Keyboard - 7342889

Keys (6342xxx): (See Note) 3 digits of key code numbers.

Note: The 3179 Model 2 is shipped with two keys. Additional keys can be purchased from IBM. Key identification number must accompany each order. If the key identification number is unknown, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis.

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3179 Model 2.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

Customer Responsibilities: The Customer's responsibilities are the same as those above under "Customer Responsibilities".

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order the "IBM 3179 Model 2 Color Display Station and Pre-Installation Planning Manual", GA18-2404, for site planning and preparation work.

The video, logic, keyboard, video stand and line cord of the 3179 Model 2 Color Display Station can be ordered as follows:

- 8233436 Video: Canada
- 8233437 Video: Bermuda, Bahamas, Barbados, Colombia, Costa Rica, Dominican Republic, El Salvador, Guatemala, Guyana, Haiti, Honduras, Japan, Jamaica, Korea, Mexico, Nicaragua, Netherlands-Antilles, Panama, Surinam, Taiwan, Trinidad

SUPPLIES (NONE)

3180 DISPLAY STATION

PURPOSE

A family of advanced function CRT display stations for use with the S/360, S/370, the 303X, 308X, 3090, 43XX, and 9370 processors via a 3274 or 3276, and 8100 Information Systems, or the S/36, S/38, and the 5294 Remote Control Unit. The 3180 offers a high resolution 15-inch (nominal), monochrome CRT display. The 3180 Model 1 provides selectable multiple screen formats with up to 3,564 alphanumeric characters for entering, retrieving, editing, and displaying data. The 3180 Model 140 is used as the console(s) on the 3090 Processor Complex. A 122-key (124-key for Japanese Katakana) keyboard permits the operator to display and manipulate data on the screen. Depending on model selection, a typewriter-style or APL-style or data entry-style keyboard is provided. The 3180 meets both general-purpose and unique display requirements.

Default order entry schemes allow any available machine configuration to be ordered by model selection. No specify codes are required in most instances. Model 11X, 12X: Attaches in clusters to the 3274 and 3276 for use with the S/360, S/370, 43XX (4321, 4331, 4341, 4361, and 4381), 303X, 308X, 3090, and the 8100 system, attaches to the 4321, 4331, or 4361 via the display/printer adapter, attaches to the 4361 via the Work Station Adapter, or attaches to the 4701 via the Device Cluster Adapter (see "APL" below). Provides four user selectable screen formats.

- Up to 1,920 characters -- 24 lines of 80 characters each
- Up to 2,560 characters -- 32 lines of 80 characters each
- Up to 3,440 characters -- 43 lines of 80 characters each
- Up to 3,564 characters -- 27 lines of 132 characters each

The 3180 Model 140 is used as the console(s) on the 3090 Processor Complex.

APL: APL capability is available on Model 13X. APL is supported by an appropriately configured 3274 or 3276, or a 4361 with Work Station Adapter (#2002), or 9370 with Workstation Subsystem Controller (#6020). The 3180 Model 13X with the APL keyboard performs standard data processing functions when not in APL mode.

(Except Japan > Model 21X, 22X: <) (Japan only > Model 20X, 21X: <) Attaches to the 5360, 5362, and 5381 systems units and the 5294 Remote Control Unit. Provides two program selectable screen formats:

- Up to 1,920 characters -- 24 lines of 80 characters each.
- Up to 3,564 characters -- 27 lines of 132 characters each.

Refer to individual system pages for formats supported.

MODELS

Model 1: 11X, 12X, 13X, 140

Model 2: (Except Japan > 21X, 22X <)

(Japan only > 20X, 21X <)

Standard Models: Standard models are provided for order entry convenience as follows:

(Except Japan > Models 11X and 21X <) (Japan only > 11X and 20X <) consist of the appropriate video element, logic element, a typewriter-style keyboard, cable attachment element, and a 3.0m (9.8 ft) power cord.

(Except Japan > Models 12X and 22X <) (Japan only > Models 12X and 21X <) consist of the appropriate video element, logic element, a data entry-style keyboard, cable attachment element, and a 3m (9.8 ft) power cord.

Model 13X consists of the appropriate video element, logic element, and APL-style keyboard, cable attachment element, and a 3.0m (9.8 ft) power cord.

Models 140: The 3180 Model 140 is used as the primary system or service console on the 3090 Processor Complex. A minimum of two consoles are required for each 3090. The console serves as the primary interface for operator interaction with the processor. For maintenance and service support, the console displays the status of the processor complex and is used for interaction with the processor complex by service and support personnel. It is also used for controlling diagnostic tools. The Models 140 will be shipped with the appropriate display element, logic element, console-style keyboard, cable attachment element, and a 3.0m (9.8 ft) line cord.

Customer Setup (CSU): The 3180 is designated as a customer setup machine thereby offering the customer early availability and relocation flexibility. The Marketing Representative must advise the customer of his responsibilities before receipt of the machine. For additional information on CSU, contact IBM. Not applicable to Console Models 140/145.

Prerequisites: For Model 1:

1. One of the following control unit attachments:

3274 with available Category A terminal port

3276 with available port or added #3225, #3256, or #3257

The 3180 Model 1 is only available on the 3276 when emulating a 3278 Model 2-4.

The 3180 Model 130 is available on a 3276 with APL/Text Control feature #1067.

4321 with standard display/printer adapter*

4331 with standard display/printer adapter or display/printer adapter expansion #2001 on a 4331 Model Group 1 or 2*

4361 with standard display/printer adapter* or WSA (Work Station Adapter) #2002

9370 with Workstation Subsystem Controller (#6020).

An available console position on a 3092 processor controller (uses Model 140 only).

4701 with Device Cluster Adapter (#3101)

* The 3180 Model 1 is only available when emulating a 3278 Model 2.

2. 3274 Configuration Support D (starting with Release Level 63) for program selectable screen format sizes, vertical scrolling, modifiable keyboard, or cursor position indicator functions.

The use of magnetic readers and selector light pen on the 3180 is not supported.

For Model 2: One of the following control unit attachments:

5360
5362
5381
5382
5294

For any model, the language option will be designated by the third character of the WT AAS model number as follows:

Y	English US
D	Canadian - French
K	Japanese Katakana
S	Spanish Speaking

MACHINES

Note: Specify Model 140 for a console model. This model is available only with US English language.

The country number of the ordering country determines the default for line cord and shipping group.

HIGHLIGHTS

The 3180 provides display functions compatible with the 3278 Models 2-5 and the 5251 Model 11, advanced display functions, and enhanced ergonomic characteristics including display screen, tilt, rotate, and elevate. The 3180 keyboards consist of 122 keys (124 keys for Japanese Katakana) which includes control and cursor movement keys, 24 program function or command function keys, alphanumeric keys, and numeric pad keys. The keyboard is attached to the display by a pluggable, coiled cable and has three operator selectable slope settings. The keyboard keycaps are removable and, on the Model 1, under 3274 Configuration Support D (Release 63), may be moved about on the keyboard to suit individual desires (with certain restrictions as described in the "IBM 3270 Information Display System Keyboard Utility Users Guide", GA23-0187). Thus, users can create uniquely tailored keyboard layouts (see "Customer Responsibilities").

The Model 1 provides the following operator selectable screen formats:

No. of Lines	24	32	43	27
Chars. Per Line	80	80	80	132
Tot. Data Chars.	1,920	2,560	3,440	3,564
Char. Box Dot	12x18	12x16	12x12	10x16
Matrix				
Char. Dot Matrix	9x11	**	9x8	8x8

** 9x8

The Model 1 provides the following functions:

- 3278 base function
- Operator and program selectable screen formats
- Vertical scrolling
- Record/playback of keystrokes
- Modifiable keyboard
 - (Japan only) > (except Japanese Katakana) <
- Extended highlighting
- Monocase/dual case selection
- Local copy
- Keyboard choice:
 - Typewriter Style
 - Typewriter/APL Style
 - Data entry style
 - Console style (Models 140)
- Keyboard numeric lock selectable
- Adjustable audible alarm
- Security keylock
- Display tilt and rotate
- Display elevate
- Cursor position indicator
- Screen dimming
- Switch control unit (accessory)

The Model 2 provides the following program selectable screen formats:

No. of Lines	24	27
Chars. Per Line	80	132
Tot. Data Chars.	1,920	3,564
Chars.Box Dot	12X18	10X16
Matrix		
Chars. Dot Matrix	9X11	8X8

Refer to individual system pages for formats supported.

The Model 2 provides the following functions:

- 5251-11 function
- Program selectable screen formats
- Record/playback of keystrokes

- Keyboard choice
 - Typewriter style
 - Data entry style
- Adjustable audible alarm
- Security keylock
- Display tilt and rotate
- Display elevate
- Cursor position indicator
- Shadow cursor
- Special text symbols
- Screen dimming
- Multinational character set
- Message line
- Extended country character sets

The 3180 consists of five workstation elements -- display, logic, keyboard, cable attachment, and power cord.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided in "IBM 3180 Display Station User's Guide", (GA21-9468 for Model 1 or GA21-9469 for Model 2). Also, see "Customer Responsibilities".

Customer Responsibilities: The customer is responsible for:

- Receipt, unpacking and placement of the 3180.
 - Physical setup, connection of cables to IBM devices incorporating protected access areas, and checkout in accordance with instructions supplied by IBM.
 - Using and following the customer problem analysis and resolution procedures for the 3180 prior to calling for IBM service.
 - Providing a desk or a table top to support the 3180.
 - Installation and maintenance of signal cables and associated parts for interconnecting the 3180(s) and/or attached system or control unit.
 - Returning security keys with the display element if service of the display element is required.
- All modifications made to the standard 3180 keyboard. The customer should remove all special keycaps which are installed on the keyboard prior to submitting a keyboard for exchange or repair, because only keyboards with a standard key layout are available for exchange maintenance.
- Modifying the system configuration specifications when adding additional display stations.
 - Determining quantities and acquiring adequate spares.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3180 elements or machines for such use. The number of spare units is dependent upon the number of 3180 units the customer has installed, application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as complete machines or as individual workstation elements.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged for at IBM's then applicable time-and-material charges. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer/Service Rep. On-Site Assistance: If the customer desires assistance in performing CPAR the local CE branch office may be called for CE/CSR assistance. The CE will respond to

the customer site to aid the customer in performing CPAR procedures using the same documentation that is available to the customer. Customer owned spare Workstation Elements may be installed to replace defective workstation elements by the CE upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. All on-site assistance is available on a per-call basis at the applicable hourly rates and terms.

For performance considerations of the 3180 Model 1 attached to the 3274, contact IBM.

SPECIFY

Default Order Entry: Specify codes are not required when ordering a 3180. If other codes are not specified, appropriate defaults will be assumed based on the 3-digit country code. Default parameters are shown below for "Specifies".

Default Order Entry: See description of Standard Models in "Models". No specify codes are required.

- Color: Shell gray only. No specify code is required.
- Keyboard: One of the following keyboards will be supplied depending on the model ordered. No specify code is required. Note: The price of the keyboard is included in the machine price. Spare keyboard elements may be purchased via P/N. See "Workstation Elements".

Typewriter-style - A 122-key (124 for Japanese Katakana) pluggable keyboard with the EBCDIC character set, typewriter-like layout, movable, with alphameric keys, control keys, and a numeric pad.

Data entry-style - A 122-key (124 for Japanese Katakana) pluggable data entry style keyboard, movable, with alphameric keys, control keys, and blank keys.

- Console -- (will be supplied on the Model 140). No specify code required.) A 122-key pluggable and movable keyboard configured to function as the primary system or service console on the 3090 Processor Complex. Note: This keyboard is available with English language only.

APL--A 122-key (124 for Japanese Katakana) pluggable keyboard with the typewriter-style layout including 81 APL specific characters in addition to the 94 EBCDIC characters. An APL on/off key controls whether the keyboard is in typewriter or APL mode. When emulating a 3278 APL keyboard, PF Keys 13 through 24 duplicate PF 1 through 12. Furnished on Model 13X only.

- Voltage Defaults (AC, 50/60 Hz):

Argentina	#0801	200-240V
Australia	#0801	200-240V
Canada	#0802	100-127V
Colombia	#0802	100-127V
Japan	#0802	100-127V
Mexico	#0802	100-127V
Venezuela	#0802	100-127V

Note: If the default voltage is not desired or if a default is not listed for your country, specify desired voltage from the following list:

#0802	100-127V
#0801	200-240V

- Power Cord/Plug Default: A 3.0m power cord with the most commonly used plug for each country as shown in the "IBM 3180 Introduction and Preinstallation Planning Manual", (GA21-9465 for Model 1 or GA21-9466 for Model 2) will be shipped with the machine.

- For Canada and Japan, standard nonlocking plugs will be supplied.

If a standard plug is not listed for your country or is not desired by your customer, specify #2710 for a 50 Hz power cord without a plug or #2746 for a 60 Hz power cord without a plug.

- Cables: See "Accessories" for Model 1 cable or Model 2 cable and associated cable components and ordering instructions.

The following RPQs may be applicable.

Canadian-French keyboard requires the following I/O interface code table in the 3274, 3276, 4321, 4331, or 4361:

Emulation Mode Can.-French
Native Mode Can.-French Bilingual

3180 Model 2 with Spanish speaking keyboard requires the following control unit/processor RPQs:

	Plant	Field
5360 (Release 2)	8D0255	8D0195
5362	8D0204	N/A
5381 (Release 6)	8D0196	8D0256
5294	8D0194	N/A

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Keys (P/N 2546418): The 3180 is shipped with two keys for the keylock. Additional keys may be purchased from IBM. Vendor will supply additional keys only to original purchaser. Order additional keys on MES (your plant of manufacture). A letter of authorization with key identification number must accompany each order. Allow 6 to 8 weeks for delivery.

Note: If the key identification number is unknown, the display WSE may be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the lock and the keys. This service will be billed on a time-and-material basis.

User Modifiable Keyboard Accessories: The following are Model 1 accessories for user modifiable keyboards:

Description	P/N
Blank Keycaps - Light (60 caps plus 1 removal tool)	1351710
Blank Keycaps - Dark (60 caps plus 1 removal tool)	1351728
PF key/87-Key Typewriter Keycaps (2 sets) & removal tool	1351742
Clear Lens Keycaps (60 caps plus 60 light and 60 dark inserts plus 1 removal tool)	6341707
Paper inserts for use with Clear Lens Keycaps (1 set of 150 light & 150 dark)	6341704
Removal Tool (6 tools)	1351717
Blank Keyboard Overlay (10)	6341703

Order parts desired via MES from NDD, Dayton, NJ.

Switch Control Unit: (Model 1) Permits switching operational control of 3180 between two different control units. Customer is responsible for procurement and installation of this accessory, and also for the replacement of a defective unit.

Warranty: The Switch Control Unit is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled maintenance recommended by IBM, and IBM Maintenance Agreements are not available for the switch control unit.

Ordering Instructions: This accessory is ordered via MES for field installation only.

One of the following P/Ns should be specified when ordering by MES for field installation.

Language	P/N
Canadian French	2446447
English	2446446
Japanese	2446448
Spanish	2446450

Model 1 Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3180 Introduction and Preinstallation Planning Manual", GA21-9465. Also, "Coaxial Cable and Associated Manual", GA27-2805. When cabling is ordered from IBM, specify a shipping date 4 weeks in advance of receiving the machine.

Item	Number	Description
Assm	2577672	Cable Assembly In-Door
Bulk	0323921	Coax Wire (Note 1)
P/N	1836418	Connector Kit (Note 1)
Assm	1833108	Cable Assembly Out-Door
Bulk	5252750	Coax Wire (Note 2)
P/N	1836419	Connector Kit (Note 2)
P/N	1833104	Station Protector Kit, Carbon (Note 4)
P/N	2621414	Modification Kit (Note 3)
P/N	1833106	Station Protector Attachment Kit (Note 5)
P/N	5252772	Station Protector Element Carbon (Note 6)
P/N	5252643	Adapter (Note 7)
P/N	1830818	Station Protection Kit, Gas (Note 4)
P/N	5252899	Station Protector Element, Gas (Note 6)

Order the above items via MES from Poughkeepsie. Allow a lead time of 120 days.

Notes:

- Coaxial wire and one connector kit (includes two connectors P/N 1836446) required for each indoor cable assembly.
- Coaxial wire and one connector kit (includes two connectors P/N 1836447) required for each outdoor cable assembly.

- Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
- Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
- Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
- Replacement station protector elements.
- Use to join two P/N 2577672 or two P/N 1833108 cable assemblies together.

Model 2 Cables: IBM shielded twisted pair cable (or equivalent) or twinaxial cable is required for product attachment. Cable and associated accessories may be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Twinaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3180 Introduction and Preinstallation Planning Manual", GA21-9466. When cable is ordered from IBM, specify a shipping date at least four weeks in advance of receiving the machine.

Twinaxial Connector Kit: Includes two connectors. Twinaxial wire and one twinaxial connector kit are required for each attachment cable. Individual connectors are available for replacement purposes. Order as follows:

P/N 7362268	Connector kit for vinyl covered cables
P/N 7362229	Individual connector (replacement) for vinyl covered cables

Twinaxial Wire: Order must specify the desired length. Twinaxial wire and one twinaxial connector kit are required for each attachment cable. (Vinyl-covered cable is an indoor/outdoor cable.) Order as follows:

P/N 7362211	For vinyl-covered cables
-------------	--------------------------

Twinaxial Cable Assembly: Includes two connectors attached to bulk wire. The required length of wire must be specified on the order. The cost of the wire must be added to the fixed assembly price to obtain the total price of the cable assembly. Order as follows:

P/N 7362267	Cable assembly with vinyl-coated wire
-------------	---------------------------------------

Twinaxial Adapter (P/N 7362230): Permits two twinaxial cable assemblies to be joined together.

Twinaxial Station Protector Kit (B/M 7361807): Two protectors. One is required at each end of each twinaxial attachment cable installed outdoors (either above or below ground level). Individual twinaxial station protectors (P/N 7362426) are available for replacement purposes.

FIELD PACKAGING MATERIALS

The following parts are available for purchasing by the customer if required. Branch offices should order via parts and supplies requisition.

Description	P/N
Field Packaging Material:	
For Display Element	0905193
For Logic Element	0905194
For Keyboard Element	7342558

WORKSTATION ELEMENTS

Workstation Elements may be ordered to provide individual elements as needed by the customer in the use of the 3180.

3180 Display Station Workstation Elements: Order Entry: For shipment, specify Machine Element (P/N) at time of order entry.

Workstation elements may be ordered to provide individual elements as needed by the customer in the use of the 3180.

Customer Responsibilities: The customer's responsibilities are the same as those listed under "Customer Responsibilities".

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order the "IBM 3180 Display Station Introduction and Preinstallation Planning Manual", (GA21-9465 for Model 1 or GA21-9466 for Model 2) for site planning and preparation work.

Warranty: Category B

Maintenance: Maintenance for individual workstation element is only available on a time-and-material basis at an IBM Repair Center or through an IBM Service/Exchange Center. Minimum charge is applied. Maintenance for workstation element is different by country. Contact Country Service Department for the available maintenance in your country.

Spare display element, logic element, keyboard, cable attachment, and power cord of the 3180 can be ordered as follows:

Note: Except for keyboards, the parts listed for Model 1 also apply to Model 140.

To Fit Workstation Model	Element	P/N*					
1/2	Display	2446783	(Canada-Low Voltage)

SUPPLIES (NONE)

3191 DISPLAY STATION MODELS A, B

THERE IS MORE THAN ONE TEXT VERSION FOR THIS PRODUCT

PURPOSE

A 12-inch cathode-ray tube (CRT) display station used in clusters with the IBM 3174, 3274, the 3276, the 4701 or 4702 Controller, or the 4331 or 4361 Processor with Display Printer Adapter or Workstation Adapter or the 9370 Workstation Subsystem Controller for displaying alphanumeric data, and for entering data into and retrieving data from S/360, S/370, 303X, 308X, 3090, 43XX, 9370 Processor, or 8100 Systems. A keyboard permits an operator to display and manipulate data on the screen. The 3191 meets both general-purpose and unique display requirements.

MODELS A, B

Model A1X: Displays up to 1,920 characters in Green and provides a 122-key Typewriter keyboard (modifiable) or 124-key Japanese Katakana Typewriter keyboard.

Model B1X: Displays up to 1,920 characters in Amber-Gold and provides a 122-key Typewriter keyboard (modifiable) or 124-key Japanese Katakana Typewriter keyboard.

Model A2X: Displays up to 1,920 characters in Green and provides a 102/103-key IBM Enhanced Typewriter keyboard (104-key Japanese Katakana).

(Except LAD > **Model A3X:** Displays up to 1,920 characters in Green and provides a 104-key Typewriter keyboard (modifiable) or 106-key Japanese Katakana Typewriter keyboard. <)

Model B2X: Displays up to 1,920 characters in Amber-Gold and provides a 102/103-key IBM Enhanced Typewriter keyboard (104-key Japanese Katakana).

(Except LAD > **Model B3X:** Displays up to 1,920 characters in Amber-Gold and provides a 104-key Typewriter keyboard (modifiable) or 106-key Japanese Katakana Typewriter keyboard. <)

Language option selected will be designated by the third character of the model number as follows:

- Y US English
- D Canadian Bilingual/French (Not available on Model A2X, B2X, A3X, B3X)
- K Japanese Katakana
- S Spanish Speaking (Not available on Model A2X, B2X, A3X, B3X)

Prerequisites:

Attachment: Required on Control Unit. For a 3174 or 3274: Available Category A terminal port.

Note: If the 3191 is attached to the 3274: The 3191 Models A1X, B1X, A3X, B3X in Native Mode must be attached to 3274 Control Unit with Configuration D - Microcode Release Level 63 or higher. This level of support is also required for changing the layout of the IBM 104- or 122-Key Typewriter Keyboard.

The 3191 Models A2X and B2X operate only in Native Mode and must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 65 or higher and 3274 RPQ 7L0825.

3274 Microcode and RPQ must be ordered well in advance in order to assure receipt prior to arrival of the 3191.

3274: RPQ 7L0825 is required to attach Models A2X or B2X, and operates in Native Mode only. (Canadian-French and Spanish-Speaking are not available.)

3276: Available port or added #3255, #3256, or #3257. Allows attachment of 3191 Model A1X, B1X, A3X, B3X in Emulation Mode only.

4361: Standard Display/Printer Adapter or Workstation Adapter allows attachment of 3191 Model A1X or B1X in Emulation Mode only.

4701: Available port on optional DCA adapter. Allows attachment of an 3191 Model A1X or B1X in Emulation Mode only.

4702: Available Port on the DCA adapter. Allows attachment of an 3191 Model A1X or B1X in Emulation Mode only.

Customer Setup (CSU): The 3191 is designated as a customer setup machine. Setup instructions (GA18-2458) are included with each machine.

HIGHLIGHTS

- Displays up to 1,920 characters in 24 rows of 80 characters each. Each character is represented in a maximum 7 X 14 dot matrix in the 9 X 16 contiguous box matrix. Displays a 94 character set: 26 uppercase alphabetic, 26 lowercase alphabetic, 10 numeric and 32 special characters.
- (Canada only > With Canadian Bilingual/French keyboard, displays additional 30 unique Canadian French characters (total 124-character set). <)
- (Japan only > With Japanese Katakana keyboards, displays 127-character set). <)
- The 3191 offers functions equivalent to the 3278 Model 2 or 3178 in Emulation Mode.
- Uses 3270 field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphanumeric, normal/intensified, and displayable/non-displayable.
- The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of the 3191. When the 3191 is attached to a 3174, 3274, 4300 Processor Display Printer Adapter, 4361 Workstation Adapter or 9370 Workstation Subsystem Controller, the printer designation is controlled by operator use of the IDENT key and by: (a) a printer authorization matrix which is loaded into the 3274 through a user-written host application program, or, (b) a customer-definable matrix loaded from the System Diskette at IML time. For further details, see the "IBM 3270 Information Display System Planning and Setup Guide", GA27-2827.
- When the 3191 is attached to a 3276, the printer designation is controlled by operator use of the IDENT Key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276. (The host can perform a copy in a manner compatible with 3271/3272 support.)
- The 3191 consists of three workstation elements (WSEs): Video, logic and keyboard elements.
- Operator Factors: The 3191 has an etched screen, which minimizes glare and fingerprint. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to changed the screen angle for the operator.
- Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field,

erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typematic capability. Double speed cursor and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 PF keys are available.

- When attached to a 3274 with Configuration Support D, or to an 3174, it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 pages for languages supported.
- Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of data in the display terminal unless the key is turned to the "on" position.

These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to control access to data and audit or actions.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. Physical setup, connection of cables in customer access areas, switch settings and checkout.
4. During initial Setup, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3191.
5. Contacting an IBM customer service coordinator for attachment of the 3191 communications cable to an on-site serviced IBM control unit where customer access area is not provided.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution.
8. Customer is responsible for all modifications he makes to the 3191 keyboard.
9. Customer is responsible for handling any keyboard changes necessary in the event of a maintenance action. That is, the customer should remove all special keycaps prior to submitting a keyboard for exchange. A keyboard with the standard layout will be returned to the customer.
10. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
11. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
12. Each customer must order the "IBM 3191 Display Station Description Manual", GA18-2457, for site planning and preparation works since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3191 units for such use. The number of spare units is dependent upon the number of the 3191 units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase of Maintenance Agreement and repair of that damage or replacement of missing, altered, or non-IBM parts will be charged for at IBM's then-applicable time and materials charges. Altered elements will not be eligible for the exchange or replacement services.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3191 to enhance the availability to the customer. Use of these functions are described in the "Problem Solving Guide" and are designed to be executed by the operator.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing CPAR, the local CE branch office may be called for their assistance. The CE will respond to the customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer.

Customer-owned spare Workstation Elements (WSE) may be installed to replace defective workstation elements by the CE upon customer request. All on-site assistance is available on a per-call basis at the applicable hourly rates and terms.

Keyboards:

- 122-key Typewriter Keyboard (Modifiable) - moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Function keys, and 18 numeric pad keys.
- 124-key Japanese Katakana Typewriter keyboard - Typewriter layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys.

Note: Can be used with:

3174

3274 with Configuration Support A, B, C, or D in Emulation Mode.

3274 with Configuration Support D (microcode release 63 or higher) in Native Mode.

3274 with Configuration Support D (microcode release 63 or higher) in Native Mode with modified keytop capability.

- 103-Key IBM Enhanced Keyboard - typewriter-like layout, moveable with 49 alphanumeric keys, 24 control keys, 12 Function keys (24 functions) and 18 numeric pad keys.
- 104-key IBM Enhanced Keyboard (Japanese Katakana - typewriter-like layout, moveable with 49 alphanumeric keys, 25 control keys, 12 Program Function keys (24 functions) and 18 numeric pad keys.

Note: Can only be used with:

3174

3274 with Configuration Support D (microcode Release 65 or higher) with 3274 RPQ 7L0825, in Native Mode. (Canadian-French and Spanish Speaking are not available.)

- (Except LAD) 104-key Typewriter Keyboard (modifiable) - moveable with 49 alphanumeric keys, 31 control keys and 24 individual Program Function keys.

Note: Can be used with:

3174

3274 with Configuration Support A, B, C, or D in Emulation Mode.

3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode.

3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode with modified keytop capability.<)

- 106-key Japanese Katakana Typewriter keyboard - typewriter layout, moveable, provides 4-level shift with 50 data keys and 32 control keys.

Note: Can be used with:

3174

3274 with Configuration Support A, B, C, or D in Emulation Mode.

3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode.

3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode with modified keytop capability.

- Keyboards used on other products are not interchangeable with keyboards used on the 3191.

Publications: The following publications are available:

- IBM 3191 Display Station Repair Center Maintenance Information (SY18-2152)

* Note: A copy will be shipped with each machine.

SPECIFY

- Power: 100-127V, 1-phase, 3-wire, 50-60 Hz. A 2.8m (9.0 ft) line cord with non-locking plug.

SPECIAL FEATURES (NONE)

ACCESSORIES

Cables: IBM shielded twisted-pair cable or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted-Pair Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Coaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM 3270 Installation Manual - Physical Planning", GA27-2787 and "Coaxial Cable and Associated Manual" GA27-2805.

The following accessories can be ordered as follows.

- Data Entry Keycaps and Keycap Removal Tool (US English) (P/N 1351741) for Model A10, B10; (LAD only) (P/N 73x3881) for Model A30, B30 (<)
- PF Keycaps for 3178-C20 Typewriter Keyboard Layout (2 sets) and Keycap Removal Tool (US English) (P/N 1351742)
- PF Keycaps for 3178-C30 Typewriter Keyboard Layout (2 sets) and Keycap Removal Tool (US English) (P/N 1391244)
- Blank Keycaps Light (60 caps) and Keycap Removal Tool (P/N 1351710) for Model A10, B10; (LAD only) (P/N 73x3876) for Model A30, B30 (<)
- Blank Keycaps Dark (60 caps) and Keycap Removal Tool (P/N 1351728) for Model A10, B10; (LAD only) (P/N 73x3878) for Model A30, B30 (<)

- Clear Lens Keycaps (60 caps) with Paper Inserts (60 light and 60 dark) and Keycap Removal Tool (P/N 6341707)
- Paper Inserts for Clear Lens Keycaps (150 light and 150 dark) (P/N 6341704) for Model A10, B10; (LAD only) (P/N 73x3886) for Model A30, B30 (<)
- Keycap Removal Tool (6 tools) (P/N 1351717)
- Keyboard Overlay for Extended Select Functions (10 sheets) Model A1X, B1X (P/N 6342112); Model A2X, B2X (P/N 64X9937)
- Blank Keyboard Overlay Model A1X, B1X, A3X, B3X (P/N 6341703); Model A2X, B2X (P/N 6238058)
- Key Blanks for Security Keylock (10)* for keys labelled A00-A99 (P/N 6238059); for keys labelled D00-D99 (P/N 64X9944)

* Note: Duplicate keys may be made locally from these key blanks.

Switch Control Unit**	P/N
English	6052157
Japanese	6052160
Canadian French	6052158
Spanish	6052159

** Note: Permits switching operational control of a 3191 between 2 different control units. The customer is responsible for procurement and installation of this accessory, and also for the replacement of a defective unit. There is no switch control unit designed specifically for the 3191, but use may be made of the unit designed for the 3278 or 3279. The 3279 switch is suggested even though it does not fit readily under the foot of the 3191, since it is better adapted than the 3278 switch to a free-standing installation.

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative

Description	P/N
Field Packaging Material	
For Video	6317356
For Logic	6431983
For Keyboard:	
(122-Key Typewriter)	7342987
(102-Key IBM Enhanced)	7342889
(LAD only)	
(104-Key Typewriter)	69x8207(<)

Keys: The 3191 is shipped with two keys. If the keys are lost, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis. As an alternative, security key blanks are available (See Accessories section).

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3191. For shipment, specify Machine Element (P/N) number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

SITE PLANNING AND PREPARATION

These are the responsibility of the customer. The customer should have on hand, or should order the "IBM 3191 Display Station Description" (GA18-2457) for site planning and preparation work.

The video, logic, keyboard, video stand and line cord of the 3191 Color Display Station can be ordered as follows:

- Video (Green) (P/N 83X7939); Video (Amber-Gold) (P/N 83X7944) -- Bermuda, Bahamas, Barbados, Canada, Colombia, Costa Rica, Dominican Republic, El Salvador, Ecuador, Guatemala, Guyana, Haiti, Honduras, Japan, Jamaica, Korea, Nicaragua, Netherlands Antilles, Mexico, Panama, Philippines, Surinam, Taiwan, Trinidad
- Video (Green) (P/N 83X7941); Video (Amber-Gold) (P/N 83X7946) -- Bolivia
- Video (Green) (P/N 83X7940); Video (Amber-Gold) (P/N 83X7945) -- China, Hong Kong, Malaysia, Sri Lanka, Afghanistan, Bangladesh, Burma, Venezuela, Thailand
- Video (Green) (P/N 83X7942); Video (Amber-Gold) (P/N 83X7947) -- Chile, Indonesia, New Zealand, Argentina, Australia, Brunei, Peru, Paraguay, Singapore, Uruguay
- Logic (P/N 6238033) -- All countries
- Keyboards:
 - 122-Key Typewriter (P/N 1390242) -- Canadian French
 - 124-Key Typewriter (P/N 1390246) -- Japanese Katakana
 - 122-Key Typewriter (P/N 1390250) -- Spanish Speaking
 - 122-Key Typewriter (P/N 1390416) -- New Spanish
 - 104-Key Typewriter (P/N 73X3848) -- US - English
 - 122-Key Typewriter (P/N 1390238) -- US - English
 - IBM Enhanced (P/N 1390123) -- US - English
 - 106-Key Typewriter (P/N 73X3854) -- Japanese Katakana
 - IBM Enhanced (P/N 1390454) -- Japanese Katakana
- Video Stand (P/N 6238060) -- All countries
- Line Cord (P/N 6952353) -- Brunei, Malaysia, Singapore, Hong Kong
- Line Cord (P/N 6952317) -- Afghanistan, Indonesia, Surinam
- Line Cord (P/N 6952308) -- Australia, New Zealand
- Line Cord (P/N 6952371) -- Chile
- Line Cord (P/N 6952285) -- Argentina, Paraguay, Uruguay
- Line Cord (P/N 6952297) -- Bahamas, Barbados, Bermuda, Bolivia, Canada, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Japan, Korea, Mexico, Netherlands Antilles, Nicaragua, Panama, Philippines, Taiwan, Trinidad
- Line Cord (P/N 6952344) -- Bangladesh, Burma, Sri Lanka
- Line Cord (P/N 6952397) -- Peru, Thailand, Venezuela

IBM 3191 DISPLAY STATION MODELS D AND E

PURPOSE

The 3191 Display Station Models D and E, members of the 3270 Information Display System provide high-quality, 1,920 and 2,560 character, 14-inch monochrome CRT with a smudge-resistant screen which is available in green or amber-gold phosphor. The 3191 Models D and E provide the functions of the 3191 Models A and B as well as the following standard enhancements: Printer Port for local screen copy with screen trim options, Record/Pause/Play capability, Rule and Set-Up Mode. The 3191 Models D and E may be attached to the IBM S/360, S/370, 43XX, 937X, 303X, 308X, 3090, S/8100, S/36 and S/38.

MODELS

Model D1X: Displays up to 2,560 characters on a green monitor and provides a 122-Key Typewriter keyboard (modifiable) (124-Key Japanese Katakana).

Model E1X: Displays up to 2,560 characters on an amber-gold monitor and provides a 122-Key Typewriter keyboard (modifiable) (124-Key Japanese Katakana).

Model D2X: Displays up to 2,560 characters on a green monitor and provides a 102-key IBM Enhanced Typewriter keyboard (103-Key Thai, 104-Key Japanese Katakana).

Model E2X: Displays up to 2,560 characters on an amber-gold monitor and provides a 102-Key Typewriter keyboard (modifiable) (103-Key Thai, 104-Key Japanese Katakana).

Model D3X: Displays up to 2,560 characters on a green monitor and provides a 104-key Typewriter keyboard (modifiable) (106-Key Japanese Katakana).

Model E3X: Displays up to 2,560 characters on an amber-gold monitor and provides a 104-Key Typewriter keyboard (modifiable) (106-Key Japanese Katakana).

Language option selected will be designated by the third character of the model number as follows:

- Y - English US
- D - Canadian French (Not available on Model D2X, E2X) (Available on D3X, E3X 10/87)
- K - Japanese Katakana
- S - Spanish Speaking (Only available on Model D1X, E1X)
- C - New Spanish (Only available on Model D1X, E1X)
- O - Thailand (Only available on Model D2X, E2X)

Limitations: For model limitations, see "Prerequisites"

- The following are not available:
 - Magnetic reader control and accessories
 - Monocase switch
 - Selector light pen
 - Video output
- The following items should be taken into consideration when selecting the 3191 keyboard:
 - 122-Key or 104-Key Typewriter Keyboard
 - ▲ Available in Native or Emulation Mode
 - ▲ If keyboard is to be modified: The IBM 3174 (any level) or 3274, Configuration Support D release level 63 or higher is required
 - Available in Native Mode only.
 - 102-Key Enhanced Keyboard

- ▲ Requires a 3174 or Configuration Support D Release Level 65 on 3274 with no-charge RPQ #7L0825.

- ▲ If keyboard is to be modified, the 3174 Release Level 2 is required.

Prerequisites: Attachment required on 3174 or 3274 Control Unit available Category A terminal port.

Note: If 3191 Models DXX/EXX are attached to a 3274:

- The 3191 Models D1X/E1X and D3X/E3X in Native Mode must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 63 or higher. This level of support is also required for changing the layout of the IBM 122/124-Key Typewriter Keyboard.
- The 3191 Model D2X/E2X operating in Native Mode only, must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 65 or higher and 3274 RPQ 7L0825.
- 3274 Microcode and RPQ must be ordered well in advance in order to assure receipt prior to arrival of the 3191.

(LAD Only> The RPQ #7L0625/#7L0626 is required on 3274 to support the New Spanish (122-Key Typewriter Keyboard) for Latin America.<)

(APG Only> The RPQ #8K1555 is required on 3174 to support the Thai Language (103-Key IBM Enhanced Keyboard).<)

3274 RPQ #7L0825 is required to attach Models D2X/E2X, and operates in Native Mode only.

3276 Available port or added #3255, #3256, or #3257. Allows attachment of Models D1X, E1X, D3X, E3X in Emulation Mode only.

4321 Standard Display/Printer Adapter on 4321. Allows attachment of 3191 Models D1X, E1X, D3X, E3X in Emulation Mode only.

4331 Standard Display/Printer Adapter on the 4331 or Display/Printer Adapter Expansion (2001) on a 4331 Mdl group 1 or 2. Allows attachment of an 3191 Model D1X, E1X, D3X, E3X in Emulation Mode only.

937X Workstation Subsystem Controller allows attachment of 3191 Model D1X or D3X in Emulation Mode only.

4361 Standard Display/Printer Adapter or Workstation Adapter allows attachment of 3191 Model D1X, E1X, D3X, E3X in Emulation Mode only.

Note: Spanish Speaking and New Spanish are not available for D2X/E2X or D3X/E3X. Canadian-French is not available for D2X/E2X.

Customer Setup (CSU): The 3191 Models D and E are Customer Set-Up (CSU) machines. IBM 3191 Display Station Setup Instructions (GA18-2527) are included with each machine.

HIGHLIGHTS

- Improved price/performance
 - Low price with discounts for volume procurement
 - 1 or 3 Year Warranty
 - Alert function for maintenance
- Functions
 - Printer Port for local screen copy
 - Screen Margin option
 - Various Print Options selectable at Set-Up time
 - Record/Play/Pause

- Rule
- Set-Up Mode
 - Cursor Speeds selectable
 - Volume Control for Keyboard Click
- Vertical Scroll
- IBM 3270 compatible
- Screen Characteristics
 - Screen Size selectable at Set-Up time
 - 1920 Characters (80 x 24) plus Operator Information Area
 - 2560 Characters (80 x 32) plus Operator Information Area
 - Larger character size than 3178 or 3191 Model A/B
 - Non-glare, 14-inch Green or Amber-Gold monochrome CRT
 - Auto-Dim feature with Time-Out option
 - Row-Column Indicator
- Modifiable Keyboards
 - IBM 122(Japan Only>/124<)-Key Typewriter Keyboard (Except LAD>IBM Enhanced Keyboard (102/103/104-Key)
 - IBM 104/106-Key Typewriter Keyboard <)
 - Coiled keyboard cable
 - Home row indicator keys
- Ergonomics
 - Small, light weight video unit
 - Tilt/Swivel pedestal
 - Small footprint
 - Low-profile keyboards

The 3191-D/E supports the following national languages:

	D1X/ E1X	D2X E2X	D3X E3X
Canadian French	X	-	X
English US	X	X	X
Spanish Speaking	X	-	-
New Spanish	X	-	-
Japanese Katakana	X	X	X
Thailand	-	X	-

DESCRIPTION

The 3191 Models D and E are a high quality, 1920 or 2560 character, 14-inch Green/Amber-Gold monochrome CRT Display Station used for displaying alphanumeric data, and for entering data into, and receiving data from, the following systems:

SYSTEM	VIA ATTACHMENT
S/360	3274,3276 Type A Adapter
S/370	3274,3276 Type A Adapter
43XX	3174,3274,3276 Type A Adapter
937X	3174,3274 Type A Adapter or Workstation Subsystem Controller
308X	3174,3274,3276 Type A Adapter
3090	3174,3274,3276 Type A Adapter
S/8100	3174,3274 Type A Adapter
303X	3274,3276 Type A Adapter
S/36	3174,3274 Type A Adapter
S/38	3174,3274 Type A Adapter
4321	Display/Printer Adapter
4331	Display/Printer Adapter
4361	Display/Printer or Workstation Adapter

- The 3191 consists of the following workstation elements:

	D1X E1X	D2X E2X	D3X E3X
Video 14" green/ amber-gold	X	X	X
Logic	X	X	X
122-Key Typewriter Kbd.	X		
Enhanced Keyboard		X	
104-Key Typewriter Kbd.			X
Pedestal	X	X	X
Power Cord	X	X	X
Video Cable	X	X	X
Shipping Group	X	X	X

* Not available in Spanish Speaking or New Spanish

** Not available in Spanish Speaking or New Spanish (available in Canadian-French 10/87.)

- A typewriter style modifiable keyboard with (Except LAD>either 102/103/104 keys on the IBM Enhanced Keyboard or<) 122(APG Only>/124<) keys on the Typewriter Keyboard, provides 24 program function keys, a numeric pad, and cursor-move keys. (Except LAD>Also available is the 104/106-Key Modifiable Typewriter Keyboard (no numeric pad).<)
- A keyboard definition utility is supported in the 3191 to allow definition of customer specific data keyboard layouts. A keycap removal tool is standard so that keycaps can be changed conveniently.
- PA3 key function is supported. To add PA3 nomenclature to the keyboard, use the appropriate Clear Lens Keycaps/Paper Inserts Accessory Kit as listed in the "Accessories" section.
- Printer Port
 - The 4201/4202 (Proprinter) may be attached to the printer port to provide local screen copy. The 3191 Models D and E provide, via set up mode, the ability to select the area of the screen to be printed, as well as the print quality, line density and pitch.
- Rule provides the ability to display the cursor by extending a line both vertically and/or horizontally. This facilitates finding the cursor on a busy screen as well as horizontal and vertical guide for rows and columns.
- Record/Pause/Play provides a method reducing keystrokes by recording and playing back often used data.
- The Response Time Monitor, Alert capability and Entry Assist are supported on the 3274 with Configuration Support D and the IBM 3174.
- Adjustable Audible Alarm, Variable Auto-Dim and Security Keylock are standard. Security key is removable in both LOCK and UNLOCK position
- Low-profile keyboards with coiled cable
- Screen Characteristics
 - 14-inch Monochrome CRT provides a bright, steady presentation of either 80 x 24 or 80 x 32 characters
 - Etched, enhanced contrast CRT screen designed to reduce light reflections and fingerprint smudges to produce high-quality, high-resolution output.
- Video pedestal, provided as standard, provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be individually positioned.
- Through the use of error indicators, off-line tests and the Customer Problem Solving guide, the customer may isolate a failing element for exchange or replacement.

Operator Factors: The 3191-D/E has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to changed the screen angle for the operator. The keyboard slope can be adjusted by the user.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typamatic capability. Double speed cursor and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 PF keys are available.

When attached to a 3274 with Configuration Support D, or to an IBM 3174, it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3174 or M3274 for languages supported.

Cabling: IBM shielded twisted pair cable or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable: For proper identification, installation and application of cable and associated accessories, refer to IBM Cabling System - Planning and Installation Guide, GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Coaxial Cable - For proper identification, installation and application of cable and associated accessories, refer to IBM 3270 Installation Manual - Physical Planning (GA27-2787) and Coaxial Cable and associated manual (GA27-2805).

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position.

These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions.

User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see Data Security Controls and Procedures (G320-5649).

Physical Specifications:

Video Element

Width: 333mm (13.1 in.)
Depth: 314mm (12.4 in.)
Height: 295mm (11.6 in.)
Weight: 8.5 kg (18.7 lbs.)

Logic Element

Width: 300mm (11.8 in.)
Depth: 290mm (11.4 in.)

Height: 47mm (1.9 in.)
Weight: 1.2 kg (2.6 lbs.)

Keyboard Element (122-Key)

Width: 561mm (22.1 in.)
Depth: 230mm (9.1 in.)
Height: 30mm (1.2 in.)*
Weight: 3.0 kg (6.6 lbs.)

Keyboard Element (102-Key)

Width: 492mm (19.4 in.)
Depth: 210mm (8.3 in.)
Height: 30mm (1.2 in.)*
Weight: 2.5 kg (5.5 lbs.)

Keyboard Element (104-Key)

Width: 419mm (16.5 in.)
Depth: 204mm (8.0 in.)
Height: 30mm (1.2 in.)*
Weight: 1.8 kg (4.0 lbs.)

* At home row

Operating Environment: Operating environment of configurable I/O units are different.

● 3191 Models D and E

Class C: 10 to 40.6 degrees C (50 to 105 degrees F)
Relative Humidity - 8 to 80 percent

● IBM 4201/4202

Class B: 15.6 to 32.2 degrees C (60 to 90 degrees F);
Relative Humidity - 20 to 80 percent

Customer Responsibilities:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial set-up, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the IBM 3191-D/E.
4. Physical set-up, connection of cables in customer access areas, switch settings and checkout.
5. Contacting IBM service for attachment of the 3191-D/E communications cable to an on-site serviced IBM control unit where customer access area is not provided. This service will be provided at current hourly rates.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR).
8. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the IBM 3191 Display Station Description Manual (GA18-2866) for site planning and preparation works since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3191-D/E units for such use. The number of spare units is dependent upon the number of the 3191-D/E units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3191-D/E to enhance the availability to the customer. This has been done through routines and procedures in the 3191 Display Station Problem Solving Guide which is used by the customer.

Publications: The following publications are available:

- 3191 Display Station Description (GA18-2666)
- 3191 Display Station User's Guide* (GA18-2526)
- 3191 Display Station Setup Instructions* (GA18-2527)
- 3191 Display Station Problem Solving Guide* (GA18-2728)
- IBM Display Station Repair Center Maintenance Information Manual (SY18-2206)

* A copy is shipped with each machine.

These publications are available from Mechanicsburg.

Note: Customers should order the 3191 Display Station Description for site planning and preparation work since this publication is not shipped with each machine. Customers may order the 3191 Display Station Repair Center Maintenance Information (SY18-2206) for repair. The other publications are shipped with the machine.

SPECIFY

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz or 200-240V AC, 1-phase, 3-wire, 50-60 Hz.
- Line Cord: A 2.8m (9.0 ft) line cord with nonlocking plug. The country number of the ordering country determines the default line for line cord and shipping group.
- The country number of the ordering country determines the default line for line cord and shipping group.

Keyboards: The emulation mode which is only available on 122-Key and 104-Key keyboard is provided via 3276, 3274 and 3174. Native mode which is available on all keyboard types. For the modifiable keyboard, native mode is provided via the 3274 Configuration Support D, Release Level 63 or higher and for 102-Key IBM Enhanced Keyboard via 3274 Configuration Support D, Release Level 65 or higher with RPO #7L0825 on the 3274. All keyboard types are supported native mode by 3174. (Japan Only>The modifiable Katakana keyboard is not supported by 3274 in emulation mode nor in native mode.<)

- 122-Key Typewriter Keyboard (Modifiable) - with 2 angles inclination, moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys.
- (Japan Only> 124-key Japanese Katakana Typewriter keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys.<)

Can be used with:

- 3174
- 3274 with Configuration Support A, B, C, or D in Emulation Mode
- 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode
- 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode with modified keytop capability
- IBM 3276, 43XX and 937x in Emulation Mode
- IBM Enhanced Keyboard - Typewriter-like layout, moveable with two angles inclination (Canada Only> 102-key English.<)

- (Japan Only> 104-key Japanese Katakana IBM Enhanced keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and control keys.<)

Can only be used with:

- 3174
- 3274 with Configuration Support D (microcode Release 65 or higher) with 3274 RPO #7L0825, in Native Mode. (Canadian-French and Spanish Speaking are not available.)
- 104-Key Typewriter Keyboard (modifiable) - moveable with 3 angles of inclination and 49 alphanumeric keys, 31 control keys and 24 individual Program Function keys. The keyboard layout is identical to the IBM 122-key Typewriter Keyboard, but is without the 18-key keypad.
- (Japan Only> 106-Key Japanese KATAKANA Typewriter Keyboard - Typewriter layout, moveable. Provides 4-level shift with 50 data keys, 32 control keys and 24 individual Program Function keys.<)

Can be used with:

- IBM 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support (Microcode release level 63 or higher) in Native Mode.

* Duplicate keys may be made locally from these key blanks.

For local charges, consult your Marketing Representative.

Keys: The 3191-D/E is shipped with two keys. If keys are lost, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis. For additional/replacement keys, see "Accessories" or "Supplies".

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3191-D/E.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry.

- Order individual workstation elements through the Telemarketing Representatives.

3191 DISPLAY STATION MODEL L

PURPOSE

The 3191 Display Station Model L, a member of the 3270 Information Display System, provides high-quality, 1920 and 2560 character, 14-inch green monochrome CRT with a smudge-resistant screen. The 3191 Model L provides a Selector Light-pen as well as the following standard functions: Printer Port for local screen copy with screen trim options, Record/Pause/Play capability, Rule and Setup Mode. The 3191 Model L may be attached to the IBM S/360, S/370, 43XX, 937X, 303X, 308X, 3090, S/8100, S/36 and S/38.

MODEL L

Model L1X: 122-Key Typewriter Keyboard, Green Phosphor (14 inch) (124-Key Japanese Katakana)

Model L2X: 102-Key IBM Enhanced Keyboard, Green Phosphor (14-inch) (104-Key Japanese Katakana)

Model L3X: 104-Key Typewriter Keyboard, Green Phosphor (14-inch) (106-Key Japanese Katakana)

Language option selected will be designated by the third character of the model number as follows:

- Y US English
- D Canadian Bilingual/French (Only available on Model L1x) (Model L3x available 10/87)
- K Japanese Katakana
- S Spanish Speaking (Only available on Model L1X)
- C New Spanish (Only available on Model L1X) material deleted

Limitations: For model limitations, see "Prerequisites".

The following are not available:

- Magnetic reader control and accessories
- Monocase switch
- Video output

The following items should be taken into consideration when selecting the IBM 3191 keyboard:

- 122-Key or 104-Key Typewriter Keyboard
 - Available in Native or Emulation Mode.
 - If keyboard is to be modified: The 3174 (any level) or 3274, Configuration Support D release level 63 or higher is required.
- Available in Native Mode only.
- 102-Key Enhanced Keyboard:
 - Requires a 3174 or Configuration Support D Release Level 65 on a 3274 with no-charge RPQ 7L0825.
 - If keyboard is to be modified, the 3174 Release Level 2 is required.

Prerequisites: Attachment Required on 3174 or 3274 Control Unit available Category A terminal port.

Note: If 3191 Model Lxx is attached to a 3274:

- The 3191 Models L1X and L3X in Native Mode must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 63 or higher. This level of support is also required for changing the layout of the IBM 122-Key Typewriter Keyboard.
- The 3191 Model L2X operating in Native Mode only, must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 65 or higher and IBM 3274 RPQ 7L0825.

3274 Microcode and RPQ must be ordered well in advance in order to assure receipt prior to arrival of the 3191.

(LAD only) The RPQs 7L0625, 7L0626 are required on 3274 to support the New Spanish (122-Key Typewriter Keyboard) for Latin America. <)

3274 RPQ 7L0825 is required to attach Model L2X, and operates in Native Mode only.

3276 Available port or added #3255, #3256, or #3257. Allows attachment of Models L1x or L3x in Emulation Mode only.

937X Workstation Adapter allows attachment of 3191 Model L3x in Emulation Mode only.

Note: Canadian-French available for Model L3x 10/87. Spanish Speaking and New Spanish are not available for L2x or L3x.

Customer Setup (CSU): The 3191 Model L is a customer setup (CSU) machine. 3191 Display Station Setup Instructions (GA18-2704) are included with each machine.

HIGHLIGHTS

- Selector Light-Pen
 - A hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. A holder is provided for the Selector Light-Pen while not in use.
- Improved price/performance:
 - Low price with discounts for volume procurement
 - Alert function for maintenance
- Functions:
 - Printer Port for local screen copy:
 - ▲ Screen Margin option
 - ▲ Various Print Options selectable at setup time
 - Record/Play/Pause
 - Rule
 - Setup Mode:
 - ▲ Cursor Speeds selectable
 - ▲ Volume Control for Keyboard Click
 - Vertical Scroll
- Compatibility (See "Compatibility and Migration" section for details):
 - IBM 3270 compatible
- Screen Characteristics:
 - Screen Size selectable at Setup time
 - ▲ 1,920 Characters (80 x 24) plus Operator Information Area
 - ▲ 2,560 Characters (80 x 32) plus Operator Information Area
 - Larger character size than 3178 or 3191 Model A/B
 - Non-glare, 14-inch Green monochrome CRT
 - Auto-Dim feature with Time-Out option
 - Row-Column Indicator
- Modifiable Keyboards:
 - IBM 122-Key Typewriter Keyboard
 - (Except LAD > IBM Enhanced Keyboard (102-Key)
 - IBM 104-Key Typewriter Keyboard <)
 - Coiled keyboard cable
 - Home row indicator keys
- Ergonomics:
 - Small, light weight video unit
 - Tilt/Swivel pedestal
 - Small footprint

- Low-profile keyboards

The 3191-L supports the following national languages:

	3191-L1x	3191-L2x	3191-L3x

Note: Customers should order the "IBM 3191 Display Station Description" for site planning and preparation work since this publication is not shipped with each machine. Customers may order the

"IBM 3191 Display Station Repair Center Maintenance Information", SY18-2221, for repair. The other publications are shipped with the machine.

DESCRIPTION

The 3191 Model L is a high quality, 1,920 or 2,560 character, 14-inch Green monochrome CRT Display Station that provides a Selector Light-Pen and is used for displaying alphanumeric data, and for entering data into and receiving data from the following systems:

System	via Attachment
S/360	3274, 3276 Type A Adapter
S/370	3274, 3276 Type A Adapter
43XX	3174, 3274, 3276 Type A Adapter*
937X	3174, 3274 Type A Adapter
	or Workstation Adapter
308X	3174, 3274, 3276 Type A Adapter
3090	3174, 3274, 3276 Type A Adapter
S/8100	3174, 3274 Type A Adapter
303X	3274, 3276 Type A Adapter
S/36	3174, 3274 Type A Adapter
S/38	3174, 3274 Type A Adapter

* The 3191-L does not attach to the 43X1 Workstation Adapter or DPA.

- The 3191 consists of the following workstation elements:

	Models		
	L1x	L2x*	L3x**
Video 14-inch			
green monochrome	X	X	X
Logic	X	X	X
Selector Light-Pen	X	X	X
IBM 122-Key			
Typewriter Keyboard	X		
IBM Enhanced Keyboard		X	
IBM 104-Key Typewriter			
Keyboard			X
Pedestal	X	X	X
Power Cord	X	X	X
Shipping Group	X	X	X

* Not available in Canadian French, Spanish Speaking or New Spanish.

** Not available in Spanish Speaking or New Spanish. Available in Canadian-French 10/87.

- A typewriter style modifiable keyboard with either (Except LAD> 102/104 keys on the IBM Enhanced Keyboard<) or 122(A/PG only> /124<) keys on the Typewriter Keyboard, provides 24 program function keys, a numeric pad, and cursor-move keys. (Except LAD> Also available is the 104/106-Key Modifiable Typewriter Keyboard (no numeric pad).<)

A keyboard definition utility is supported in the 3191 to allow definition of customer specific data keyboard layouts. A keycap removal tool is standard so that keycaps can be changed conveniently.

- PA3 key function is supported. To add PA3 nomenclature to the keyboard, use the appropriate Clear Lens Keycaps/Paper Inserts Accessory Kit as listed under the "Accessories" section.

- Printer Port:

- The 4201/4202 (Proprinter) may be attached to the printer port to provides local screen copy. The 3191 Model L provides, via set up mode, the ability to select the area of the screen to be printed, as well as the print quality, line density and pitch.

- Rule provides the ability to display the cursor by extending a line both vertically and/or horizontally. This facilitates finding the cursor on a busy screen as well as horizontal and vertical guide for rows and columns.
- Record/Pause/Play provides a method reducing keystrokes by recording and playing back often used data.
- The Response Time Monitor, Alert capability and Entry Assist are supported on the 3274 with Configuration Support D and the 3174.
- Adjustable Audible Alarm, Variable Auto-Dim and Security Keylock are standard. Security key is removable in both LOCK and UNLOCK position.
- Low-profile keyboards with coiled cable.
- Screen Characteristics:
 - 14-inch Green monochrome CRT provides a bright, steady presentation of either 80 x 24 or 80 x 32 characters.
 - Etched, enhanced contrast CRT screen designed to reduce light reflections and fingerprint smudges to produce high-quality, high-resolution output.
- Video pedestal, provided as standard, provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be individually positioned.
- Through the use of error indicators, off-line tests and the Customer Problem Solving guide, the customer may isolate a failing element for exchange or replacement.

Operator Factors: The 3191-L has an etched screen, which minimizes glare and fingerprint. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provides useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to changed the screen angle for the operator. The keyboard slope can be adjusted by the user.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typematic capability. Double-speed cursor and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 PF keys are available.

When attached to a 3274 with Configuration Support D, or to a 3174, it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3174 or 3274 pages for languages supported.

Cabling: IBM shielded twisted pair cable or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

- IBM Shielded Twisted-Pair Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.
- Coaxial Cable - For proper identification, installation and application of cable and associated accessories, refer to "IBM

3270 Installation Manual - Physical Planning", GA27-2787 and Coaxial Cable and associated manual, GA27-2805.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the LOCKED position.

These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions.

User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures" (G320-5649).

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial setup, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3191-L.
4. Physical setup, connection of cables in customer access areas, switch settings and checkout.
5. Contacting IBM service for attachment of the 3191-L communications cable to an on-site serviced IBM control unit where customer access area is not provided. This service will be provided at current hourly rates.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR).
8. Contacting IBM CE Branch Office if IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the "IBM 3191 Display Station Description Manual", GA18-2700 for site planning and preparation work, since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3191-L units for such use. The number of spare units is dependent upon the number of the 3191-L units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3191-L to enhance the availability to the customer. This has been done through routines and procedures in the 3191 Display Station Problem Solving Guide which is used by the customer.

SPECIFY

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz or 200-240V AC, 1-phase, 3-wire, 50-60 Hz
- Line Cord: A 2.8m (9.0 ft.) line cord with non-locking plug. The country number of the ordering country determines the default line for line cord and shipping group.
- The country number of the ordering country determines the default line for line cord and shipping group.

Keyboards: The emulation mode which is only available on 122-Key and 104-Key keyboard is provided via 3276, 3274, and 3174. Native mode which is available on all keyboards types. For the modifiable keyboard, native mode is provided via the 3274 Configuration Support D, Release Level 63 or higher, and for 102-Key IBM Enhanced Keyboard via 3274 Configuration Support D, Release Level 65 or higher with RPQ 7L0825 on the 3274. All keyboard types are supported native mode by 3174. (Japan only) The modifiable Katakana keyboard is not supported by 3274 in emulation mode or in native mode. < >

- 122-Key Typewriter Keyboard (Modifiable) - with 2 angles inclination, Moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys.
- (Japan only) 124-key Japanese Katakana Typewriter keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys. < >

Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- IBM 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode.
- IBM 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode with modified keytop capability.
- IBM 3276 and 937X in Emulation Mode.
- IBM Enhanced Keyboard - Typewriter-like layout, moveable with 2 angles inclination. (Canada only) (102-key English) < >
- (Japan only) 104-key Japanese Katakana IBM Enhanced keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 24 control keys. < >

Can only be used:

- IBM 3174.
- IBM 3274 with Configuration Support D (microcode Release 65 or higher) with 3274 RPQ 7L0825, in Native Mode. (Canadian-French and Spanish Speaking are not available.)
- 104-Key Typewriter Keyboard (modifiable) - moveable with 3 angles of inclination and 49 alphanumeric keys, 31 control keys and 24 individual Program Function keys. The keyboard layout is identical to the IBM 122-key Typewriter Keyboard, but is without the 18-key keypad.
- (Japan only) 106-Key Japanese Katakana Typewriter Keyboard - Typewriter layout, moveable. Provides 4-level shift with 50 data keys, 32 control keys and 24 individual Program Function keys. < >

Can be used with:

- IBM 3174
- IBM 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- IBM 3274 with Configuration Support (Microcode release level 63 or higher) in Native Mode.

- Printer Cable (P/N 6457008)

For local charges, consult your Marketing Representative.

Keys: The 3191-L is shipped with 2 keys. If keys are lost, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center. This service is available on an hourly service basis. For additional/replacement keys, see "Accessories".

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3191-L.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

Site Planning and Preparation: Planning is the responsibility of the customer. The customer should have on hand, or should order the "IBM 3191 Display Station Description Manual", GA18-2700 for site planning and preparation work.

The video, logic, keyboard, pedestal, selector light-pen, and line cord of the 3191-L Display Station can be ordered as follows:

- Video (Green), P/N 83X7951

Bermuda, Bahamas, Barbados, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Japan, Korea, Mexico, Netherlands Antilles, Nicaragua, Panama, Philippines, Surinam, Taiwan, Trinidad, US, Canada:

- Video (Green), P/N 83X7953 (Bolivia)
- Video (Green), P/N 83X7954:

Argentina, Australia, Chile, Indonesia, New Zealand,
Paraguay, Peru, Singapore, Uruguay

- Video (Green), P/N 83X7943:

Afghanistan, Bangladesh, Brunei, Burma, China, Hong
Kong, Malaysia, Sri Lanka, Thailand, Venezuela

- Logic, P/N 81X7943 (All Countries)
- Keyboard 122-Key, P/N 1390702 (US English)
- Keyboard 122-Key, P/N 1390703 (Canadian/French)
- Keyboard 122-Key, P/N 1390705 (Spanish Speaking)
- Keyboard 122-Key, P/N 1390717 (New Spanish for Latin America)
- Keyboard 124-Key, P/N 1390704 (Japanese Katakana)
- Keyboard 102-Key, P/N 1390766 (US English)
- Keyboard 104-Key, P/N 1390768 (Japanese Katakana)
- Keyboard 106-Key, P/N 73x3838 (Japanese Katakana)
- Keyboard 104-Key, P/N 73x3832 (US English)
- Keyboard 104-Key, P/N 73X3834 (Canadian French)
- Pedestal, P/N 94X1857 (All Countries)
- Power Cord, P/N 6952297

Bolivia, Bermuda, Ecuador, Bahamas, Barbados, Costa
Rica, Trinidad, Colombia, Guatemala, Dominican Re-
public, Haiti, Mexico, Netherlands Antilles, Jamaica, El
Salvador, Korea, Nicaragua, Japan, Panama, Guyana,
Taiwan, Honduras, Canada, Philippines, Surinam

- Power Cord, P/N 6952308:

Australia, New Zealand, China, Argentina, Paraguay,
Uruguay

- Power Cord, P/N 6952317 (Afghanistan, Indonesia)
- Power Cord, P/N 6952344 (Bangladesh, Burma, Sri Lanka)
- Power Cord, P/N 6952353 (Brunei, Malaysia, Singapore, Hong Kong)
- Power Cord, P/N 6952371 (Chile)
- Power Cord, P/N 6952397 (Peru, Thailand, Venezuela)
- Selector Light-pen, P/N 94X1847 (All Countries)

SUPPLIES (NONE)

3192 DISPLAY STATION MODEL C

THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT

PURPOSE

The 3192 Model C Color Display Station, is the newest color display in the 3270 Information Display System. The 3192 Model C provides high quality, 1920- or 2,560-character, 14-inch 7-color CRT with smudge-resistant screen. The 3192 Models C replaces and provides the functions of the 3179-1 as well as the following standard enhancements:

- Printer Port for local screen copy with screen trim options
- Record/Pause/Play capability
- Rule
- Setup Mode
- Choice of keyboard and lower price.

The 3192 may be attached to the S/360, S/370, 43xx, 303x, 308x, 3090, S/8100, S/36 and S/38.

MODEL C

Model C1X: Displays up to 2,560 characters on a 7-color monitor and provides 122 (APG only > /124 <) -Key Typewriter Keyboard.

Model C2X: Displays up to 2,560 characters on a 7-color monitor and provides 102-Key IBM Enhanced Typewriter Keyboard (104-key Japanese Katakana).

Model C3X: Displays up to 2,560 characters on a 7-color monitor and provides 104-Key Typewriter Keyboard (106-key Japanese Katakana).

Language option selected will be designated by the third character of the model number as follows:

- Y English US
- D Canadian French (Not available on Model C2X, C3X)
- K Japanese Katakana
- S Spanish Speaking (Not available on Model C2X, C3X)
- C New Spanish (Not available on Model C2X, C3X)
- O Thailand (Not available on Model C1X, C3X)

Limitations: For model limitations, see Prerequisites.

The following are not available:

- Magnetic reader control and accessories
- Monocase switch
- Selector light-pen
- Video output

The following items should be taken into consideration when selecting the 3192 keyboard:

- 122-Key or 104-Key Typewriter Keyboard
Available for the 3276, 43XX and 3274 with Configuration Support A, B, or C. For the 3274, Configuration Support D Release Level 63s required.
- 102-Key Enhanced Keyboard
Requires Configuration Support D Release Level 65 on the 3274 with no-charge RPQ 7L0825.

Prerequisites: Attachment required on the 3174 or 3274 Control Unit (available Category A terminal port).

Note: If a 3192 Model C is attached to a 3274:

- The 3192 Models C10 and C30 in Native Mode must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 63 or higher. This level of support is also re-

quired for changing the layout of the IBM 122-Key Typewriter Keyboard.

- The 3192 Model C20, operating in Native Mode only, must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 65 or higher and 3274 RPQ 7L0825.
- 3274 Microcode and RPQ must be ordered well in advance in order to assure receipt prior to arrival of the 3192 Model C.

(LAD only > The RPQ 7L0625/7L0626 is required on 3274 to support the New Spanish (122-Key Typewriter) Keyboard for Latin America. <)

(APG only > The RPQ 8K1555 is required on 3174 to support the Thai Language (103-Key IBM Enhanced Keyboard). <)

3274 RPQ 7L0825 is required to attach Models C2X and operates in Native Mode only.

3276 available port or added #3255, #3256, or #3257. Allows attachment of Model C1X, C3X in Emulation Mode only.

4321 Standard Display/Printer Adapter on 4321. Allows attachment of 3192 Model C1X, C3X in Emulation Mode only.

4331 Standard Display/Printer Adapter on the 4331 or Display/Printer Adapter Expansion (#2001) on a 4331 Model Group 1 or 2. Allows attachment of a 3192 Model C1X or C3X in Emulation Mode only.

937X Workstation Adapter allows attachment of a 3192 Model C1X or C3X in Emulation Mode only.

4361 Standard Display/Printer Adapter or Workstation Adapter allows attachment of 3192 Model C1X or C3X in Emulation Mode only.

Note: Canadian French, Spanish Speaking and New Spanish are not available for C2X or C3X.

Customer Setup (CSU): The 3192 Model C is a customer setup (CSU) machine. Setup instructions are included with each machine as "IBM 3192 Model C Color Display Station Setup Instructions", GA18-2533.

HIGHLIGHTS

- Improved price/performance
 - Low price with discounts for volume procurement
 - 36-month warranty
 - Alert function for maintenance
- Functions
 - Printer Port for local screen copy
 - ▲ Screen Margin option
 - ▲ Various Print Options selectable at setup time
 - Record/Play/Pause
 - Rule
 - Setup Mode
 - ▲ Cursor Speeds selectable
 - ▲ Volume Control for Keyboard Click
 - Vertical Scroll
- Compatibility
 - 3270 compatible
- Screen Characteristics (Model C)
 - Screen size selectable at setup time
 - ▲ 1,920 Characters (80 x 24) plus Operator Information Area
 - ▲ 2,560 Characters (80 x 32) plus Operator Information Area
 - Non-glare, 14-inch, 7-color CRT with Steady Image
 - Extended Highlighting
 - Auto-Dim feature with Time-out option
 - Row-Column Indicator
- Keyboard
 - 122-Key Typewriter Keyboard (Modifiable)
 - (Except LAD > 102-Key IBM Enhanced Keyboard)

- 104-Key Typewriter Keyboard (Modifiable) <
- Coiled keyboard cable
- Home row indicator keys
- Ergonomics
 - Smaller, lighter weight video unit
 - Tilt/Swivel pedestal
 - Small footprint
 - Low-profile keyboards

The 3192 Model C supports the following national languages:

DESCRIPTION

The 3192 Model C is a high quality, 1,920- or 2,560-character, 14-inch, 7-color CRT display station used for displaying alphanumeric data, and for entering data into, and receiving data from, the following systems:

System	via Attachment
S/360	3274, 3276 Type A Adapter
S/370	3274, 3276 Type A Adapter
43xx	3174, 3274, 3276 Type A Adapter
937x	3174, 3274 Type A Adapter or Workstation Adapter
308x	3174, 3274, 3276 Type A Adapter
3090	3174, 3274, 3276 Type A Adapter
S/8100	3174, 3274 Type A Adapter
303x	3274, 3276 Type A Adapter
S/36	3174, 3274 Type A Adapter or
	5209 3270-5250 Link Protocol Converter
S/38	3174, 3274 Type A Adapter or
	5209 3270-5250 Link Protocol Converter
4321	Display/Printer Adapter
4331	Display/Printer Adapter
4361	Display/Printer or Workstation Adapter

The 3192 consists of the following workstation elements:

	Models		
	C1x	C2x*	C3x*
Video 14-inch Color	X	X	X
Logic	X	X	X
IBM 122-Key Typewriter Keyboard	X		
IBM Enhanced Keyboard		X	
IBM 104-Key Typewriter Keyboard			X
Pedestal	X	X	X
Power Cord	X	X	X
Video Cable	X	X	X
Shipping Group	X	X	X

* Not available in Canadian French, Spanish Speaking or New Spanish.

- A typewriter style keyboard with either (Except LAD> 102/104 modifiable keys on the IBM Enhanced Keyboard<) or 122(APG only> /124<) (modifiable) keys on the Typewriter Keyboard, provides 24 program functions, a numeric pad, and cursor-move keys. (Except LAD> Also available is the 104/106-Key Modifiable Typewriter Keyboard (no numeric pad).<)

A keyboard definition utility is supported in the 3192 to allow definition of customer specific (Except LAD> 104/106<) or 122/(APG only> /124<)-key data keyboard layouts. A keycap

removal tool is standard so that keycaps can be changed conveniently.

- Printer Port
 - The 4201/4202 (Proprinter) may be attached to the printer port to provide local screen copy. The 3192 provides, via setup mode, the ability to select the area of the screen to be printed, as well as the print quality, line density and pitch.
- Rule provides the ability to display the cursor by extending a line both vertically and horizontally. This facilitates finding the cursor on a busy screen as well as horizontal and/or vertical guide for rows and columns.
- Record/Pause/Play provides a method reducing keystrokes by recording and playing back often-used data.
- The Response Time Monitor, Alert, and Entry Assist capabilities are supported on the 3274 with Configuration Support D and the 3174.
- Adjustable Audible Alarm, Variable Auto-dim, and Security Keylock are standard. Security key is removable in both LOCK and UNLOCK position.
- Low-profile keyboards with coiled cable.
- Screen Characteristics
 - 14-inch 7-color CRT provides a bright, steady presentation of either 80 x 24 or 80 x 32 characters.
 - Etched, enhanced contrast CRT screen designed to reduce light reflections and fingerprint smudges to produce high-quality, high-resolution output.
- Video pedestal, provided as standard, provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be individually positioned.
- Through the use of error indicators, off-line tests and the Customer Problem Solving guide, the customer may isolate a failing element for repair or replacement.
- Operator Factors: The 3192 Model C has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to changed the screen angle for the operator. The keyboard slope can be adjusted by the user.
- Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typematic capability. Double speed cursor and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 PF keys are available. When attached to a 3274 with Configuration Support D, or to a 3174, it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3174 or 3274 pages for languages supported.
- Cabling: IBM shielded twisted pair cable or coaxial cable is required for product attachment. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Coaxial Cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM 3270 Installation Manual - Physical Planning", GA27-2787 and Coaxial Cable and Associated Manual", GA27-2805.

- Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position. These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions. User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Physical Specifications:**Video Element**

Width - 383mm (15.1 inches)
Depth - 405mm (15.9 inches)
Height - 345mm (13.6 inches)
Weight - 12.7kg (28.0 pounds)

Logic Element

Width - 300mm (11.8 inches)
Depth - 290mm (11.4 inches)
Height - 47mm (1.9 inches)
Weight - 1.2kg (2.6 pounds)

Keyboard Element - 122-Key

Depth - 204mm (8.0 inches)
Height - 30mm (1.2 inches)*
Weight - 1.8kg (4.0 pounds)<)

* At Home Row.

Operating Environment:

Operating environment of configurable I/O units are different.

- 3192 Model C Class C:
Temperature - 10 - 40.6 degrees C (50 to 105 degrees F)
Relative Humidity - 8 to 80 percent
- 4201, 4202 Class B:
Temperature - 15.6 - 32.2 degrees C (60 to 90 degrees F)
Relative Humidity - 20 to 80 percent

Customer Responsibilities:

The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial setup, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3192 Model C.
4. Physical setup, connection of cables in customer access areas, switch settings and checkout.
5. Contacting IBM service for attachment of the 3192 Model C communications cable to an on-site serviced IBM control unit where customer access area is not provided.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR)
8. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the "IBM 3192 Display Station Description Manual", GA18-2544 for site planning and preparation work since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3192 Model C units for such use. The number of spare units is dependent upon the number of the 3192 Model C units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3192 Model C to enhance the availability to the customer. This has been done through routines and procedures in the "IBM 3192 Model C Color Display Station Problem Solving Guide" which is used by the customer.

Keyboards: The emulation mode, which is only available on 122-key and 104-key keyboard is provided via 3174, 3274 and 3276. Native mode is available on all keyboard types. For the modifiable keyboard, native mode is provided via the 3274 Configuration Support D, Release Level 63 or higher and for 102-key IBM Enhanced Keyboard via 3274 Configuration Support D, Release Level 65 or higher with RPQ 7L0825 on the 3274. All keyboard types are supported native mode by 3174. (Japan only> The modifiable Katakana keyboard is not supported by 3274 in emulation mode nor in native mode.<)

- 122-key Typewriter Keyboard - with 2 angles inclination moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys. (Japan only> 124-key Japanese Katakana Typewriter Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys.<)

Note: Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode with modified keytop capability.
- 3276, 43XX, and 937X in Emulation Mode.
- IBM Enhanced Keyboard - Typewriter-like layout, moveable with 2 angles inclination (Canada only> 102-key English<).

(Japan only > 104-Key Japanese Katakana IBM Enhanced Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 24 control keys. <)

Note: Can only be used with:

- 3174.
- 3274 with Configuration Support D (microcode Release 65 or higher) with 3274 RPQ 7L0825, in Native Mode. (Canadian French and Spanish Speaking are not available.)
- 104-Key Typewriter Keyboard - moveable with 3 angles of inclination and 49 alphanumeric keys, 31 control keys and 24 individual Program Function keys. The keyboard layout is identical to the IBM 122-Key Typewriter Keyboard, but is without the 18-key keypad.
- (Japan only > 106-Key Japanese Katakana Typewriter Keyboard - typewriter layout, moveable. Provides 4-level shift with 50 data keys, 32 control keys and 24 individual Program Function keys. <)

Note: Can be used with:

- 3174
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode.

Publications: The following publications are available:

- GA18-2532 IBM 3192-C Display Station User's Guide*
- GA18-2533 IBM 3192-C Display Station Setup Instructions*
- GA18-2534 IBM 3192-C Display Station Problem Solving Guide*
- GA18-2535 IBM 3192 Display Station Description,
- SY18-2174 IBM 3192 Display Station Repair Center Maintenance Information

* A copy will be shipped with each machine.

The countries will print translated ship group documentation. Countries without translation centers (such as Austria and Switzerland) must request translated ship group documentation from the appropriate translation centers. The country Distribution Center will merge the translated documents with the hardware. Manufacturing will print non-translated ship group documentation and include it with the hardware (business as usual).

These publications are available immediately from Mechanicsburg.

Note: Customers should order the "IBM 3192 Display Station Description" for site planning and preparation work since this publication is not shipped with each machine. Customers may order the "IBM 3192 Display Station Repair Center Maintenance Information", SY18-2174, for repair. The other publications are shipped with the machine.

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz. or 200-240V AC, 1-phase, 3-wire, 50-60 Hz.
- Line Cord: A 2.8m (9.0 ft.) line cord with non-locking plug. The country number of the ordering country determines the default line for line cord and shipping group.

ACCESSORIES

Cables: IBM shielded twisted pair cable or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer

is responsible for installation and maintenance of the cable and associated accessories.

Twisted Pair Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies Operation with your country.

D00-D99 64X9944
Printer Cable 6457008

* Duplicate Keys may be made locally from these key blanks. For local charges, consult your Marketing Representative.

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed. Order from Country Telemarketing Representative.

Description	P/N
Field Packaging Material for:	
Video	6317356
Logic	69X8197
Keyboard (122-key)	7343198
Keyboard (102-key)	7342889
Keyboard (104-key)	69X8207

Keys: The 3192 Model C is shipped with two keys. If keys are lost, the logic element should be sent to an IBM repair center or an IBM service/exchange center for replacement of the locks and the keys. This service is available on an hourly service basis. For additional/replacement keys, see Accessories.

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3192 Model C.

Order Entry: For shipment, specify Machine Element (P/N) number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

The video, logic, keyboard, pedestal and line cord of the 3192 Model C Color Display Station can be ordered as follows:

Element	P/N	Country
Video	6405302	Canada, Bahamas, Barbados, Bermuda, Jamaica, Trinidad, Surinam
Video	6405303	Colombia, Costa Rica, Dominican Republic, El Salvador, Guatemala, Guyana, Haiti, Honduras, Japan, Korea, Mexico, Netherlands Antilles, Nicaragua, Panama, Taiwan
Video	6405304	Afghanistan, China,

SUPPLIES (NONE)

3192 DISPLAY STATION MODEL D

PURPOSE

The 3192 Display Station, Model D, is the newest member of the 3270 Information Display System. The 3192 Model D provides high quality, 1920-, 2,560-, 3,440-, or 3,564-character, 15-inch Green monochrome CRT with smudge-resistant screen. The 3192 Model D replaces and provides the functions of the 3180-1 as well as the following standard enhancements:

- Printer Port for local screen copy with screen trim options
- Increased Record/Pause/Play capability
- Rule
- Setup Mode
- Choice of keyboard and lower price.

The 3192 may be attached to the S/360, S/370, 43xx, 303x, 308x, 3090, S/8100, S/36 and S/38.

MODEL D

Model D1X: Displays up to 3,564 characters on a Green monitor and provides 122-Key Typewriter Keyboard (modifiable) (Japan only) > or a 124-Key Japanese Katakana Typewriter Keyboard. <)

Model D2X: Displays up to 3,564 characters on a Green monitor and provides 102-Key IBM Enhanced Typewriter Keyboard (104-key Japanese Katakana).

Model D3X: Displays up to 3,564 characters on a Green monitor and provides 104-Key Typewriter Keyboard (106-key Japanese Katakana).

Language option selected will be designated by the third character of the model number as follows:

- Y US English
- D Canadian Bilingual/French (Not available on Model D2X, D3X)
- K Japanese Katakana
- S Spanish Speaking (Not available on Model D2X, D3X)
- C New Spanish (Not available on Model D2X, D3X)
- O Thailand (Not available on Model D1X, D3X)

Limitations: For model limitations, see Prerequisites.

The following are not available:

- Magnetic reader control and accessories
- Monocase switch
- Selector light-pen
- Video output

The following items should be taken into consideration when selecting the 3192 keyboard:

- 122-Key or 104-Key Typewriter Keyboard
Available for the 3276, 43XX and 3274 with Configuration Support A, B, or C. For the 3274, Configuration Support D Release Level 63 or higher is required.
- 102-Key Enhanced Keyboard
Requires Configuration Support D Release Level 65 on the 3274 with no-charge RPQ 7L0825.

Prerequisites: Attachment required on the 3174 or 3274 Control Unit (available Category A terminal port).

Note: If a 3192 Model Dxx is attached to a 3274:

- The 3192 Models D10 and D30 in Native Mode must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 63 or higher. This level of support is also required for changing the layout of the IBM 122-Key Typewriter Keyboard.

- The 3192 Model D20, operating in Native Mode only, must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 65 or higher and 3274 RPQ 7L0825.
- 3274 Microcode and RPQ must be ordered well in advance in order to assure receipt prior to arrival of the 3192 Model D.

(LAD only) > The RPQ 7L0625/7L0626 is required on 3274 to support the New Spanish (122-Key Typewriter) Keyboard for Latin America. <)

(APG only) > The RPQ 8K1555 is required on 3174 to support the Thai Language (103-Key IBM Enhanced Keyboard). <)

3274 RPQ 7L0825 is required to attach Model D2X and operates in Native Mode only.

3276 Available port or added #3255, #3256, or #3257. Allows attachment of Model D1X, D3X in Emulation Mode only.

4321 Standard Display/Printer Adapter on 4321. Allows attachment of 3192 Model D1X, D3X in Emulation Mode only.

4331 Standard Display/Printer Adapter on the 4331 or Display/Printer Adapter Expansion (#2001) on a 4331 model group 1 or 2. Allows attachment of a 3192 Model D1X or D3X in Emulation Mode only.

937X Workstation Adapter allows attachment of a 3192 Model D1X or D3X in Emulation Mode only.

4361 Standard Display/Printer Adapter or Workstation Adapter allows attachment of 3192 Model D1X or D3X in Emulation Mode only.

Note: Canadian French, Spanish Speaking and New Spanish are not available for D2X nor D3X.

Customer Setup (CSU): The 3192 Model D is a customer setup (CSU) machine. Setup instructions are included with each machine as "IBM 3192 Model D Color Display Station Setup Instructions", GA18-2530.

HIGHLIGHTS

- Improved price/performance
 - Low price with discounts for volume procurement
 - 36-month warranty
 - Alert function for maintenance
- Functions
 - Printer Port for local screen copy
 - ▲ Screen Margin option
 - ▲ Various Print Options selectable at setup time
 - Record/Play/Pause
 - Rule
 - Setup Mode
 - ▲ Cursor Speeds selectable
 - ▲ Volume Control for Keyboard Click
 - Vertical Scroll
- Compatibility
 - 3270 compatible
- Screen Characteristics (Model D)
 - Screen size selectable at setup time
 - ▲ 1,920 Characters (80 x 24) plus Operator Information Area
 - ▲ 2,560 Characters (80 x 32) plus Operator Information Area
 - ▲ 3,440 Characters (80 x 43) plus Operator Information Area
 - ▲ 3,564 Characters (132 x 27) plus Operator Information Area
 - Larger character size than 3180 Model 1
 - Non-glare, 15-inch, Green monochrome CRT with Steady Image
 - Auto-Dim feature with Time-Out option
 - Row-Column Indicator

MACHINES

- Keyboards
 - 122-Key Typewriter Keyboard (Modifiable)
 - (Except LAD > 102-Key IBM Enhanced Keyboard
 - 104-Key Typewriter Keyboard (Modifiable) <)
 - Coiled keyboard cable
 - Home row indicator keys
- Ergonomics
 - Smaller, lighter weight video unit
 - Tilt/Swivel pedestal
 - Small footprint
 - Low-profile keyboards

The 3192 Model D supports the following national languages:

DESCRIPTION

The 3192 Model D is a high quality, 1,920-, 2,560-, 3,440-, or 3,564-character, 15-inch, Green monochrome CRT display station used for displaying alphanumeric data, and for entering data into, and receiving data from, the following systems:

System via Attachment

S/360	3274, 3276	Type A Adapter
S/370	3274, 3276	Type A Adapter
43xx	3174, 3274, 3276	Type A Adapter
937x	3174, 3274	Type A Adapter or Workstation Adapter
308x	3174, 3274, 3276	Type A Adapter
3090	3174, 3274, 3276	Type A Adapter
S/8100	3174, 3274	Type A Adapter
303x	3274, 3276	Type A Adapter
S/36	3174, 3274	Type A Adapter or 5209 3270-5250 Link Protocol Converter
S/38	3174, 3274	Type A Adapter or 5209 3270-5250 Link Protocol Converter
4321	Display/Printer	Adapter
4331	Display/Printer	Adapter
4361	Display/Printer	or Workstation Adapter

The 3192 consists of the following workstation elements:

	Models		
	D1x	D2x*	D3x*
Video 15-inch Green	X	X	X
Logic	X	X	X
IBM 122-Key Typewriter Keyboard	X		
IBM Enhanced Keyboard		X	
IBM 104-Key Typewriter Keyboard			X
Pedestal	X	X	X
Power Cord	X	X	X
Video Cable	X	X	X
Shipping Group	X	X	X

* Not available in Canadian French, Spanish Speaking nor New Spanish.

- A typewriter style keyboard with either (Except LAD > 102/104 modifiable keys on the IBM Enhanced Keyboard <) or 122(APG only > /124 <) (modifiable) keys on the Typewriter Keyboard, provides 24 program functions, a numeric pad, and cursor-move keys. (Except LAD > Also available is the 104/106-Key Modifiable Typewriter Keyboard (no numeric pad). <)

A keyboard definition utility is supported in the 3192 to allow definition of customer specific (Except LAD > 104/106 <) or 122(APG only > /124 <) key data keyboard layouts. A keycap removal tool is standard so that keycaps can be changed conveniently.

Printer Port

- The 4201/4202 (Proprinter) may be attached to the printer port to provide local screen copy. The 3192 provides, via set up mode, the ability to select the area of the screen to be printed, as well as the print quality, line density and pitch.

- Rule provides the ability to display the cursor by extending a line both vertically and horizontally. This facilitates finding the cursor on a busy screen as well as horizontal and/or vertical guide for rows and columns.
- Record/Pause/Play provides a method reducing keystrokes by recording and playing back often-used data.
- The Response Time Monitor, Alert, and Entry Assist capabilities are supported on the 3274 with Configuration Support D and the 3174.
- Adjustable Audible Alarm, Variable Auto-dim, and Security Keylock are standard. Security key is removable in both LOCK and UNLOCK position.
- Low-profile keyboards with coiled cable.
- Screen Characteristics
 - (Model D) 15-inch Green monochrome CRT provides a bright, steady presentation of either 80 x 24 or 80 x 32, 80 x 43 or 132 x 27 characters.
 - Etched, enhanced contrast CRT screen designed to reduce light reflections and fingerprint smudges to produce high-quality, high-resolution output.
- Video pedestal, provided as standard, provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be individually positioned.
- Through the use of error indicators, off-line tests and the Customer Problem Solving guide, the customer may isolate a failing element for repair or replacement.
- Operator Factors: The 3192 Model D has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard slope can be adjusted by the user.
- Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typematic capability. Double speed cursor and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 PF keys are available. When attached to a 3274 with Configuration Support D, or to a 3174, it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3174 or 3274 pages for languages supported.
- Cabling: IBM shielded twisted pair cable or coaxial cable is required for product attachment. The customer is responsible

for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Coaxial Cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM 3270 Installation Manual - Physical Planning", GA27-2787 and Coaxial Cable and Associated Manual", GA27-2805.

- Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position. These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions. User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Physical Specifications:

Video Element

Width - 361mm (14.2 inches)
Depth - 337mm (13.3 inches)
Height - 316mm (12.4 inches)
Weight - 8.0kg (17.6 pounds)

Logic Element

Width - 300mm (11.8 inches)
Depth - 290mm (11.4 inches)
Height - 47mm (1.9 inches)
Weight - 1.2kg (2.6 pounds)

Keyboard Element - 122-Key

Width - 561mm (22.1 inches)
Depth - 230mm (9.1 inches)
Height - 30mm (1.2 inches)*
Weight - 3.0kg (6.6 pounds)

(Except LAD>

Keyboard Element - 102-Key

Height - 30mm (1.2 inches)*
Weight - 2.5kg (5.5 pounds)

Keyboard Element - 104-Key

Width - 419mm (16.5 inches)
Depth - 204mm (8.0 inches)
Height - 30mm (1.2 inches)*
Weight - 1.8kg (4.0 pounds)<)

* At Home Row.

Operating Environment:

Operating environment of configurable I/O units are different.

- 3192 Model D Class C:
Temperature - 10 - 40.6 degrees C (50 to 105 degrees F)
Relative Humidity - 8 to 80 percent
- 4201, 4202 Class B:
Temperature - 15.6 - 32.2 degrees C (60 to 90 degrees F)
Relative Humidity - 20 to 80 percent

Customer Responsibilities:

The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial setup, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3192 Model D.
4. Physical setup, connection of cables in customer access areas, switch settings and checkout.
5. Contacting IBM service for attachment of the 3192 Model D communications cable to an on-site serviced IBM control unit where customer access area is not provided.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR)
8. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the "IBM 3192 Display Station Description Manual", GA18-2544 for site planning and preparation works since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3192 Model D units for such use. The number of spare units is dependent upon the number of the 3192 Model D units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3192 Model D to enhance the availability to the customer. This has been done through routines and procedures in the "IBM 3192 Model D Color Display Station Problem Solving Guide" which is used by the customer.

Keyboards: The emulation mode, which is only available on 122-key and 104-key keyboard is provided via 3174, 3274 and 3276. Native mode is available on all keyboard types. For the modifiable keyboard, native mode is provided via the 3274 Configuration Support D, Release Level 63 or higher and for 102-key IBM Enhanced Keyboard via 3274 Configuration Support D, Release Level 65 or higher with RPQ 7L0825 on the 3274. All keyboard types are supported native mode by 3174. (Japan only> The modifiable Katakana keyboard is not supported by 3274 in emulation mode nor in native mode.<)

- 122-key Typewriter Keyboard - with 2 angles inclination moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys. (Japan only> 124-key Japanese Katakana Typewriter Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys.<)

Note: Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode with modified keytop capability.
- 3276, 43XX, and 937X in Emulation Mode.
- IBM Enhanced Keyboard - Typewriter-like layout, moveable with 2 angles inclination (Canada only> 102-key English<).

(Japan only > 104-Key Japanese Katakana IBM Enhanced Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 24 control keys. <)

Note: Can only be used with:

- 3174.
- 3274 with Configuration Support D (microcode Release 65 or higher) with 3274 RPQ 7L0825, in Native Mode. (Canadian French and Spanish Speaking are not available.)
- 104-Key Typewriter Keyboard - moveable with 3 angles of inclination and 49 alphanumeric keys, 31 control keys and 24 individual Program Function keys. The keyboard layout is identical to the IBM 122-Key Typewriter Keyboard, but is without the 18-key keypad.
- (Japan only > 106-Key Japanese Katakana Typewriter Keyboard - typewriter layout, moveable. Provides 4-level shift with 50 data keys, 32 control keys and 24 individual Program Function keys. <)

Note: Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode.

Publications: The following publications are available:

- GA18-2535 IBM 3192 Display Station Description.
- GA18-2529 IBM 3192-D Display Station User's Guide*
- GA18-2530 IBM 3192-D Display Station Setup Instructions*
- GA18-2531 IBM 3192-D Display Station Problem Solving Guide*
- SY18-2174 IBM 3192 Display Station Repair Center Maintenance Information

* A copy will be shipped with each machine.

The countries will print translated ship group documentation. Countries without translation centers (such as Austria and Switzerland) must request translated ship group documentation from the appropriate translation centers. The country Distribution Center will merge the translated documents with the hardware. Manufacturing will print non-translated ship group documentation and include it with the hardware (business as usual).

These publications are available immediately from Mechanicsburg.

Note: Customers should order the "IBM 3192 Display Station Description" for site planning and preparation work since this publication is not shipped with each machine. Customers may order the "IBM 3192 Display Station Repair Center Maintenance Information", SY18-2174, for repair. The other publications are shipped with the machine.

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz. or 200-240V AC, 1-phase, 3-wire, 50-60 Hz.
- Line Cord: A 2.8m (9.0 ft.) line cord with non-locking plug. The country number of the ordering country determines the default line for line cord and shipping group.

SPECIAL FEATURES (NONE)

ACCESSORIES

Cables: IBM shielded twisted pair cable or coaxial cable is required for product attachment. Cable and associated accessories can be

purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted Pair Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies Operation with your country.

Coaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "3270 Installation Manual - Physical Planning", GA27-2787 and "Coaxial Cable and Associated Manual", GA27-2805. Also the System Supplies Operation with your country. For pricing and ordering information, refer to the System Supplies Operation with your country.

Keys: The 3192 Model D is shipped with two keys. If keys are lost, the logic element should be sent to an IBM repair center or an IBM service/exchange center for replacement of the locks and the keys. This service is available on an hourly service basis. For additional/replacement keys, see Accessories.

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3192 Model D.

Order Entry: For shipment, specify Machine Element (P/N) number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

The video, logic, keyboard, pedestal and line cord of the 3192 Model D Display Station can be ordered as follows:

Element	P/N	Country
Video	6457150	Canada, Bahamas, Barbados, Bermuda, Jamaica, Trinidad, Surinam
Video	6459151	Bolivia, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Japan, Korea, Mexico,

Netherlands Antilles, Nicaragua, Panama, Taiwan	
Argentina, Australia	6457152
Chile, Indonesia, New Zealand, Paraguay, Peru, Singapore, Uruguay	
Afghanistan, Bangladesh, Brunei, Burma, China, Hong Kong, Malaysia, Sri Lanka, Thailand, Venezuela	6457160
All countries except Thailand	6457001

SUPPLIES (NONE)

3192 DISPLAY STATION MODEL F

PURPOSE

The 3192 Display Station Model F, a member of the 3270 Information Display System, provides high function, 1920-, 2,560-, 3440-, or 3564-character, 14-inch 7-color CRT with smudge-resistant screen. The 3192 Model F compliments the 3192 Models C and D and provides the following standard enhancements:

- Record/Pause/Play capability
- Rule
- Setup Mode
- Choice of keyboard
- One or three year warranty

The 3192 may be attached to the S/360, S/370, 43xx, 303x, 308x, 937x, 3090, S/8100, S/36 and S/38.

MODEL F

Model F1X: Displays up to 3,564 characters on a 7-color monitor and provides a 122-Key (APG only) or a 124-Key (<) Typewriter Keyboard.

(Except LAD) **Model F2X:** Displays up to 3,564 characters on a 7-color monitor and provides 102/103/104-Key IBM Enhanced Typewriter Keyboard (103-Key Thai, 104-Key Japanese Katakana).

Model F3X: Displays up to 3,564 characters on a 7-color monitor and provides 104/106-Key Typewriter Keyboard (106-Key Japanese Katakana). (<)

These models support 16 major languages as well as eight languages from Code Page 6. Refer to "Product Structure Section" for details.

Note: Language option selected will be designated by the third character of the model number as follows:

- Y US English
- D Canadian French (Not available on Model F2X) (Available on Model F3X 10/87)
- K Japanese Katakana
- S Spanish Speaking (Not available on Model F2X, F3X)
- C New Spanish (Not available on Model F2X, F3X)
- O Thailand (Not available on Model F1X, F3X)

Limitations: For model limitations, see "Prerequisites".

The following are not available:

- Magnetic reader control and accessories
- Monocase switch
- Selector light pen
- Video output

The following items should be taken into consideration when selecting the 3192 keyboard:

- 122-Key or 104-Key Typewriter Keyboard: Available in Native or Emulation Mode. If keyboard is to be modified, the 3174 (any level) or 3274, Configuration Support D Release Level 63 or higher is required.
- 102-Key Enhanced Keyboard: Requires a 3174 or Configuration Support D Release Level 65 on the 3274 with no-charge RPQ 7L0825. If keyboard is to be modified, the 3174 Release Level 2 is required.

Prerequisites: Attachment required on the 3174 or 3274 Control Unit (available Category A terminal port).

Note: If a 3192 Model F is attached to a 3274:

- The 3192 Models F1X and F3X in Native Mode must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 63 or higher. This level of support is also re-

quired for changing the layout of the IBM 122/124-Key Typewriter Keyboard.

- The 3192 Model F20 operating in Native Mode only, must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 65 or higher and 3274 RPQ 7L0825.
- 3274 Microcode and RPQ must be ordered well in advance in order to assure receipt prior to arrival of the 3192 Model F.

(LAD only) The RPQ 7L0625/7L0626 is required on the 3274 to support the New Spanish (122/124-Key Typewriter) Keyboard. (<)

(APG only) The RPQ 8K1555 is required on the 3174 to support the Thai Language (103-Key IBM Enhanced Keyboard). (<)

3274 RPQ 7L0825 is required to attach Model F2X and operates in Native Mode only.

3276 Available port or added #3255, #3256, or #3257. Allows attachment of Model F1X, F3X in Emulation Mode only. 937x Workstation Subsystem Controller allows attachment of 3192 F1X, F3X in Emulation Mode only.

4321 Standard Display/Printer Adapter on 4321. Allows attachment of 3192 Model F1X, F3X in Emulation Mode only.

4331 Standard Display/Printer Adapter on the 4331 or Display/Printer Adapter Expansion (#2001) on a 4331 model group 1 or 2. Allows attachment of a 3192 Model F1X, F3X in Emulation Mode only.

937X Workstation Adapter allows attachment of a 3192 Model F1X, F3X in Emulation Mode only.

4361 Standard Display/Printer Adapter or Workstation Adapter allows attachment of 3192 Model F1X, F3X in Emulation Mode only.

Customer Setup (CSU): The 3192 Model F is a customer setup (CSU) machine. Setup instructions are included with each machine as "IBM 3192 Model F Color Display Station Setup Instructions", GA18-2648.

HIGHLIGHTS

- Price/performance
 - Low price with discounts for volume procurement
 - 1- or 3-year warranty
 - Alert function for maintenance
- Functions
 - Printer Port for local screen copy -- Screen Margin option
 - Record/Play/Pause
 - Rule
 - Setup Mode
 - ▲ Cursor Speeds selectable
 - ▲ Volume Control for Keyboard Click
 - Vertical Scroll
- Compatibility (See "Compatibility" for details.)
 - 3270 compatible
- Screen Characteristics (Model F)
 - Screen size selectable at setup time
 - ▲ 1,920 Characters (80 x 24) plus Operator Information Area
 - ▲ 2,560 Characters (80 x 32) plus Operator Information Area
 - ▲ 3,440 Characters (80 x 43) plus Operator Information Area
 - ▲ 3,564 Characters (132 x 27) plus Operator Information Area
 - Non-glare, 14-inch, 7-color CRT with Steady Image
 - Extended Highlighting
 - Auto-Dim feature with Time-Out option
 - Row-Column Indicator
- Modifiable Keyboards

- 122/124-Key Typewriter Keyboard
- (Except LAD > 102/103/104-Key IBM Enhanced Keyboard
- 104/106-Key Typewriter Keyboard <)
- Coiled keyboard cable
- Home row indicator keys
- Ergonomics
 - Smaller, lighter weight video unit
 - Tilt/Swivel pedestal
 - Small footprint
 - Low-profile keyboards

The 3192 Model F supports the following national languages:

	3192-F1X	3192-F2X	3192-F3X
Canadian French	X	-	X
Spanish speaking	X	-	-
Japanese Katakana	X	X	X
Thai	-	X	-
US English	X	X	X

DESCRIPTION

The 3192 Model F is a high function 1,920-, 2,560-, 3,440-, or 3,564-character, 14-inch, 7-color CRT display station used for displaying alphanumeric data, and for entering data into, and receiving data from, the following systems:

System	via Attachment
S/360	3274, 3276 Type A Adapter
S/370	3274, 3276 Type A Adapter
43xx	3174, 3274, 3276 Type A Adapter
937x	3174, 3274 Type A Adapter or Workstation Adapter
308x	3174, 3274, 3276 Type A Adapter
3090	3174, 3274, 3276 Type A Adapter
S/8100	3174, 3274 Type A Adapter
303x	3274, 3276 Type A Adapter
S/36	3174, 3274 Type A Adapter
S/38	3174, 3274 Type A Adapter
4321	Display/Printer Adapter
4331	Display/Printer Adapter
4361	Display/Printer or Workstation Adapter

The 3192 consists of the following workstation elements:

	Models		
	Flx	F2x*	F3x**
	FDO	FE0*	FF0**
Video 14-inch	X	X	X
Logic	X	X	X
IBM 122/124-Key Typewriter Keyboard	X		
IBM Enhanced Keyboard		X	
IBM 104/106-Key Typewriter Keyboard			X
Pedestal	X	X	X
Power Cord	X	X	X
Shipping Group	X	X	X

* Not available in Spanish Speaking.

** Not available in Spanish Speaking. Canadian French available 10/87.

- A typewriter style keyboard with (Except LAD > either 102/103/104 keys on the IBM Enhanced Keyboard or <) 122(APG only > /124 <) keys on the Typewriter Keyboard, pro-

vides 24 program functions, a numeric pad, and cursor-move keys. (Except LAD > Also available is the 104/106-Key Modifiable Typewriter Keyboard (no numeric pad). <)

A keyboard definition utility is supported in the 3192 Model F to allow definition of customer specific data keyboard layouts. A keycap removal tool is standard so that keycaps can be changed conveniently.

- PA3 key function is supported. To add PA3 nomenclature to the keyboard, use the appropriate Clear Lens Keycaps/Paper Insert accessory kit as listed in the "Accessories" section of this document.

Printer Port

- The 4201/4202 (Proprinter) may be attached to the printer port to provide local screen copy. The 3192 provides, via set up mode, the ability to select the area of the screen to be printed, as well as the print quality, line density and pitch.

- Rule provides the ability to display the cursor by extending a line both vertically and horizontally. This facilitates finding the cursor on a busy screen as well as horizontal and/or vertical guide for rows and columns.

- Record/Pause/Play provides a method reducing keystrokes by recording and playing back often-used data.

- The Response Time Monitor, Alert, and Entry Assist capabilities are supported on the 3274 with Configuration Support D and the 3174.

- Adjustable Audible Alarm, Variable Auto-dim, and Security Keylock are standard. Security key is removable in both LOCK and UNLOCK position.

- Low-profile keyboards with coiled cable.

Screen Characteristics

- (Model F) 14-inch 7-color CRT provides a bright, steady presentation of either 80 x 24 or 80 x 32, 80 x 43 or 132 x 27 characters.
- Etched, enhanced contrast CRT screen designed to reduce light reflections and fingerprint smudges to produce high-quality, high-resolution output.

- Video pedestal, provided as standard, provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be individually positioned.

- Through the use of error indicators, off-line tests and the Customer Problem Solving guide, the customer may isolate a failing element for repair or replacement.

Operator Factors: The 3192 Model F has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard slope can be adjusted by the user.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typamatic capability. Double speed cursor and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 PF keys are available.

When attached to a 3274 with Configuration Support D, or to a 3174, it provides capabilities which facilitate operator entry and editing

of text material. The capabilities include margins, tabbing, wordwrap, cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See 3174 or 3274 product descriptions for languages supported.

Cabling: IBM shielded twisted pair cable or coaxial cable is required for product attachment. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Coaxial Cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM 3270 Installation Manual - Physical Planning", GA27-2787 and Coaxial Cable and Associated Manual", GA27-2805.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position. These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions. User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Physical Specifications:

Video Element

Width - 347mm (13.7 inches)
Depth - 386mm (15.2 inches)
Height - 301mm (11.9 inches)
Weight - 12.5kg (27.5 pounds)

Logic Element

Width - 300mm (11.8 inches)
Depth - 290mm (11.4 inches)
Height - 47mm (1.9 inches)
Weight - 1.2kg (2.6 pounds)

Keyboard Element - 122/124-Key

Width - 561mm (22.1 inches)
Depth - 230mm (9.1 inches)
Height - 30mm (1.2 inches)*
Weight - 3.0kg (6.6 pounds)

Depth - 204mm (8.0 inches)
Height - 30mm (1.2 inches)*
Weight - 1.8kg (4.0 pounds)<)

* At Home Row.

Operating Environment:

Operating environment of configurable I/O units are different.

- 3192 Model F Class C:
Temperature - 10 - 40.6 degrees C (50 to 105 degrees F)
Relative Humidity - 8 to 80 percent
- 4201, 4202 Class B:
Temperature - 15.6 - 32.2 degrees C (60 to 90 degrees F)
Relative Humidity - 20 to 80 percent

Customer Responsibilities:

The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial setup, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3192 Model F.
4. Physical setup, connection of cables in customer access areas, switch settings and checkout.
5. Contacting IBM service for attachment of the 3192 Model F communications cable to an on-site serviced IBM control unit where customer access area is not provided. This service is provided at the current hourly rates.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR)
8. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the "IBM 3192 Display Station Description Manual", GA18-2535 for site planning and preparation works since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3192 Model F units for such use. The number of spare units is dependent upon the number of the 3192 Model F units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3192 Model F to enhance the availability to the customer. This has been done through routines and procedures in the "IBM 3192 Model F Color Display Station Problem Solving Guide" which is used by the customer.

Keyboards

- 122/124-key Typewriter Keyboard (modifiable) - Moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys.
- (Japan only) > 124-key Japanese Katakana Typewriter Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys.<)

Note: Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode with modified keytop capability.

- 3276, 43XX, and 937X in Emulation Mode.

- IBM Enhanced Keyboard (modifiable) - Typewriter-like layout, moveable (Canada only > 102-key English <)(Thailand only > 103-Key Thai <)
- (Japan only > 104-Key Japanese Katakana IBM Enhanced Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 24 control keys. <)

Note: Can only be used with:

- 3174.
- 3174 with Configuration Support A, Release 2 in Native Mode for modifiable keytop capability.
- 3274 with Configuration Support D (microcode Release 65 or higher) with 3274 RPQ 7L0825, in Native Mode. (Canadian French and Spanish Speaking are not available.)
- 104/106-Key Typewriter Keyboard (modifiable)- moveable with 49 alphanumeric keys, 31 control keys and 24 individual Program Function keys. The keyboard layout is identical to the IBM 122-Key Typewriter Keyboard, but is without the 18-key keypad.

- (Japan only > 106-Key Japanese Katakana Typewriter Keyboard - typewriter layout, moveable. Provides 4-level shift with 50 data keys, 32 control keys and 24 individual Program Function keys. <)

Note: Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode.

Publications: The following publications are available:

- GA18-2535 IBM 3192 Display Station Description,
- GA18-2652 IBM 3192-F Display Station User's Guide*
- GA18-2648 IBM 3192-F Display Station Setup Instructions*
- GA18-2650 IBM 3192-F Display Station Problem Solving Guide*
- SY18-2208 IBM 3192 Display Station Repair Center Maintenance Information

* A copy will be shipped with each machine.

These publications are available immediately from Mechanicsburg.

Note: Customers should order the "IBM 3192 Display Station Description" for site planning and preparation work since this publication is not shipped with each machine. Customers may order the "IBM 3192 Display Station Repair Center Maintenance Information", SY18-2208, for repair. The other publications are shipped with the machine.

SPECIFY

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz. or 200-240V AC, 1-phase, 3-wire, 50-60 Hz.
- Line Cord: A 2.8m (9.0 ft.) line cord with non-locking plug. The country number of the ordering country determines the default line for line cord and shipping group.
- The country number of the ordering country determines the default line for line cord and shipping group.

ACCESSORIES

Cables: IBM shielded twisted pair cable or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted Pair Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies Operation with your country.

Coaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "3270 Installation Manual - Physical Planning", GA27-2787 and "Coaxial Cable and Associated Manual", GA27-2805. Also the System Supplies Operation with your country. For pricing and ordering information, refer to the System Supplies Operation with your country.

SUPPLIES (NONE)

3192 COLOR GRAPHICS DISPLAY STATION MODEL G

PURPOSE

The 3192 Color Graphics Display Stations, Model G, are follow-on products to the 3179 Color Graphics Display Stations. These models are 8-color, 1,920- or 2,560-character, 14-inch CRTs for display of alphanumeric and presentation business graphics. The new models provide a print buffer with screen trimming capability for local alphanumeric and graphics screen copy. In addition, host-directed alphanumeric print support as a logical terminal is provided. The 3192 Model Gs support attachment of the IBM 3852 2 Color Printer and the 4201, 4202, and 5201 Model 2 printers. The printers may be attached directly or via the 3979 Expansion Unit. Additional attachments via the 3979 Expansion Unit include the 5277 Mouse and the 6180 Model 2, 6184, 7371 and 7372 Color Plotters. These new Color Graphics Display Stations support 122-key (APG only) or 124-key Katakana or 106-key Katakana < (Except LAD) and the 104-key < Typewriter and Typewriter/APL2 keyboards. The 3192 Model Gs attach to the 3174, 3274 Control Units and to the Workstation Subsystem Controller of the 9370 Processors.

MODEL G

Model G1X, GDX: Displays up to 2,560 characters in 32 lines of 80 characters each. Eight colors, APA buffer and external highlighting. Provides:

Print buffer
Host-directed alphanumeric-only print support
Local alphanumeric and graphics screen copy
3852 2 Color Printer, 4201, 4202, and 5201 Model 2 Printer support
6180 Model 2, 6184, 7371 and 7372 Plotter support
122-key Typewriter keyboard (APG only) or 124-key Katakana < Typewriter keyboard.

(Except LAD) Model G3X, GFX: Displays up to 2,560 characters in 32 lines of 80 characters each. Eight colors, APA buffer and external highlighting. Provides:

Print buffer
Host-directed alphanumeric-only print support
Local alphanumeric and graphics screen copy
3852 2 Color Printer, 4201, 4202, and 5201 Model 2 Printer support
6180 Model 2, 6184, 7371 and 7372 Plotter support
104-key Typewriter keyboard < (APG only) or 106-key Katakana < (Except LAD) Typewriter keyboard.

Model G4X, GGX: Displays up to 2,560 characters in 32 lines of 80 characters each. Eight colors, APA buffer and external highlighting. Provides:

Print buffer
Host-directed alphanumeric-only print support
Local alphanumeric and graphics screen copy
3852 2 Color Printer, 4201, 4202, and 5201 Model 2 Printer support
6180 Model 2, 6184, 7371 and 7372 Plotter support
104-key Typewriter keyboard < (APG only) or 106-key Katakana < (Except LAD) Typewriter/APL2 keyboard. <

Language option selected will be designated by the third character of the model number as follows:

GxY US English
GxD Canadian French
GxK Japanese Katakana
GxS Spanish Speaking
GxC New Spanish

Where 'x' denotes keyboard model specification.

Limitations

- A 3178, 3179-100, 3180-1, 3191, 3192, 3278, or 3279 Display Station must be attached to Port 0 of the 3174, 3274 Control Unit or to the Workstation Subsystem Controller of the 9370 processor for customization and diagnostic support. (This display may be attached via a 3299.)
- Category B terminals (e.g., 3277 Display Stations) cannot be attached to the 3274 Control Unit when these units are customized to support the 3192 Model G.
- Plotters are only supported via IEEE488 interface.
- Attachment of the IBM 3852 2 Color Printer, 4201, 4202, 5201-2 printers to the logic unit of the 3192 Model G, or to the 3979 Expansion Unit, for local screen copy or host directed print support must specify printer interface cable #2058 (P/N 6342058).

An IBM Quiet Electronic Font Type A multilingual cartridge is required for attachment of the IBM Quietwriter(R) printer 5201 Model 2 to the 3192 Model G models. These fonts are available in a variety of typestyles and pitches. Consult the "Supplies Reference Guide for Information Processing Equipment" (71K6162 or G570-2098).

- (Japan only) The printer buffer (8K optional RAM) is required for attachment of the 4201 printer to support Japanese Katakana. <
- For host addressable printing, the 3192 Model G supports the IBM 3852 2 Color Printer, the 4201, 4202, and 5201 Model 2 printers as an SNA Logical Unit type 1 (LU-1) printer, as an SNA Logical Unit type 3 (LU-3) printer, or as a non-SNA printer with the following limitations
 - APL2 is supported on the 4201, 4202 printers only,
 - No Programmed Symbols (PS), and
 - Buffer size is 2K bytes maximum.
- Existing alphanumeric applications will run on the 3192 Model G unless the program is affected by:
 - 3174, 3274 Control Unit or Workstation Subsystem Controller of the 9370 Processor restrictions (e.g., no Category B terminals) or
 - Required display station configuration function restrictions not available with the 3192 Model G (e.g., magnetic readers, light pen, triple-plane programmable symbols, encryption/decryption or unsupported screen sizes).
- The 3192 Model G models may attach to an X.21 leased/switched network via the 3174, 3274 Control Unit. One 3178, 3179-100, 3180-1, 3191, 3192, 3278, or 3279 is required as a network control terminal attached to the 3174, 3274 Control Unit.
- BSC Copy Command is not supported.
- Programmable Symbols (PSA and PSB only) are supported in single color.

Prerequisites

- A 3178, 3179-100, 3180 Model 1, 3191, 3192, 3278, or 3279 Display Station must be attached to Port 0 of the 3174, 3274 Control Unit or to the Workstation Subsystem Controller of the 9370 Processor.
- The 3192 Model G must be attached to the 3174 or 3274 Control Units and Workstation Subsystem Controller of the 9370 Processor with the required Load Diskette feature code. (See Hardware Requirements section.)
- Printer Logical Terminal (LT) address must be assigned in the host software to support host directed printer output at the 3192 Model G workstation.

- GDDM Version 1 Release 4 or GDDM Version 2 must be installed on the host processor for graphic support. (See Software Requirements section.)

Customer Setup (CSU): The 3192 Model G is designated as a Customer Setup machine. A copy of the "IBM 3192 Model G Color Graphics Display Station and IBM 3979 Expansion Unit Setup Instructions", GA18-2590 is included with each machine.

HIGHLIGHTS

- Improved price/performance with discounts for volume procurement
- Enhanced printer support which provides a print buffer for local alphanumeric and graphics screen copy or host directed alphanumeric only print output.
- Provides attachment support for the IBM 3852 2 Color Printer and the 4201, 4202 and 5201-2 printers for local alphanumeric and graphics screen copy and host-directed alphanumeric print output.
- Provides plotter support to attach the 6180 Model 2, 6184, 7371, 7372 plotters via the 3979 Expansion Unit.
- Improved keyboard support to attach the 122-key (APG only) > or 124-key Katakana or 106-key Katakana < (Except LAD > and 104-key <) Typewriter and Typewriter/APL2 keyboards.
- Improved system connectivity by support of attachment to the 3174, 3274 Control Units and Workstation Subsystem Controller of the 9370 Processor via the IBM Cabling System without requirement for Balun.
- The 3192 Model G models support US English and the National Languages for Canadian French, Japanese Katakana, New Spanish, and Spanish Speaking.

Hardware Requirements

- A 3178, 3179-100, 3180 Model 1, 3191, 3192, 3278, or 3279 Display Station must be attached to Port 0 of the 3174, 3274 Control Unit or Workstation Subsystem Controller of the 9370 Processor for customization and diagnostic support.
- 3274 Control Unit attachment: The 3192 Model G models must be attached to the 3274 Control Unit with Configuration Support D at microcode Release Level 65 and Load Diskette #9301 or #9311 (except Katakana), or #9305 or #9315 (Katakana only).

Note: BSC users should contact the 3274 National Service Division representative for support information; refer to IBM 3274 RETAIN TIP #779.

Note: Since a feature code load diskette is used to support the 3193, 3290, 3179 Model G, and the 3192 Model G models, customers should read the diskette label. (Except APG > #9301 supports <) (APG only) > #9301, #9305 support <) the 3179 Model G, 3192 Model G and 3290. (Except APG > #9311 supports <) (APG only) > #9311, #9315 support <) the 3179 Model G, 3192 Model G and 3193. The label will state if the 3192 Model G is supported.

- 3174 Control Unit Attachment: The 3192 Model G models attach to the 3174 Control Unit (except Models 81R and 82R) and require Load Diskette #9016.

Note: BSC users require Microcode Release A1.4 at Maintenance Level 86282 or Microcode Release A1.5.

- Workstation Subsystem Controller of the 9370 Processor Attachment: The 3192 Model G models attach to the Workstation Subsystem Controller, #6020, of the 9370 Processors and require Load Diskette #9016.

Note: Only one feature code load diskette is required to support the 3179 Model G and the 3192 Model G models when at-

tached to the 3174 Control Unit or to the Workstation Subsystem Controller of the 9370 Processor. Refer to the "IBM 3174 Control Unit Customization Guide, GA23-0214.

- Attachment of the IBM 3852 2 Color Printer, 4201, 4202, 5201 Model 2 printers to the logic unit of the 3192 Model G, or to the 3979 Expansion Unit, for local screen copy or host directed Print support must specify printer interface cable #2058 (P/N 6342058).

An IBM Quiet Electronic Font Type A multilingual cartridge is required for attachment of the IBM Quietwriter(R) printer 5201 Model 2 to the 3192 Model G models. These fonts are available in a variety of typesizes and pitches. Consult the "Supplies Reference Guide for Information Processing Equipment" (71K6162 or G570-2098).

- (Japan only) > The printer buffer (8K optional RAM) is required for attachment of the 4201 Printer to support Japanese Katakana. <)

Software Requirements

- GDDM Version 1 Release 4, or GDDM Version 2 for the appropriate operating environment (e.g. MVS, VM, VSE) plus PGF Version 2, must be installed on the host for graphic support. The following PTFs must be installed on GDDM Version 1.4 and PGF Version 1:

	OS	DOS/VSE	VM/370
GDDM	UP90176	UP90177	UP90178
Base	UP59304	UP59305	UP59306
PGF	UP90179	UP90180	UP90181
	UP59307	UP59308	UP59309

- BSC Users:

Customers installing the 3192-G for use over binary synchronous communication lines should customize the IBM Control Unit with BSC Enhanced Communications Option (176).

Customers operating under ACF/VTAM with ACF/NCP over Binary Synchronous (BSC) communication lines must be at an ACF/NCP Version 3 or higher level. Customers should contact their service representative for PTF prerequisites including the following PTFs:

NCP V3 on 3705	PTF UR12445
NCP V3 on 3725	PTF UR12446
NCP V4	PTF UR12444
SSP V1R2.2	PTF UR13293
SSP OS/MVS	PTF UR13294
SSP VM	PTF UR13295

Operator Factors: The 3192 Model G has an etched screen which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underlined-type cursor and a rectangular reverse video cursor, with blinking option, are provided. An enhanced full-screen cross-hair cursor or an alternate cross cursor is featured for graphic operations. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator via switches on the keyboard underside.

The video element may be tilted (4.4 degrees forward and 15 degrees backward), and may be rotated 180 degrees to change the screen angle for individual viewing comfort.

The keyboard has a low profile, is light-weight, has textured keytops to reduce glare, attaches with a flexible coiled cable permitting operator positioning, and may be inclined at any of three angles (122-key: 6, 12 or 18 degrees, 104-key: 4, 12 or 18 degrees) for individual comfort.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all key-

board input data, and erase entire screen) and cursor select keys are all basic. All alphanumeric and special symbol keys have typematic capability. Cursor move keys cause acceleration of the cursor when held down. Simultaneous depression of vertical and horizontal will cause diagonal movement. Fields of data can be selected by positioning the cursor, then using the cursor select key. If data fields are light pen detectable, the Selectable Field Tab function key will provide more rapid location. The 24 Program Function (PF) keys are provided on the keyboard in lower case mode.

Entry assist is supported. The 3192 Model G Entry Assist provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, word-wrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. (See M3274 and M3174 pages for details).

The 3192 Model G provides a screen trimming function which enables the operator to set screen boundaries for both upper and lower screen lines, and left and right columns of the display for local screen print copy. The boundaries are independently set for both the 1920 (24 lines x 80 characters) or the 2560 (32 lines x 80 characters) screen sizes. The boundaries are independently saved until either updated by the operator or power is turned off on the 3192 Model G. At power-on, the boundaries are reset to the top and bottom lines and to the left most (column 0) and right most (column 79) columns of the display area.

DESCRIPTION

The 3192 Model G Color Graphics Display Station models are follow-on products to the 3179-G Color Graphics Display Station. The 3192 Model G models are 8-color (red, green, blue, yellow, turquoise, pink, white and black background), 1,920/2,560-character, 14-inch CRT with bright, clear colors and a smudge-resistant screen surface. An all-points-addressable (APA) display provides a screen presentation of 720 x 384 picture elements in a viewable area of 240mm (9.4 in.) by 172mm (6.8 in.) and requires no color convergence adjustments. The new 3192 Model G models are compatible with the 3179 Model G in both alphanumeric and presentation graphics applications. The 3192 Model G models attach to the 3174 and 3274 Control Units and to the 9370 Processors via the Workstation Subsystem Controller, #6020.

The workstation capabilities are significantly enhanced by the provision of a print buffer with line trimming capability to allow print support for local alphanumeric and graphic screen copy or host addressable alphanumeric-only printer output. Host-directed printer support is addressed as a logical terminal.

The 3192 Model G models support attachment of the IBM 3852 2 Color Printer and the 4201, 4202 and 5201 Model 2 printers for local alphanumeric or graphics screen copy or host-directed alphanumeric-only printer output. Line pitch of either 6 or 8 lpi is selectable by operator setup of bit switches located on the keyboard underside.

Supports the attachment of the 6180 Model 2, 6184, 7371 and 7372 Plotters. All plotters attach to the 3979 Expansion Unit via the IEEE488 interface.

(Except LAD>Keyboard support is enhanced to include the 122-key<) (APG only> or 124-key Katakana<) (Except LAD>Typewriter keyboard, the 122-key<) (APG only> or 124-key Katakana<) (Except LAD>Typewriter/APL2 keyboard, the 104-key<) (APG only> or 106-key Katakana<) (Except LAD>Typewriter keyboard, and the 104-key<) (APG only> or 106-key Katakana<) (Except LAD>Typewriter/APL2 keyboards.<)

The keyboards feature modifiable keycaps, numeric keypad, 24 program function (PF) keys, improved cursor-move function keys, and a Selectable Field Tab function key for light pen detectable fields. (Except LAD>The 104-key<) (APG only> or 106-key<) (Except LAD>keyboard offerings allow the user to select a shorter keyboard if a numeric keypad is not required.<) The modified keyboard layouts are defined by switches located on the underside of

the keyboard (refer to "3192 Model G Color Graphics Display Station Operator Reference and Problem Solving Guide", GA18-2591, for information) and can be set by the operator. The keyboard definition utility allows customer definition of three specific keyboard layouts. The keyboard definition utility also allows customer definition of the 5277 Mouse function keys when attached via the 3979 Expansion Unit. A keycap removal tool is standard so that the keycaps can be interchanged conveniently.

The 3192 Model G models provide enhanced connectivity to the 3174 and 3274 Control Units and to the Workstation Subsystem Controller of the 9370 Processor via the IBM Cabling System without the requirement for Baluns. In addition, the 3192 Model G models may attach to an X.21 leased/switched network via the 3174 and 3274 Control Units. One 3178, 3179-100, 3180 Model 1, 3191, 3192, 3278 or 3279 is required as a network control terminal attached to the 3174 or 3274 Control Unit.

Host interactive graphics support on S/370, 43xx, 303x, 308x, 3090 and 9370 Processors is included in GDDM (Graphical Data Display Manager) Version 1 Release 4 or GDDM Version 2. Screen management functions are extended to interact with graphics information as well as with alphanumeric information.

One 3979 Expansion Unit may be attached to the 3192 Model G to allow attachment of the 5277 Mouse and the 6180 Model 2, 6184, 7371 and 7372 Color Plotters. The 3979 Expansion Unit provides an alternative port for the IBM 3852 2 Color Printer and the 4201, 4202, 5201 Model 2 Printers.

Notes:

- Attachment of the IBM 3852 2 Color Printer, 4201, 4202, 5201 Model 2 Printers to the logic unit of the 3192 Model G, or to the 3979 Expansion Unit, for local screen copy or host directed print support must specify printer interface cable #2058 (P/N 6342058).
- An IBM Quiet Electronic Font Type A multilingual cartridge is required for attachment of the IBM Quietwriter(R) Printer, 5201 Model 2, to the 3192 Model G models. These fonts are available in a variety of typesizes and pitches. Consult the "Supplies Reference Guide for Information Processing Equipment" (71K6162 or G570-2098).

Physical Specifications:

Video Element with Pedestal
Width - 380mm (15.0 inches)
Depth - 405mm (15.9 inches)

with 122/124-key keyboard
Weight - 20.6kg (45 pounds):
with 104/106-key keyboard<

* At Home Row.

Note: The 3979 Expansion Unit is required for attachment of the optional I/O devices such as mouse or plotters.

Operating Environment:

Operating environment of configurable I/O units are different.

- 3192 Model G, 3979, 5277, 6180 Model 2, 6184, 7371 or 7372 Class C:
Temperature - 10 - 40.6 degrees C (50 to 105 degrees F)
Relative Humidity - 8 to 80 percent
- 4201, 4202, 5201 Model 2 and IBM 3852 2 Color Printer Class B:
Temperature - 15.6 - 32.2 degrees C (60 to 90 degrees F)
Relative Humidity - 20 to 80 percent

Publications: The following publications are shipped with the product:

- "IBM 3192-G Color Graphics Display Station and IBM 3979 Expansion Unit Setup Instructions", GA18-2590
- "IBM 3192-C Color Graphics Display Station Operator Reference and Problem Solving Guide", GA18-2591

The following publications are available:

- "IBM 3179-G/3192G Color Graphics Display Station Description", GA18-2589
- "IBM 3179-G/3192G Color Graphics Display Station Repair Center Maintenance Information", GA18-2099

Additional copies are immediately available from Mechanicsburg. To order, contact your IBM representative.

Note: Customers should order the "IBM 3179-G/3192G Color Graphics Display Station Description", GA18-2589 for site planning and preparation work since this publication is not shipped with each machine. Customers may order the "IBM 3179-G/3192G Color Graphics Display Station Repair Center Maintenance Information", GA18-2099 for repair. The other publications are shipped with each machine.

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz. or 200-240V AC, 1-phase, 3-wire, 50-60 Hz.
- Line Cord: A 2.8m (9.0 ft.) line cord with non-locking plug.
- The country number of the ordering country determines the default line for line cord and shipping group.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual- Physical Planning", GA27-2787 and "Coaxial Cable and Associated Manual", GA27-2805.

The following keyboard and switch control unit* accessories can be ordered for 122-key (APG only) or 124-key< keyboards, Models G1x, G2x, GDx, and GEx:

Description	P/N
Clear Lens Keycaps/Paper Inserts/Removal Tool	6341707
Blank Keycaps (Light) and Removal Tool	1351710
Blank Keycaps (Dark) and Removal Tool	1351728
Keycap Removal Tools (6 tools)	1351717
Paper Inserts (150 Light and 150 Gray)	6341704

The following keyboard and switch control unit* accessories can be ordered (Except LAD> for 104-key<)(APG only> or 106-key<) (Except LAD> keyboards, Models G3x, G4x, GFx, and GGx<)

(Except LAD> Description	P/N
Clear Lens Keytops/Paper Inserts/Removal Tool	73X3878
Blank Keytops (Light) and Removal Tool	73X3876
Blank Keytops (Dark) and Removal Tool	73X3877
Keytop Removal Tools (6 tools)	73X3887
Paper Inserts (150 Light and 150 Gray)	73X3886

For all models: <)	
Keyboard overlays (10 overlays)	
English	81X5744
Spanish	81X5745
French	81X5747
(Except LAD> Switch Control Unit *<)

Japanese	6052160
Canadian	6052158
Spanish	6052159

MACHINES

* Permits switching operational control of the 3192 Model G between two different control units. The customer is responsible for procurement and installation of this accessory, and also for the replacement of a defective unit. There is no switch control unit designed specifically for the 3192 Model G, but use can be made of the unit designed for the 3278 or 3279. The 3279 switch is suggested even though it does not fit readily under the foot of the 3192 Model G, since it is better adapted than the 3278 switch to a free-standing position.

For local charges, consult your IBM Marketing representative.

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative.

Description	P/N
Field Packaging Material	
For Video	6317356
For Logic (or Expansion Unit)	6316868
(Canada only>	
For 122-key Keyboard	7342987
For 104-key Keyboard	69X8207<)
(LAD only>	
For 122-key Keyboard	7342987<)
(APG only>	
For 122/124-key Keyboard	7342987
For 104/106-key Keyboard	69X8207<)
Keys (See Note)	6342xxx
xxx = (3 digits of key code numbers)	

Note: The 3192 Model G is shipped with two keys. Additional keys can be purchased from IBM. Key identification number must accompany each order. If the key identification number is unknown, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis.

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3192 Model G.

Order Entry: For shipment, specify Machine Element (P/N) at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

The video, logic, keyboard, pedestal and line cord of the 3192 Model G Color Display Station can be ordered as follows:

Machine Element	P/N	
Video	8233436	Canada, Bahamas, Barbados, Bermuda, Jamaica, Surinam,
Video	8233437	Colombia, Costa Rica, Dominican Republic, El Salvador, Guatemala, Guyana, Haiti, Honduras, Japan, Korea, Nicaragua, Netherlands-Antilles, Mexico,

Video	8233389	Panama, Taiwan
Video	8233440	Bolivia, Ecuador, Philippines
Video	8233391	Afghanistan, Venezuela, China
Video	8233392	Australia, New Zealand
		Argentina, Burma, Brunei, Bangladesh, Chile, Hong Kong, Indonesia, Malaysia, Peru, Paraguay, Singapore, Sri Lanka, Thailand, Uruguay

SUPPLIES (NONE)

3192 DISPLAY STATION MODEL L

PURPOSE

The 3192 Display Station Model L, a member of the 3270 Information Display System, provides high-quality, 1920- and 2,560-character, 14-inch 7-color CRT with smudge-resistant screen. The 3192 Model L provides a Selector Light Pen as well as the following standard functions:

- Printer Port for local screen copy with screen trim options
- Record/Pause/Play capability
- Rule and Setup Mode

The 3192 may be attached to the S/360, S/370, 43xx, 303x, 308x, 937x, 3090, S/8100, S/36 and S/38.

MODEL L

Model L1X: 7-color, 14-inch monitor and provides 122-Key Typewriter Keyboard (124-Key Japanese Katakana).

Model L2X: 7-color, 14-inch monitor and 102-Key IBM Enhanced Typewriter Keyboard (104-Key Japanese Katakana).

Model L3X: 7-color, 14-inch monitor and provides 104-Key Typewriter Keyboard (106-Key Japanese Katakana).

Language option selected will be designated by the third character of the model number as follows:

- Y US English
- D Canadian French (Not available on Model L2X) (Available on Model L3X 10/87)
- K Japanese Katakana
- S Spanish Speaking (Only available on Model L1X)
- C New Spanish (Only available on Model L1X)

Limitations: For model limitations, see Prerequisites.

The following are not available:

- Magnetic reader control and accessories
- Monocase switch

- Video output

The following items should be taken into consideration when selecting the 3192 keyboard:

- 122-Key or 104-Key Typewriter Keyboard
 - Available in Native or Emulation Mode.
 - If keyboard is to be modified, the 3174 (any level) or 3274, Configuration Support D Release Level 63 or higher is required.
- 102-Key Enhanced Keyboard
 - Requires a 3174 or Configuration Support D Release Level 65 on the 3274 with no-charge RPQ 7L0825.
 - If keyboard is to be modified, the 3174 Release Level 2 is required.

Prerequisites: Attachment required on the 3174 or 3274 Control Unit (available Category A terminal port).

Note: If a 3192 Model L is attached to a 3274:

- The 3192 Models L10 and L30 in Native Mode must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 63 or higher. This level of support is also required for changing the layout of the IBM 122-Key Typewriter Keyboard.

- The 3192 Model L20, operating in Native Mode only, must be attached to a 3274 Control Unit with Configuration D - Microcode Release Level 65 or higher and 3274 RPQ 7L0825.
- 3274 Microcode and RPQ must be ordered well in advance in order to assure receipt prior to arrival of the 3192 Model L.

(LAD only) The RPQ 7L0625/7L0626 is required on the 3274 to support the New Spanish (122-Key Typewriter Keyboard) for Latin America. <)

3274 RPQ 7L0825 is required to attach Model L2X

Customer Setup (CSU): The 3192 Model L is a customer setup (CSU) machine. Setup instructions are included with each machine as "IBM 3192 Model L Color Display Station Setup Instructions", GA18-2706.

HIGHLIGHTS

- Selector Light Pen
 - A hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. The Selector Light Pen will detect on any color. A holder is provided for the Selector Light Pen while not in use.
- Improved price/performance
 - Low price with discounts for volume procurement
 - 1- or 3-year warranty
 - Alert function for maintenance
- Functions
 - Printer Port for local screen copy
 - ▲ Screen Margin option
 - ▲ Various Print Options selectable at Setup time
 - Record/Play/Pause
 - Rule
 - Setup Mode
 - ▲ Cursor Speeds selectable
 - ▲ Volume Control for Keyboard Click
 - Vertical Scroll
- Compatibility
 - 3270 compatible
- Screen Characteristics (Model L)
 - Screen size selectable at setup time
 - ▲ 1,920 Characters (80 x 24) plus Operator Information Area
 - ▲ 2,560 Characters (80 x 32) plus Operator Information Area
 - Non-glare, 14-inch, 7-color CRT
 - Extended Highlighting
 - Auto-Dim feature with Time-Out option
 - Row-Column Indicator
- Modifiable Keyboards
 - 122-Key Typewriter Keyboard
 - (Except LAD > 102-Key IBM Enhanced Keyboard
 - 104-Key Typewriter Keyboard <)
 - Coiled keyboard cable
 - Home row indicator keys
- Ergonomics
 - Smaller, lighter weight video unit
 - Tilt/Swivel pedestal
 - Small footprint
 - Low-profile keyboards

The 3192 Model L supports the following national languages:

	3192-L1X	3192-L2X	3192-L3X
Canadian French	X	-	X
Spanish	-	-	-
Speaking	X	-	-
New Spanish	X	-	-
Japanese	-	-	-

MACHINES

US English	X	X	X

DESCRIPTION

The 3192 Model L is a high quality 1,920- or 2,560-character, 14-inch, 7-color CRT display station that provides a Selector Light Pen used for displaying alphanumeric data, and for entering data into, and receiving data from, the following systems:

System via Attachment

S/360	3274, 3276	Type A Adapter
S/370	3274, 3276	Type A Adapter
43xx	3174, 3274, 3276	Type A Adapter*
937x	3174, 3274	Type A Adapter or Workstation Adapter
308x	3174, 3274, 3276	Type A Adapter
3090	3174, 3274, 3276	Type A Adapter
S/8100	3174, 3274	Type A Adapter
303x	3274, 3276	Type A Adapter
S/36	3174, 3274	Type A Adapter
S/38	3174, 3274	Type A Adapter

* 3192 Model L does not attach to 43x1 WSA or DPA.

The 3192 consists of the following workstation elements:

	Models		
	L1x	L2x*	L3x**
Video 14-inch 7-Color	X	X	X
Logic	X	X	X
Selector Light Pen	X	X	X

* Not available in Canadian French, Spanish Speaking, or New Spanish.

** Not available in Spanish Speaking or New Spanish. Canadian French available 10/87.

- A typewriter style keyboard with (Except LAD > either 102/104 keys on the IBM Enhanced Keyboard or <) 122(APG only > /124 <) keys on the Typewriter Keyboard, provides 24 program functions, a numeric pad, and cursor-move keys. (Except LAD > Also available is the 104/106-Key Modifiable Typewriter Keyboard (no numeric pad). <)

A keyboard definition utility is supported in the 3192 Model L to allow definition of customer specific data keyboard layouts. A keycap removal tool is standard so that keycaps can be changed conveniently.

- PA3 key function is supported. To add PA3 nomenclature to the keyboard, use the appropriate Clear Lens Keycaps/Paper Insert accessory kit as listed in the "Accessories" section of this document.
- Printer Port
 - The 4201/4202 (Proprinter) may be attached to the printer port to provide local screen copy. The 3192 provides, via setup mode, the ability to select the area of the screen to be printed, as well as the print quality, line density and pitch.

- Rule provides the ability to display the cursor by extending a line both vertically and horizontally. This facilitates finding the cursor on a busy screen as well as horizontal and/or vertical guide for rows and columns.
- Record/Pause/Play provides a method reducing keystrokes by recording and playing back often-used data.
- The Response Time Monitor, Alert, and Entry Assist capabilities are supported on the 3274 with Configuration Support D and the 3174.
- Adjustable Audible Alarm, Variable Auto-dim, and Security Keylock are standard. Security key is removable in both LOCK and UNLOCK position.
- Low-profile keyboards with coiled cable.
- Screen Characteristics
 - (Model L) 14-inch 7-color CRT provides a bright, steady presentation of either 80 x 24 or 80 x 32 characters.
 - Etched, enhanced contrast CRT screen designed to reduce light reflections and fingerprint smudges to produce high-quality, high-resolution output.
- Video pedestal, provided as standard, provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be individually positioned.
- Through the use of error indicators, off-line tests and the Customer Problem Solving guide, the customer may isolate a failing element for repair or replacement.

Operator Factors: The 3192 Model L has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard slope can be adjusted by the user.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typematic capability. Double speed cursor and a horizontal cursor positioning key. Fields of data may be selected by positioning the cursor, then using the cursor select key. 24 PF keys are available.

When attached to a 3274 with Configuration Support D, or to a 3174, it provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3174 or 3274 pages for languages supported.

Cabling: IBM shielded twisted pair cable or coaxial cable is required for product attachment. The customer is responsible for installation and maintenance of the cable and associated accessories.

IBM Shielded Twisted Pair Cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Coaxial Cable - For proper identification, installation and application of cable and associated accessories, refer to the "IBM 3270 Installation Manual - Physical Planning", GA27-2787 and Coaxial Cable and Associated Manual", GA27-2805.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position. These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions. User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Physical Specifications:

Video Element

Width - 383mm (15.1 inches)
Depth - 405mm (15.2 inches)
Height - 345mm (13.6 inches)
Weight - 12.7kg (28.0 pounds)

Logic Element

Width - 300mm (11.8 inches)
Depth - 290mm (11.4 inches)
Height - 47mm (1.9 inches)
Weight - 1.2kg (2.6 pounds)

Keyboard Element - 122-Key

Width - 561mm (22.1 inches)
Depth - 230mm (9.1 inches)
Height - 30mm (1.2 inches)*
Weight - 3.0kg (6.6 pounds)

Keyboard Element - 102-Key

Width - 492mm (19.4 inches)
Depth - 210mm (8.3 inches)
Height - 30mm (1.2 inches)*
Weight - 2.5kg (5.5 pounds)

Keyboard Element - 104-Key

Width - 419mm (16.5 inches)
Depth - 204mm (8.0 inches)
Height - 30mm (1.2 inches)*
Weight - 1.8kg (4.0 pounds)

* At Home Row.

Operating Environment:

Operating environments of configurable I/O units are different.

- 3192 Model L Class C:
Temperature - 10 - 40.6 degrees C (50 to 105 degrees F)
Relative Humidity - 8 to 80 percent
- 4201, 4202 Class B:
Temperature - 15.6 - 32.2 degrees C (60 to 90 degrees F)
Relative Humidity - 20 to 80 percent

Customer Responsibilities:

The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial setup, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3192 Model L.
4. Physical setup, connection of cables in customer access areas, switch settings and checkout.
5. Contacting IBM service for attachment of the 3192 Model L communications cable to an on-site serviced IBM control unit where customer access area is not provided. This service is provided at the current hourly rates.

6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR).
8. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the "IBM 3192 Display Station Description Manual", GA18-2700 for site planning and preparation works since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3192 Model L units for such use. The number of spare units is dependent upon the number of the 3192 Model L units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3192 Model L to enhance the availability to the customer. This has been done through routines and procedures in the "IBM 3192 Model L Display Station Problem Solving Guide" which is used by the customer.

Keyboards: The emulation mode, which is only available on 122-Key and 104-Key keyboard, is provided via 3276, 3274 and 3174. Native mode is available on all keyboards types. For the modifiable keyboard, native mode is provided via the 3274 Configuration Support D, Release Level 63 or higher. Also, for the 102-Key IBM Enhanced Keyboard via 3274 Configuration Support D, Release Level 65 or higher with RPQ 7L0825 on the 3274. All keyboard types are supported native mode by 3174. (Japan only> The modifiable Katakana keyboard is not supported by 3274 in emulation mode or in native mode.<)

- 122-Key Typewriter Keyboard (modifiable) - with 2 angles inclination, moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys.
- (Japan only> 124-key Japanese Katakana Typewriter Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys.<)

Note: Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode.
- 3274 with Configuration Support D (microcode Release 63 or higher) in Native Mode with modified keytop capability.
- 3276 and 937X in Emulation Mode.

- IBM Enhanced Keyboard - Typewriter-like layout, moveable with 2 angles inclination(Canada only> (102-key English).<)
- (Japan only> 104-Key Japanese Katakana IBM Enhanced Keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 24 control keys.<)

Note: Can only be used with:

- 3174.
- 3274 with Configuration Support D (microcode Release 65 or higher) with 3274 RPQ 7L0825, in Native Mode. (Canadian French and Spanish Speaking are not available.)

- 104-Key Typewriter Keyboard (modifiable)- moveable with 3 angles of inclination and 49 alphanumeric keys, 31 control keys and 24 individual Program Function keys. The keyboard layout is identical to the IBM 122-Key Typewriter Keyboard, but is without the 18-key keypad.
- (Japan only) 106-Key Japanese Katakana Typewriter Keyboard - typewriter layout, moveable. Provides 4-level shift with 50 data keys, 32 control keys and 24 individual Program Function keys. <)

Note: Can be used with:

- 3174.
- 3274 with Configuration Support A, B, C, or D in Emulation Mode.
- 3274 with Configuration Support D (microcode release 63 or higher) in Native Mode.

Publications: The following publications are available:

- GA18-2700 IBM 3192 Display Station Description.
- GA18-2712 IBM 3192-L Display Station User's Guide*
- GA18-2706 IBM 3192-L Display Station Setup Instructions*
- GA18-2710 IBM 3192-L Display Station Problem Solving Guide*
- SY18-2223 IBM 3192 Display Station Repair Center Maintenance Information

* A copy will be shipped with each machine.

These publications are available from Mechanicsburg.

Note: Customers should order the "IBM 3192 Display Station Description" for site planning and preparation work since this publication is not shipped with each machine. Customers may order the "IBM 3192 Display Station Repair Center Maintenance Information", SY18-2223, for repair. The other publications are shipped with the machine.

SPECIFY

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz. or 200-240V AC, 1-phase, 3-wire, 50-60 Hz.
- Line Cord: A 2.8m (9.0 ft.) line cord with non-locking plug. The country number of the ordering country determines the default line for line cord and shipping group.
- The country number of the ordering country determines the default line for line cord and shipping group.

SUPPLIES (NONE)

3193 DISPLAY STATION

PURPOSE

The 3193 Display Station is a member of the 3270 display family which provides the capability to display alphanumeric and image information. The 3193 provides multiple logical terminals, multiple partitioning, and up to 48 lines of alphanumeric display capability. Image documents of up to letter or A4 size may be displayed. Image handling capability is provided in conjunction with existing alphanumeric functions.

The 3193 Display Station is a high resolution, monochrome, portrait type, 15-inch CRT display terminal. Two logical terminals may be functional on the screen. The 3193 Display Station attaches to System/370, 43XX, 303X, 308X, 3090, and 9370 Processors via the 3174 and 3274 Control Units. The 3117 Scanner with 3117 Extension Unit feature and the 3118 Scanner can be attached to the 3193 Display Station. Image data compression is a technique to save transmission time and reduce storage requirements. Compressed images can be sent to the 3193 Display Station. Decompression of the image is performed in the 3193.

MODELS

Model 01X: Displays up to 880 (horizontal) X 1200 (vertical) dots of image or up to 3840 alphanumeric characters in 48 lines of 80 characters, or mixture of image and alphanumeric characters. Provides 122-key or 124-key Katakana Typewriter keyboard.

Model 02X: Displays up to 880 (horizontal) X 1200 (vertical) dots of image or up to 3840 alphanumeric characters in 48 lines of 80 characters, or mixture of image and alphanumeric characters. Provides 103-key or 104-key Katakana Typewriter keyboard.

Language option selected will be designated by the third character of the model number. Specify the model number shown as follows:

OXY US English
 OXD Canadian French
 OXK Japanese Katakana
 OXS Latin American Spanish

Where middle "X" denotes keyboard specification.

Limitations: Category "B" terminals (e.g., 3277 Display Stations) and 3290 Information Panel Display Station cannot be used on the same 3274 when the 3274 is customized to support the 3193 Display Station. Existing alphanumeric applications will run on the 3193 Display Station unless the program is affected by the 3274 Control Unit configuration restrictions (e.g., no Category B terminals) or required hardware functions are not available on the 3193 Display Station, e.g., magnetic readers, light pen, triple plane programmable symbols, encryption/decryption, unsupported screen sizes or graphics.

BSC Copy Command is not supported.

Prerequisites: A 3178, 3179, 3180, 3278 or 3279 Display Station with 1920 characters or larger screen must be attached to Port 0 of the 3274 Control Unit for customization and diagnostic support. The 3193 Display Station is designed to attach to the 3174 or 3274 Control Units. The supported 3174 Control Unit Mdl's are 1L, 1R, 2R, 3R, 51R, 52R or 53R with Feature Code #9017. The supported 3274 Control Unit Mdl's are 31A, 31C, 31D, 41A, 41C, 41D, 51C and 61C Support D at microcode Release 65.0 or higher and 3274 Load Diskette.

- The 3174 Downstream load diskette.
- The 3274 Downstream load diskette #9311 (except Katakana) or #9315 (Katakana only) provides space for 3 modified keyboard layouts per Control Unit. The diskette is supplied via microcode release level 65.0 or higher for the 3274 with configuration support D. The modified keyboard layouts are selected by the operator of the 3193 Display Station during setup

mode. The diskette is available at no charge and ordered via MSORDER from Raleigh.

Customer Setup (CSU): The 3193 Display station is a Customer Setup machine. A copy of the "Setup Instructions" (GA18-2366), which contain detailed CSU instructions, will be shipped with each machine.

Spares: It is recommended that the customer replace a failing element with a spare element and that the customer purchase sufficient spare 3193 Display Station units for such use. The number of spare units is dependent upon the number of the 3193 Display Station units the customer has installed, the application requirements, physical locations and layout. Determination of the required number of spares is the customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a complete machine or as individual elements. See "Accessories" and "Machine Elements" for ordering individual elements.

HIGHLIGHTS

The 3193 Display Station represents an advanced function member of the 3270. Some of the highlights are as follows:

- 15-inch monochrome display 880 (Horizontal) x 1200 (Vertical) dots
- Multiple logical terminal capability (up to two logical terminals)
- 3278 Mdl's 2, 3, 4 Screen Support and 80 chars. x 48 lines
- Multiple partition capability (up to 8 partitions)
- Image datastream support
- Decompression of image data
- Image manipulation functions: Scale, Orient, Mirror, Invert, Fill
- 3117 Scanner Attachment (with 3117 Extension Unit feature)
- 3118 Scanner Attachment
- Entry assist function
- Scrolling functions
- Intel 80186 microprocessor
- Selectable cursors: alphanumeric, image cursor and image rectangle
- Display letter or A4 size image pages at 100 pels/inch
- Enlarge key to enlarge a viewport
- Roll-Your-Own keyboard (Except Katakana)

DESCRIPTION

The 3193 Display Station is a new high resolution image display with 880 dots horizontally and 1200 dots vertically (48 dots worth of space are used as an operator information area leaving 1152 dots for display). The image capabilities are significantly enhanced by the provision of an all-points-addressable (APA) screen capability. The terminal utilizes a new 15-inch, portrait type, monochrome cathode ray tube and provides a full 8-1/2 X 11 inch or A4 size image display capability accepting compressed or uncompressed image data from the host system.

This display terminal supports multiple logical terminals and provides a user with viewing capability of alphanumeric data only, im-

age data only, or a combination of both image and alphanumeric data. The image displayed is represented by dots providing a high resolution white on a black background, or black on a white background by reversing images. Datastream compatibility with today's 3270 displays is provided in alphanumeric application environments. The 3193 Display Station is designed to support existing applications programmed for the 3270 (except where hardware features are not supported). See Limitations section for additional information. The character box size is 11 (horizontal) and 24 (vertical) dots.

Using the Intel 80186 (TM) microprocessor, the 3193 Display Station provides advanced display function for processing the alphanumeric and image information. One of its salient functions is to provide two logical terminals capability to the user. The terminal user may log-on to one or two applications or systems. Each configured screen acts like a separate display station, referred to as a logical terminal. Storage display buffers in the 3193 store data for presentation and display on the screen. Through the use of scrolling, the buffer contents can be displayed.

The 3193 Display Station is compatible with the 3278 Mdl's 2, 3, and 4. The screen formats in split-screen or full-screen configurations are as follows:

Split-screen configuration:

- Two full 3278 Mdl 2 screens
- One 3278 Mdl 2 screen of 24 rows and 80 columns and one image screen

Full-screen configuration: The following screens can exist singularly or two of them can coexist at a time (one is hidden under the other)

- One full 3278 Mdl's 2, 3, or 4 screen
- Up to 48 rows of 80 columns alphanumeric screen
- A full screen (image only or image and alphanumeric mixed)

The host can send image data with an image order that is executed in the 3193.

- Source Image Data: The 3193 accepts source image data which have the following characteristics.
 - Compression
 - ▲ Compressed with Modified Modified Read (MMR) format
 - ▲ Uncompressed
 - Horizontal and vertical resolution (in pels per inch)
 - ▲ Any combination of 240 and 120 horizontally and vertically, or any combination of 200 and 100 horizontally and vertically.
 - Some of the Image functions supported are:
 - ▲ Decompression and mapping of image data stream to approximately a 100 pel screen when pages are received in varying pel resolutions
 - ▲ Scale up or down the size of an image to: 4x, 3x, 2x, 3/2x, 4/3x, 1x, 3/4x, 2/3x, 1/2x, 1/3x, 1/4x
 - ▲ Image orientation rotates images 0, 90, 180 and 270 degrees
 - ▲ Image mirror rotates an image around a horizontal or vertical axis to present a view of image from the other side
 - ▲ Invert image changes each dot to reverse black/white
 - ▲ Image fill causes a defined rectangle to be filled with white or black
 - ▲ Attachment of 3117 Scanner via the 3117 Extension Unit feature or 3118 Scanner for scanning and transmitting images of documents to the host system

Multiple Logical Terminals: The 3193 Display Station provides multiple logical terminal capability (up to two), which allows a user to use the 3193 as two independent logical terminals, each of which interacts with its own host application program. This capability maximizes the use of the display terminal without modifying the existing applications. Only one of the logical terminals provides image capability. Both logical terminals can be used to support alphanumeric applications.

Multiple Partitions: The 3193 Display Station supports up to a total of 8 partitions in one or two logical terminals. A partition can be a part of the divided screen or can be a hidden one. Each partition will be separately managed via application program control. One partition can handle image data and the rest of the partitions alphanumeric data. A partition can display alphanumerics only, image only, or mixture of the image and alphanumerics.

A partition with which the terminal user can interact is called an active partition and only one partition can be active to the operator, at a time. The terminal user can successively activate partitions by pressing the Jump Partition key, and the application program can also activate any partition.

Setup mode is provided to setup the 3193 Display Station.

Keyboards: The 3193 is offered in two models differentiated only by the keyboard shipped:

- 3193 Model 01X is offered with a 122-Key Typewriter Keyboard.
- 3193 Mdl 02X, is offered with a 103-Key Typewriter Keyboard.
- 3193 Mdl 01K, is offered with a 124-key Japanese Katakana Typewriter Keyboard.
- 3193 Mdl 02K, is offered with a 104-key Japanese Katakana Typewriter Keyboard.

Note: X denotes language option selected.

Note: Keyboards used on other products are not interchangeable with keyboards used on 3193 Display Station.

The keyboard definition utility supports the 3193 Display Station allowing definition of customer specific keyboard layouts. The 3274 Downstream Load diskette provides space for 3 modified keyboard layouts per control unit. A keycap removal tool is standard so that keycaps can be interchanged conveniently.

Keyboard functions are as follows:

Cursors: Improved cursor movement is provided. Whenever cursor keys are kept depressed, the cursor accelerates. Two new cursors are provided in an image partition in addition to the alphanumeric cursor; i.e., an image cross cursor and an image rectangle cursor. The cross cursor informs a host program of a point on the screen and the rectangle cursor provides the host program with the co-ordinates of a rectangular area on a screen.

Enlarge Key: The Enlarge Key is used to enlarge the viewport to the physical screen size. For example, when an operator is using a split screen and is viewing half of an image in one logical terminal, the operator can press the Enlarge key and see the full page (the other logical terminal will disappear from the physical screen).

Scroll Keys: Four Scroll Keys are provided; left, right, forward, and backward. The following scrolling operation is performed while one of the scroll keys is depressed, depending on which partition is active.

- Alphanumeric only partition. Alphanumeric data will be scrolled. A scroll unit is a character cell.
- Alphanumeric and image partition. Alphanumeric and image data will be scrolled together. A scrolling unit is a character cell.
- Image only partition. Image data will be scrolled. A scrolling unit is 1 dot.

Jump Key: This key is effective only in two logical terminal operations. Pressing this key alternately makes each logical terminal active.

Jump Partition Key: This key is effective only in multi-partition operation. Pressing this key switches active partition from one to the next.

Clear Partition Key: Pressing this key causes all data in the active partition to be erased.

Clear Key: Pressing this key erases data in all presentation space(s) operating under an active logical terminal.

Setup Key: Pressing this key causes the 3193 to enter setup mode. The following are some of the typical items which can be set up by the terminal user:

- Screen layout: Full screen or split screen
- Logical Terminal Attributes
 - Screen model of each logical terminal (3278 Mdl 2, 3 or 4 or 48 rows x 80 columns screen)
 - Extended attributes
 - Numeric Lock on/off
 - Number of partitions: 0 to 8
- Display polarity: Dark on a bright background or bright on a dark background
- Keyboard ID (for keyboard layout selection)
- Audible alarm: Volume
- Mono/Dual case: Selection of either case
- Local copy: Viewport copy or presentation space copy

Entry Assist: 3193 supports Entry Assist capabilities for an operator for entry and editing of text material. The capabilities include: margins, tabs, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs.

Roll Your Own Keyboard: Three additional keyboard layouts can be defined in addition to the standard layout.

Operator Factors: The 3193 Display Station has a screen with anti-reflection treatment to minimize glare. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. An underline cursor and a rectangular reverse video cursor with blinking option, are provided for alphanumerics. The cross cursor and rectangle cursor are provided for image operations in the image partition. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator in the 3193 Display Station setup mode.

The video pedestal provides 19.4 degrees of tilt (plus 15 degrees to minus 4.4 degrees) and 180 degrees of swivel (plus or minus 90 degrees from the center position) to enable the display to be positioned properly.

The keyboard is low profiled and connected with a coiled cable. The keyboard provides three or two angles of inclination (6, 12 or 18 degrees for Mdl 1 keyboard and 6 or 12 degrees for Mdl 2 keyboard) for operator adjustment.

Input Editing Capability: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen or partition) and cursor select keys are all standard. All alphanumeric and special symbol keys have typamatic capability. Cursor move keys cause acceleration of the cursor when held down. Simultaneous depression of vertical and horizontal cursor move keys will cause diagonal cursor movement. Fields of data can be selected by positioning the cursor,

then using the cursor select key. 24 Program Function (PF) keys are provided on Mdl 1 and Mdl 2 keyboards. The 3193 Display Station supports Entry Assist capabilities, which facilitate an operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs.

Security Facilities: Data security functions provided by the 3193 Display Station are non-display control (specified in the attribute byte) and the Security Keylock. A program defined non-displayed input mode is provided for fields of data, so that data is entered from the keyboard without being displayed on the screen. A Security Keylock prevents display of data on the 3193 Display Station unless the key is turned to the "UNLOCK" position. The key is removable in both the "LOCK" and "UNLOCK" positions.

Publications:

- "IBM 3193 Display Station Description" GA18-2364
- "IBM 3193 Display Station Setup Instructions" GA18-2366*
- "IBM 3193 Display Station Operator's Guide" GA18-2365*
- "IBM 3193 Display Station Problem Solving Quick Check Guide" GA18-2443*
- "IBM 3193 Display Station Problem Solving Guide" GA18-2444*
- "IBM 3193 Display Station Repair Center Maintenance Information" SY18-2134.

* The publications marked with an asterisk or country language version of them will be shipped with each machine.

Contact your country publication department for the order form number assigned for each country.

Note: These manuals or country language version of these can be ordered from the country publication centers.

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Coaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM 3270 Installation Manual-Physical Planning", GA27-2787 and "Coaxial Cable and Associated Manual", GA27-2805.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase or Maintenance Agreement and repair of that damage or replacement of missing, altered or non-IBM parts will be charged for at IBM's then applicable hourly service rates and terms. Altered elements will not be eligible for the exchange or replacement services.

On-site Assistance: If the customer desires assistance in performing Customer Problem Analysis and Resolution (CPAR), the customer calls local IBM service branch office. IBM will assist the customer on-site in performing CPAR procedures using the same documentation that is available to the customer.

Customer owned spare elements can be installed to replace defective elements by IBM upon customer request. Shipping of defective elements to the Repair Center or Service/Exchange Center is a customer responsibility. All on-site assistance is provided on an hourly service basis at the applicable hourly service rates and terms.

SPECIFY

- Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz or 200-240V AC, 1-phase, 3-wire, 50-60 Hz. 2.8m (9.0 ft) line cord with non-locking plug.

The country number of the ordering country determines the line cord and shipping group.

ACCESSORIES

The following keyboard and switch control units accessories can be ordered:

	P/N
Clear Lens Keycaps/Paper Inserts/Removal Tool	6341707
Blank Keycaps (Light) and Removal Tool	1351710
Blank Keycaps (Dark) and Removal Tool	1351728
Keycap Removal Tools (6 tools)	1351717
Paper Inserts (150 Light and 150 Gray)	6341704
Keyboard Overlays (10 overlays) for Model 01x	
English	6456082
Spanish	6456083
French	6456085
Keyboard Overlays (10 overlays) for Model 02x	
English	6456146
Spanish	6456147
French	6456149
Switch Control Unit*	
English	6052157
Japanese	6052160
Canadian French	6052158
Spanish	6052159

* Note: Permits switching operational control of the 3193 Display Station between two different control units. The customer is responsible for procurement and installation of this accessory, and also for the replacement of a defective unit. There is no switch control unit designed specifically for the 3193 Display Station, but use can be made of the unit designed for the 3278 or 3279. The 3279 switch is suggested even though it does not fit readily under the foot of the 3193 Display Station since it is better adapted than the 3278 switch to a free-standing position.

For local charges, consult your IBM marketing representative.

MACHINE ELEMENTS

Individual machine elements can be ordered as needed.

The video, logic, keyboard, pedestal and line cord of the 3193 Display Station can be ordered as follows:

- Video (P/N 6238880) -- Canada - Bermuda, Bahamas, Barbados, Colombia, Costa Rica, Dominican Republic, El Salvador, Guatemala, Guyana, Haiti, Honduras, Japan, Jamaica, Korea, Nicaragua, Netherlands Antilles, Mexico, Panama, Surinam, Taiwan, Trinidad -- Bolivia, Ecuador, Philippines
- Video (P/N 6238900) -- Australia, New Zealand -- Argentina, Chile, Hong Kong, Indonesia, Peru, Paraguay, Uruguay
- Video (P/N 6238902) -- Afghanistan, Bangladesh, Brunei, Burma, Hong Kong, Malaysia, Singapore, Sri Lanka, Thailand, Venezuela
- Logic (P/N 6238810) -- All AG-APG countries
- Keyboard-Tpwr Mod.1 (P/N 1391005); Mod.2 (P/N 1391066) -- Canadian French
- Keyboard-Tpwr Mod.1 (P/N 1391006); Mod.2 (P/N 1391067) -- Japanese Katakana
- Keyboard-Tpwr Mod.1 (P/N 1391007); Mod.2 (P/N 1391068) -- Latin American Spanish
- Keyboard-Tpwr Mod.1 (P/N 1390832); Mod.2 (P/N 1391065) -- US-English
- Pedestal (P/N 5954170) -- All AG-APG countries
- Line Cord (P/N 6952353) -- Brunei, Malaysia, Hong Kong, Singapore
- Line Cord (P/N 6952317) -- Afghanistan, Indonesia, Surinam
- Line Cord (P/N 6952308) -- Australia, New Zealand
- Line Cord (P/N 6952371) -- Chile
- Line Cord (P/N 6952285) -- Argentina, Paraguay, Uruguay
- Line Cord (P/N 6952297) -- Bahamas, Barbados, Bermuda, Bolivia, Canada, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Japan, Korea, Mexico, Netherlands Antilles, Nicaragua, Panama, Philippines, Taiwan, Trinidad
- Line Cord (P/N 6952344) -- Bangladesh, Burma, Sri Lanka
- Line Cord (P/N 6952397) -- Peru, Thailand, Venezuela

CUSTOMER REPLACEMENT PARTS

Following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative.

Description	P/N
Field Packaging Material	
For Video	6481600
For Logic	6316868
For Model 1 keyboard	7342987
For Model 2 keyboard	7342889
Keys (Note)	6342xxx
(3 digits of key code numbers)	

Keys: The 3193 Display Station is shipped with two keys for Security Keylock. If the keys are lost, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis.

SUPPLIES (NONE)

3194 DISPLAY STATION

PURPOSE

The 3194 Display Station is a high-function member of the 3270 Information Display System Family. It can be used with S/370, 43XX, 30XX, 9370 series processors and the 8100, via a 3X74 control unit, the 9370 Information System via the Workstation Controller feature #6020, and S/36 and S/38 via a 3X74 unit (remote attach only) or a 5209 3270-5250 Link Protocol Converter (in CUT mode only). All attachment environments are supported, i.e., SNA local channel, SNA remote, non-SNA local channel and BSC remote. Attachment to the 3X74 is via coaxial cable, IBM Cabling System Media, (with external balun) or telephone twisted-pair via IBM/ROLM 3270 Coax-to-Twisted-Pair-Adapter (with external balun).

The 3194 is available in many models, providing a choice of monitor and keyboard combinations. It offers a number of functions not available with other 3270 family members. It is compatible with the 3179-1 and applications written for that product will operate on the 3194.

The 3194 provides a programming interface called the Device Function Interface. Utility programs may be written in a high level language, compiled and linked on a 3270 PC (or PC with file transfer capability) and file transferred to the 3194 to execute. See the Device Function Interface section under "Special Features" for more details.

The base or default IBM 3194 Display Station format presentation is 24 x 80, 1,920 characters (3278 Model 2).

The 3278 (Model 2 to 5) display formats will be available on the 3194 models D and H (Canada only) (except Model H50) in Distributed Function Terminal mode only. The 3278 Model 2 and 3 display formats will be available on the 3194 C models in DFT mode only.

24 rows by 80 columns (3278 Model 2) 1,920 characters
32 rows by 80 columns (3278 Model 3) 2,560 characters
43 rows by 80 columns (3278 Model 4) 3,440 characters
27 rows by 132 columns (3278 Model 5) 3,564 characters

MODELS

The 3194 Display Station consists of three primary workstation elements: a logic unit, a monitor, and a keyboard. All models share a common logic unit and offer a choice of keyboards and monitors.

(Except Canada) Model CD0: A 12-Inch Color Display with the 122-Key Typewriter Keyboard.

Model CE0: A 12-Inch Color Display with the IBM Enhanced Keyboard.

Model DD0: A 15-Inch Monochrome Display with the 122-Key Typewriter Keyboard.

Model DE0: A 15-Inch Monochrome Display with the IBM Enhanced Keyboard.

Model HD0: A 14-Inch Color Display with the 122-Key Typewriter Keyboard.

Model HE0: A 14-Inch Color Display with the IBM Enhanced Keyboard.

Note: Not all models are available in all countries. Refer to the "Machine Element" section.

Note: The first position of the model number (C, D, or H) identifies the type of monitor. The second position (D, E, F) identifies the type of keyboard and a three-year warranty.

The model D has a green monochrome monitor.

The pedestal of the model C is an integral part of the monitor.

Monitors			
		Color	Mono
Keyboard	12"	14"	15"
122-Key Typewriter	CD0	HD0	DD0
IBM Enhanced Kbd. *	CE0	HE0	DE0

* 102-Key

High Resolution Monitors: High resolution monitors, the type familiar to IBM 3192 and IBM Personal Computer users are:

- 14-inch (8 colors) with up to 1188 X 725 pel resolution.
- 12-inch (8 colors) with up to 720 X 400 pel resolution.
- 15-inch (monochrome) with up to 1188 X 544 pel resolution. <

(Canada Only) Model C10: A 12-Inch Color Display with the 122-Key Typewriter Keyboard.

Model C20: A 12-Inch Color Display with the IBM Enhanced Keyboard.

Model D10: A 15-Inch Monochrome Display with the 122-Key Typewriter Keyboard.

Model D20: A 15-Inch Monochrome Display with the IBM Enhanced Keyboard.

Model H10: A 14-Inch Color Display with the 122-Key Typewriter Keyboard.

Model H20: a 14-Inch Color Display with the IBM Enhanced Keyboard. <

(Canada Only) Model H50: A 14-Inch Color Display with the 122-Key Typewriter Keyboard.

The H50 is an early model of the 3194 with a unique logic unit, monitor, and keyboard. These elements, as well as the 3194 Microcode, Release 1.0 and 1.1, are not interchangeable with the other models of the 3194 Display Station. <

Note: (Canada Only) The first position of the model number (C, D, or H) identifies the type of monitor. The second position (1, 2, 3) identifies the type of keyboard and a one year warranty.

The model D has a green monochrome monitor.

The pedestal of the model C is an integral part of the monitor.

Monitors			
		Color	Mono
Keyboard	12"	14"	15"
122-Key Typewriter	C10	H10	D10
IBM Enhanced K/B*	C20	H20	D20

* 102-Key <

(Canada Only) High Resolution Monitors: High resolution monitors, the type familiar to IBM 3192 and IBM Personal Computer users are:

- 14-inch (8 colors) with up to 1188 X 725 pel resolution.
- 12-inch (8 colors) with up to 720 X 400 pel resolution.

- 15-inch (monochrome) with up to 1188 X 544 pel resolution. <)

Prerequisites: When the 3194 is attached to a 3274 operating in DFT mode, configuration support D at release 64.2 or higher is required. When the 3194 is attached to a 3174, Microcode Release 1.0 or higher is required.

A host based file transfer program is required to complement the 3194 File Transfer utility function. Acceptable programs include:

MVS/TSO: 5665-311
VM/SP: 5664-281
CICS: 5798-DQH V1.6.1

See the "Device Function Interface" section under "Special Features" for Device Function Interface prerequisites.

Limitations: The following 3270 capabilities are not available in the 3194:

- 3270 diagnostic reset dump
- 3X74 entry assist feature (in DFT mode)
- Base (four color) color copy to the 3X74 attached printer
- Binary synchronous copy command
- Explicit partitions
- APL Character Set
- Keyboard types
- Magnetic reader control and accessories
- Monocase switch
- Selector light-pen
- Video output
- Modifiable keyboard (Canada only > (not available on Model H50) <)

Customer Setup (CSU): The 3194 is designated as a customer setup machine. Setup instructions are included in the Customer Setup section of the "3194 User's Guide", shipped with each machine.

For Device Function Interface limitations, see the Device Function Interface section under Special Features.

HIGHLIGHTS

The base or default 3194 Display Station screen format, in CUT mode is 24 x 80, 1,920 characters (3278 Model 2).

3278 model 2 to 5 display screen formats are available on the 3194 models D and H (Canada only > except model H50 <) in Distributed Function Terminal mode only. 3278 model 2 and 3 display formats will be available on the 3194 C models in DFT mode only.

The 3194 offers enhanced functions over base color displays. Up to 30K bytes may be stored for Record/Play applications. A default customization profile is provided with three sessions defined: host, notepad and utility. Customization functions are provided to allow the customer to establish additional profiles beyond those provided by IBM.

The Device Function Interface is compatible with the 3270-PC High Level Language Application Program Interface, Version 3 (HLLAPI) and provides the same compatibility to the 3194 through the use of Device Function Interface utility programs. See the Device Function Interface section under Special Features for additional details.

Display functions include: non-display, blinking, underscore and reverse image (dark characters on a light background) on a field or character basis. The 3194 uses field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as color, protected/unprotected, alphanumeric, normal/intensified, and display/non-display.

(Canada only > Asynchronous/ASCII support, see ASCII/VT100 feature #4900 for details. <)

The 122-key keyboard and the IBM Enhanced keyboard offer the Program Function (PF) keys in two locations, thereby duplicating the PF key positioning of other IBM keyboards. PF key location in concert with adjustable slope provides operator input and control flexi-

bility. Easy-to-use select options, provided from the keyboard, allow the operator to utilize a block or underscore cursor, cursor blink or non-blink. An operator-adjustable alarm is provided to alert the operator to special conditions.

The 3194 consists of three workstation elements (monitor, logic and keyboard), a monitor tilt/swivel pedestal, microcode, and video module.

(Canada only > (English only) A 4201-001 Proprinter may be attached via a 3194 Printer Attachment Feature (#4899, P/N 1614899) on the 3194-H50. <) On all models (Canada only > , (English only) (except the Model H50) <) the 4201 Proprinter II Model 002, and the 4202 XL Proprinter may be attached to the Personal Printer Interface of the 3194 via P/N 1525612 (this cable may require a screwdriver to install). The 4201 will be supported as a 3194 local printer and will perform a full-screen copy function. As a 3194 local printer, it will not be visible to the host or the cluster controller. It is the customer responsibility to order and install the 4201 Proprinter. The 4201 will not be shipped with the 3194. Host print is not supported. See "Special Features" section for description.

Operator Factors: Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard slope can be adjusted by the user to 6 or 12 degrees.

The Device Function Interface provides the option to alter the operator interface for both the machine and host based applications. See the Device Function Interface section under Special Features for further details.

Cabling: The cable attachment between the 3194 and the 3X74 is via coaxial cable, IBM Cabling System Media (with external balun), or telephone twisted-pair via IBM/ROLM 3270 Coax-to-Twisted-Pair-Adapter (with external balun).

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display station if the key is turned to the "LOCKED" position.

User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Customer Problem Analysis and Resolution: Functions have been designed into the 3194 to enhance the availability to the customer. This has been done through routines and procedures described in the Customer Setup section of the "IBM 3194 User's Guide".

Ordering: Elements and accessories can be ordered. See "Accessories" and/or "Machine Elements" section for the appropriate part numbers.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other preparation.
- Receipt at customer's receiving dock, unpacking and placement of unit.
- During initial setup, install Repair Identification (RID) tags on the video and keyboard elements of the 3194.
- Physical setup, connection of cables in customer access areas, switch settings and checkout.
- Contacting an IBM customer service coordinator for attachment of the 3194 communications cable to an on-site serviced IBM control unit where customer access is not provided.

- Determination of the required number of spares.
- Performing problem determination to ascertain if a hardware or a microcode problem exists. The Problem Determination section of the "IBM 3194 User's Guide" and, as a supplement, the "3194 Operations and Control Program Reference", provide guidelines in the performance of this task.
- Contacting IBM CE Branch Office when on-site repair service is required.

Site Planning and Preparation: These are the responsibility of the customer. The customer should have on hand, or should order (Canada only > (except for Model H50) <) the "IBM 3194 Display Station Planning and Site Preparation Guide" as follows:

US English: GA27-3720
German Austrian: GA12-2931

The customer should also order the "IBM 3194 Operations and Control Program Reference", as follows:

US English: SK2T-0311
French: GA11-0614
German Austrian: GA12-2932
Spanish-Speaking: GA10-0178

(Canada only > For Model H50, the customer should order or have on hand the "IBM 3194 Pre-Installation Guide", GA23-0321, and the "IBM 3194 Operations and Control Program Reference", GA23-0315. <)

These manuals are required to do 3194 customization and are not shipped with the 3194.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3194 units for such use. The number of spare units is dependent upon the number of the 3194 units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares can be ordered as machines or individual workstation elements.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase of Maintenance Agreement and repair of that damage or replacement of missing, altered, or non-IBM parts will be charged for at IBM's then-applicable hourly service charges. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires help in performing Problem Isolation, the local IBM Service Branch Office may be called for their assistance. The CE will respond to the customer site to aid the customer in performing problem determination procedures using the same documentation available to the customer.

Customer owned spare workstation elements may be installed to replace defective workstation elements by the CE upon customer request. On-Site assistance is available on an hourly service basis at applicable rates and minimums.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center for repair on a time-and-material basis. After the expiration of warranty, an IBM maintenance agreement acceptance inspection is not normally required when the customer certifies, in writing, that the machine is physically and functionally in good working order, and that it has not been subject to neglect or misuse. IBM reserves the option to inspect a machine within one month following IBM's receipt of the Customer Certification for the machine. If IBM elects to exercise this option, there will be no charge for the inspection. Machines failing to pass the inspection must be repaired at the customer's expense prior to being eligible for IBM Maintenance Agreement coverage.

Microcode Service: Suspected microcode failures are to be reported by a registered service coordinator to the local IBM Service Branch Office. An IBM service representative will respond to the failure report within eight business hours by phone for further action. Microcode fixes will be supplied as a patch over the phone with periodic updates of the microcode via a refresh release. Notification of the availability of a new level of the microcode will be by mail to all registered customer service coordinators.

Keyboards

- 122-Key Typewriter Keyboard - 49 alphanumeric keys, 31 control keys, 24 individual Program Function keys, and 18 numeric pad keys.
- IBM Enhanced Keyboard (102-key) typewriter-like layout, 48 alphanumeric keys, 24 control keys, 12 Program Function keys (24 functions) and 18 numeric pad keys.

PHYSICAL DIMENSIONS

Logic Unit (Controller):

3194(Canada only > (except Model H50) <):

Width: 362mm (14.5 in.)
Height: 81mm (3.2 in.)
Depth: 336mm (13.4 in.)
Weight: 6.5kg (14.3 lb.)

(Canada only > 3194 (Model H50):

Width: 360mm (14.4 in.)
Height: 81mm (3.2 in.)
Depth: 335mm (13.4 in.)
Weight: 6.3kg (13.9 lb.) <)

Keyboard:

3194 (Model X1X) 122-Key Keyboard:

Width: 562mm (22.6 in.)
Height: 60mm (2.4 in.)
Depth: 230mm (9.2 in.)
Weight: 3.0kg (6.6 lb.)

3194 (Model X2X) IBM Enhanced Keyboard:

Width: 492mm (19.7 in.)
Height: 44mm (1.75 in.)
Depth: 210mm (8.3 in.)
Weight: 3.0kg (6.6 lb.)

(Canada only > 3194 (Model H50) 122-Key Keyboard:

Width: 560mm (22.4 in.)
Height: 52mm (2.1 in.)
Depth: 192mm (7.7 in.)
Weight: 2.0kg (4.4 lb.) <)

Monitor:

12-inch Color:

Width: 318mm (12.7 in.)
Height: 320mm (12.8 in.)
Depth: 350mm (14.0 in.)
Weight: 10.0kg (22.0 lb.)

15-inch Monochrome:

Width: 361mm (14.4 in.)
Height: 316mm (12.6 in.)
Depth: 334mm (13.4 in.)
Weight: 10.0kg (22.0 lb.)

14-inch Color(Canada only > (Including Model H50) <):

Width: 360mm (14.4 in.)
Height*: 370mm (14.8 in.)
Depth: 405mm (16.2 in.)
Weight: 14.0kg (30.8 lb.)

* With pedestal

Operating Environment:

	Operating	Power-Off
Temperature	60-90F	50-110F
Relative Humidity	8-80 percent	8-80 percent
Max Wet Bulb or Dew Point	73F	80F

SPECIFIED OPERATING ENVIRONMENT

Hardware Requirements: The 3194 Display Station (Canada only > (except Model H50) <) is designed to operate with the 3194 Microcode, Release 2.0. (Canada only > The 3194 Model H50 Display Station is designed to operate with the 3194 Microcode, Release 1.0 or Release 1.1 (Device Function Interface and the 3194 Printer Attachment feature # 4899 require Release 1.1 on the model H50). <)

System Attachment: The 3194 attaches to S/370, 43XX, 308X, 3090, Processors, and the 8100 Information System, via a 3174 or 3274 control unit; to the S/36 or S/38 via a 3174 or 3274 (remote attach only) or to a 5209 3270-5250 Link Protocol Converter (in CUT mode only); or to the 9370 Information System via the Workstation Subsystem Controller (9370 Feature # 6020). All attachment environments are supported, i.e., SNA local channel, SNA remote, non-SNA local channel, and BSC remote.

All 3174 models (with Microcode Release 1.0 or higher) are supported.

All 3274 models are supported for CUT mode. For DFT mode, Configuration Support D at release 64.2 or higher is required.

It should be noted that RPQs for 3274 or 3174 are required to support the keyboards of the following countries in a CUT session. LAD, Spanish Speaking (RPQ 7L0626 on the 3274, standard on 3174), Canada (Bilingual) (RPQ 7L0624 on the 3274, RPQ 8K1347 on the 3174).

Programming Support: The 3194 is shipped with 3.5-inch diskettes containing the microcode.

Host Software Requirements: The 3194 File Transfer program requires the 3270-PC File Transfer Program in one of the following versions on the participating host: MVS/TSO (5665-311), or VM/SP with or without HPO (5664-281), or CICS Version 1, Release 6.1 (5798-DOH).

Compatibility: Current versions of IBM access methods, operating systems, application subsystems, and 3270 applications that conform to the appropriate attachment and data stream architectures (e.g. SNA, BSC, 3270DS, 370 channel, SDLC, X.25) will execute without change with the 3194.

Publications: (Canada only > For all models except H50) <) The following publications will be available from the IBM Mechanicsburg Distribution center with the general availability of the 3194.

Note: The "IBM 3194 Display Station User's Guide", as well as the "IBM 3194 Display Station Maintenance Information Manual", SY27-0310 (English only), is shipped with the 3194.

IBM 3194 Display Station User's Guide:

US English: SK2T-0312
Canada French: GA09-0442
Spanish Speaking: GA10-0177

IBM 3194 Display Station Operation and Control Program Reference:

US English: SK2T-0311
Spanish Speaking: GA10-0178

IBM 3194 Display Station Planning and Site Preparation Guide:

US English: GA27-3780

IBM 3194 Display Station Maintenance Information Manual:

US English: SY27-0310

(Canada only > For H50 - The following publication is shipped as a unit with each 3194, "IBM 3194 User's Guide" (G126-0166). A copy of the microcode written to 3.5-inch diskettes is included in the package. The publication portion of the package may be ordered using the form number G126-0166.

The following publications will be available from the IBM Mechanicsburg distribution center with the general availability of the 3194:

- GA23-0321 IBM 3194 Pre-Installation Planning Guide
- GA23-0315 IBM 3194 Operations and Control Program Reference
- SY27-2583 IBM 3194 Maintenance Information Manual
- GA23-0320 3194 Display Station Proprietary Support Information

The following publication will be available from the Mechanicsburg Distribution Center at the general availability of the Device Function Interface:

- SA23-0314 IBM 3194 Device Function Interface Programmer's Guide

This manual is to be used as a supplement to the "IBM 3270-Personal Computer High Level Language Application Program Interface Programming Guide" and to the "IBM 3194 Operations and Control Program Reference". <)

SPECIFY

- Power and Line Cord: 120V AC, 1-phase, 3-wire, 60 Hz. 2.8m (9.0 ft) line cord with non-locking plug. A 1.8m (6.0 ft) line cord with non-locking plug is available.

See "Machine Elements". The country will select a power cord plug to the specifications most commonly used in that country. See "Product Structure" under "Machine Elements" section.

SPECIAL FEATURES

Device Function Interface (standard): The Device Function Interface is not a feature of the 3194 in that there is no feature code associated with it. It is a standard function that is shipped as part of the 3194 microcode, Release 1.1 (P/N 1614923) or later. However, its function is sufficiently important to warrant a separate section for its description and considerations. The Device Function Interface is an extension to the 3194 hardware that allows 3194 utility programs which have been developed on a 3270 PC to access workstation functions and services on the 3194 Display Station. The utility programs are created on a 3270 PC using the 3270-PC High Level Language Application Program Interface Program Product, Version 3 (59X9-959). Programmers may develop 3194 utility programs using the familiar programming languages, IBM COBOL 1.0 or IBM Pascal 2.0.

The Device Function Interface provides the 3194 user with a microcode-to-utility program interface that supports IBM COBOL 1.0 and IBM Pascal 2.0. The Device Function Interface allows development of programs having the ability to emulate the actions of the terminal operator.

Device Function Interface utilities are valuable in a variety of environments by allowing increased productivity for users. Device Function Interface utilities permit:

- Improvements in ease of use
 - Masking complicated host application generated screens and commands from the user

- Automated logon sequence
- Simplifying 3194 setup functions (e.g., creating windows, sizing, developing notepad functions)
- Simplifying existing host operations
- Providing unattended operation
- Creating composite screen applications

The 3194 Device Function Interface is compatible with the IBM 3270-PC HLLAPI Version 3. The same 44 Service Request functions provided by the 3270-PC HLLAPI are supported by the 3194 Device Function Interface. It is recommended that utility programs for the 3194 be compiled on the 3270 PC and tested on the 3194.

The 3194 is not intended to be used for execution of licensed personal computer programs. The programmer must be aware that programs written for the 3270 PC may not operate in exactly the same way on the 3194. Some functions will not be transportable to the 3194. For example, a program that sets background color on the 3270 PC will not perform that function on a 3194 since the background color on the 3194 is always black. Use of the Device Function Interface requires the use of the IBM 3270-PC HLLAPI, Version 3 (59X9-959). Getting the utility programs to the 3194 requires the use of file transfer programs on the utility program development machine, the host computer (see prerequisites above) and on the 3194. The file transfer programs for the 3194 are part of the microcode and for the utility program development machine are part of the IBM 3270-PC Control Program.

(Canada only > 3194 Printer Attachment Feature (#4899, P/N 1614899): (English and Model H50 only) Provides the capability to attach a 4201-001 Proprinter to the 3194 Display Station. The 4201 will be supported as a 3194 local printer and will perform a full-screen copy function. As a 3194 local printer, it will not be visible to the host or the communications controller. This feature includes a 4201 Attachment Cable (P/N 1614867) and a publication, "3194 Display Station Proprinter Support Information", GA23-0320. Prerequisite: Microcode, Release 1.1, P/N 1614923, is required on the 3194. Limitations: Host directed printing is not supported. Maximum: One. Field Installation: Yes.

Note: For models other than H50, the printer attachment cable for the Personal Printer Interface should be ordered separately using P/N 1525612 (this cable may require a screwdriver to facilitate installation). < >

Extended Character Set Feature*: Extended Character Set (where available) provides the ability to display more than the standard 92 Base Character Set.

The Extended Character Set will display the full 191 International character set. Documentation is provided in the "Operations and Control Program Reference Manual" and the "User's Guide", showing all of the characters available for display.

Please note that all 191 characters are not engraved on the keytops.

Dependencies for Extended Character Set: In order to display the full Extended Character Set, you must have the Extended Character Set Diskette Pack (3 Diskettes). The IBM Enhanced Keyboard is recommended. The Extended Character Set diskettes provide the full 191 characters in Distributed Function Terminal (DFT) mode only.

Customers should be aware that when selecting this option, characters may be displayed and placed in their data file which cannot be recognized by other devices such as terminals and printers. Your system coordinator should be consulted to determine any effect the Extended Character Set may have on your existing data files.

A procedure is provided to access (display) any character of the Extended Character set that is not engraved on the keytops. This procedure activates a single extended character. If another unique character is required, the process is repeated.

The country default character set (diskette set) will be furnished with the initial machine order, at no additional charge.

* See Feature Code below for each language.

EXTENDED CHARACTER SET FEATURE

Language

Canadian English	(1)	
Canadian French	1615030	#5030
US English	(1)	
Spanish Speaking	1615034	#5034

Notes:

1. Extended character set not available.

(Canada only > ASCII/VT100 Feature (#4900, P/N 1615166) (English only): ASCII/VT100 (Asynchronous/ASCII support) for the 3194 is provided in addition to existing IBM System/370 attachment support. With the feature card and microcode provided, the 3194 may be attached to an asynchronous/ASCII host and, through an additional window, emulate a DEC VT-100 (TM) terminal.

The VT100 supported functions include:

- 1,920/3,168-character screen.
- US English ASCII character set.
- VT52 mode.
- RS-232-C.
- 3194 Device Function Interface.
- Emulation Setup Utility.
- Attachment to the 5841 Modem or equivalent.
- Attachment to ROLM (R) CBX (R) DataCom Module (DCM) or Data Terminal Interface (DTI).
- Data rate up to 1200 bps.
 - ROLM is a registered trademark of ROLM Corporation.
 - CBX is a registered trademark of ROLM Corporation.

The following 3194 functions are available for use in the ASCII window:

- Full Device Function Interface Support.
- Record and Play.
- All 3194 set-up functions (window size, move, border color, cursor type).
- Screen print to attached Proprinter.
- Session-to-session copy. Using the 3194 COPY function, data may be copied from the ASCII session to any other session. As in the Utility session, data may not be copied via the COPY function into the ASCII session. However, Device Function Interface programs may be written to transfer data into the ASCII session and concurrently translate the copied data into keystrokes.
- The 3194 Device Function Interface provides access to the Asynchronous/ASCII window to allow user-written utilities to automatically query the presentation space and send keystrokes to the host.

Prerequisite: 3194 Display Station Microcode Release 2.0. Limitations: Not available on the Model H50. Maximum: One. Field Installation: Yes. < >

3194 Memory Feature (#5098, P/N 1615167): Provides 192K bytes of memory for a total of 832K bytes. This additional memory can be used for customer-written Device Function Interface programs. Prerequisite: 3194 Display Station Microcode, Release 2.0. (Canada only > Limitations: Not available on the 3194 Model H50. < >) Maximum: One. Field Installation: Yes.

ACCESSORIES

Cables: Attachment to the 3X74 is via coaxial cable, IBM Cabling System Media (with external balun) or telephone twisted pair via IBM/ROLM Coax-to-Twisted-Pair-Adapter (with external balun). Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

(Canada only > The following accessories can be ordered for Model H50:

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed. Order from Country Telemarketing Representative.

Keys: The 3194 is shipped with two keys. If keys are lost, the lock (and key) assembly can be replaced by an IBM Service Representative. Lock replacement is available on an hourly service basis at applicable rates and minimums.

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3194.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry. Order individual workstation elements through the Telemarketing Representatives.

(Canada only > Elements/accessories can be ordered as follows for Model H50 only:

DISKETTE PACK

(The BASE CHARACTER SET will
be the default, if available,
otherwise the EXTENDED

MACHINES

CHARACTER SET will be the default)

Extended Character Set: Extended Character Set (where available) provides the ability to display more than the standard 92 Base Character Set.

The Extended Character Set will display the full 191 International character set. Documentation is provided in the Operations and Control Program Reference Manual and the User's Guide, showing all of the characters available for display.

Please note that all 191 characters are not engraved on the keytops.

Dependencies for Extended Character Set: In order to display the full Extended Character Set you must have the Extended Character Set Diskette Pack (3 Diskettes).

The IBM Enhanced Keyboard is recommended. The Extended Character Set diskettes provide the full 191 characters in Distributed Function Terminal (DFT) mode only.

Customers should be aware that when selecting this option, characters may be displayed and placed in their data file which cannot be recognized by other devices such as terminals and printers. Your system coordinator should be consulted to determine any effect the Extended Character Set may have on your existing data files.

A procedure is provided to access (display) any character of the Extended Character Set that is not engraved on the keytops. This procedure activates a single extended character. If another unique character is required, the process is repeated.

The country default character set (diskette set) will be furnished with the initial machine order, at no additional charge.

POWER CORD ADAPTER

The Power Cord Adapter is a cable from the monitor to the logic unit on CXX and DXX models. This cable is not required on the HXX models.

(Except Australia > Use Low Voltage P/N 1615169. <)

Maintenance: Hourly service will be available at designated IBM Repair Centers only. This service is billable at the applicable IBM hourly service and minimum charge. Maintenance for elements is different by country. Contact your Country Service Department for the available maintenance in your country. Contact your IBM marketing representative for the warranty applicable in your country.

SUPPLIES (NONE)

3196 DISPLAY STATION

PURPOSE

The 3196 Display Station is a member of the 5250 Information Display System, and can be used with the S/36 or S/38 locally attached or remotely attached via the 5294 Remote Control Unit (Models A10 and B10 only). A low-profile typewriter keyboard permits the operator to enter, display, and manipulate data on a 12-inch monochrome screen. This display station performs the same basic functions as the 5291-2 plus a number of added functions. It is capable of displaying up to 1,920 characters with 24 lines of 80 characters each. It also displays a 25th line containing an operator information area.

The 3196 is compatible with the 5291 Mdl 2 Display Station and applications written for that product will operate on the 3196.

MODELS

Model A1X: Displays up to 1,920 characters in Green and provides a 122-key Typewriter Keyboard(Japan only> or 124-key Japanese Katakana Typewriter keyboard<).

Model B1X: Displays up to 1,920 characters in Amber-Gold and provides a 122-key Typewriter Keyboard(Japan only> or 124-key Japanese Katakana Typewriter keyboard<).

| **(AG only> Model A2X:** Displays up to 1,920 characters in Green and provides an IBM Enhanced Keyboard (103-key).

| **Model B2X:** Displays up to 1,920 characters in Amber-Gold and provides an IBM Enhanced Keyboard (103-key).<)

Language option selected will be designated by the third character of the model number as follows:

Y	English US
D	Canadian French
S	Spanish Speaking
K	Japanese Katakana
?	Thai

| **Prerequisites:** The 3196 models A1X and B1X attach to the IBM S/36, S/38, or 5294 Remote Control Unit via IBM Cabling System, twinaxial cable, or equivalent. Programming support is as follows:

- S/36: Release 4 or higher
- S/38: Release 7 or higher
- 5294:
 - On S/36 Release 5 or higher. Release 4 with PTF Diskette Level DK2203 or higher. (APG only> Model K01 and S01 require release 5 or higher.<) (LAD only> RPQ 8D0194 is required for Spanish Speaking.<)
 - On S/38 Release 8 or higher. Release 7 with Interim EC 837998F. (APG only> Model K01 and S01 require release 8 or higher.<) (LAD only> RPQ 8D0194 is required for Spanish Speaking.<)

| (AG only> The 3196 Mdls A20, B20, A2X and B2X attach to the S/36 and S/38. Programming support is:

- S/36: Release 5.0 or higher
- S/38: Release 8.0 or higher<)

For Thailand, one of the following RPQs is required for any 3196 Model:

5360	5362	5294	5381/82
8D0090	8D0214	8D0139	8D0270

Customer Set-Up (CSU): The 3196 is designated as a customer set-up machine. Set-up instructions (GA18-2488) are included with each machine.

HIGHLIGHTS

- Displays up to 1,920 characters in 24 rows of 80 characters each. Each character is represented in a maximum 7 x 14 dot matrix in the 9 x 16 contiguous box matrix. Displays a 94 character set: 26 uppercase alphabetic, 26 lowercase alphabetic, 10 numeric and 32 special characters.
- (Canada only>With Canadian Bilingual/French keyboard, displays additional 30 unique Canadian French characters (total 124-character set).<)
- (Japan only>With Japanese Katakana keyboards, displays 127 character set).<)
- The 3196 offers functions equivalent to the 5291 mdl 2. In addition, the 3196 offers Record/Play, Set-Up mode, Auto-Dim, a choice of Green or Amber-Gold screens, and Text Assist symbols.
- Cable-Thru with Auto-Termination and Screen Glare Reduction are standard. 188-character Multinational Character Set is available: providing 112 alphabetic, 10 numeric, and 66 special displayable characters. Display functions include: nondisplay, blinking, underscore, column separator, and reverse image (dark characters on a color background) on a field basis. An operator-adjustable alarm is provided to alert the operator to special conditions. The low-profile keyboard with adjustable slope and 24 application- assigned command functions provides input and control flexibility. Easy-to-use select options, provided from the keyboard, allow the operator to utilize a block or underscore cursor, cursor blink or non-blink. The operator can also elect to display the cursor locations (row/column) and screen attribute codes being utilized as well as set the audible alarm volume.
- The 3196 uses field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphanumeric, normal/intensified, and displayable/non-displayable.
- The 3196 consists of three workstation elements (WSEs): video, logic and keyboard elements.
- Operator Factors: The 3196 has an etched screen, which minimizes glare and fingerprint. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to changed the screen angle for the operator. The keyboard slope can be adjusted by the user to 6 or 12 degrees.
- Field Editing: Individual data input fields can be edited as Alphanumeric, Alpha Only, Digits only, Numeric Only, Signed Numeric, Field Exit Required, Right Adjust, Mandatory Entry, Mandatory Fill, Bypass, Auto Enter, Dup Enable and Monocase.
- Cabling: The cable attachment between the 3196 and other 5250 system components and/or systems may be made with IBM Cabling System, twinaxial cable, or equivalent. Cable connection: Maximum length of any one twinaxial cable is 1,525m (5,000 ft). Up to seven workstations may be attached to a twinaxial cable via the Cable-Thru capability of the 3196. See "IBM 5250 Information Display System Planning and Site Preparation Guide" (GA21-9337), for cabling information.

- **Security Facilities:** A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position.

These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions.

User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures" (G320-5649).

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial set-up, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3196.
4. Physical set-up, connection of cables in customer access areas, switch settings and checkout.
5. Contacting an IBM customer service coordinator for attachment of the 3196 communications cable to an on-site serviced IBM control unit where customer access area is not provided.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR).
8. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the "IBM 3196 Display Station Description Manual", GA18-2521, for site planning and preparation works since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3196 units for such use. The number of spare units is dependent upon the number of the 3196 units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution: Functions have been designed into the 3196 to enhance the availability to the customer. This has been done through routines and procedures in the "IBM 3196 Display Station Problem Solving Guide" which is used by the customer.

Customer Responsibility for Damaged or Altered Elements: Determination by IBM that damage to replaced units is due to causes or conditions not covered under the terms and conditions of the Purchase of Maintenance Agreement and repair of that damage or replacement of missing, altered, or non-IBM parts will be charged for at IBM's then-applicable hourly service charges. Altered elements will not be eligible for the exchange or replacement services.

Customer Engineer On-Site Assistance: If the customer desires assistance in performing Problem Isolation, may be called for their assistance. The CE will respond to the customer site to aid the customer in performing CPAR procedures using the same documentation available to the customer.

Customer owned spare Workstation Elements may be installed to replace defective workstation elements by the CE upon customer request. Shipping of defective WSEs to the Repair Center or Service/Exchange Center is a customer responsibility. On-Site assistance is available on an hourly service basis at applicable rates and minimums.

Customers with machines not under an IBM Maintenance Agreement have the option to ship the machines to the designated IBM Repair Center or IBM Service/Exchange Center for element exchange on a time-and-material basis. After the expiration of warranty, an IBM maintenance agreement acceptance inspection is not normally required for Service/Exchange Center machines when the customer certifies, in writing, that the machine is physically and functionally in good working order, and that it has not been subject to neglect or misuse. IBM reserves the option to inspect an IBM Service/Exchange machine within one month following IBM's receipt of the Customer Certification of IBM Service/Exchange Center Machines, for the machine. If IBM elects to exercise this option, there will be no charge for the inspection. Machines failing to pass the inspection must be repaired at the customer's expense prior to being eligible for IBM Maintenance Agreement coverage.

Keyboards:

- 122-Key Typewriter Keyboard - Moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys.
- (Japan only) > 124-key Japanese Katakana Typewriter keyboard - typewriter-like layout, moveable. Provides 4-level shift with 50 data keys and 32 control keys. <)
- (Canada only) > IBM Enhanced Keyboard (102-key) - typewriter-like layout, moveable with 48 alphanumeric keys, 24 control keys, 12 Program Function keys (24 functions) and 18 numeric pad keys. <)
- (AG only) > IBM Enhanced Keyboard (103-key) - typewriter-like layout, moveable with 49 alphanumeric keys, 24 control keys, 12 Program Function Keys (24 functions) and 18 numeric pad keys. <)

Publications:

- "IBM 3196 Display Station Description" (Canada only) > GA18-2481 < (LAD only) > GA18-2521 <)
- The following are shipped with the product:
- "IBM 3196 Display Station User's Guide" (Canada only) > GA18-2482 < (LAD only) > GA18-2515 <)
- "IBM 3196 Display Station Set-Up Instructions" (Canada only) > GA18-2488 < (LAD only) > GA18-2513 <)
- "IBM 3196 Display Station Problem Solving Guide" (Canada only) > GA18-2483 < (LAD only) > GA18-2514 <)
- "Attaching the IBM 3196 to System/36 and System/38" (Canada only) > GA18-2548 < (LAD only) > GA18-2549 <)
- "IBM 3196 Display Station Repair Center Maintenance Information Manual" (Canada only) > SY18-2161 < (LAD only) > SY18-2172 <)

SPECIFY

- Power: 100-127V, 200-240V, 1-phase, 3-wire, 50-60 Hz. 2.8m (9 ft) line cord with non-locking plug.

The country number of the ordering country determines the default for line cord and shipping group.

RPQs: RPQs will not be accepted for the 3196 Display Station.

SPECIAL FEATURES (NONE)

ACCESSORIES

Cables: IBM Cabling System, twinaxial cable (or equivalent) is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted Pair Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Twinaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM 5250 Information Display System Planning and Site Preparation Guide" (GA21-9337).

The following accessories can be ordered:

- Blank keycaps light (60 caps) and keycap removal tool (P/N 1351710)
- Blank keycaps dark (60 caps) and keycap removal tool (P/N 1351728)
- Clear lens keycaps (60 caps) with paper inserts (60 light and 60 dark) and keycap removal tool (P/N 6341707)
- Paper inserts for clear lens keycaps (150 light and 150 dark) (P/N 6341704)
- Keycap removal tool (6 tools) (P/N 1351717)
- Blank Keyboard Overlays (10) (AG only) Models A2X, B2X (P/N 6238058 <)
- Keyboard Overlays for Set-Up Functions (10) Models A1X, B1X (Italian, P/N 6457131); (French, P/N 6457133); (German, P/N 6457135); (Spanish, P/N 6457143) (AG only) Models A2X, B2X (French, P/N 6457134); (Spanish, P/N 6457144) <)
- Key Blanks for Security Keylock (10)* for keys labelled A00-A99 (P/N 6238059); for keys labelled D00-D99 (P/N 64X9944)

* Note: Duplicate keys may be made locally from these key blanks.

Customers may order these accessories through IBM Direct Response Operations by calling 1-800-IBM-2468.

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative.

Description	P/N
Field Packaging Material	
For Video	6317356
For Logic	6316868
For 122-key Typewriter	
Keyboard	7342987
(AG only)	
For IBM Enhanced Keyboard	
(102-key)	7342889<)

Keys: The 3196 is shipped with two keys. If keys are lost, the Logic Element should be sent to an IBM Repair Center or an IBM

Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis. For additional/replacement keys, see Accessories.

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3196.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

SITE PLANNING AND PREPARATION

These are the responsibility of the customer. The customer should have on hand, or should order the "IBM 3196 Display Station Description Manual" (Canada only) (GA18-2481) (GA18-2521) for site planning and preparation work.

The video, logic, keyboard, video stand and line cord of the 3196 Display Station can be ordered as follows:

- Video (Green) (P/N 67X0218); Video (Amber-Gold) (P/N 67X0151) - Canada
- Video (Green) (P/N 67X0219) - Bermuda, Bahamas, Barbados,
- Video (Amber-Gold) (P/N 67X0152) - Colombia, Costa Rica, Dominican Republic, El Salvador, Ecuador, Guatemala, Guyana, Haiti, Honduras, Japan, Jamaica, Korea, Nicaragua, Netherlands Antilles, Mexico, Panama, Philippines, Surinam, Taiwan, Trinidad
- Video (Green) (P/N 67X0203); Video (Amber-Gold) (P/N 67X0204) - Bolivia
- Video (Green) (P/N 67X0222); Video (Amber-Gold) (P/N 67X0155) - Afghanistan, Bangladesh, Burma, Venezuela, China, Hong Kong, Malaysia, Sri Lanka, Thailand
- Video (Green) (P/N 67X0223); Video (Amber-Gold) (P/N 67X0156) - Argentina, Australia, Brunei, Chile, Indonesia, New Zealand, Peru, Paraguay, Singapore, Uruguay
- Logic (P/N 63X5252) - All AG-APG languages except Thai
- Logic (P/N 69X7855) - Thailand
- 122-Key Typewriter (P/N 1390573) - Canadian French
- 124-Key Typewriter (P/N 1390574) - Japanese Katakana
- 122-Key Typewriter (P/N 1390575) - Spanish Speaking
- 122-Key Typewriter (P/N 1390572) - US English
- 122-Key Typewriter (P/N 0989716) - Thai
- 102-Key IBM Enhanced: Keyboard (P/N 1390636) - US English
- 103-Key IBM Enhanced: Keyboard (P/N 1390637) - Canadian French
- 103-Key IBM Enhanced: Keyboard (P/N 1390639) - Spanish Speaking
- Video Stand (P/N 6238060) - All AG-APG countries
- Video Cable (P/N 6185557) - All AG-APG countries
- Line Cord (P/N 6952353) - Brunei, Malaysia, Singapore, Hong Kong
- Line Cord (P/N 6952317) - Afghanistan, Indonesia, Surinam
- Line Cord (P/N 6952308) - Australia, New Zealand
- Line Cord (P/N 6952371) - Chile
- Line Cord (P/N 6952285) - Argentina, Paraguay, Uruguay
- Line Cord (P/N 6952297) - Bahamas, Barbados, Bermuda, Bolivia, Canada, Colombia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Japan, Korea, Mexico, Netherlands Antilles, Nicaragua, Panama, Philippines, Taiwan, Trinidad

- Line Cord (P/N 6952397) - Peru, Thailand, Venezuela

3197 COLOR DISPLAY STATION MODEL C

THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT

PURPOSE

The IBM 3197 Model C Color Display Station is for use with the IBM System/36, System/38, and the IBM 5294 Remote Control Unit. The 3197 Model C is an attractively-priced, 14-inch color CRT display station with a smudge-resistant screen capable of displaying up to 1,920 characters. Standard features include host-directed alphanumeric print support for IBM ASCII printers, IBM 4201 Proprinter, IBM 4202 Proprinter XL, and IBM 5201 Models 1 and 2 Quietwriter, and the ability to support two display sessions or one display and one printer session concurrently.

MODEL

Model C1X: Displays up to 1,920 characters and provides a 122-Key Typewriter Keyboard (Japan only) or 124-Key Japanese Katakana Typewriter Keyboard. (<)

Model C2X: Displays up to 1,920 characters and provides an IBM Enhanced Keyboard (103-key)(Japan only) or 104-Key Japanese Katakana IBM Enhanced Keyboard. (<)

Language option selected will be designated by the third character of the model number as follows:

D = Canadian French
Y = English US
K = Japanese Katakana
S = Spanish Speaking
O = Thai

Limitations

- DisplayWrite/36: The 3197 Model C2X when attached via the IBM 5294 Remote Control Unit, does not support DisplayWrite/36.
- 4214 printer emulation does not support the Load Alternate Character (LAC) command. As a result, S/36 and S/38 applications which generate graphics for a 4214 printer are not supported on the 3197-D attached printers including:
 - S/36 Advanced Printer Function, Licensed Program (5727-AP1/AP6)
 - S/36 Business Graphics Utilities, Licensed Program (5727-BG1/BG6)
 - S/38 Advanced Printer Function Utility, Licensed Program (5714-UT2)
 - S/38 Business Graphics Utility, Licensed Program (5714-GP1)
 - S/38 GDDM
- Also, see "Prerequisites"
- (APG Only) IBM 5294 Remote Control Unit does not support 3197 Mdl C2X. (<)

Prerequisites: The 3197 Models C1X, C2X attach to the S/36, S/38, or 5294 Remote Control Unit via IBM Cabling System, twinaxial cable, or equivalent.

Programming support or feature prerequisites are:

- S/36: Release 5.0 or higher
- S/38: Release 8.0 or higher
- 5294: For the 3197 Models C1X, either of the above releases.

(AG Only) For the 3197 Model C20 Feature Code #3630 - IBM Enhanced Keyboard Support Feature. Note: Feature Code #3630 requires prerequisite #3611 - Feature Adapter Card A. (<)

- To attach the 3197 Model C2X to System/38, the WSCE (Workstation Controller Extended) is required.
- (APG Only) Thai requires system RPQs as follows:

SYSTEM	RPQ
5360	8D0090
5362	8D0214
5364	--
5381/82	8D0270
5294	8D0139<)

Printer Prerequisites:

IBM Quietwriter(R) Printer 5201 Models 1 and 2: An IBM "Quiet" electronic Font Type A is required for the attachment of the IBM Quietwriter(R) printer 5201 to the 3197 Model C Display Station. These fonts are available in a variety of typesstyles and pitches. Consult the "Supplies Reference Guide for Information Processing Equipment" (71K6162 or G570-2098).

An IBM "Quiet" Electronic Font in a choice of language character set cartridges is required for the attachment of the IBM Quietwriter(R) printer 5201 to the 3197-C.

The IBM "Quiet" Electronic Font Type A is a multilingual cartridge which supports the following languages. These fonts are available in a variety of typesstyles and pitches: Austrian German, Belgian, Canadian French, Danish, Dutch, Finnish/Swedish, French, Icelandic, Italian, Norwegian, Portuguese, Spanish, Swiss French/Swiss German, English UK, English US.

The following "Quiet" Electronic Font types are available in limited typesstyles and fonts:

LANGUAGE	FONT TYPE
Arabic	F
Greek	G
Hebrew	K
Turkish	C
Cyrillic	E
Latin 2/ROECE	
and Yugoslavian	B or BC

IBM 4201 Proprinter and 4202 Proprinter XL: When attached to the 3197 Model C Color Display Station, the 4201 Proprinter and 4202 Proprinter XL support the following languages: Austrian German, Belgian, Canadian French, Danish, Dutch, Finnish/Swedish, French, Italian, Norwegian, Portuguese, Spanish, Swiss French/Swiss German, English UK, English US, in addition to Greek, Arabic, Hebrew, Icelandic, Yugoslavian, Cyrillic, Latin 2/ROECE, and Turkish.

Refer to the IBM PC Printer and IBM Typewriter supplies catalogs, IBM Authorized dealers or IBM DIRECT for the appropriate part numbers, ordering procedures and prices.

When ordering any of the above printers for use with the 3197-C, order printer cable P/N 6457008.

Customer Setup (CSU): The 3197-C is a Customer Set-Up (CSU) machine. Set-up instructions are included with each machine as "3197 Model C Color Display Station Setup Instructions", (GA18-2558)

HIGHLIGHTS

- Improved price/performance -- low price with discounts for volume procurement
- Compatibility with existing 3179-2 application programs
- Functional Enhancements
 - Printer support for host-directed printing
 - ▲ 4201 Proprinter - multi-speed matrix
 - ▲ 4202 Proprinter XL - Multi-speed, wide platen
 - ▲ 5201 Models 1 and 2 Quietwriter non-impact, letter quality
 - Dual address terminal capability when printer is not in use
 - ▲ Two concurrent sessions to S/36 or S/38
- Choice of two keyboards
- Improved ergonomics/usability
 - Tilt/Swivel pedestal
 - Reduced weight
 - Reduced glare screen
 - Low-profile keyboard with 2 angles of inclination
 - 1,500-Keystroke Record/Play capability
 - Set-up function
 - Keylock
 - Enhanced diagnostics

The 3197-C supports the following national languages:

	3197-C1X	3197-C2X
Canadian French	X	X
English US	X	X
Japanese Katakana	X	X
Latin America Spanish	X	X
Thai	-	X

DESCRIPTION

The 3197 Model C Color Display Station displays up to 1,920 characters -- 24 lines of 80 characters each plus an Operator Information Area.

The printer port emulates IBM workstation printers in alphanumeric characters only (5256 or 4214-2) for attached printers which are IBM 4201 Proprinter, 4202 Proprinter XL, or 5201 Models 1 and 2 Quietwriter printer. The attached printer is addressable from the Host (programs and other workstations).

The dual address capability allows two concurrent sessions to S/36 or S/38. The prime workstation address is assigned to the display and the second is assigned to either the printer (D-P mode) or display (D-D mode). In D-D mode, two jobs are controlled concurrently and a user may alternate between screens from each session through the use of a "hot key".

(Canada only) > With Canadian/French keyboard, displays additional 30 unique Canadian French characters (total 124-character set). < >
(Japan Only) > With Japanese Katakana keyboards, displays 127-character set. < >

The 3197-C offers functions equivalent to the 3179-2. In addition, the 3197-C offers the ability to attach a choice of printers and to operate in dual terminal mode when the printer is not in use.

Cable-Thru with Auto-Termination and Screen Glare Reduction are standard. 188-character Multinational Character Set is available: providing 112 alphabetic, 10 numeric, and 66 special displayable characters. Display functions include: non-display, blinking, underscore, column separator, and reverse image (dark characters on a color background) on a field basis. An operator-adjustable

alarm is provided to alert the operator to special conditions. The low-profile keyboard with adjustable slope and 24 application-assigned command functions provides input and control flexibility. Easy-to-use select options, provided from the keyboard, allow the operator to utilize a block or underscore cursor, cursor blink or non-blink. The operator can also elect to display the cursor locations (row/column) and screen attribute codes being utilized as well as set the audible alarm volume.

The 3197-C uses field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphanumeric, normal/intensified, and displayable/non-displayable.

The 3197-C consists of three workstation elements (WSEs): video, logic and keyboard elements.

Operator Factors: The 3197-C has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard slope can be adjusted by the user to 6 or 12 degrees.

Field Editing: Individual data input fields can be edited as Alpha-numeric, Alpha Only, Digits only, Numeric Only, Signed Numeric, Field Exit Required, Right Adjust, Mandatory Entry, Mandatory Fill, Bypass, Auto Enter, Dup Enable and Monospace.

Cabling: The cable attachment between the 3197-C and other 5250 system components and/or systems may be made with IBM Cabling System, twinaxial cable, or equivalent. Cable connection: maximum length of any one twinaxial cable is 1,525m (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via the Cable-Thru capability of the 3197-C. See "IBM 5250 Information Display System Planning and Site Preparation Guide", GA21-9337, for cabling information.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position.

These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions.

User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Keyboards

- 122-Key Typewriter Keyboard - Moveable with 49 alphanumeric keys, 31 control keys, 24 individual Program Command keys, and 18 numeric pad keys.

Operating Environment: Operating environment of configurable I/O units are different.

- 3197-C
 - Temperature - Class C: 10 to 40.6 degrees C (50 to 105 degrees F)
 - Relative Humidity - 8 to 80 percent
- IBM 4201, 4202, 5201
 - Temperature - Class B: 15.6 to 32.2 degrees C (60 to 90 degrees F)
 - Relative Humidity - 20 to 80 percent

Customer Responsibilities:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of unit.
3. During initial set-up, install Repair Identification (RID) tags on each element (logic, video, and keyboard) of the 3197-C.
4. Physical set-up, connection of cables in customer access areas, switch settings and checkout.
5. Contacting IBM Service for attachment of the 3197-C communications cable to an on-site serviced IBM control unit where customer access area is not provided.
6. Determination of the required number of spares.
7. Performing customer problem analysis and resolution (CPAR).
8. Contacting IBM CE Branch Office if Customer On-Site Exchange service or IBM On-Site Exchange service is required.
9. Returning security keys to IBM if any exchange service of Logic WSE is required. (If the keys are not returned to IBM, the customer will be charged for the replacement of the security keys and locks on a time-and-material basis.)
10. Each customer must order the "3197 Display Station Description Manual", GA18-2544, for site planning and preparation works since this is not shipped with each machine.

Spares: It is recommended that the customer replace a failing workstation element with a spare element and that the customer be advised to purchase sufficient spare 3197-C units for such use. The number of spare units is dependent upon the number of the 3197-C units that the customer has installed, his application requirements, physical locations and layout. Determination of the required number of spares is a customer responsibility.

The customer should be advised to test spares for correct operation before putting them on the shelf. Spares may be ordered as a machine or individual workstation element.

Customer Problem Analysis and Resolution (CPAR): Functions have been designed into the 3197-C to enhance the availability to the customer. This has been done through routines and procedures in the "3197 Model C Color Display Station Problem Solving Guide" which is used by the customer.

Publications: The following publications are available from Mechanicsburg.

- 3197 Display Station Description, GA18-2544
- 3197 Model C Color Display Station User's Guide, GA18-2559*
- 3197 Model C Color Display Station Setup Instructions, GA18-2558*
- 3197 Model C Color Display Station Problem Solving Guide, GA18-2561*
- Connecting the 3197 to System/36 and System/38, GA18-2629*
- IBM Display Station Repair Center Maintenance Information Manual, SY18-2176

* A copy is shipped with each machine.

Note: Customers should order the 3197 Display Station Description, GA18-2544, for system design considerations, configuring the host system, site planning and preparation work since this publication is not shipped with each machine. Customers may order the 3197 Display Station Repair Center Maintenance Information, SY18-2176, for repair. The other publications are shipped with the machine.

SPECIFY

- Power - 100-127V AC, 1-phase, 3-wire, 50-60 Hz or 200-240V AC, 1-phase, 3-wire, 50-60 Hz
- Line Cord: A 2.8m (9.0 ft) line cord with nonlocking plug. The country number of the ordering country determines the default line for line cord and shipping group.

RPQs: Requests for RPQs will not be accepted for the 3197-C.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Cables: IBM shielded twisted pair cable, twinaxial cable (or equivalent) is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Twinaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM 5250 Information Display System Planning and Site Preparation Guide", GA21-9337.

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative.

Description	P/N
Field Packaging Material	
For Video	6317356
For Logic	69x8197
For Keyboard (122-Key)	7343198
For Keyboard (102-Key)	7342889

Keys: The 3197-C is shipped with two keys. If keys are lost, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis. For additional/replacement keys, see "Accessories".

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3197-C.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

The video, logic keyboard, pedestal and line cord of the 3197-C color Display Station can be ordered as follows:

3197 DISPLAY STATION MODEL D

PURPOSE

The 3197 Model D Display Station is for use with the IBM System/36, System/38, and the IBM 5294 Remote Control Unit. The 3197 Model D is an attractively-priced, 15-inch green phosphor monochrome CRT display station with a smudge-resistant screen capable of displaying up to 3,564 characters. Standard features include host-directed alphanumeric print support for IBM ASCII printers, IBM 4201 Proprinter, IBM 4202 Proprinter XL, and IBM 5201 Models 1 and 2 Quietwriter, and the ability to support two display sessions or one display and one printer session concurrently.

MODEL

Model D1X: Displays up to 3,564 characters in one of three screen formats and provides a 122-Key Typewriter Keyboard(Japan only> or 124-Key Japanese Katakana Typewriter Keyboard <).

Model D2X: Displays up to 3,564 characters in one of three screen formats and provides an IBM Enhanced Keyboard (103-key)(Japan only> or 104-Key Japanese Katakana IBM Enhanced Keyboard <).

Language option selected will be designated by the third character of the model number as follows:

- D = Canadian French
- Y = English US
- K = Japanese Katakana
- S = Spanish Speaking
- O = Thai

Limitations

- DisplayWrite/36: The 3197 Model D2X when attached via the IBM 5294 Remote Control Unit, does not support DisplayWrite/36.
- 4214 printer emulation does not support the Load Alternate Character (LAC) command. As a result, S/36 and S/38 applications which generate graphics for a 4214 printer are not supported on the 3197-C attached printers including:
 - S/36 Advanced Printer Function, Licensed Program (5727-AP1/AP6)
 - S/36 Business Graphics Utilities, Licensed Program (5727-BG1/BG6)
 - S/38 Advanced Printer Function Utility, Licensed Program (5714-UT2)
 - S/38 Business Graphics Utility, Licensed Program (5714-GP1)
 - S/38 GDDM
- Also, see "Prerequisites"
- (APG Only> IBM 5294 Remote Control Unit does not support 3197 Mdl D2X. <)
- The following is not available:
 - Reverse Image Key

Prerequisites: The 3197 Models D1X, D2X attach to the IBM S/36, S/38, or IBM 5294 Remote Control Unit via IBM Cabling System, twinaxial cable, or equivalent.

Programming support or feature prerequisites are:

- S/36: Release 5.0 or higher
 - S/38: Release 8.0 or higher
 - 5294: For the 3197 Models D1X, either of the above releases.
- (AG Only> For the 3197 Model D2X Feature Code #3630 - IBM Enhanced Keyboard Support Feature. Note: Feature Code

#3630 requires prerequisite #3611 - Feature Adapter Card A.<.)

- To attach the 3197 Model D2X to System/38, the WSCE (Workstation Controller Extended) is required.
- (APG Only> Thai requires system RPQs as follows:

SYSTEM	RPQ
5360	8D0090
5362	8D0214
5364 --	
5381/82	8D0270
5294	8D0139<)

Printer Prerequisites:

IBM Quietwriter(R) Printer 5201 Models 1 and 2: An IBM "Quiet" electronic Font Type A is required for the attachment of the IBM Quietwriter(R) printer 5201 to the 3197 Model D Display Station. These fonts are available in a variety of typesstyles and pitches. Consult the "Supplies Reference Guide for Information Processing Equipment" (71K6162 or G570-2098).

An IBM "Quiet" Electronic Font in a choice of language character set cartridges is required for the attachment of the IBM Quietwriter(R) printer 5201 to the 3197-D.

The IBM "Quiet" Electronic Font Type A is a multilingual cartridge which supports the following languages. These fonts are available in a variety of typesstyles and pitches: Austrian German, Belgian, Canadian French, Danish, Dutch, Finnish/Swedish, French, Icelandic, Italian, Norwegian, Portuguese, Spanish, Swiss French/Swiss German/Swiss German, English UK, English US.

The following "Quiet" Electronic Font types are available in limited typesstyles and fonts:

LANGUAGE	FONT TYPE
Arabic	F
Greek	G
Hebrew	K
Turkish	C
Cyrillic	E
Latin 2/ROECE	
and Yugoslavian	B or BC

IBM 4201 Proprinter and 4202 Proprinter XL: When attached to the 3197 Model D Display Station, the IBM 4201 Proprinter and 4202 Proprinter XL support the following languages: Austrian German, Belgian, Canadian French, Danish, Dutch, Finnish/Swedish, French, Italian, Norwegian, Portuguese, Spanish, Swiss French/Swiss German, English UK, English US, in addition to Greek, Arabic, Hebrew, Icelandic, Yugoslavian, Cyrillic, Latin 2/ROECE, and Turkish.

Refer to the IBM PC Printer and IBM Typewriter supplies catalogs, IBM Authorized dealers or IBM DIRECT for the appropriate part numbers, ordering procedures and prices.

When ordering any of the above printers for use with the 3197-D, order printer cable P/N 6457008.

Customer Setup (CSU): The 3197-D is a Customer Set-Up (CSU) machine. Set-up instructions are included with each machine as "3197 Model D Display Station Setup Instructions", (GA18-2546)

HIGHLIGHTS

- Improved price/performance -- low price with discounts for volume procurement

- Compatibility with existing 3180-2 application programs
- Functional Enhancements
 - Printer support for host-directed printing
 - ▲ 4201 Proprinter - multi-speed matrix
 - ▲ 4202 Proprinter XL - multi-speed, wide platen
 - ▲ 5201 Models 1 and 2 Quietwriter non-impact, letter quality
 - Dual address terminal capability when printer is not in use
 - ▲ Two concurrent sessions to S/36 or S/38
- Choice of two keyboards
- Improved ergonomics/useability
 - Tilt/Swivel pedestal
 - Smaller size
 - Reduced weight
 - Reduced glare screen
 - Low-profile keyboard with 2 angles of inclination
 - 1,500-Keystroke Record/Play capability
 - Set-up function
 - Keylock
 - Enhanced diagnostics

The 3197-D supports the following national languages:

	3197-D1X	3197-D2X
Canadian French	X	X
English US	X	X
Japanese Katakana	X	X
Latin America Spanish	X	X
Thai	-	X

DESCRIPTION

The 3197 Model D Display Station displays up to 3,564 characters in one of three selectable formats:

1. Up to 1,920 characters - 24 lines of 80 characters each
2. Up to 3,564 characters - 27 lines of 132 characters each
3. In dual address mode, up to 3,280 characters in two split screens - 24 lines of 80 characters each and 17 lines of 80 characters each.

In addition, each of the above formats provides operator message and status lines.

The printer port emulates IBM workstation printers in alphanumeric characters only (5256 or 4214-2) for attached printers which are IBM 4201 Proprinter, 4202 Proprinter XL, or 5201 Models 1 and 2 Quietwriter printer. The attached printer is addressable from the Host (programs and other workstations).

The dual address capability allows two concurrent sessions to S/36 or S/38. The prime workstation address is assigned to the display and the second is assigned to either the printer (D-P mode) or display (D-D mode). In D-D mode, two jobs are controlled concurrently in a split display through a "hot key".

(Canada only > With Canadian/French keyboard, displays additional 30 unique Canadian French characters (total 124-character set). <)
(Japan Only > With Japanese Katakana keyboards, displays 127-character set). <)

The 3197-D offers functions equivalent to the 3180-2. In addition, the 3197-D offers the ability to attach a choice of printers and to operate in dual terminal mode when the printer is not in use.

Cable-Thru with Auto-Termination and Screen Glare Reduction are standard. 188-character Multi-national Character Set is available: providing 112 alphabetic, 10 numeric, and 66 special displayable characters. Display functions include: non-display, blinking, underscore, column separator, and reverse image (dark characters

on a color background) on a field basis. An operator-adjustable alarm is provided to alert the operator to special conditions. The low-profile keyboard with adjustable slope and 24 application-assigned command functions provides input and control flexibility. Easy-to-use select options, provided from the keyboard, allow the operator to utilize a block or underscore cursor, cursor blink or non-blink. The operator can also elect to display the cursor locations (row/column) and screen attribute codes being utilized as well as set the audible alarm volume.

The 3197-D uses field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/unprotected, alphanumeric, normal/intensified, and displayable/non-displayable.

The 3197-D consists of three workstation elements (WSEs): video, logic, and keyboard elements.

Operator Factors: The 3197-D has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the host is accomplished without refresh interruption (i.e., no blinking). An underline type cursor and a rectangular reverse video cursor, with blinking option are provided. An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable-connected keyboard can be moved and the video element can be tilted and swiveled to change the screen angle for the operator. The keyboard slope can be adjusted by the user to 6 or 12 degrees.

Field Editing: Individual data input fields can be edited as Alpha-numeric, Alpha Only, Digits only, Numeric Only, Signed Numeric, Field Exit Required, Right Adjust, Mandatory Entry, Mandatory Fill, Bypass, Auto Enter, Dup Enable and Monospace.

Cabling: The cable attachment between the 3197-D and other 5250 system components and/or systems may be made with IBM Cabling System, twinaxial cable, or equivalent. Cable connection: maximum length of any one twinaxial cable is 1,525m (5,000 feet). Up to seven workstations may be attached to a twinaxial cable via the Cable-Thru capability of the 3197-D. See "IBM 5250 Information Display System Planning and Site Preparation Guide", GA219337, for cabling information.

Security Facilities: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of the data in the display terminal if the key is turned to the "LOCKED" position.

These capabilities and the terminal's ability to identify itself to the host program, allow customer-supplied security program routines to control access to data and audit of actions.

User management is responsible for evaluation, selection, and implementation of the security and auditability features, for administrative procedures, and for appropriate controls in application systems. If sensitive data is sent over external communication facilities, user management may wish to pursue the application of cryptography. For more information on data security controls, see "Data Security Controls and Procedures", G320-5649.

Keyboards

- 3197 Model D Display Station User's Guide, GA18-2545*
- 3197 Model D Display Station Setup Instructions, GA18-2546*
- 3197 Model D Display Station Problem Solving Guide, GA18-2547*
- Connecting the 3197 to System/36 and System/38, GA18-2629*
- IBM Display Station Repair Center Maintenance Information Manual, SY18-2176

* A copy is shipped with each machine.

Note: Customers should order the 3197 Display Station Description, GA18-2544, for system design considerations, configuring the host system, site planning and preparation work since this publication is not shipped with each machine. Customers may order the 3197 Display Station Repair Center Maintenance Information, SY18-2176, for repair. The other publications are shipped with the machine.

SPECIFY

- Power - 100-127V AC, 1-phase, 3-wire, 50-60 Hz or 200-240V AC, 1-phase, 3-wire, 50-60 Hz
- Line Cord: A 2.8m (9.0 ft.) line cord with nonlocking plug. The country number of the ordering country determines the default line for line cord and shipping group.

RPQs: Requests for RPQs will not be accepted for the 3197-D.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS (NONE)

ACCESSORIES

Cables: IBM shielded twisted pair cable, twinaxial cable (or equivalent) is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the System Supplies operation with your country.

Twinaxial Cable: For proper identification, installation and application of cable and associated accessories, refer to "IBM 5250 Information Display System Planning and Site Preparation Guide", GA21-9337.

For local charges, consult your Marketing Representative.

CUSTOMER REPLACEMENT PARTS

The following parts are not covered by an IBM maintenance agreement and must be purchased by the customer when replacement is needed.

Order from Country Telemarketing Representative.

Description	P/N
Field Packaging Material	
For Video	69x8245
For Logic	69x8197
For Keyboard (122-Key)	7343198
For Keyboard (102-Key)	7342889

Keys: The 3197-D is shipped with two keys. If keys are lost, the Logic Element should be sent to an IBM Repair Center or an IBM Service/Exchange Center for replacement of the locks and the keys. This service is available on an hourly service basis. For additional/replacement keys, see "Accessories".

MACHINE ELEMENTS

Machine elements can be ordered to provide individual elements as needed by the customer in the use of the 3197-D.

Order Entry: For shipment, specify Machine Element (P/N) Number at time of order entry.

Order individual workstation elements through the Telemarketing Representatives.

The video, logic, keyboard, pedestal and line cord of the 3197-D Display Station can be ordered as follows:

MACHINE ELEMENT	P/N	COUNTRY
Video with cable	6457150	Canada, Bahamas, Barbados, Bermuda, Guyana, Jamaica, Surinam, Trinidad
Video with cable	6457151	Bolivia, Columbia, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Japan, Korea, Mexico, Netherlands Antilles, Nicaragua, Panama, Philippines, Taiwan

SUPPLIES (NONE)

3203 PRINTER

PURPOSE

Printer output unit for S/38, all virtual storage S/370, 3031, 3032, 3033, 3081, 3083, 3084 Processors and the 3777 Communication Terminal.

MODELS

Model 1 001: (NO LONGER AVAILABLE) 600 lpm -- native attachment on S/370 models 115 and 125 only.

Model 2 002: (NO LONGER AVAILABLE) 1,200 lpm -- native attachment on S/370 models 115 and 125 only.

Model 3 003: 1,000 lpm -- for use with a 3777 Communication Terminal model 1, 2 or 3.

Model 4 004: (NO LONGER AVAILABLE) 1,200 lpm -- native attachment on S/370 models 138 and 148 only.

Model 5 005: 1,200 lpm -- channel attachment on all Virtual Storage S/38, S/370, 3031, 3032, 3033, 3081, 3083, 3084, 3090, 4331, 4343 or 9370 Processor.

Note: All rated speeds are based on a 48-character set.

Limitations:

1. Only marginally-punched, pin-fed, continuous forms can be used. For multiple part forms, it is preferred that both sides be securely fastened. However, when only one side is fastened, it must be the right side. No staples are permitted in the print train area.
2. The 3203 may be used to generate input in OCR applications; see M1270, 1275, 1287, 1288, 3881 and 3886 pages for information on acceptable characters and printing devices. For OCR applications, a special ribbon is recommended.
3. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use single-part forms for OCR printing.
4. Print quality and forms feeding varies with paper specifications, ribbon and number of copies. Multiple copy forms of more than four parts and forms with a first part heavier than 49 grams/sq. meter (13 lbs.) should be tested under operating conditions to determine that results are satisfactory for the user's application.
5. The 3203 may not be natively attached on a S/370 mdls 115, 125 with a natively attached 1403.

Maximum: A maximum of two 3203 mdl 5s can be attached to a S/38. See S/38 special features for attachment explanation. Only one 3203 mdl 1 or 2 can be natively attached to a S/370 mdl 115 or 125. Only one 3203 mdl 3 can be attached to a 3777. A maximum of two 3203 mdl 4s can be natively attached to a S/370 mdl 138 or 148. 3203 mdl 5 is limited only by the number of control unit positions available on a system channel.

Prerequisites: One 1416 Interchangeable Train Cartridge is required for each 3203. See M1416 page. In addition, the following are required, depending upon the 3203 mdl:

- Model 1: An Integrated 3203 Printer Attachment (#4650) on the 3115 or 3125. In addition, on the 3115 only, Integrated 3203/5203 Printer Prerequisite (#4653) is required. On the 3115 and 3125, specify #9770 for 3203 mdl 1.

- Model 2: #4650 on the 3115 or 3125. In addition on the 3115 only, #4653 is required. On the 3115 and 3125, specify #9771 for 3203 mdl 2.
- Model 3: A 3777 Communication Terminal mdl 1, 2 or 3. Note: See #2921 for 107 Katakana or #2873 for 127 Katakana in M1416 pages.
- Model 5: For S/38 --- 3203-5 Printer Attachment Feature (#1135 or #1136) on the S/38 system unit. See M5381 special features.

Cables for the 3203-5 must be ordered when attaching to a S/38. Refer to the "System/38 Installation Manual-Physical Planning" for ordering information.

HIGHLIGHTS

- 132 print positions are standard.
- Horizontal spacing is 10 characters per inch.
- Vertical spacing is 6 or 8 lines per inch under operator control.
- Forms skipping and spacing are controlled by a forms control buffer. The carriage is a dual speed unit for mdls 1, 2, 4 and 5, and single speed for mdl 3.
- Normal skipping for mdls 1, 2, 4 and 5 is up to 24 inches per second with high speed skip of up to 55 inches per second after 6 lines have passed.
- The carriage speed for mdl 3 is up to 18 inches per second.
- A Universal Character Set buffer of 240 positions is standard.
- Use of graphics sets from 30 to 240 characters are allowed.
- Print speeds vary depending upon frequency of character repetition on the cartridge. One 1416 Interchangeable Train Cartridge is required for each 3203 Printer. The 3203 uses the proven train printing principle of the 1403 mdl N1 and maintains comparable high quality printing. Additionally, the 3203 has the capability of producing better copies.
- Continuous marginally punched forms are fed by a forms tractor. Maximum forms dimensions are: Width -- 20 inches; Length -- 24 inches. Minimum forms dimensions are: Width -- 3-1/2 inches; Length -- 3 inches. Mdls 1, 2, 4 and 5 of the 3203 have a power-assisted stacker.
- For full flexibility of column location for margins, 17-25/32 inches maximum width is recommended.
- If forms greater than 14 inches in length are used, the rear stacker enclosure must be opened. If forms greater than 17 inches in length are used, the forms compartment front door must be opened.
- See "Forms Design Manual", GA24-3488.

Bibliography: S/370 -- GC20-0001, S/3770 -- GA27-3097. System/38 -- "System/38 Installation Manual - Physical Planning" (GA21-9293), "3203-5 Printer Component Description and Operator's Guide" (GA33-1529), and "Form Design Reference Guide for Printers" (GA24-3488).

SPECIFY

- (Canada only > Voltage (AC, 3-phase, 4-wire, 60 Hz): #9903 for 208V, or #9905 for 230V --- must be consistent with system voltage for the mdl 1, 2 or 4. <)

* 3203 mdls 1, 2 and 4 must be consistent with system voltage provided for the printer. <)

- Color: Mdls 1, 2, and 4 -- #9041 for red, #9042 for yellow, #9043 for blue, #9045 for gray, #9046 for white. Mdl 3 -- blue is supplied as standard. Mdl 5 -- available from plant in pearl white only, MES orders will retain original color.
- Train Arrangement: See page TC 3203 in Type Catalog and M1416 pages for arrangements and required feature numbers.
- System Attachment: Specify #9501 for S/370 Mdl 115 Adapter, or #9502 for S/370 mdl 125 Adapter or #9503 for the first 3203 mdl 4 on S/370 mdl 138 or 148 and #9504 for the second 3203 mdl 4 on S/370 mdl 138 or 148.

S/38: Specify #9509 for the first 3203-5 to be installed at a customer's locations. This provides one tool kit required for CE maintenance. Another tool kit for the second 3203-5 installed on the system is not necessary. When rental machines are purchased, a tool kit can, if necessary, be ordered on a no-charge MES.

- Tool Kit - Mdl 5: Specify #9190 for first and fifth 3203 mdl 5 in a multiple rental machine installation. Specify #9191 for the second to fourth and sixth to ninth 3203 mdl 5 in a multiple rental machine installation. The #9191 eliminates tool kit shipment(s) to second to fourth and sixth to ninth printer. Check with Customer Engineering for additional tool kit requirement in multiple machine installation(s) or in case of machine transfer(s).
- Specify #9190 for all purchase machines.
- When installed rental 3203 mdl 5s are purchased, a tool kit has to be ordered on a no-charge MES for each printer requiring one.
- When installed rental 3203 mdl 5 out of multiple printer installation is transferred and becomes a first or fifth printer, a tool kit has to be ordered on a no-charge basis MES.
- On mdl upgrades from mdls 1, 2 or 4, no tool kit is to be specified.
- Machine Nomenclature:
English #2927 Japanese #2930
Canadian Fr #2935 Spanish #2931
- OCR: When OCR ribbons are used for either OCR printing or other applications, specify #9488. Field Installation: Yes.

MODEL CONVERSIONS

Can be made in the field between models 1, 2, 4 and 5. Model upgrades of models 1 to 4 or 1 to 5 require multiple MES orders. Prices are additive. When upgrading from models 4 to 5 or 2 to 5, specify on MES orders the required power/voltage and frequency. For model 5, see above specify/feature codes.

SPECIAL FEATURES

Speed Enhancement (#6360): (Mdl 3) Provides capability to operate the 3203 mdl 3 at 1,200 lpm. Maximum: One. Field Installation: Yes. Prerequisites: #5595 on the 3777.

ACCESSORIES (NONE)

SUPPLIES

Ribbons: Contact IBM.

3205 CONSOLE

PURPOSE

A high quality, 14 inch, 1,920 character, cathode-ray tube (CRT) color display console for attachment to 4361 and 4381 processors which are equipped with an Operator Control Panel (OCP).

Console messages are displayed in four colors (white, red, blue, or green) according to the status of the protected and intensified attributes. This gives the operator better perception of the system status.

BASE COLOR SUPPORT:

Protected and intensified	- White
Unprotected and intensified	- Red
Protected and normal intensity	- Blue
Unprotected and normal intensity	- Green

MODELS

Model 1	100	Displays up to 1,920 characters and provides 122-key Typewriter Keyboard or 124-key Japanese Katakana Typewriter Keyboard.
----------------	------------	--

The country number of the ordering country determines the default for line cord and shipping group.

Prerequisites: An appropriate operator control panel (OCP) is required for the 3205 color display console on the 4361 and 4381 processors. (IOCP for the 4361 and OCP for the 4381). The IOCP/OCP provides the capability to power on/off, IML as well as providing a number of status indicators. See the M4361 and 4381 pages for details.

- For the 4361 -- Specify Code **#9325**, IOCP for the 3205 console, must be ordered on the 4361 for the attachment of the 3205. For details, see the M4361 pages.
- For the 4381 -- EC A20156 is required on the 4381 for the attachment of the 3205. It provides a standalone operator control panel. EC A20156 will be included on all 4381s shipped after (Canada only+ November 30, 1984 +) (Except Canada+ January 31, 1985 +) and must be ordered for all 4381s shipped before that date. Up to three additional 3205s may be attached to the 4381. They do not require an OCP. Each attached 3205 requires an available console position. Note that 3205 cannot be intermixed on the same processor with 3278-2A or 3279-2C consoles.

HIGHLIGHTS

Displays characters in a maximum 7 x 14 dot matrix in the 9 x 16 contiguous box matrix, arranged in 24 rows of 80 characters each. Rows 1 through 20 are usable by the operator, rows 21 through 24 are used for system status information. A 94-character set is used, consisting of 26 uppercase alphabetic, 26 lowercase alphabetic, 10 numeric and 32 special characters.

The 3205 consists of five major units: Video, logic, keyboard, pedestal and line cord. Maintenance consists of repair by the CE of the failing unit.

A simple operator problem determination procedure is available, enabling the customer to isolate the failing unit and thereby allowing the Customer Engineer to bring the proper replacement part on the initial trip.

Elements used on other products are not interchangeable with units used on 3205.

The 3205 offers function equivalent to the 3279-2C color display console.

The 3205 keyboard emulates the existing 3278-2A and 3279-2C keyboards. The operator control panel (OCP) functions of the 3278-2A and 3279-2C are provided as a feature of the 4361 and EC A20156 of the 4381 processors.

A base color switch is provided allowing the 3205 to run in "monochrome mode". In this mode, fields are displayed in green for normal intensity and white for intensified.

Operator Factors: The 3205 has an etched screen, which minimizes glare and fingerprints. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Updating the screen from the processor is accomplished without refresh interruption (i.e., no blinking). An audible alarm is provided to alert the operator. The volume of the alarm can be adjusted by the operator. The cable connected keyboard can be moved and the video element can be tilted and swiveled to change the screen

angle for the operator. The keyboard is thin and the keyboard slope can be adjusted by the user to 6, 12, or 18 degrees.

Security Facilities: The 3205 is equipped with a standard two-position key lock switch to control access to the console. In addition, the System Control Programs supporting the 3205 contain functions that provide security, auditability, and control. User management is responsible for evaluation, selection, and implementation of security functions, for administrative procedures, and for appropriate controls in application systems.

Warranty Service and Maintenance: 3205 has a three month warranty on parts and labor.

The 3205 qualifies for an IBM maintenance agreement immediately following expiration of the warranty.

If an IBM maintenance agreement is not contracted for immediately following expiration of the service and parts warranty and the customer subsequently wants maintenance coverage, an inspection of the unit must be done by IBM at the customer's expense. In addition, all time and parts required to qualify the machine for maintenance agreement acceptability will be billed at IBM's then current rates and terms. The machine will then qualify for an IBM maintenance agreement coverage.

If a maintenance agreement is not in effect, service will be provided by IBM on an hourly services basis.

There is no regularly scheduled preventive maintenance recommended by IBM for the 3205.

Keyboards: Keyboards used on other products are not interchangeable with the keyboard used on the 3205.

Bibliography: *3205 Color Display Console Operator Reference and Problem Determination Guide* (GA18-2339) and *3205 Color Display Console Maintenance Information* (SY18-2121).

SPECIFY

Power: 100-127V AC, 1-phase, 3-wire, 50-60 Hz. or 200-240V AC; 1-phase, 3-wire, 50-60 Hz.

Line Cord: 2.7 meter (9 foot), non-locking plug.

Specify as follows for the keyboard language.

English US **#2956**
Canadian French **#2977**
Japanese Katakana **#2973**
Spanish Speaking **#2969**

MODEL CONVERSION (None)

ACCESSORIES (None)

SUPPLIES (None)

3262 LINE PRINTER MODELS B1, C1
THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT
PURPOSE

The 3262 mdl B1 is the printed output unit for S/34, 5360 and S/38.
 The 3262 mdl C1 is the printed output unit for 5360.

MODELS B1, C1
Model B1: B01 650 lpm stand-alone

Model C1: C01 650 lpm CSU stand-alone

The above nominal rated speed is based on a standard 48-character set.

Limitations:

1. Only puffed, continuous forms can be used.
2. Both edges of the forms must be fastened in the forms tractors.
3. No staples are permitted in the areas exposed to the interchangeable print band.
4. Printer operation and print quality vary with paper and number of copies. Forms sets of more than four parts should be tested in operating conditions to verify that results are satisfactory.
5. Due to the complexity of certain characters on the multinational print bands, multiple part forms should be tested in operating conditions to ensure that results are satisfactory.
6. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results use 20-24 lb (75-90g/sg. m.) OCR bond in single-part forms. OCR forms utilizing other papers should be tested for satisfactory results with the user requirements. When reading 3262 documents on the 3886, Re-read on Reject capability and 3211/5211 compatibility (#9701) should be used on the 3886. OCR printing is limited to controlled DP room environment. Refer to system planning guides. The OCR feature is a prerequisite for OCR applications.

Maximum: Two 3262 Printers can attach to S/38, one 3262 Printer can attach to the 5360, one 3262 Printer can attach to S/34.

Prerequisites: A 3262 Attachment on the 5381 System Unit. Specify #1100 or #1110 on 5381. See 5381 Special Features.

A 3262 attachment on the 5360 System Unit. A 3262 printer attachment feature (#5830) is required on the 5360 System Unit. See 5360 special features. 5360-AXX mdls additionally require processor unit expansion A (#5732).

Note: If an installed 3262 mdl B1 is to be attached to a 5360 system unit, see specify #9876 in the M5360 pages. See 5360 special features. An installed 3262 mdl B1 can attach to the 5360 System via specify code #9030 which is a no-charge MES on the printer. No new orders will be accepted in AAS for a 3262 mdl B1 printer for attachment to the 5360 System.

A 3262 Printer Attachment Feature (#5815) and a 5211/3262 Base Printer Attachment (#1110) are required on the 5340 System Unit. See 5340 Special Features.

Customer Setup (CSU): Yes, mdl C1 only.

HIGHLIGHTS

A universal character set buffer of 288 positions in the 3262 Attachment allows use of graphic sets of up to 288 characters. A general purpose optimized print band of 64 characters is available. (See 3262 in Type Catalog section.) The 64-character optimized print band can provide speeds up to a maximum of 625 lpm. Should specific application data have unique characteristics and not conform to the 64-character set optimized print band, the normal print bands will provide the following nominal rated speeds:

	Nominal Rated Speeds (lpm)
48-character set	650
64-character set	467
96-character set	364
128-character set	253
188-Character Set	131

132 print positions are standard. Horizontal spacing is 10 characters per inch. Vertical spacing is six or eight lines per inch under system control for S/38 and operator control for S/34 and 5360. Forms skipping and spacing are program controlled. The carriage is a single speed unit allowing skipping up to 20 inches per second. Continuous forms are fed by a forms tractor. See "Forms Design Reference Guide for Printers", GA24-3488, for forms design considerations.

OCR capability is provided as a feature (#5460). See special features. The 48 and 128 Japan Katakana character bands containing numeric A or B font (10 numbers and 3 special characters) are available only as part of the feature. The new OCR feature is supported by the S/38 hardware and software beginning with Release 3.0. The OCR feature is also supported by the S/34 and 5360.

Customer Setup (CSU): The 3262 mdl C1 is designated as a customer setup device. The Marketing Representative must advise the customers of their responsibilities before receipt of the device.

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- (Canada only > Power cord and plug: (120 V AC 1-phase, 3 wire, 60 Hz). The standard power cord is 4.3m (14 ft) long with locking plug; specify #9081. For a watertight power cord (S/38 only), specify #9080. <)
- (Except Canada > Power cord and plug: (AC, 1 phase - One must be specified). A power cord and plug are shipped with each machine from the plant of manufacture. The 3-digit

country code in the DP Machine Order Sheet will be used to select a power cord and plug of the specifications most commonly used in that WT country. If any exception to the above is required, a Country RPQ may be initiated.

50 Hz		60 Hz	
100V	#2804	100V	#2730
110V	#2805	110V	#2822
220V	#2813	120V	#9911
230V	#2831	127V	#2823
240V	#2801<)		

• Nomenclature:

Brazilian	#2933	Japanese	#2930
Canadian	#2935	Spanish	#2931
French			
English US	#2924		

• System Attachment: Specify one of the following:

Printer Model	System Attachment	Feature Code
3262 B1	S/34	#9010
3262 B1	S/38	#9020
3262 C1	5360	#9030
3262 B1*	from S/34	remove #9010,
	to S/38	add #9020
3262 B1*	from S/34	remove #9010,
	to 5360	add #9030

* Used only when existing printer is moved to new CPU.

- Color: Background color is pearl white. A color accent must be specified. #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray or #9066 for pearl white.
- Interchangeable Print Band: (Plant only) See "Type Catalog" for print band arrays. When ordering, indicate one specify code for character set and one specify code for character height. When printing 8 lpi, 2.0mm (0.079 in.) character height is recommended.

Two print bands (same specify code) will be shipped with the printer. The second band will be a spare for use by the customer as a back up. When the customer installs this backup band, a replacement should be ordered via MES and the platen rotated as described in the instructions provided with the printer (exception is when OCR feature is installed). In this case the platen is single surface and cannot be rotated. The customer will be billed at the current accessory band price. Replacement and installation of the print band is the customer's responsibility. If the customer desires to have Customer Engineering replace or install the print band, the CE time will be billed to the customer.

Specify	Language
#2956	US/Canada EBCDIC
#2977	Canadian French
#2950	International
#2955	Japan
#2973	Japan Katakana*
#2961	Spanish Speaking
#2990	Multinational**
#9565	FORTAN***

* Available only with 96-character set (#2770) or 128-character set (#2873) and 2.4mm (0.095 in.) character height (#9950).

** Available only with 2.4mm (0.095 in.) character height (#9950), and 64- (#2768), 96- (#2770), and 188- (#9562) character set size.

*** Available on S/34 and 5360 with a 2.4mm (0.095 in.) character height (#9950), and 48-character set (#2767).

Specify	Character Set Size
#2767	48-character set
#2765	48-extended character set
#9521	60-character set S/38 special**
#2768	64-character set
#9523	64-character set (optimized)
#2770	96-character set*
#2779	116-Canadian French only*
#2873	128-Katakana only*
#9562	188-Multinational only*

* Available only with 2.4mm (0.095 in.) character height (#9950).

** Available only with US/Canada EBCDIC #2956. This specially designed belt (for S/38 only) will enable the user to print the S/38 Control Language characters.

Specify	Character Height
#9951*	2.0mm (0.079 in.)
#9950	2.4mm (0.095 in.)

* Recommended for printing 8 lpi (25.4mm).

SPECIAL FEATURES

OCR Print Feature (#5460): Provides for manual operator selection of print hammer controls for OCR applications. One of the following OCR print bands must be specified:

Specify	Band Description
#0901	48-Character OCR-AON(1)
#0902	48-Character OCR-BON(1)
#0903	128-Character OCR-BON(1,2)

Notes:

1. Non-OCR characters are 2.4mm (0.095 in.) in height.
2. Available only for Japan (#2973).

Two OCR print bands (OCR numerics and 3 specials) will be shipped with #5460 in addition to the two standard bands shipped with the basic printer. The second band will be a spare for use by the customer for backup. When the customer installs the backup band, a replacement should be ordered via an MES. Billing, warranty and ordering additional bands (see Accessories section) is the same as for standard bands shipped with the printer. Field Installation: CSU.

MODEL CONVERSIONS (NONE)

ACCESSORIES

Print Bands: Two print bands are included with the initial shipment. Additional print bands permit the customer to print more than one character set for various applications and can be interchangeably used with the band provided with the machine. OCR print bands are for use only with OCR Feature #5460. See "Type Catalog" for print band arrays. When ordering, indicate one feature code for character set size and one feature code for character height. Interchangeable Print Bands: See "Specify".

Print Bands, Add'l: Additional print bands permit the customer to print more than one character set and/or language. Can be inter-

changeably used with the band provided with the machine. See Type Catalog for print belt arrays. When ordering, order one feature code for character set size (Table A), one feature code for language (Table B), and one feature code for character set height (Table C). Order via MES for field installation. Only one band per MES. OCR print bands are for use only with the OCR Feature #5460.

Installation and replacement of these print bands is the customer's responsibility. If the customer desires to have Customer Engineering replace or install the print band, the CE time involved will be billed to the customer. OCR bands are available only for printers with OCR feature #5460. The specified language for OCR must be the same as specified for the bands ordered with the basic machine.

Table A

Character Set Size	Feature	Notes
48	#5940	
60 S/38 Special	#5943	(3)
64	#5944	
64 Optimized	#5946	
96	#5948	(2)
116 (Canadian/ French only)	#2878	(2)
128 (Katakana only)	#2875	(2)
188 (Multinational only)	#5962	(2)
48 Numeral A-Font	#5974	(2,5)
48 Numeral B-Font	#5975	(2,4)
128 Numeral B-Font	#0703	(2)

Notes:

1. Available only with Austria/Germany (#2757).
2. Available only with 2.4mm (0.095 in.) character height (#5950).
3. Available only with US/Canada EBCDIC #2756. This specially designed belt (for S/38 only) will enable the user to print the S/38 control language characters.
4. Available only with #2755, #2756, #2768.
5. Available only with #2766, #2761.

Table B

Language	Feature	Notes
Canada-French	#2777	
Canada/US EBCDIC	#2756	
International	#2750	
Japan-English	#2755	

Japan Katakana	#2773	(3)
Spanish Speaking	#2761	
Brazil	#2775	
Multinational	#2790	(1)
FORTTRAN	#5965	(2)

Notes:

1. Available only with 2.4mm (0.095 in.) character height #5950 and 64- (#5944), 96- (#5948), and 188- (#5962) character set size.
2. Available only with 48-character set (#5940) and 2.4mm (0.095 in.) character height (#5950).
3. Available only with 96- (#5948) and 128-character set size (#2875).

Table C

Character Height	Feature
2.4mm (0.095 in.)	#5950
2.0mm (0.079 in.)	#5951*

* Recommended for printing 8 lines/25.4mm (inch).

SUPPLIES

Ribbons: A black ribbon, P/N 7819690, or equivalent, is required. An OCR ribbon P/N 032877 or equivalent is required with OCR feature #5460.

Convenience Kits: The following kits may be ordered with the initial machine shipment. For additional information, see your Country DP Supplies Coordinator.

Convenience Kit for 5360 or S/38 With Magazine Feature (#8010):

This kit provides the basic start-up supplies plus application set-up and programming tools at the same cost as the supplies sold separately. Each kit contains: 10 printer ribbons, 50 1,024-byte double density diskettes, and 5 diskette magazines. Also included, free of charge, are the following: Fiftifile, proofreading ruler, printer spacing pad, forms ruler, flow chart template and RPG debugging template.

Convenience Kit for 5360 or S/38 Without Magazine Feature (#8012)

This kit provides the basic start-up supplies plus application set-up and programming tools at the same cost as the supplies sold separately. Each kit contains: 10 printer ribbons and 50 1,024-byte double density diskettes. Also included, free of charge, are the following: Fiftifile, proofreading ruler, printer spacing pad, forms ruler, flow chart template and RPG debugging template.

3262 LINE PRINTER MODELS 1, 2, 3, 11, 12, 13

PURPOSE

A series of line printers for attachment to the 3274, 3276, 3601, 3602, 3694, 3777, 4331, 4361, 4701, 8100, 8775 or 9370.

MODELS 1, 2, 3, 11, 12, 13

Model 001: 4331/4361 Processor via Display Printer Adapter.

Model 002: 8100 Information System via the loop (9.6 and 38.4 KB). 3777-4 Communication Terminal via direct attachment (38.4 KB).

Model 003: 3601 Controller mdls 3A or 3B, 3602 Finance Communication Controller, 4701 Finance Communication Controller mdl 1, 3694 Document Processor, 3274 Control Unit, 4361 Display Printer Adapter or Workstation Adapter, 9370 Processor via Workstation Subsystem Controller, and S/3 via the 3274 Control Unit.

Model 011: 4331/4361 Processor via Display Printer Adapter.

Model 012: 8100 Information System via the loop (9.6 and 38.4 KB). 3777-4 Communication Terminal via direct attachment (38.4 KB).

Model 013: 3601 Controller mdls 3A or 3B, 3602 Finance Communication Controller, 4701 Finance Communication Controller mdl 1 or 2, 3694 Document Processor, 3274 Control Unit, 4361 Display Printer Adapter or Workstation Adapter, 9370 Processor via Workstation Subsystem Controller, 3276 Control Unit Display Station and S/3 via the 3276 Control Unit Display station and 8775 Display Station via Printer Attachment feature (#5580).

All models can attach to appropriate processor or controller using the IBM cabling system.

Limitations:

1. Only pinfed, continuous forms can be used.
2. Both edges of the forms must be engaged by the forms tractor pin feed.
3. No staples are permitted in the areas exposed to the interchangeable print belt.
4. Printer operation and print quality vary with paper and number of copies. Form sets of more than four parts (one part with specify #9529 or #0993 and one part with 128-character text print bands) should be tested in operating conditions to verify that results are satisfactory. Maximum forms thickness is 0.51mm (0.020 in.).
5. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use in single-part forms for OCR printing. OCR forms utilizing other papers should be tested for satisfactory results with user requirements. When reading 3262 documents on the 3886, reread on reject capability and 3211/5211 Compatibility (#9701) should be used on the 3886. OCR printing is limited to controlled DP room environment. Refer to "Site Planning and Preparation Guide", GA24-3734. The OCR feature #5450 is a prerequisite for OCR Applications.

Maximum: Up to two 3262 Printers (mdl 1 and/or 11) may be attached to a 4331/4361 Processor --- for mdl 2s/12s, see 3777 mdl 4, 8101, 8130 or 8140 --- for mdl 3s/13s, see 3274 mdl 1A, 1B, 1C, 1D, 3274 mdl 51C, 3602, 3694 or 4701 --- for mdl 13s, see 3276.

Prerequisites: Mdl 1 and 11 -- a position on the 4331 standard Display/Printer Adapter or the Display/Printer Adapter Expansion (#2001) on the 4331 Mdl Group 1 or 2 --- see M4331 pages or the 4361 Display Printer Adapter.

Mdl 2 and 12 -- a position on an 8100 system loop --- see 8101, 8130 or 8140, or direct attachment to a 3777 mdl 4 --- see 3777 mdl 4.

Mdl 3 and 13 -- an available Category A terminal port on a 3274, 9370 Processor via Workstation Subsystem Controller, 4361 Display Printer Adapter or Workstation Adapter or a Device Cluster Adapter (#3101) on a 3601 mdl 3A or 3B, 3602, 3694, 8775 Display Station via the Printer Attachment feature (#5580) or 4701 --- see M3274, 3601, 3602, 3694, 4701, 8775 or 9370 pages.

Mdl 13 -- an available terminal port on a 3276 --- see M3276 pages.

Customer Setup (CSU): The 3262 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility.

HIGHLIGHTS

132 print positions are standard. Horizontal spacing is 10 characters per 25.4mm. Vertical spacing is 3, 4, 6 or 8 lines per 25.4mm for the mdls 1 and 11 under system control. Forms skipping and spacing are program controlled. The carriage is a single speed unit allowing skipping up to 508mm (20 in.) per second. Continuous forms are fed by a forms tractor, which accepts forms of up to a maximum of 406.4mm (16 in.) wide. See "Forms Design Reference Guide for Printers", GA24-3488, for forms design considerations. 288 character Universal Character Set Buffer is standard (for mdls 1 and 11 only).

Print Format Compatibility: Compatibility Options for 3270 Data Stream (Non-SCS) Operation mdls 3 and 13 only. Differences in the functional responses of the 3287, 3289 and 3262 result in differences in the format of the printed output. A no-charge RPQ MM4370 can be ordered for print format compatibility when compared to a 3287 or 3289 printer. For additional information refer to the "3262 mdl 3 or 13 Component Description Manual", GA24-3741-1" or the DP-Hone/Smart Data Base.

Decompaction (mdls 2, 12): Provides the decompaction function associated with the receipt of a compaction data stream whereby a pair of consecutive alphameric characters is represented by a single transmission byte. The function is dependent upon receipt from the host of a decompaction table corresponding to the compaction table used by the host programming in creating the compacted data stream. The master character count may range from 3 to 16.

Decompression (mdls 2, 12): Provides expansion of compressed data streams whereby a two byte identifying sequence is substituted for each occurrence of two or more consecutive duplicate characters and one byte is substituted for each occurrence of two or more consecutive blank characters.

Performance Considerations: Actual printer throughput is dependent upon operational and programming characteristics. The following factors must be considered in determining actual throughput:

- System Configuration
 - Loop speed (mdls 2 and 12 on S/8100)
 - Transmission speeds (mdls 2 and 12 on 3777-4)
 - Multiple device operational loads
- Host Link Communications Facility
 - Communication protocol (BSC/SDLC)
 - Transmission line speed
 - Compression and compaction characteristics
- Application Processing
 - Data organization
 - Output format: skipping --- spacing --- print line length
 - Character set size of print band application program.

Mdl 3 and 13 Performance Considerations: In addition to the performance considerations listed above, the 3262 mdls 003 and 013 are sensitive to data stream characteristics. Optimum throughput can be achieved using SN LU-1-Datastreams. Significantly less than maximum rated speed may be experienced when using BSC or DSC (SNA-LU-3) Datastreams. Refer to the "Component Description Manual" for additional details.

The FIVE3270 SE aid is available to estimate printer performance for the particular environment in which the mdls 3 and 13 will be installed. Use of the aid is essential for understanding the effects of transmission speed, data stream protocol, and message sized on printer throughput.

Print Bands: Operator-interchangeable print bands are available which offer the following character sets and maximum rated speeds:

	Maximum Rated Speed (lpm)	
	Mdl 1,2,3	Mdl 11,12,13
48-char. set	650	325
64-char. set	467	230
96-char. set		
(94 printable)	364	180
116/128-char. set	253	125

A general-purpose optimized 63-character set print band is available which can provide speeds of up to 310 lpm on the mdls 11 and 12 and up to 625 lpm on the mdls 1 and 2. The optimized 63-character print band can be used on the mdls 003 and 013. However, performance may be limited by system configurations and other factors described under Performance Considerations. See "Component Description Manual", GA24-3741.

Two special 128-character Distributed Office print bands are available on mdls 2 and 12:

- North American-English US, Canadian French.
- Iberian-Brazil, Spanish Speaking.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities" below.

Customer Responsibilities: The customer is responsible for:

- Adequate site, system and other vendor preparation.
- Receipt at the customer's receiving dock, unpacking and placement of the 3262.
- Physical setup, connection of cables, switch settings and checkout, with the exception that the CE will connect the printer communication cable to the 3777-4.
- Notify IBM of intent to relocate and follow IBM instructions for relocation.
- Use and follow the problem determination procedures and fill out trouble report prior to calling IBM for service.
- Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
- Replacing a worn print band with the spare provided and rotating the platen per the instructions provided with the printer, and order another spare band.
- Procurement, installation, and management of the loop network (see "Accessories").

SPECIFY

Unless otherwise indicated, these specify features are only available at time of manufacture.

- (Canada only > The basic machine is shipped with the following: Voltage 120V, AC, 1-phase, 3-wire, 60 Hz, power plug non-locking, power cable length 4.3m (14 ft).
- The following options may be specified: #9081 for locking plug, #9080 water tight plug (required where connection is beneath raised floor) or #9511 for 1.8m (6 ft) cable length. <)
- (Except Canada > Power (AC, 1-phase): Specify one of the following:

50 Hz	60 Hz
100V #2804	100V #2730
110V #2805	110V #2822
200V #2806	120V #9911*
220V #2813	127V #2823
230V #2821	
240V #2801	

* Includes 115V.

For Japan, specify #9890 for locking plug or #9891 for non-locking plug for voltages under 200V. For other countries, a power plug is selected which matches the most commonly used power supply in each country. If an exception to the above is required, a Country RPQ may be initiated.

Note: If a power supply, not the most common, is specified, and it is incompatible with the power plug commonly supplied, a power cord without a plug will be shipped unless the country RPQ referenced above is initiated. <)

- Power Cord: If standard 4.3m (14.0 ft) power cord is not required, specify #9511 for 1.8m (6.0 ft) power cord.
- Color: Background color is pearl white. One color accent panel must be specified: #9060 for willow green, #9061 for garnet rose, #9062 for sunrise yellow, #9063 for classic blue, #9064 for charcoal brown, #9065 for pebble gray.
- Machine Nomenclature: One must be specified.

Brazilian	#2933
Canadian French	#2935
English US	#2924
Japanese	#2930
Spanish	#2931

- Cables: For the mdls 1, 3, 11 and 13, the customer is responsible for procurement, maintenance and installation of signal cable. See Accessories for ordering instructions. For the mdls 2 and 12, a 1.8m (6.0 ft) communication cable (Loop Station Connector (LSC) cable) is provided as standard for attachment to a direct attached or data link attached loop. If the standard length cable is not desired, specify #9405 for a 4.3m cable.
- Print Band Character Set: Select one band only by specifying one number from Group A (character set), one number from Group B (language) and one number from Group C (character set height). When printing 8 lpi, 2.0mm (0.079 in.) character height is recommended. Two print bands (same specify code) will be shipped with the printer. The second band will be a spare for use by the customer as a back-up. When the customer installs this back-up band, a replacement should be ordered via an MES. The platen must be rotated periodically as described in the operators manual provided with the printer. The customer will be billed at the current accessory band price. If the customer desires to have CE replace or install the print band, or rotate the platen, the CE time involved will be billed to the customer. See Print Band, Add'l, in "Accessories" if more than one band is required.

Group A

Specify Number	Character Set
#2767	48-character set EBCDIC
#2765	48-extended character set (52 graphics)
#2768	64-character set EBCDIC
#9523	63-character set EBCDIC (optimized)
#2770*	96-character set EBCDIC (94 printable)
#2725*	128-character set text (mdls 3 and 13 only)
#2729*	116-character set (Canadian French only mdls 3 and 13 only)
#9529*	North American-128-character Distributed Office (mdls 2 and 12 only)
#0993*	Iberian-128-character Distributed Office (mdls 2 and 12 only)

International Language Code is not available on the 128-character set print bands for mdls 002 and 012.

* Available only with 2.4mm (0.095 in.) character height #9950.

Group B

Specify Number	Language
#2950	International
#2955	Japanese English
#2956	English US
#2961	Spanish Speaking
#2973	Japanese Katakana
#2975	Brazilian
#2977	Canadian French

Group C

Specify Number	Character Set Height
#9950	2.4mm (0.095 in.)
#9951*	2.0mm (0.079 in.)

* Recommended for printing 8 lpi (25.4mm).

If Spanish N (with Tilde) printing capability is desired on the print band provided with the 3262, order #2961 and one number from Group A (character set) and one number from Group B (character set height).

Group A

Specify Number	Character Set
#2767	48-Character Set
#2768	64-Character Set
#2770	96-Character Set
#2779*	116-Character set (Canadian French only)
#2873*	128-Character set (Japanese Katakana only)

* Available only with 2.4mm (0.095 in.) character height (#9950).

Group B

Specify Number	Character Set Height
#9950	2.4mm (0.095 in.)
#9951*	2.0mm (0.079 in.)

* Recommended for printing 8 lpi (25.4mm).

Character Print Operations: For mdls 3 and 13 only, the basic machine is shipped for use with a program which assumes the buffer size to be 1,920 bytes while using Erase/Write Alternate Command. Specify the following options only to alter the basic machine:

- #9200 - 960-Character Print Operation: For use with a program which assumes the buffer size is 960 bytes while using Erase/Write Alternate Command.
- #9202 - 2,560-Character Print Operation: For use with a program which assumes the buffer size is 2,560 bytes while using Erase/Write Alternate Command.
- #9203 - 3,440-Character Print Operation: For use with a program which assumes the buffer size is 3,440 bytes while using Erase/Write Alternate Command.
- #9204 - 3,564 Character Print Operation: For use with a program which assumes the buffer size is 3,564 bytes while using Erase/Write Alternate Command. Limitations: This specify code is not valid when the 3262 mdls 3 or 13 is attached to a 3274 Display Controller with Configuration Support A #9110.

Note: To provide compatibility with programs written for 3271/3272 using Erase/Write Command, #9200 provides 480-character print operation. Specify #9202, #9203 and #9204 provide 1,920-character print operation. Allowable usage in SNA character string of the full buffer varies according to the control unit (3274 or 3276) to which the printer is attached and to programming consideration. See "IBM Information Display Component Description", GA27-2749. Copy operation from larger screen size display to smaller printer buffer is not accepted.

SPECIAL FEATURES

Audible Alarm Feature (#1090): Audibly notifies the operator that manual intervention or problem determination is required. On mdls 2, 3, 12 and 13, the alarm sounds when the printer receives the SCS "Bell Code" or when the "Check Indicator" goes on. On mdls 1 and 11, the alarm is under printer control and is activated only when the "Check Indicator" is turned on. A switch on the operator's panel can disable the alarm. Maximum: One. Field Installation: Yes.

OCR Print Feature (#5450): Provides a manual selection for OCR print applications.

Language Code	OCR-AON	OCR-BON
#2955	No	Yes
#2956	Yes	Yes
#2961	Yes	No
#2973	No	Yes

One of the following OCR bands (numerics only) must also be specified.

- #0901 OCR-AON 48 Character Set (1)
- #0902 OCR-BON 48 Character Set (1)
- #0903 OCR-BON 128 Katakana Set (1) (2)

Note(s):

1. Non-OCR characters are 2.4mm (0.095 in.) in height.
2. Available only for Japanese #2973

Two OCR print bands (OCR numerics and specials only) will be shipped with #5450, in addition to the bands shipped with the basic printer. The second band will be a spare for use by the customer for backup. When the customer installs the backup band, a replacement should be ordered via an MES, billing, warranty and ordering additional bands is the same as for non-OCR bands shipped with the printer. Field Installation: Yes.

MODEL CONVERSIONS

Model 11 to a mdl 1, mdl 12 to a mdl 2, and mdl 13 to mdl 3 are field installable.

ACCESSORIES

Cables: IBM shielded twisted-pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted-pair Cable: For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", (GA27-3361). For pricing and ordering information, refer to the System Supplies operation within your country.

Coaxial Cable: For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual - Physical Planning", GA27-2787 and "Coaxial Cable and Accessories Manual", GA27-2805.

Item Number	Description
Assm 2577672	Cable Assembly In-Door
Bulk 0323921	Coax Wire (2)
P/N 1836418	Connector Kit (2)
Assm 1833108	Cable Assembly Out-Door
Bulk 5252750	Coax Wire (3)
P/N 1836419	Connector Kit (3)
P/N 1833104	Station Protector Kit, Carbon (5)
P/N 2621414	Modification Kit (4)
P/N 1833106	Station Protector Attachment Kit (6)
P/N 1833104	Station Protector Kit, Carbon (5)
P/N 5252772	Station Protector Element Carbon (7)
P/N 5252643	Adapter (8)
P/N 1830818	Station Protection Kit, Gas (5)
P/N 5252899	Station Protector Element, Gas (7)

Notes:

- Order the above items via MES from Poughkeepsie. Allow a lead time of 120 days.
- Coax wire and one connector kit (includes two connectors #1836446) required for each indoor cable assembly.
- Coax wire and one connector kit (includes two connectors #1836447) required for each outdoor cable assembly.
- Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
- Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.

- Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
- Replacement station protector elements.
- Use to join two #2577672 or two #1833108 cable assemblies together.

Print Band, Add'l: Additional print bands permit the customer to print more than one character set and/or language. Can be used interchangeably with the band provided with the machine. OCR bands are available for printers with OCR feature #5450, and for language codes #2755, #2756, #2757, #2758, #2761, #2762, #2763, #2764, #2773, or #2788. The specified languages for OCR must be the same as specified for the bands ordered with the basic machine. When ordering, order one feature for character set size (Table A), one feature code for language (Table B), and one feature code for character set height (Table C). Order via MES. Only one band per MES. Installation and replacement of these print bands is the customer's responsibility. If the customer desires to have Customer Engineering replace or install the print band, the CE time will be billed to the customer. Additional 128-character distributed office print bands are available for countries as described on page M3262.1.

DEC 86

SUPPLIES

Ribbons: A black ribbon, P/N 7819690, or equivalent, is required.
An OCR ribbon P/N 7032877 or equivalent is required with OCR feature #5450.

3262 LINE PRINTER MODEL 5

PURPOSE

Printer output for attachment to a processor channel.

MODEL 5

Model 5 005

Printer output unit for 4300 Processors, all Virtual Storage S/370 (except 155II or 165II), 3031, 3032, 3033, 3081, 3083, 3084, 3090 or 9370 Processors.

Limitations

1. Only pinfed, continuous forms can be used.
2. Both edges of the forms must be engaged by the forms tractor pin feed.
3. No staples are permitted in the areas exposed to the interchangeable print band.
4. Printer operation and print quality vary with paper and number of copies. Form sets of more than four parts (and one part with 128 character text print bands) should be tested under operating conditions to verify that results are satisfactory. Maximum forms thickness is 0.51mm (0.020 inch).
5. Multiple-part forms are not recommended for OCR printing. The print quality of the top sheet is affected by the underlying sheets. Under no circumstances should the copy sheets be used for optical scanning. For best results, use in single-part forms for OCR printing. OCR forms utilizing other papers should be tested for satisfactory results with user requirements. When reading 3262 documents on the 3886, reread on reject capability and 3211/5211 Compatibility (#9701) should be used on the 3886. OCR printing is limited to controlled DP room environment. The OCR feature #5450 is a prerequisite for OCR Applications.

Maximum: The number of 3262 mdl 5s that can be attached is limited only by the number of control unit positions available on the system channel. Channel loading and system configuration may affect printer performance.

Prerequisites: An available control unit position on a system channel.

HIGHLIGHTS

- 132 print positions are standard.
- Horizontal spacing is 10 characters per 25.4mm.
- A fine horizontal vernier adjustment is provided on the mdl 5 to allow the operator to horizontally position printed characters in predetermined print positions.
- The maximum amount of movement is the width of one and one half print positions 3.8mm (0.150 inch) at 10 characters per 25.4mm (inch).
- Vertical spacing is 6 or 8 lines per 25.4mm (inch) under system control.
- Forms skipping and spacing are program controlled.
- The forms carriage is a single speed unit allowing skipping up to 508mm (20 inches) per second.
- Continuous forms are fed by a forms tractor, which accepts forms of up to a maximum of 406.4mm (16 inches) wide. See

"Forms Design Reference Guide for Printers", GA24-3488, for forms design considerations.

Performance Considerations: Actual printer throughput is dependent upon operational and programming characteristics. The following factors must be considered in determining actual throughput:

- System Configuration
- Application Processing
 - Data organization
 - Output format:
 - skipping -- spacing -- print line length
 - Character set size of print band application program.

Programming Support: For 3262 mdl 5 printers that are shipped prior to the General Availability dates of MVS/SP Version 1 support of the 3262-5, a no-charge RPQ S00538 must be ordered via MES and installed to operate on a MVS/SP Version 1 system. RPQ S00538 activates the mode selector switch so that in addition to system generating the 3262 mdl 5 printer as a 3262 mdl 001 and 011 for DOS/VSE, VM/SP and OS/VS1, it can be system-generated as a 4248 printer for MVS/SP Version 1. 3262 mdl 5 printers that are shipped after the MVS/SP Version 1 General Availability dates will operate in either mode and will not require an RPQ.

Print Bands: Operator interchangeable print bands are available which offer the following character sets and nominal speeds:

Nominal Speed (lpm)

48-character set	650
64-character set	466
96-character set	363
116/128-character set	252

A general purpose optimized 63-character set print band is available which can provide speeds of up to 625 lpm. The expected performance of the 63-character optimized band is not determinable unless sample data streams are printed. It is possible that the performance could be less than the 64-character band if the low frequency occurring characters on the 63-character band are used at a higher rate.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities" below.

Customer Responsibilities:

The customer is responsible for:

1. Receipt at the customer's receiving dock, unpacking and placement of the 3262.
2. Notify IBM of intent to relocate and follow IBM instructions for relocation.
3. Use and follow the problem determination procedures and fill out Trouble Report Form prior to calling IBM for service.
4. Packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
5. Replacing a worn print band with the spare provided and ordering another spare band.
6. Rotating the platen per the instructions provided with the printer. The special platen for OCR cannot be rotated when the OCR feature #5450 is installed.

Publications: GC20-0001

SPECIFY

Unless indicated otherwise, these specify features are only available at time of manufacture.

- (Canada only) The basic machine is shipped with 120V, AC, 1-phase, 3-wire, 60 Hz, watertight power plug (Russell and Stoll). Power cord length is 4.3m (14 foot). If a 1.8m (6 foot) power cord is desired, specify #9986. <
- (Except Canada) Power (AC, 1-phase): Specify one of the following:

50 Hz		60 Hz	
100V	#2804	100V	#2730
110V	#2805	110V	#2822
200V	#2806	120V	#9911*
220V	#2813	127V	#2823
230V	#2821		
240V	#2801		

* Includes 115V

- Power Cord: If standard 4.3 meter (14 foot) power cord is not required, specify #9986 for 1.8 meter (6 foot) power cord. <
- Color: Will be pearl white and accent covers will be pebble gray.
- Machine Nomenclature: One must be specified.

Brazilian	#2933	Japanese	#2930
Canadian French	#2935	Spanish	#2931
English US	#2924		

- Print Band Character Set: Select one band only by specifying one number from Group A (character set size), one number from Group B (language) and one number from Group C (character set height). When printing 8 lpi, 2.0mm (0.079") character height is recommended. Two print bands (same specify code) will be shipped with the printer. The second band will be a spare for use by the customer as a backup. When the customer installs this backup band, a replacement should be ordered via an MES. The customer will be billed at the current accessory band price. If the customer desires to have Customer Engineering replace or install the print band, or rotate the platen, the CE time involved will be billed to the customer. See "Print Band, Add'l" in Accessories section if more than one band is required.

Group C

Specify Character Set Height

#9950	2.4mm (0.095")
#9951*	2.0mm (0.079")

* Recommended for printing 8 lines per 25.4mm (inch)

If Spanish N (with Tilde) printing capability is desired on the print band provided with the 3262, order #2961 and one number from Group A (character set size) and one number from Group B (character set height).

Group A

Specify Character Set Size

#2767	48-Character Set
#2768	64-Character Set
#2770*	96-Character Set
#2779*	116-Character set (Canadian French only)
#2873*	128-Character set (Japanese Katakana only)

* Available only with 2.4mm (0.095") character height (#9950).

Group B

Specify Character Set Height

#9950	2.4mm (0.095")
#9951*	2.0mm (0.079")

* Recommended for printing eight lines per 25.4mm (inch).

SPECIAL FEATURES

Audible Alarm Feature (#1090): Audibly notifies the operator that manual intervention or problem determination is required. The alarm is under printer control and is activated only when the "Check Indicator" is turned on. A switch on the operator's panel can disable the alarm. Maximum: One. Field Installation: Yes.

OCR Print Feature (#5450): Provides a manual selection for OCR print applications. OCR feature #5450 is available for the following language codes only and one code must be specified. The specified OCR language code must be the same as specified for the bands ordered with the basic machine.

Language Code	OCR-AON	OCR-BON
#2955	No	Yes
#2956	Yes	Yes
#2961	Yes	No
#2973	No	Yes

One of the following OCR bands (numerics only) must also be specified.

- #0901 OCR-AON 48-Character Set (1)
- #0902 OCR-BON 48-Character Set (1)
- #0903 OCR-BON 128-Katakana Set (1) (2)

Notes:

1. Non-OCR characters are 2.4mm (0.095") in height
2. Available only for Japan #2973

Two OCR print bands (OCR numerics and specials only) will be shipped with #5450, in addition to the bands shipped with the basic printer. The second OCR band will be a spare for use by the customer for backup. When the customer installs the backup band, a

replacement should be ordered via an MES. Billing, warranty and ordering additional bands are the same as for non-OCR bands shipped with the printer. Field installation: Yes.

Office (mdls 2 and 12 only)
Iberian 128 Distributed Office #0893
(mdls 2 and 12 only)

3268 PRINTER MODEL 1

THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT

Features, RPQs, and Accessories will continue to be available.

PURPOSE

Provides hard copy output for the 8100 Information System via Loop attachment, printing at a maximum speed of 340 cps.

MODEL 1

Model 1 001: (NO LONGER AVAILABLE)

Prerequisites: For direct attached loop operation: #4830 or #4835 on the 8101, 8130, or 8140. For data link attached loop operation: 3842 or 3843 Loop Control Unit.

Customer Setup (CSU): The 3268 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility.

HIGHLIGHTS

The 3268 mdl 1 consists of control functions, printer and indicator lights in one integrally designed pedestal unit. 132 printer positions are standard. Horizontal spacing is 10 characters per 25.4 mm (inch) and 16.7 characters per 25.4mm (inch). Selection of horizontal spacing is via a manual switch on the operator panel or via data stream control. Vertical spacing is 3, 4, 6 or 8 lines per 25.4mm (inch). The printer operates in SCS (SNA LU1) mode, which provides for customer program definable horizontal and vertical formatting. APL/Text, Dual Case Operation, Audible Alarm and Cancel Print are provided as standard functions.

Continuous forms are fed by a forms tractor which accepts forms up to 406.4mm (16 in.) wide. Up to 6-part forms may be used. 5- and 6-part forms should be tested on an individual basis for acceptable feeding, registration and print quality.

See "Forms Design Reference Guide for Printers", GA24-3488, for forms design considerations.

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done by the use of problem determination and recovery routines and procedures that can be understood and used by the operator. See "Customer Responsibilities", below.

Performance Considerations: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration, line transmission speed, loop speed, output format, and program application processing must all be considered in determining actual throughput. Refer to "IBM 3268 Printer Component Description", GA27-3267, for more detail.

Customer Responsibilities: The Customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at the customer's receiving dock, unpacking and placement of the 3268.
3. Physical setup, connection of cables, switch settings and checkout.
4. Notifying IBM of intent to relocate and follow IBM instructions for relocation.
5. Using and following the problem determination procedures and filling out the trouble report prior to calling for IBM Service.

6. Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
7. Ordering and replacing a worn printhead and insuring that a functional printhead is available for use by a service personnel. The customer must be advised that on his request, can provide on-site installation of the customer-supplied printhead (P/N 7033524) on a per-call billable basis.
8. Procurement, installation, and maintenance of the loop network.

Communication Cable: A communication cable (Loop Station Connector (LSC) cable) is provided as standard for attachment to a direct attached or data link-attached loop. Standard cable is 4.3m (14 ft) in length.

Bibliography: See "KWIC Index", GA20-1621, or specific system bibliography.

SPECIFY

- Power (AC, 1-phase): Specify one of the following:

50 Hz		60 Hz	
100V	#2804	100V	#2730
110V	#2805	110V	#2822
200V	#2806	120V	#2800
220V	#2813	127V	#2823
230V	#2821		
240V	#2801		

Note: A 2.8m power cord and plug are shipped from the plant of manufacture. The 3-digit country code on the DPMO used to select a power cord with a plug which is most commonly used in that country. If an exception to the above is required, a country RPQ may be initiated. For Canada, the default is a non-locking plug; specify #9890 for a locking plug. For Japan the default is a locking plug; specify #9891 for a non-locking plug.

If a power supply, not the most common, is specified and it is incompatible with the power plug commonly supplied, a power cord without a plug will be supplied unless the country RPQ referenced above is initiated.

- Language: National Use Character Sets are selected via the operator panel. APL/Text may be selected via the SCS data stream.

Character Sets which may be selected include:

Brazilian
Canadian Bilingual
English UK
English US
French
German
German (Alternate)
International
Italian
Japanese English
Spanish
Spanish (Alternate)
Spanish Speaking

For Katakana, specify #0173 for Katakana plus APL/Text or #2773 for National Use Character Set (selected via operator panel) plus Katakana.

- Machine Nomenclature: Available at time of manufacture only.

MACHINES

Nomenclature default is as follows:

Argentina - Spanish Speaking
Canada - Canadian Bilingual
France - French
Germany - German
Italy - Italian
Japan - Japanese
Mexico - Spanish Speaking
Peru - Spanish Speaking
Spain - Spanish Speaking
Venezuela - Spanish Speaking

All other countries default to English. Alternate nomenclature may be chosen by specifying one of the following:

English #2924	Italian #2932
French #2928	Japanese #2930
German #2929	Spanish Speaking #2931

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order #4450. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. This accessory is a one-shelf forms stand. See "Forms Design Reference Guide for Printers", GA24-3488, for forms design and stacking considerations.

For field installation: Forms Stand: P/N 8678375 or Feature #4450

SUPPLIES

Ribbon (P/N 7032821): A Black Ribbon Cartridge, P/N 7032821 or equivalent, is required. The ribbon cartridge has a print life* of five million characters. Replacement printheads and ribbon cartridges are available for purchase from IBM.

* Ribbon print life is derived from IBM - conducted tests. Ribbon life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and paper quality.

Printhead (P/N 7033524): The life expectancy** of the printhead is 300 million characters.

** Printhead life expectancy is derived from IBM - conducted tests. Printhead life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and ribbon used.

3268 PRINTER MODEL 2

Features, RPQs, and Accessories will continue to be available.

PURPOSE

Provides hard copy output for the 3270 System via a 3274, 3276 or 8775, a 4331 Processor via Display/Printer Adapter, 4361 Display Printer Adapter or Workstation Adapter, the 3081/3083/ 3084 via the 3082 Processor Controller, the 4341 via a console position, and the 9370 Processor via Workstation Subsystem Controller, printing at a maximum speed of 340 cps.

MODEL 2

Model 2 002: (NO LONGER AVAILABLE)

Prerequisites: The device adapters required for attachment are:

- 3274: Available Category A terminal port.
- 3276: Available port or added #3255, #3256, or #3257.
- 4361: Available position on Display Printer Adapter and Workstation Adapter (APL/Text, SCS and Character Print Operation specifies are not supported).
- 4331: Available position on Display/Printer Adapter. (APL/Text, SCS and Character Print Operation specifies are not supported on the 4331.) Specify Character Print Oper. code #9841 must be ordered.
- 4341/4381: Available console position on 4341. (APL/Text, SCS and Character Print Operation specifies are not supported on the 4341.)
- 3081/3083/3084: Attaches via 3082 Processor Controller.
- 3694: Attaches via the 3694 Device Cluster Adapter #3101.
- 8775: Printer Attachment Feature (#5580).
- 9370: Attaches via Workstation Subsystem Controller (#6020).

Customer Setup (CSU): The 3268 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The 3268 mdl 2 consists of control functions, printer and indicator lights in one integrally designed pedestal unit.

The printer operates in either 3270 mode (BSC or SNA LU3) or SCS (SNA LU1) mode. 132 print positions are standard. Horizontal spacing is 10 characters per 25.4mm (inch) and 16.7 characters per 25.4mm (inch). Selection of horizontal spacing is via a manual switch on the operator panel or via data stream control. Vertical spacing is 3, 4, 6 and 8 lines per 25.4mm (inch). Vertical spacing may be selected via manual switch on the operator panel or via the program when in SCS mode of operation. APL/Text, Dual Case operation, Audible Alarm and Cancel Print are provided as standard functions.

Continuous forms are fed by a forms tractor which accepts forms up to 406.4mm (16 in.) wide. Up to 6-part forms with a total thickness of 0.457mm (0.018 in.) may be used. 5- and 6-part forms should be tested on an individual basis for acceptable feeding, registration, and print quality. See "Forms Design Reference Guide for Printers", GA24-3488, for forms design considerations.

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the cus-

tomers. This has been done by the use of problem determination and recovery routines and procedures that can be understood and used by the operator. See "Customer Responsibilities", below.

Performance Considerations: Actual printer throughput is dependent upon operational and system characteristics. Factors such as controller configuration, line transmission speed, loop speed, output format, and program application processing must all be considered in determining actual throughput. Refer to "IBM 3268 Printer Component Description", GA27-3267, for more detail.

The FIVE3270 SE Aid is available to estimate printer performance for the particular environment in which the 3268 mdl 2 will be installed. Use of this aid is essential for understanding the effects of transmission speed, data stream protocol, and message sizes on printer throughput.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at the customer's receiving dock, unpacking, and placement of the 3268.
3. Physical setup, connection of cables, switch settings and checkout.
4. Notifying IBM of intent to relocate and following IBM instructions for relocation.
5. Using and following the problem determination procedures and filling out the trouble report prior to calling for IBM service.
6. Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
7. Contact CE to make cable connection of IBM CSU units to IBM non-CSU units where customer access areas are not provided.
8. Ordering and replacing a worn printhead and insuring that a functional printhead is available for use by service personnel. The customer must be advised that on his request, CE can provide on-site installation of the customer-supplied printhead (P/N 7033524) on a per-call billable basis.

Publications: See "KWIC Index", GA20-1621, or specific system bibliography.

SPECIFY

- Power (AC, 1-phase): Specify one of the following:

50 Hz		60 Hz	
100V	#2804	100V	#2730
110V	#2805	110V	#2822
200V	#2806	120V	#2800
220V	#2813	127V	#2823
230V	#2821		
240V	#2801		

Note: A 2.8 meter power cord and plug are shipped with each machine from the plant of manufacture. The 3-digit country code on the DPMO Sheet is used to select a power cord with a plug which is most commonly used in that country. If an exception to the above is required, a country RPQ may be initiated.

For Canada, the default is a non-locking plug specify #9890 for a locking plug. For Japan, the default is a locking plug; specify #9891 for a non-locking plug.

If a power supply, not the most common, is specified, and it is incompatible with the power plug commonly supplied, a power cord without a plug will be supplied unless the country RPQ referenced above is initiated.

- Cables: See "Accessories" and "IBM Information Display System Installation Manual - Physical Planning", GA27-2787, for cable details.
- Language: National Use Character Sets are selected via the operator panel. APL/Text may be selected via the SCS data stream.

Character Sets which may be selected include:

Brazilian
Canadian Bilingual
English UK
English US
French
German
German (Alternate)
International
Italian
Japanese English
Spanish
Spanish (Alternate)
Spanish Speaking

For Katakana: #0173 for Katakana plus APL/Text or #2773 for Katakana plus National Use Character Set (selected via operator panel).

- Machine Nomenclature: Available at time of manufacture only. Nomenclature default is as follows:

Argentina - Spanish Speaking
Canada - Canadian Bilingual
France - French
Germany - German
Italy - Italian
Japan - Japanese
Mexico - Spanish Speaking
Peru - Spanish Speaking
Spain - Spanish Speaking
Venezuela - Spanish Speaking

All other countries default to English. Alternate nomenclature may be chosen by specifying one of the following:

English	#2924	Italian	#2932
French	#2928	Japanese	#2930
German	#2929	Spanish Speaking	#2931

- Compatibility Options for the 3270 Data Stream (non-SCS) Operation: Operation of the 3268 mdl 2 is defined as standard. Alternate operation may be specified. Note: Standard 3268 mdl 2 operation is the same as the standard 3287 mdls 1 and 2.

Field Installation: Yes. Contact local CE Branch Office for installation.

Carriage Return (CR) at MPP Plus 1

Standard: An automatic New Line (NL) is executed at MP plus 1, then the CR is executed. The next print position will be the first print position of the next line.

#9501: No automatic New Line (NL) is executed. The CR is executed at MPP plus 1. The next print position will be the first print position of the current line. Compatible with 3287 RPQ S30219.

New Line (NL) at MPP Plus 1

Standard: An automatic New (NL) is executed at MPP plus 1, then the NL is executed. The next print position will be the first print position of the current line plus 2.

#9502: No automatic New Line (NL) is executed. The NL is executed at MPP plus 1. The next print position will be the first

print position of the next line. Compatible with 3287 RPQ S30219.

Form Feed Followed by Data

Standard: The form will be skipped to the first line of the next form and the next print position will be the second print position of that line.

#9503: The form will be skipped to the first line of the next form and the next print position will be the first print position of that line. Compatible with 3289 RPQ S30220 - SC3752.

Form Feed is Last Character in Print Order

Standard: An automatic new Line (NL) is executed after the form feed is completed. The next print position will be the first print position of the second line on the next form.

#9504: The automatic New Line (NL) is suppressed at completion of the form feed. The next print position will be the first print position of the first line of the next form. Compatible with 3287 RPQ S30219 - SC3749.

Null Suppression

Standard: If an entire print Line contains no printable characters, no New Line (NL) is performed. Space (X'40') is considered a printable character. Next print position is first print position of current line.

#9505: Prints all null lines as a blank line and performs a new Line (NL). Next print position is first print position of next line. Compatible with 3287 RPQ ML0442 - SC 3741 or 3287 RPQ MK3988 - SC3741.

Form Feed (FF) Command Position

Standard: Execute a Form Feed (FF) command only if it occurs at the first print position in a line or at MPP plus 1. Treat Form Feed (FF) at other positions as spaces.

#9506: Execute a Form Feed (FF) command whenever it is encountered in the Data Stream. Compatible with 3287 RPQ ML0442 - SC3739 or 3287 RPQ MK3988 - SC3739.

Automatic Function at End of Print Buffer

Standard: An automatic New Line (NL) is executed following a print order. Next print position is first print position of the next line.

#9507: An automatic Form Feed (FF) is executed following a print order. Next print position is first print position of first line of next form. Compatible with 3287 RPQ MK3988 - SC3740.

- Character Print Operation: The basic machine provides for operation with a program which requires a print buffer of 1,920 bytes while using Erase/Write Alternate Command. For other buffer size requirements, specify as listed below.

Field Installation: Yes. Contact local CE Branch Office for installation.

#9521 (960-character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

#9523 (2,560-character print operation) for use with a program which requires a printer buffer size of 2,560 bytes while using Erase/Write Alternate Command.

#9524 (3,440-character print operation) for use with a program which requires a print buffer size of 3,440 bytes while using Erase/Write Alternate Command.

#9525 (3,564-character print operation) for use with a program which requires a print buffer size of 3,564 bytes while using Erase/Write Alternate Command. Limitation: This specify code is not valid when the 3268 is attached to a 3274 with Configuration Support A (#9110).

- #9181 - Provides the following:

MACHINES

Up to 220 characters per line at 16.7 characters per inch.

Set print density control code support via data stream.

Save/restore formats structured field - provides for saving the current printer format parameters and restoring the previously saved parameters.

Query list structured field - provides capability for the application to selectively query the printer.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order #4450. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. This accessory is a 1-shelf forms stand. See "Forms Design Reference Guide for Printers", GA24-3488, for forms design and stacking considerations.

For field installation: Forms Stand: P/N 8678375 or Feature #4450

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation in your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual - Physical Planning", GA27-2787, and "Coaxial Cable and Associated Manual", GA27-2805.

- Assm 2577672 Cable Assembly In-Door
- Bulk 0323921 Coax Wire (Note 1)
- P/N 1836418 Connector Kit (Note 1)
- Assm 1833108 Cable Assembly Out-Door

- Bulk 5252750 Coax Wire (Note 2)
- P/N 1836419 Connector Kit (Note 2)
- P/N 1833104 Station Protector Kit, Carbon (Note 4)
- P/N 2621414 Mod. Kit (Note 3)
- P/N 1833106 Station Protector Attachment Kit (Note 5)
- P/N 5252772 Station Prot. Element Carbon (Note 6)
- P/N 5252643 Adapter (Note 7)
- P/N 1830818 Station Protection Kit, Gas (Note 4)
- P/N 5252899 Station Protector Element, Gas (Note 6)

Order the above items via MES from Poughkeepsie. Allow a lead time of 120 days.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N 1836446) required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N 1836447) required for each outdoor cable assembly.
3. Customers replacing 2260s may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N 2577672 or two P/N 1833108 cable assemblies together.

SUPPLIES

Ribbon (P/N 7032821): A Black Ribbon Cartridge, P/N 7032821 or equivalent, is required. The ribbon cartridge has a print life* of five million characters. Replacement printheads and ribbon cartridges are available for purchase from IBM.

* Ribbon print life derived from IBM - conducted tests. Ribbon life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings and paper quality.

Printhead (P/N 7033524): The life expectancy** of the printhead is 300 million characters.

** Printhead life expectancy is derived from IBM - conducted tests. Printhead life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and ribbon used.

3268 COLOR PRINTER MODEL 2C

Features, RPQs, and Accessories will continue to be available.

PURPOSE

Provides hard copy output in black and color by using replaceable ribbon cartridges at a maximum speed of 340 cps. Attaches to a 3270 Information Display System via a 3274 or a 3276, a or 4331 via a port on the Display/Printer Adapter, Display Printer Adapter or Workstation Adapter and a 4341 via a console position, and 9370 via Workstation Subsystem Controller.

MODEL 2C

Model 2C C02: (NO LONGER AVAILABLE)

Prerequisites:

- Attachment Required on Control Unit.
- 3274 Available Category A terminal port.
- 3276 (1) Available port or added #3255, #3256 or #3257.
- 4331 (2) Available port on Standard Display/Printer Adapter.
- 4341 (2) Available console position on 4341.
- 4361 (2) Available port on the Display Printer Adapter or Workstation Adapter.
- 9370 Workstation Subsystem Controller (#6020)

Notes:

1. Programmed Symbols (PS) is not supported on 3276.
2. PS, APL/Text, SCS and Character Print Operation specifications are not supported on 4331 or 4341.

Customer Setup (CSU): The 3268-2C is designed as Customer Setup, thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

The unit consists of control functions, printer and indicator lights in one integrally designed pedestal unit. The printer operates in either 3270 mode (BSC or SNA LU3) or SCS (SNA LU1) mode. 132 print positions at 10 characters per 25.4mm (inch) and 220 print positions at 16.7 characters per 25.4mm (inch) are standard. Selection of horizontal spacing (10 cpi or 16.7 cpi) is via a manual switch on the operator panel or via the program when in SCS mode of operation. Vertical spacing is 3, 4, 6 and 8 lines per 25.4mm (inch). Vertical spacing may be selected via manual switches on the operator panel or via the program when in SCS mode of operation. APL/Text, Dual Case operation, Audible Alarm, Cancel Print, Extended Character Set Adapter and PS are provided as standard functions.

PS may be configured either as six single-plane 190-symbol sets whose shapes and codes are customer definable and which allow printing within a character location a single selected color (green, blue, red or black) or as three single-plane 190-symbol sets and one triple-plane 190-symbol set. The triple-plane symbol set allows printing of up to four colors within a single character position. Selection of the PS configuration is via the operator panel. Prerequisite for use of PS is attachment to a 3274 with Configuration Support C or D. Prerequisite for use of PS on 4361 is the Workstation Adapter.

Continuous forms are fed by a forms tractor which accepts forms up to 406.4mm (16 in.) wide. Up to 6-part forms with a total thickness of 0.457mm (0.018 in.) may be used. 5- and 6-part forms should be tested on an individual basis for acceptable feeding, registration,

and print quality. See "Forms Design Reference Guide for Printers", GA24-3488, for forms design considerations.

Using the replaceable multi-color ribbon cartridge, two modes of color selection (base color and extended color) may be employed. Base Color Printing is the selection of color at the field level as a function of the 3270 Data Stream protect and intensify attribute byte. The display to printer mapping is as follows:

3270 Attribute Byte	Color Displayed	Color Printed
Not Protected, Normal Intensity	Green	Black Green
Protected, Intensified	White	Green Black
Not Protected, Intensified	Red	Red Red
Protected, Normal Intensity	Blue	Blue Blue

Extended color printing is the selection of color at the character level in addition to the field level. The display to printer color mapping for extended color is:

Color Displayed	Color Printed
White	Black
Red	Red
Blue	Blue
Green	Green
Turquoise	Black (by default)
Pink	Black (by default)
Yellow	Black (by default)

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done by the use of problem determination and recovery routines, and procedures that can be understood and used by the operator. See "Customer Responsibilities" below.

Performance Considerations: Actual printer throughput is dependent upon operational and system characteristics. Factors such as control unit configuration, line transmission speed, output format, and programming application processing must all be considered in determining actual throughput.

Compared to black or monochrome printing, throughput will be reduced when printing in multi-color as a function of the number of color changes on the page due to a separate pass of the printhead for each color on a line. In addition, when printing in other than the standard character format (4 of 7 horizontal X 8 vertical dots) and using PS, the printer will print at reduced speeds. Under these conditions the printer prints unidirectionally at 147 cps. Dense printing when using PS will also lessen printer throughput. Refer to the "IBM 3268 Printer Component Description", GA27-3268, for more details.

The FIVE3270 SE Aid is available to estimate printer performance for the particular environment in which the 3268 will be installed. Use of this aid is essential for understanding the effects of transmission speed, data stream protocol, and message sizes on printer throughput.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at the customer's receiving dock, unpacking, and placement of the 3268.
3. Physical setup, connection of cables, switch settings and checkout.
4. Notifying IBM of intent to relocate and following IBM instructions for relocation.

5. Using and following the problem determination procedures and filling out the trouble report prior to calling for IBM service.
6. Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
7. Contact CE to make cable connection of IBM CSU units to IBM non-CSU units where customer access areas are not provided.
8. Ordering and replacing a worn printhead and ensuring that a functional printhead is available for use by service personnel. The customer must be advised that on his request, CE can provide on-site installation of the customer-supplied printhead (P/N 7033701) on a per-call billable basis.

Publications: See "KWIC Index", G320-1621, or specific system bibliography.

SPECIFY

- Power (AC, 1-phase): Specify one of the following:

50 Hz		60 Hz	
100V	#2804	100V	#2730
110V	#2805	110V	#2822
200V	#2806	120V	#2800
220V	#2813	127V	#2823
230V	#2821		
240V	#2801		

Note: A 2.8m power cord and plug are shipped with each machine from the plant of manufacture. The 3-digit WT country code on the DPMO Sheet is used to select a power cord with a plug which is most commonly used in that WT country. If an exception to the above is required, a country RPQ may be initiated.

For Canada, the default is a non-locking plug; specify #9890 for a locking plug. For Japan, the default is a locking plug; specify #9891 for a non-locking plug. If a power supply, not the most common, is specified and it is incompatible with the power plug commonly supplied, a power cord without a plug will be supplied unless the country RPQ referenced above is initiated.

- Cables: See "Accessories" and "IBM Information Display System Installation Manual - Physical Planning", GA27-2787, for cable details.
- Language: National Use Character Sets are selected via the operator panel.

Character Sets which may be selected include:

Brazilian
Canadian Bilingual
English UK
English US
French
German
German (Alternate)
International
Italian
Japanese English
Spanish
Spanish (Alternate)
Spanish Speaking

For Katakana: #0173 for Katakana plus APL/Text or #2773 for Katakana plus National Use Character Set (selected via operator panel).

- Machine Nomenclature: Available at time of manufacture only. Nomenclature defaults are as follows:

Argentina - Spanish Speaking

Canada - Canadian Bilingual
France - French
Germany - German
Italy - Italian
Japan - Japanese
Mexico - Spanish Speaking
Peru - Spanish Speaking
Spain - Spanish Speaking
Venezuela - Spanish Speaking

All other countries default to English. Alternate nomenclature may be chosen by specifying one of the following:

English #2924 Italian #2932
French #2928 Japanese #2930
German #2929 Spanish Speaking #2931

- Compatibility Options for the 3270 Data Stream (Non-SCS) Operation: Standard operations of the 3268 mdl 2C are described in the paragraph marked "standard". Alternate operation may be specified. Note: Standard 3268 mdl 2C operation is the same as the standard 3287 mdls 1 and 2 and 3268-2. Field Installation: Yes. Contact local CE Branch Office for installation.

Carriage Return (CR) at MPP Plus 1

Standard: An automatic New Line (NL) is executed at MP plus 1, then the CR is executed. The next print position will be the first print position of the next line.

#9501: No automatic New Line (NL) is executed. The CR is executed at MPP plus 1. The next print position will be the first print position of the current line. Compatible with 3287 RPQ S30219.

New Line (NL) at MPP Plus 1

Standard: An automatic New Line (NL) is executed at MPP plus 1, then the NL is executed. The next print position will be the first print position of the current line plus 2.

#9502: No automatic New Line (NL) is executed. The NL is executed at MPP plus 1. The next print position will be the first print position of the next line. Compatible with 3287 RPQ S30219.

Form Feed (FF) Followed by Data

Standard: The form will be skipped to the first line of the next form and the next print position will be the second print position of that line.

#9503: The form will be skipped to the first line of the next form and the next print position will be the first print position of that line. Compatible with 3289 RPQ S30220 - SC3752.

Form Feed (FF) is Last Character in Print Order

Standard: An automatic New Line (NL) is executed after the Form Feed (FF) is completed. The next print position will be the first print position of the second line on the next form.

#9504: The automatic New Line (NL) is suppressed at completion of the Form Feed (FF). The next print position will be the first print position of the first line of the next form. Compatible with 3287 RPQ S30219 - SC3749.

Null Suppression

Standard: If an entire print line contains no printable characters, no New Line (NL) is performed. Space (X'40') is considered a printable character. Next print position is first print position of current line.

#9505: Prints all null lines as a blank line and performs a New Line (NL). Next print position is first print position of next line. Compatible with 3287 RPQ ML0442 - SC 3741 or 3287 RPQ MK3988 - SC3741.

Form Feed (FF) Command Position

Standard: Execute a Form Feed (FF) command only if it occurs at the first print position in a line or at MPP plus 1. Treat Form Feed (FF) at other positions as spaces.

#9506: Execute a Form Feed (FF) command whenever it is encountered in the Data Stream. Compatible with 3287 RPQ ML0442 - SC3739 or 3287 RPQ MK3988 - SC3739.

Automatic Function at End of Print Buffer

Standard: An automatic New Line (NL) is executed following a print order. Next print position is first print position of the next line.

#9507: An automatic Form Feed (FF) is executed following a print order. Next print position is first print position of first line of next form. Compatible with 3287 RPQ MK3988 - SC3740.

Full Page on Skip Suppress

Standard: Execute an automatic form feed when the number of lines set in the maximum page length counter has been printed when operating in skip suppress mode.

RPQ S30277: Print a full page prior to automatic form feed when operating in skip suppress mode. Compatible with 3287 RPQ S30273. Full page is defined by the values of maximum page length times lines per inch (MPL)x(LPI). Note: Machines will be shipped from plant with RPQ S30277 installed.

Field Installation: Yes. Contact local CE Branch Office for installation.

Form Feed after Local Copy

Standard: An automatic New Line (NL) is executed following a print order resulting from an operator-initiated local copy if specify feature #9507 is not selected.

#9508: An automatic Form Feed (FF) is executed following a print order resulting from an operator-initiated local copy. The operator uses the print key on the display keyboard to initiate a local copy. A host-initiated local or a host direct print does not cause this form feed.

- Character Print Operation: The basic machine provides for operation with a program which requires a print buffer of 1,920 bytes while using Erase/Write Alternate Command. For other buffer size requirements, specify as listed below. Field Installation: Yes. Contact local CE Branch Office for installation.

#9521 (960-character print operation) for use with a program which requires a printer buffer size of 960 bytes while using Erase/Write Alternate Command.

#9523 (2,560-character print operation) for use with a program which requires a printer buffer size of 2,560 bytes while using Erase/Write Alternate Command.

#9524 (3,440-character print operation) for use with a program which requires a printer buffer size of 3,440 bytes while using Erase/Write Alternate Command.

#9525 (3,564-character print operation) for use with a program which requires a printer buffer size of 3,564 bytes while using Erase/Write Alternate Command.

- Base Color Print Operation: The basic machine is shipped with base color black. For base color green order (#9136). Base color is defined under "Highlights" above.

SPECIAL FEATURES (NONE)

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Forms Stand (#4450): Available on a purchase-only basis. For shipment with machine, order #4450. Provides for stacking forms after printing. For forms stacking, use of the Forms Stand is recommended. This accessory is a 1-shelf forms stand. See "Forms Design Reference Guide for Printers", GA24-3488, for forms design and stacking considerations. For field installation: Forms Stand: P/N 8678375 or Feature #4450.

Cables: Cables and or associated parts to attach the 3268-2C to the 3271s/3272s/3274s and the 3276, or Local Display Adapter (#4702) on the 3276, may be purchased from IBM or from a customer-selected source. For the proper identification, installation, and application of the subject cables and parts, see "IBM 3270 Installation Manual - Physical Planning", GA27-2787, and Coaxial Cable and Accessories Manual, GA27-2805. The customer is responsible for installation and maintenance of these cables and their associated parts.

- Assm 2577672 Cable Assembly In-Door
- Bulk 0323921 Coax Wire (Note 1)
- P/N 1836418 Connector Kit (Note 1)

Order the above items via MES from Poughkeepsie. Allow a lead time of 120 days.

Notes:

1. Coax wire and one connector kit (includes two connectors P/N 1836446) required for each indoor cable assembly.
2. Coax wire and one connector kit (includes two connectors P/N 1836447) required for each outdoor cable assembly.
3. Customers replacing 2260s may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two P/N 2577672 or two P/N 1833108 cable assemblies together.

SUPPLIES

Ribbon (P/N 7037980): A multi-colored ribbon cartridge, P/N 7037980 or equivalent, is required for color printing. A black ribbon cartridge P/N 7037979 or equivalent may be used for printing only black.

The multi-colored ribbon cartridge has a print life* of one million characters for red, green and blue tracks, and two million characters for the black track. The all-black ribbon cartridge has a print life* of eight million characters. Replacement printheads and ribbon cartridges are available for purchase from IBM.

* Ribbon print life is derived from IBM-conducted tests. Ribbon life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings and paper quality.

Printhead (P/N 7033701): The life expectancy** of the printhead is 175 million characters.

** Printhead life expectancy is derived from IBM-conducted tests. Printhead life experienced by a user may vary significantly depending on the user's own quality criteria and on factors such as printer condition, machine settings, and ribbon used.

3274 CONTROL UNIT MODEL 1

(NO LONGER AVAILABLE)

THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT

PURPOSE

Provides the capability of controlling up to a maximum cluster of 32 terminals consisting of display stations, and/or printers. Two categories of terminal adapters are used in attaching the desired displays or printers (see "Terminal Attachment List" below). The basic 3274 allows attachment of up to eight Category A terminals. The two categories of terminal adapters can be featured in various combinations to provide the maximum terminal configuration of 32 terminals (a maximum of 16 of the 32 terminals can be Category B units and at least one Category A Display Station with keyboard is needed for diagnostic purposes). The 3274 has one model for communicating in data half-duplex mode via half-duplex or duplex communications facilities and three models for local channel attachment.

ATTACHABLE TERMINALS

Category A Terminals:

- 3178 mdl C1, C2: Display Station
- 3178 mdl C3, C4: Display Station (See Note 5)
- 3191 (See M3191 pages for models): Display Station
- 3192 (See M3192 pages for models): Display Station
- 3262 mdl 3 & 13: Line Printer
- 3268 mdl 2: Impact Matrix Printer
- 3268 mdl 2C: Color Impact Matrix Printer
- 3270 Personal Computer (Control Unit Terminal Mode)
- 3278 mdl 1, 2, 3, 4, 5: Display Station (see Note 1)
- 3279 mdl 2A, 2B, 3A, 3B, 02X, 03X: Color Display Station
- 3287 mdl 1, 2: Impact Matrix Printer
- 3287 mdl 1C, 2C w/#8331: Color Impact Matrix Printer
- 3289 mdl 1, 2: Line Printer
- 3290 mdl 1: Information Panel
- 4245 mdls D12, D20 (supported as a 3262 mdl 3): Line Printer
- 4250: APA Printer (see Notes 2 and 3)
- 5150: Personal Computer (via 3278/79 Emulation Adapter)
- 5160 with XT/370 Option Kit and 3278/79 Emulation Adapter (Control Unit Terminal Mode only): Personal Computer XT/370
- 5160 mdl 589 (Control Unit Terminal Mode only): Personal Computer XT/370
- 5170 mdl 599 and mdl 739 (Control Unit Terminal Mode only): Personal Computer AT/370
- 5170 with AT/370 Option Kit and 3278/79 Emulation Adapter (Control Unit Terminal Mode only): Personal Computer AT/370
- 5210 mdl G1, G2: Printwheel Printer
- 6580 mdl A04, A06, A08, A10, B04, B06, B08, B10; w/#8332 and LP 5608-SR9 (see Note 4): Displaywriter System

Notes:

1. Mdl 5 cannot be attached to a 3274 mdl 1B.
2. 4250 cannot attach to 3274 mdls 1B and 1C.
3. Because of the high data volumes possible with this printer, it is strongly recommended the IBM Aid FIVE3270 be used to predict the effect the 4250 has on subsystem performance.
4. Two terminal ports are required to attach a Displaywriter System when it includes a printer.
5. Mdl C3, C4 support requires RQs. See "Prerequisites" section in M3178 pages for details.

Category B Terminals:

- 3277 mdl 1, 2: Display Station
- 3284 mdl 1, 2: Impact Matrix Printer
- 3286 mdl 1, 2: Impact Matrix Printer

- 3287 mdl 1, 2 (with 3271/3272 attachment feature): Impact Matrix Printer
- 3288 mdl 2: Line Printer

MODELS 1A, B1, 1C, 1D

Model 1A A01: For local (SNA version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370 or 30XX processor; or any 4300 processor via a byte multiplexer or block multiplexer channel.

Model B1 B01: For local (3272 version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370 or 30XX processor, or S/360 mdls 30, 40, 50, 65, 75, and 195; or any 4300 processor via a byte multiplexer or block multiplexer channel.

* Attachment to a non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

Model 1C C01: For communicating in data half-duplex mode over half-duplex or duplex communications facilities with the following:

- A S/370, 30XX or 4300 processor via 3704 or 3705 (or via the Communications Adapter feature on the 4331), using Synchronous Data Link Control (SDLC/SNA).
- A S/370, 30XX or 4300 processor via (where applicable) 2701, 2703, a 3704 or 3705, or a Communications Adapter feature on the 4331, using Binary Synchronous Communications (BSC).
- S/370 mdls 115, 125, 135 and 138 via Integrated Communications Adapter (ICA) using BSC.
- S/360 mdls 30, 40, 50, 65, 75, and 195 via 2701, 2703, or a 3704 or 3705 using BSC.

Model 1D D01: For Local (3272 version) attachment, via a byte multiplexer, selector or *block multiplexer channel, to a virtual storage S/370 processor, or any 4300 processor via a byte multiplexer or block multiplexer channel.

* Attachment to non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

Prerequisites:

1. One 3178, 3278, or 3279 with keyboard is needed on each 3274 as a diagnostic aid. It must be attached to the first terminal address on the control unit (Port 0).
2. A 3274 mdl 1C requires a Communications Adapter and a Communication Interface for host communications. An external modem is required with the External Modem Interface (#3701) and the CCITT V.35 Interface (#1550) unless the 3274 mdl 1C is to be directly attached to its host. The Data Circuit-Terminating Equipment or direct attachment host to which the 3274 mdl 1C is attached must provide clocking.

Customer Setup (CSU): The 3274 mdl 1C is designated as Customer Setup, thereby offering the customer early availability and terminal relocation flexibility. The customer is responsible for attaching CSU units to the 3274. For additional information on CSU, refer to GI section.

HIGHLIGHTS

The 3274 is a terminal control unit which can attach up to 32 displays, and/or printers, unless a Displaywriter System(s), which includes a printer, is to be attached. A Displaywriter System without

a printer requires one terminal port (the same as other terminals), but when a Displaywriter System includes a printer, two terminal ports are required to attach. These terminals are grouped into two categories, A and B. The Category A terminals are a display and printers which were developed for attachment to the 3274, while the Category B terminals were designed for attachment to the 3271s and 3272s. The 3274 attaches the Category B terminals with certain limitations. A maximum of 16 of the 32 attachable terminals can be Category B terminals. During a write operation, a 3277 attached to a 3274 via a Type B Terminal Adapter will blink more frequently than when attached to a 3271 or 3272. Category A terminals can be driven up to a maximum of 610m (2,000 ft) using shielded twisted pair cable or 1,500m (4,920 ft) using coaxial cable. (3289 attaches with coaxial cable only.) Category B terminals can be driven a maximum of 610m (2,000 ft) using coaxial cable or 152m (500 ft) using shielded twisted-pair cable.

The 3274 can communicate with a S/360, S/370, 30XX, 4300 or 9370 Processor by local channel attach or remotely via communications facilities. The channel-attached Control Unit is available in three models; mdl 1A for SNA operation with extended data stream handling capabilities, mdl 1B for 3272 operation, and mdl 1D for 3272 operation with extended data stream handling capabilities. The mdl 1C can operate with extended data stream handling capabilities as either a BSC 3271 or as an SNA/SDLC unit.

The flexibility of 3274s enables the user to configure a display sub-system for initial requirements, and later change hardware and functions to meet future needs. Function configurability is attained through a Configuration Support option via feature and system diskettes.

One Feature Diskette, two Systems Diskettes, and (except Canada) a Language Diskette are shipped with each 3274. An Encrypt/Decrypt Feature Diskette is also shipped with the Encrypt/Decrypt feature (#3680) on a 3274 mdl 1C. As part of the installation procedure, a customized System diskette is generated. The generation process is accomplished by the customer keying in system configuration parameters. A unique configuration table is written on the System Diskette along with the necessary control code to accomplish the functions. For example, during subsequent control unit loading or initialization of a mdl 1C, BSC or SNA/SDLC mode of operation is determined by the configuration recorded on the System Diskette used. It is possible to create two different System Diskettes; one to be used for BSC (3271 compatible) operation and the other to be used when operating SNA/SDLC.

The control unit is initialized with control code and configuration parameters as a result of Power On or by pressing the IML push-button. The load occurs from an integrated diskette drive using the previously customized System Diskette. The loading process starts with the execution of extended tests contained on the diskette.

The character set to be used on attached terminals is specified on the customized IML Diskette during installation procedure. All attached terminals must have the same character set.

Detailed information for initial customizing, for customizing made necessary by changing configurations, and for optionally updating the diskettes, is contained in the "IBM 3270 Information Display System, IBM 3274 Control Unit Planning, Setup and Customizing Guide", GA27-2827.

Katakana Support: The 127-character (plus space and null) support is an enhancement of previously announced 3270 Japanese Katakana. Katakana terminals will not be 3270 compatible for customers using the NL and EM codes. Customers who do not use the NL and EM codes will be 3274 and 3276 compatible. For detail, see appropriate SRLs.

The HONE configurator is available to assist in configuring the 3274.

COMMUNICATIONS

The 3274 mdl 1C communicates in half duplex mode with a S/370, 30XX, 4300 or 9370 Processor using SDLC over duplex or half-duplex communications facilities to a 3704/3705 (or via Communications Adapter feature (#1601) on the 4331); or by BSC to a S/360, S/370,

30XX, 4300 or 9370 Processor, over duplex or half-duplex communications facilities via (where applicable) a 2701, 2703, or a 3704/3705.

Communications with a S/370 mdl 115, 125, 135, or 138 can also be via the Integrated Communications Adapter (4640) and appropriate BSC features on a 3115, 3125, 3135, or 3138. Communications with a 4331 Processor can be via the Communications Adapter (#1601) using BSC or SDLC/SNA protocols.

SDLC as used in the 3274-1C conforms to a subset (unbalanced normal mode) of both the ISO HDLC and ANSI ADCCP standards. For details of this conformance, see "General Information Manual, IBM Synchronous Data Link Control", GA27-3093.

A 3274 mdl 1C can be used with X.25 communications facilities by using Configuration Support P #9116 and having appropriate hardware features to support this Configuration Support Option. See "X.25 Support" under "Control Storage Functions" and the Configuration Support P description for details.

Performance: For many 3274 mdl 1C, 21C, 31C and 51C systems, response time is limited by transmission line speeds. For these cases, applicable line speed upgrades can be translated into immediate response time improvements. However, performance is also data stream-dependent. Refer to IBM Aids for performance evaluation information.

Communications Facilities: The 3274 mdl 1C operates in half-duplex point-to-point or multipoint mode on half-duplex or duplex facilities at transmission speeds of (Canada only > 2000, < 2400, 4800, 7200 and 9600 bps on nonswitched facilities. See M2700 pages for facilities.

Multipoint and point-to-point communications at speeds up to 56K bps are also possible where facilities are available. In addition, communications through a 3705, or to the 4331 Communications Adapter can be via direct connection (without modems or communications facilities) at speeds up to 57.6K bps. All communications at speeds greater than 9600 bps must use SDLC. See M3705 and 4331 pages for details.

Communications Adapters: Communications adapters handle the transmission control protocols (SDLC and BSC) for the 3274 mdl 1C.

Communications Interfaces: Communications interfaces connect the 3274 mdl 1C to the host link. One and only one, can be selected.

MODEMS

Unless the 3274 mdl 1C will be directly attached to its host, an external modem with its own clocking is required when the External Modem Interface (#3701) or CCITT V.35 Interface (#1550) feature is installed.

Modem	Speed (bps)	Line
3863 mdl 1	2400/1200	Nonswitched Voice Grade
3864 mdl 1	4800/1200	Nonswitched Voice Grade
3865 mdl 1/2	9600/4800	CCITT M1020 channel
3868 mdl 1	2400/1200	Nonswitched Voice Grade
3868 mdl 2	4800/2400	Nonswitched Voice Grade
3868 mdl 3/4	9600/4800	CCITT M1020 Channel
3872 mdl 1	2400/1200	Nonswitched Voice Grade
5811 mdl 10	2400/4800/9600	Limited Distance Modem
mdl 18	Rack Mount Version of	

5865 mdl 1	Mdl 10 9600/7200/ 4800	Nonswitched
5866 mdl 1	14.4K/12K	Nonswitched
(5865 Mode)	9600	Nonswitched
5868 mdl 10	Rack Mount Version of 5865	
mdl 18	Rack Mount Version of 5866	
5979 mdl L41	9600	Limited Distance COAM

4-wire Switched Network Back-up is available on 3863, 3864, and 3865 modems with Auto Answer.

Switched network backup operation with Manual Call and Manual or Auto Answer is available on the 3863 mdl 1, 3864 mdl 1, 3865 mdl 1, 3865 mdl 2 and 3872 mdl 1. For communications capabilities, product utilization and features, see M2700, 3863, 3864, 3865 and 3872 pages.

DIRECT CONNECTION ATTACHMENT

In addition to host attachment via modems or other data circuit-terminating equipment (DCE), attachment can be made by direct connect, without the need for intervening DCE. The direct connect is made by using either the External Modem Interface (#3701) or the V.35 Interface (#1550), the corresponding host interface feature(s), and a connecting cable. Shown below are the hosts that provide direct connection attachment for the 3274. Only the basic features needed by the 3274 direct connect hosts are listed. These features may have prerequisites, therefore the machine pages for those hosts should also be reviewed. Physical planning manuals for the respective direct connect hosts can provide additional information on the connecting cables.

Attach Host	Speed (bps)	Host Feature #	B S	D L
3705	14.4K, 57.6K	#4727 (1W)	-	x
3705	14.4K, 57.6K	#4728 (1Z)	-	x
4331	2400	#4801	x	x
4331	4800	#4801	x	x
4331	9600	#4801	x	x

Attach Host	Max Cable Length	3274 Feature #
3705	57m (190')	#1550, #6303
3705	57m (190')	#1550, #6303
4331	400m (1,312')	#3701, #6302
4331	200m (656')	#3701, #6302
4331	100m (328')	#3701, #6302 or #6303

Problem Determination Procedure: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities".

The Network Problem Determination Application (NPDA), a program product, operates with VTAM and TCAM to assist in performing communication network problem determination/isolation and enhances the availability and serviceability of the 3274 for the above environments in all host attachment modes. See NPDA in the Program Products section.

Display Exception Monitoring Facility (DEMF), a software tool for network problem determination/isolation enhances the availability and serviceability of the 3274 in BSC mode or channel attachment. See DEMF in the SCP sections for OS/VS1 and OS/VS2.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Physical setup, connection of cables to communication lines/modems and IBM devices incorporating protected customer access areas, switch settings, and check out.
3. Contact CE to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
4. Notify IBM of intent to relocate and follow IBM instructions for relocation.
5. Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
6. Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.
7. Receipt at the customer's receiving dock, unpacking, and placement of the 3274.
8. Contacting IBM CE to accomplish the channel connection tasks for the 3274 mdls 1A, 1B, or 1D.
9. Connection of communication cable to the communications facility for the 3274 mdl 1C.
10. Performing 3274 customization in accordance with IBM-supplied procedures:
 - a. For initial installation.
 - b. When made necessary by changes in configuration.
 - c. For updating of the control unit diskettes (at customer option).

Publications: See "KWIC Index", G320-1621, or applicable system bibliography:

GC20-0360S/360
GC20-0001S/370
GC20-00014300
GC20-81008100

Note: Use the HONE Configurator AID (CF3270) to assist in configuring the 3274 before entering an order on AAS.

SPECIFY

- Power (AC, 1-phase): Specify #2998 for an AG-A/PG country except Canada and then select one of the following:

50 Hz	60 Hz
100V #2804	100V #2730
110V #2805	110V #2822
200V #2806	120V #2800*
220V #2813	127V #2823
230V #2821	200V #2732
240V #2801	208V #9902
220V #2803	
240V #2831**	

* Includes requirements for 115V

** Includes requirements for 230V

- Plugs:

For Canada only, specify #9890 for locking plug or #9891 for non-locking plug (both at 60 Hz, 120V, 1-phase).

For Japan only, specify #9890 for locking plug or #9891 for non-locking plug for voltages under 200V.

For countries except Canada and Japan, the 3-digit country code of the DPMO is used to select a power plug which matches the most commonly-used power supply in that country. If an exception to the above is required, a country RPQ may be initiated. For details concerning power plugs, refer to "IBM Information Display System Installation Manual - Physical Planning", (GA27-2787).

Note: If a power supply, not the most common, is specified, and it is incompatible with the power plug commonly supplied, a power cord without a plug will be shipped unless the country RPQ referenced above is initiated.

- Character Set Language (Canada): #2756 for English US.
- Keyboard Language (Canada): #2956 for English US.
- Machine Nomenclature:

Brazilian #2933	English US #2924
Canadian	Japanese #2930
French #2935	Spanish Speaking
English UK #2927	#2931

- Communication Cable: (mdl 1C only) If the standard 6.1m (20 ft) communication cable is not desired, specify one of the following: #9061 for 3.0m (10 ft), #9062 for 9.1m (30 ft) or #9063 for 12.2m (40 ft).
- Configuration Support: The Configuration support required for the 3274 must be determined before ordering special features or attaching certain terminals. Refer to the 3274 Control Storage Requirements Tables under "Special Feature" Extended Function Store (EFS) for a detailed listing of the functions supports by each option. Field Installation: Yes. Customer Setup: Yes. Limitations: Certain functions require host software support in order to be utilized. Refer to host programming support descriptions to determine the levels of software required.

Note: When operating a large screen (screen size greater than 1,920 characters) display station that is connected to a 3274 mdl 1B, 1C, or 1D in a VM/370 environment, an RPQ is recommended to change the function of the display keyboard Clear key so that it will not place the display in default mode. See RPQ 8K0976, 8K0977, or 8K0978.

- Configuration Support A (#9110): This Configuration Support is shipped with all 3274s unless Configuration Support B #9111 or C #9112 or P #9116 is specified. It provides support for all 3270 functions listed in Table 1 (see EFS under "Special Features"), plus support for solicitation of summary maintenance statistics from a 3274 mdl 1A or a 3274 mdl 1C with SNA/SDLC IML, through the use of Network Problem Determination Application (NPDA), and support for base color on attached terminals and 3270 Personal Computer (Control Unit Terminal Mode).
- Configuration Support B (#9111): (Mdl 1A, 1C, 1D) Provides support for all 3270 functions included in Configuration Support A #9110 plus the ability to attach 3278 mdl 5 displays, and support for the following functions:
 - Pacing of inbound message traffic (mdls 1A and 1C/SNA).
 - Automatic Session recovery in both single and multi-domain networks (mdl 1C/SNA).
 - Host notification of changes in the power on/off status at attached terminals (mdls 1A and 1C/SNA).
- Configuration Support C (#9112): (Mdl 1A, 1C, 1D) Provides support for all 3270 functions included in Configuration Support B, plus support for the following additional functions:
 - Structured Field and Attribute Processing.
 - Programmed Symbols (PS) on attached Terminals.
 - Extended Color on attached terminals.
 - Extended Highlighting on attached terminals.

- Decompression of PS Load data.
- BSC Text Blocking.
- BSC Transparency.
- Entry Assist RPQ.
- 4250 attachment (mdls 1A and 1D only).
- Alert Function (mdls 1A and 1C/SNA).

Notes:

1. The APL/Text Control Function, which is a separate option in Configuration Support A and B, is included as a basic function of Configuration Support C.
2. Configuration Support C, unlike Configuration Support A or B, generates a program check (X PROG 470) whenever an EBCDIC data stream contains a device control code(s) that the 3274 does not support. To prevent the program check, users must purge the unsupported code(s) from the data stream.

Configuration Support C requires #3623 or #3625 as a prerequisite.

- Configuration Support P (#9116): (Mdl 1C) Provides functions equivalent to Configuration Support A, but is for X.25 operation only. The necessary keyboard labels required for X.25 support on the attached 3178, 3278 or 3279 terminals are shipped with each Configuration Support P #9116.

Prerequisites: (1) 128K of control storage - #1801, #3622, #3625, and #3628, or #1801, #3623, and #3628. (2) #6303.

- Configuration Support T: (Mdl 1A, 1C, 1D) This Configuration support is Specify Code #9113 (NO LONGER AVAILABLE) or #9115 (NO LONGER AVAILABLE, Japan only) and provides support for the 3290 or 3270 Personal Computer (Distributed Function Mode) in addition to the other 3270 functions and terminals except:

Category B Terminals

- 3279 "Extended Color" Mdl
- Structured Field and Attribute Processing
- Programmed Symbols
- Loop Adapter
- X.21 Adapter
- Encrypt/Decrypt
- Entry Assist
- 4250 Printer Attachment
- Alert Function
- Response Time Monitor
- X.25

Two 3290 microcode load diskettes are automatically included with Configuration Support T (only one System Diskette is included with Configuration Support T). A Utility Diskette is provided to customize keyboard and keypad layouts. This Configuration Support option was developed for the user who desires to evaluate the operation of the 3290 or 3270 Personal Computer (Distributed Function Mode) on existing 3274s. Based on the intended use and inherent limitations, IBM has no intent to enhance Configuration Support T.

Prerequisites: 128K of control storage - #1801, #3622, #3625, and #3628 or #1801, #3623, and #3628. Limitations: (1) Because Configuration Support T was developed as the configuration support for evaluating of 3290s or 3270 Personal Computer (Distributed Function Mode) it does not restrict having one of the other Configuration Support A, B, or C, options although they cannot be used concurrently. (2) Hebrew Language (RPQ 7H0524) is NOT supported by Configuration Support T. Specify: For Configuration Support T, specify #9113 (NO LONGER AVAILABLE) for all languages except Katakana. For Katakana specify #9115 (NO LONGER AVAILABLE, Japan only).

Customers who have ordered, or plan to order for purchase, 3274 mdls 1A/B/C/D and anticipate later upgrading to mdls 31A/C/D should consider purchase of mdls 21A/B/C/D initially, because field upgrade of the mdl 1A/B/C/D requires replacement of the base storage at an additional cost.

SPECIAL FEATURES

Note: After the configuration support and the desired special features have been selected, the control storage requirement must be determined by using the tables under Extended Function Store (EFS) features below. Some combinations of functions and features may exceed the capacity of the control storage in the basic machine, in which case Table 2 will identify what EFS features must be ordered. Still other combinations may exceed the maximum control storage possible with all EFS features. Such combinations are invalid configurations and cannot be configured. In these situations, feature(s) must be forfeited in order to reduce the control storage requirement to an amount not exceeding the maximum control storage possible.

Control Storage Expansion (#1801): Provides the ability to install storage above the basic level. This feature must be installed with EFS - Type C1 (#3622), or Type C2 (#3623). This combination is also a prerequisite to installing the other EFS features (Types C3/ #3625, D1/ #3627, D2/ #3628). Limitations: Cannot be installed on 3274 mdl 1B. Maximum: One. Field Installation: Yes.

Extended Function Store (EFS) (#3622, #3623, #3625, #3627, #3628): #3622 is for Type C1 -- #3623 is for Type C2 -- #3625 is for Type C3 -- #3627 is for Type D1 -- #3628 is for Type D2. Provide increments of control storage to accommodate combinations of functional features that exceed the storage capacity of the base machine. Types C1, C3, and D1 each provide 16,384 additional positions of control storage. Types C2 and D2 each provide 32,768 additional positions of control storage. To determine which EFS features may be required, refer to the 3274 Control Storage Requirements in Tables 1 and 2 below.

Note: A description of non-"Specify", non-"Feature", non-"Machine" Control Storage Requirement Functions is given later in this section, with the exception of "Category A Terminals", "Category B Terminals", EBCDIC, and ASCII, which have been described above.

3274 Control Storage Requirement Tables: Use the following procedure to determine which, if any, EFS features must be ordered on the mdl 1A, 1C or 1D:

1. Select the Configuration Support option which contains the functions desired. If T is selected, go directly to Table 2, line 6, for EFS feature codes needed, otherwise continue to Step #2.
2. After determining the desired Configuration Support, refer to the appropriate part of Table 1 and select the features desired:
 - 3274 mdl 1A, refer to Table 1, Part 1.
 - 3274 mdl 1C/SNA, refer to Table 1, Part 2.
 - 3274 mdl 1C/BSC, refer to Table 1, Part 3.
 - 3274 mdl 1D, refer to Table 1, Part 4.
3. Determine the total Type C and total Type D storage required for the features and functions selected in Step #2.
4. Add the Type C and Type D totals to determine the total control storage required. If the total is equal to or less than 65,536, no EFS features are required. If the total is greater than 65,536, continue with Step #5.
5. Refer to Table 2. For Configuration Support A or B, begin at line 1 and work down. For C, begin at line 4 and work down. Stop at the first line that satisfies the control storage requirements determined in Steps 3 and 4. Order the EFS features listed in the last column.

Notes For Table 1 - Parts 1, 2, 3 and 4:

1. Configuration Support A Consideration Only: If all three keyboard types (Typewriter, Data Entry and Data Entry-Keypunch-like) are required on display stations attached to the 3274, add 1000 to the Type D storage requirements in addition to that listed in the table.
2. If the total Type D storage requirement calculated for Category A, plus Category B terminals, exceeds the applicable maximum storage value listed below, use the applicable maximum value.

Unit	Maximum Storage Value
3274-1A	10,744
3274-1C/SNA	10,744
3274-1C/BSC	6,844
3274-1D	8,844
3. There is no customizing option nor additional control storage required to support 10 Numeric-only Character Set for Operator Identification Card Reader (#4600) on 3277s (Category B terminals) which are attached to a 3274.	
4. Add the indicated amount for each keyboard type to be used.	
5. The SFAP function is also required when the SCS Support for SFAP (#9661) feature is to be used on 3287 mdls 1, 2, 1C or 2C.	
6. SCS Printer Support is required for DCA-LV2 Word Processing applications. This support also required for 5210 mdls G01 or G02, attached to 3274 mdls 1A and 1C SNA for applications that utilize the cut sheet feed attachment feature (#7860) when operating with 2 drawers.	
7. Configuration Support C (#9112) is required for 5210 mdls G01, G02 attached to 3274 mdls 1A and 1C SNA for support of Word Processing applications. This includes those applications which utilize the cut sheet feed attachment feature (#7860) when operating with 2 drawers.	
8. The SFAP function is also required when the Query function is used with 3262 mdls 3 and 13, 3268 mdl 2, printers. The Query function allows the application to interrogate the printer to determine what function is supported.	
9. For 4250 attachment to 3274 mdls 1A and 1D, the SFAP function is required plus support for one Extended Attribute Terminal for each 4250 attached.	
10. SCS printer support required for 4250 attachment.	
11. A Displaywriter System requires two terminal ports when it includes a printer.

8	Type C	GT 71,680	Invalid Configuration

EFS-Type C1 (#3622): (Mdl 1A, 1C, 1D) Provides 16,384 positions of additional control storage. Maximum: One. Field Installation: Yes. Prerequisites: #1801. Limitations: Cannot be installed with #3623.

EFS-Type C2 (#3623): (Mdl 1A, 1C, 1D) Provides 32,768 positions of additional control storage. Maximum: One. Field Installation: Yes. Prerequisites: #1801. Limitations: Cannot be installed with #3622.

EFS-Type C3 (#3625): (Mdl 1A, 1C, 1D) Provides 16,384 positions of additional control storage. Maximum: One. Field Installation: Yes. Prerequisites: #3622. Limitations: Field Installation only.

REFS-Type D1 (#3627): (Mdl 1A, 1C, 1D) Provides 16,384 positions of additional control storage. Maximum: One. Field Installation: Yes. Prerequisites: #3622 or #3623.

EFS-Type D2 (#3628): (Mdl 1A, 1C, 1D) Provides 32,768 positions of additional control storage. Maximum: One. Field Installation: Yes. Prerequisites: #3622 or #3623.

NON-COMMUNICATIONS FEATURES

Encrypt/Decrypt (#3680): Provides the Federal Data Encryption Standard algorithm to encrypt and decrypt data messages under a 56-bit key variable. When used in conjunction with the ACF/VTAM Encrypt/Decrypt feature (#6010, #5735-RC2) or ACF/TCAM Version 2 (5735-RC3) and either the 3848 and the OS/VS1 and OS/VS2 MVS Cryptographic Unit Support Program Product (5740-XY6), or the

OS/VS1 and OS/VS2 MVS Programmed Cryptographic Facility Program Product (5740-XY5), data transmitted over unprotected communications lines can be safeguarded through cryptography. Limitations: (1) 3274 mdl 1C (SDLC only). (2) Mutually exclusive with X.25. The cryptographic feature cannot be used with X.25 operation. Maximum: One. Field Installation: Yes. Note: A mercury battery, P/N 1743456, or equivalent, is needed. A battery is shipped with this feature. See "Accessories" for additional or replacement battery. Replacement or the discharged battery is the customer's responsibility. The discharged IBM battery should be returned to IBM.

(Canada only > Waterproof Power Connector (#8801): (Mdl 1A, 1B, 1D) Provides a waterproof connector on the power cable to satisfy local ordinances requiring this type termination in specific locations. See "Specify" for cable length to be ordered. Limitations: The only valid Voltage Specify codes are #9884 and #9894. One of these two codes must be specified when ordering this feature. Maximum: One. Field Installation: Not recommended. <)

COMMUNICATION ADAPTERS

Common Communication Adapter W/O Business Machine Clock (#6302): (Mdl 1C) Required for communications at speeds up to 9600 bps (see "Limitations" below when a terminal Adapter(s) Type B (#7802-#7805) is installed). SNA/SDLC and BSC transmission control protocols are supported. Clocking must be provided by the modem or communications facility. Limitations: (1) #6303 must be ordered/installed in lieu of this feature, if SNA/SDLC protocol is required with a line speed greater than 7200 bps and a Category B Terminal Adapter(s) (#7802-#7805) is installed. (2) This feature cannot be ordered/installed with #6303. Maximum: One. Field Installation: Yes.

High-Performance Communications Adapter (#6303): (Mdl 1C) When SNA/SDLC protocol is required with a line speed of 9600 bps and a Category B Terminal Adapter(s) is installed, or with a line speed greater than 9600 bps or for X.25 support, this feature is required for attachment to the communications lines through either an IBM or a non-IBM modem with its own clocking. Limitations: (1) With this feature installed, operation is restricted to SNA/SDLC protocol. IML for BSC protocol is no longer possible. (2) This feature cannot be ordered/installed with #6302. Maximum: One. Field Installation: Yes.

COMMUNICATIONS INTERFACES

CCITT V.35 Interface (#1550): (Mdl 1C) Provides a cable and a CCITT interface for attachment to an external modem or other DCE complying with CCITT Recommendation (1976) V.35, ISO Standard 2593, other relevant CCITT Recommendations, and provides clocking of up to 56K bps. Attachment to non-IBM DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3705 at speeds up to 57.6K bps. See "Specify" section for communication cable length. Limitations: (1) Cannot be installed with any other communications Interface Feature. (2) BSC is not supported at speeds greater than 9600 bps. Maximum: One. Field Installation: Yes. Prerequisites: (1) #6302 or #6303 for communications up to 9600 bps. (2) #6303 for communications above 9600 bps or for X.25 operation up to a maximum of 9600 bps. Note: Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

External Modem Interface (#3701): (Mdl 1C) Provides a cable and a CCITT interface for attachment to an external IBM modem or PTT-mandatory modem complying with CCITT Recommendation (1976) V.24, V.28, ISO Standard 2110, and other relevant CCITT Recommendations that provides clocking of up to 9600 bps. Attachment to a non-IBM modem or other DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 4331 Processor at speeds up to 9600 bps (up to 14.4K bps when used with 5866 or 5868 mdl 18 modems). See "Specify" for communication cable length. Limitations: Cannot be installed with any other Communications Interface feature. Maximum: One. Field

Installation: Yes. Prerequisites: #6302 or #6303. #6303 is required for X.25 operation.

(Japan only > X.21 Adapter For Nonswitched Networks (#5655): (Mdl 1C) An interface adapter for SDLC data transmission at speeds of 2400, 4800, 9600 or 48K bps through X.21 nonswitched data communication equipment. See "Specify" section for communication cable length. Limitations: (1) Cannot be ordered with any other Communications Interface feature. (2) Does not support BSC transmission control protocol. Maximum: One. Field Installation: Yes. Prerequisites: (1) #6302 or #6303 for communications up to 9600 bps. (2) #6303 for communications at 48K bps or for X.25 operation up to a maximum of 9600 bps. Note: Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available. <)

TERMINAL ADAPTERS

Terminal Adapter Type A1, A2, A3 (#6901, #6902, #6903): One each of these adapters can be installed. Each adapter provides for the attachment of an additional eight Category A terminals. It should be noted that two terminal ports are required to attach a Displaywriter System when it includes a printer. The base control unit, which provides for attachment of eight Category A terminals, can be expanded with these three terminal adapters to a maximum configuration of 32 Category A terminals. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s).

Terminal Adapter Type A1 (Terminals 9-16) - #6901
Terminal Adapter Type A2 (Terminals 17-24) - #6902
Terminal Adapter Type A3 (Terminals 25-32) - #6903

Limitations: #6903 is mutually exclusive with #7804 and #7805. Maximum: One of each type terminal adapter. Field Installation: Yes. Prerequisites: #6902 requires #6901 - #6903 requires #6902. Note: To attach Category A terminals via the 3299, refer to RPQ 8K1156.

Terminal Adapter Type B1 (#7802): Permits the attachment of four Category B terminals and provides for the installation of Terminal Adapter Types B2, B3 and B4 when additional Category B terminals are desired. Maximum: One. Field Installation: Yes. Note: When installed on a 3274 mdl 1A, or on a 3274 mdl 1C/SNA, EFS feature(s) (#3622, #3625, #3627) and Control Storage Expansion (#1801) are required. See "3274 Control Storage Requirements Tables" under EFS features to accurately determine what storage features are required on 3274 mdls 1A, 1C and 1D in specific configurations.

Terminal Adapter Type B2, B3, B4 (#7803, #7804, #7805): Each of these terminal adapters permits the attachment of four additional Category B terminals. A maximum of one each of these terminal adapters can be installed for a combined total of 12 additional or 16 total Category B terminals attached to a control unit. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s).

Terminal Adapter Type B2 (Terminals 5-8) - #7803
Terminal Adapter Type B3 (Terminals 9-12) - #7804
Terminal Adapter Type B4 (Terminals 13-16) - #7805

Limitations: #7804 and #7805 are mutually exclusive with #6903. Maximum: One of each type terminal adapter. Field Installation: Yes. Prerequisites: #7802.

CONTROL STORAGE FUNCTIONS

APL/Text Control Function: This function, selectable during the customization of a 3274 mdl 1A, 1C or 1D, expands the character handling capability of the 3274 to accommodate the APL, Text, and graphic plot character sets on 3278s, 3268 mdl 2, 3262s (text only), 3279, and 3287s attached via Type A Terminal Adapters (#6901, #6902, #6903).

Note: The 3274, with or without this APL/Text control function, does NOT support the 3270 Data Analysis/APL Feature (#1066) on attached 3277s or 3284, 3286 or 3287s, NOR does it support the Text Print Feature (#7880) on attached 3288s.

3289 Text Print Control Function: This function, selectable during customization of a 3274 mdl 1A, 1C, or 1D, extends the character handling capability of the 3274 to accommodate the text characters (English US only) for the text print feature (#1130) on attached 3289s.

Copy Function: This function, selectable during the customization of a 3274 mdl 1C (BSC) or 1D, enables the copying of the screen contents of an attached 3178 or 3278 to an attached 3268, 3287, 3289, 3262, 5210 through use of the Local Print Key on the display keyboard. This function is provided as basic on the 3274 mdls 1A, 1B and 1C (SNA). The ability to perform host initiated local copies from a 3178, 3278, or 3279, to a 3268, 3287, 3289, 3262, 5210 attached to a 3274 mdl 1A or 1C (SNA) is also provided as basic. In addition, the 3274 mdl 1C (BSC) supports the 3270 host Copy command as basic.

Local Copy Summary

3274 Mdl	Print Key	Host Initiated
1A	Basic	Basic
1B	Basic	Not Applicable
1C (BSC)	Cust. Option	Basic
1C (SNA)	Basic	Basic
1D	Cust. Option	Not Applicable

Note: The 3274 does not support copying the screen contents of an attached display station to an attached 4250.

Host-Loadable Print Authorization Matrix: This function, selectable during the 3274 customization process, provides the capability for the 3274, during subsequent IBM procedures, to receive, from a user-written application program at the host CPU, an updated Printer Authorization Matrix to override the matrix created by the customization operator or by system default.

Between Bracket Printer Sharing Function: This function, selectable during the customization of a 3274 mdl 1A or 1C (SNA), enables attached 3268s, 3287s, 3289s, 3262s, 5210s, to be used as Local Copy output devices for the screen contents of attached 3178, 3278 and 3279s, when the printers are Between Brackets with the host application program. Printers are available for Local Copy operations only when they are not in session with an application program if this option is not selected.

Color Convergence Function: This function, selectable during the customization of any mdl 3274, provides the mechanism through which the operator of a 3279 can perform color convergence for the 3279.

SFAP Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, provides a new 3270 command and several new orders that extend the functional capabilities of appropriately featured 3278, 3279, 3287, 3262, 3268 terminals. Data Streams sent to these attached terminals can include extended color, extended highlighting, or Programmed Symbols, in any combination. Prerequisites: BSC hosts that utilize this function must transmit in transparent-text mode.

Programmed Symbols (PS) Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, enables the customer to define, store, and access up to six, 190-symbol sets on appropriately featured 3278s, 3279s, 3268 mdl 2C and 3287s. Prerequisites: SFAP.

Decompression Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, decompresses data streams containing compressed Programmed Symbols generated by the Graphical Data Display Manager (GDDM) program product. Its usage is recommended for all 3274 TP host attachments that use GDDM. Prerequisites: SFAP.

Extended Attribute Terminals: This function, selectable during the customization of any mdl 3274 except mdl 1B, establishes an internal control table for each terminal on which Extended Color, Extended Highlighting, and Programmed Symbols, will be used or when a 4250 will be attached. If more extended attribute terminals are attached to the 3274 than are specified during customization, the excess terminals will execute only base-level function. Prerequisites: SFAP.

X.25 Support: (Mdl 1C) This function, through the use of Configuration Support P (#9116) on a 3274 mdl 1C, provides for attachment to X.25 data transmission services having an interface which complies with Recommendation X.25 (Geneva 1980) of the International Telegraph and Telephone Consultative Committee (CCITT). IBM conformance to this X.25 interface is defined in "IBM General Information Manual - The X.25 Interface for Attaching IBM SNA nodes to Packet - Switched Data Networks", GA27-3345. Keyboard labels on attached 3178s, 3278s or 3279s keyboards and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. See "X.25 Keyboard Labels" under "Accessories" for details on the labels required for selected keyboards on terminals connected to a 3274 attached to a X.25 communications facility. Limitations: #3680 is mutually exclusive with 3274 X.25 capability. The cryptographic feature cannot be used with X.25 operation. Prerequisites: (1) Configuration Support P. (2) SNA/SDLC protocol. (3) Configuration Support P requires 128K of control storage. (4) One of the following Communications Interfaces: #3701, #5655 or #1550. Note: The maximum line speed supported with any of these Communications Interface features is 9600 bps with X.25. The Communications Interface feature required depends upon the X.25 physical interface provided by the network. (5) #6303.

(Canada only > IBM Personal Computer Attachment Support: This function, selectable during the customization of any mdl 3274, except mdls 1B and 21X, provides support for attachment of an IBM Personal Computer to a 3278 or 3279. Prerequisites: SFAP.<)

3274 Entry Assist RPQ: This RPQ provides capabilities which facilitate entry and editing of text material. The capabilities include margins, tabbing, word-wrap, improved cursor positioning, improved character and word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist RPQ is intended for use with a specific set of host editor programs. See RPQ 8K1147 Description and Price Transmittal for storage requirements and prerequisites. 3274 Entry Assist RPQ is supported for the following keyboard languages/character sets: Brazilian, Canadian Bilingual 125-character set RPQ, International, Japanese English, Spanish Speaking, English UK, and English US.

Alert Function: This function, selectable during the customization of 3274 mdls 1A and 1C/SNA reports problem determination data to the host, for recording and display, when NPDA Version 3 is installed in the host.

MODEL CONVERSIONS

See table below for field installation of model changes.

From Model	To Model					
	1A/B/D	1C	21A/B/D	21C	31A/D	31C
1A/B/D	Yes (1)	No	NR	No	Yes	No
1C	No	-	No	NR	No	Yes
21A/B/D	NR	No	Yes (1)	No	Yes	No
21C	No	NR	No	-	No	Yes
31A/D	NR	No	NR	No	Yes	No
31C	No	NR	No	NR	No	-

NR = Field Installation NOT recommended.

Notes:

- When making model changes, the applicable Control Storage Requirement Table must be used to determine if sufficient control storage is available. Also, when changing models, refer to FIVE3270 to evaluate expected performance.
- Customers who have ordered, or plan to order for purchase, IBM 3274 models 1A/B/C/D and anticipate later upgrading to models 31A/C/D should consider purchase of models 21A/B/C/D initially, because field upgrade of models 1A/B/C/D requires replacement of the base storage at an additional cost.

MACHINES**ACCESSORIES**

Battery, Mercury: To provide power to sustain the master key of the Encrypt/Decrypt feature #3680 on the 3274 when normal power is not present. A 4.14 volt mercury battery (P/N 1743456). This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered from IBM. by DP Supply Order from Mechanicsburg. Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

X.25 Keyboard Labels: Stick-on labels are used on the keyboards of 3178s, 3278s and 3279s attached to a 3274 mdl 1C using X.25 communications facilities. These labels are normally provided with Configuration Support P (#9116). If new or additional labels are required, they can be obtained by ordering Form Number GX23-0285. Each form number is a sheet containing 16 sets of stick-on labels, enough for 16 keyboards, and the installation procedure for installing the labels.

SUPPLIES (NONE)

3274 CONTROL UNIT MODELS 21, 31, 51C

PURPOSE

Provides the capability of attaching 3270 Information Display System displays and printers to System/3, S/360, S/370, 4300, 303X, 3081, 308X, 3090 processors, 8100 Information System and the 9370 Processor. Models 21A, 21B, 21D, 31A and 31D are for local channel attachment. Models 21C, 31C and 51C are used for communicating in data half-duplex mode via half-duplex or duplex communications facilities.

For S/3 attachment, each of the control units can communicate via Binary Synchronous Communications (BSC) in data half-duplex mode over half-duplex or full duplex communications facilities with a suitably equipped S/3 mdl 4, 8, 10, 12, or 15 at speeds up to 9600 bps.

ATTACHABLE TERMINALS

Category A Terminals

- 3178 mdl C1, C2: Display Station
- 3178 mdl C3, C4: Display Station (see Note 6)
- 3179 mdl 1: Color Display Station
- 3179 mdl G: Color Graphics Display Station
- 3180 mdl 1: Display Station
- 3191 (See M3191 pages for models): Display Station
- 3192 (See M3192 pages for models): Display Station
- 3193 mdl 1, 2: Display Station (see Note 10)
- 3262 mdl 3, 13: Line Printer
- 3268 mdl 2: Impact Matrix Printer
- 3268 mdl 2C: Color Impact Matrix Printer
- 3270 Personal Computer Control Unit Terminal Mode (See Note 2): 3270 Personal Computer Distributed Function Mode
- 3278 mdl 1, 2, 3, 4, 5: Display Station (see Note 1)
- 3279 (except mdl 2C): Color Display Station
- 3287 mdl 1, 2 w/#8331: Impact Matrix Printer
- 3287 mdl 1C, 2C: Color Impact Matrix Printer
- 3289 mdl 1, 2: Line Printer
- 3290 (see Note 2): Information Panel Display
- 4224 mdl 201, 202, 2E2: Impact Matrix Printer (See notes 7 and 9)
- 4224 mdl 2C2: Color Impact Matrix Printer (See notes 8 and 9)
- 4234 mdl 1: Dot Band Printer
- 4245 mdl D12, D20: Line Printer
- 4250: APA Printer (see Notes 3 and 4)
- 5150: Personal Computer (via 3278/79 Emulation Adapter)
- 5160 with XT/370 Option Kit and 3278/79 Emulation Adapter (Control Unit Terminal Mode): Personal Computer XT/370 (See Note 2)
- 5170 with AT/370 Option Kit and 3278/79 Emulation Adapter (Control Unit Terminal Mode): Personal Computer AT/370 (See Note 2)
- (Canada only) >5160 mdl 589 (Control Unit Terminal Mode only): Personal Computer XT/370 (See Note 2)
- 5170 mdl 599 and mdl 739 (Control Unit Terminal Mode only): Personal Computer AT/370 (See Note 2) <)
- 5210 mdl G1, G2: Printwheel Printer
- 6850 mdl A04, A06, A08, A10, B04, B06, B08, B10; w/#8332 and LP 5608-SR9 (see Note 5): Displaywriter System

Notes:

1. Mdl 5 or a 3180 mdl 1 emulating a mdl 5 cannot be attached to a 3274 mdl 21 or a mdl 51C without Extended Function Store #1800.
2. 3274 Mdl 31X and 51C.
3. 4250 cannot attach to 3274 mdl 21X. Attachment to 3274 mdls 31C and 51C requires printer RPQ 7B0980.
4. Because of the high data volumes possible with this printer, it is strongly recommended that the "IBM 3274 Performance Guidelines, Technical Bulletin", Z220-4167, IBM be consulted to predict the effect the 4250 has on subsystem performance.

5. Two terminals ports are required to attach a Displaywriter System when it includes a printer.
6. Mdl C3 and C4 support requires RPQs. See "Prerequisites" section of the M3178 pages for details.
7. Emulates 3268 mdl 2.
8. Emulates 3268 mdl 2C except Programmed Symbols are not supported.
9. When attaching the 4224 to a control unit using Configuration Support D at release 65.0, contact the NSD representative for support.
10. RPQ 8K 1311 should be installed on 3274 mdl 31A.

Category B Terminals*:

- 3277 mdl 1, 2: Display Station
- 3284 mdl 1, 2: Impact Matrix Printer
- 3286 mdl 1, 2: Impact Matrix Printer
- 3287 mdl 1, 2 (with 3271/3272 attachment feature): Impact Matrix Printer
- 3288 mdl 2: Line Printer
- 5160 mdl 568, 588: IBM Personal Computer XT/370
- 5160 mdl 087 with XT/370 Option (1503891): IBM Personal Computer

* Category B Terminals cannot be attached to a 3274 mdl 21A, and 21C/SNA.

** Category B Terminals cannot be attached to a mdl 51C without Extended Function Store #1800.

Mdl 21s have 64K bytes of control storage and do not support all terminal features. Mdl 31s have 128K bytes of control storage and do support all terminal features, except for limitations on some feature combinations for mdls 31A, 31C/SNA, and 51C (with EFS)/SNA (see "Special Considerations" table with the "Configuration Support Requirements Tables"). The mdl 51C has 64K bytes of control storage with a feature for adding 64K bytes to provide for support of all terminal features.

The basic mdl 21s and 31s allow attachment of up to eight Category A terminals. Two types of terminal adapter features are offered to attach additional terminals. The two types can be ordered in various combinations to attach up to a maximum cluster of 32 terminals -- a maximum of 16 of the terminals can be Category B terminals.

The mdl 51C has 64K bytes for central storage with a feature for adding 64K bytes to provide for support of all terminal features. The basic mdl 51C allows attachment of up to eight Category A terminals. A terminal adapter feature can be used to attach up to four Category B terminals giving a maximum cluster size of 12 terminals.

MODELS 21, 31, 51

Model 21A A21; 31A A31: Models 21A and 31A are no longer available. For local (SNA version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370, 30XX processor; or a 4300 Processor via a byte multiplexer or multiplexer channel.

Model 21B B21: Model 21B is no longer available. For local (3272 version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370, 30XX processor, or S/360 mdls 30, 40, 50, 65, 75, and 195; or a 4300 Processor via a byte multiplexer or multiplexer channel.

Model 21C C21; 31C C31; 51C C51: Models 21C and 31C are no longer available. For communicating in data half-duplex mode over half-duplex or duplex communications facilities with the following:

- A S/370, 30XX, 4300 or 9370 Processor via 3704, 3705, or 3725 (or via the Communications Adapter feature on the 4321 or 4331 or via Telecommunications Subsystems Controller on the 9370), using Synchronous Data Link Control (SDLC/SNA).

- A S/370, 30XX, 4300 or 9370 Processor via (where applicable) 2701, 2703, a 3704, 3705, or 3725, or a Communications Adapter feature on the 4321, 4331 or a Telecommunications Subsystem Controller on the 9370, using BSC.
- S/370 mdls 115, 125, 135 and 138 via Integrated Communications Adapter (ICA) using BSC.
- S/360 mdls 30, 40, 50, 65, 75, and 195 via 2701, 2703, or a 3704 or 3705 using BSC.
- 4331/4361 Processor - The model 51C can also attach to a 4331 via a direct- or data link-attached loop using SDLC.
- A 4341, 4361, 4381, 303X, 308X or 3090 processor via 3720 using Synchronous Data Link Control (SDLC/SNA) or BSC.
- 8100 Information System - The model 51C can attach using SDLC via a data link or a direct-attached or data link-attached loop.

Model 21D D21; 31D D31: Models 21D and 31D are no longer available. For Local (3272 version) attachment, via a byte multiplexer, selector or *block multiplexer channel, to a virtual storage S/370 processor, or a 4300 processor via a byte multiplexer or block multiplexer channel.

Note: Attachment to a non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

Prerequisites:

1. One 3178, 3179, 3180-100, 3191, 3192, 3278 or 3279 with keyboard is needed on each 3274 as a diagnostic aid. It must be attached to the first terminal address on the control unit (Port 0).
2. A 3274 mdl 21C or 31C requires a Communications Adapter and a Communication Interface for communications. An external Data Circuit-Terminating Equipment (DCE) is required with the External Modem Interface (#3701) or the CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655) unless the 3274 mdl 21C/31C is to be direct connected. The DCE or direct connected unit to which the 3274 mdl 21C or 31C is attached must provide clocking.
3. The 3274 mdl 51C requires a Communications Adapter and a Communications Interface for host communications. An external DCE may be required with the External Modem Interface (#3701), and the CCITT V.35 Interface (#1550), and the CCITT X.21 Interface (#5655 and #5656).

Customer Setup (CSU): The 3274 mdls 21C, 31C, and 51C are Customer Setup, thereby offering the customer early availability and terminal relocation flexibility. The customer is responsible for attaching CSU units to the 3274. For additional information on CSU, refer to GI section. contact IBM.

HIGHLIGHTS

These units can attach up to 32 (12 on the mdl 51C) displays, and/or printers, unless a 6580 Displaywriter System, which includes a printer, is to be attached. A Displaywriter System without a printer requires one terminal port (the same as other terminals), but when a Displaywriter System includes a printer, two terminal ports are required to attach. These terminals are grouped into two categories. The basic unit provides for attachment of up to eight of the Category A terminals. Additional terminals are attached via terminal adapter features. The Category A terminals are a display and printers which were developed for attachment to the 3274s, while the Category B terminals were designed for attachment to the 3271s and 3272s. The 3274s attach the Category B terminals with certain limitations. A maximum of four on the mdl 51C or 16 of the 32 attachable terminals on mdls 21 and 31 can be Category B terminals. During a write operation, a 3277 attached to a 3274 via a Type B Terminal Adapter will blink more frequently than when attached to a 3271 or 3272. Category A terminals can be driven up to a maxi-

mum of 610m (2,000 ft) using shielded twisted pair cable or 1,500m (4,920 ft) using coaxial cable. (3289 attaches with coaxial cable only.) Category B terminals can be driven a maximum of 610m (2,000 ft) using coaxial cable or 152m (500 ft) using shielded pair cable. (3284, 3286, and 3288 attach with coaxial cable only.)

The 3274 can communicate with a S/360, S/370, 4300 or 9370 Processor by local channel attach or remotely via communications facilities. The channel-attached Control Units are the mdls 21A and 31A for SNA operation with extended data stream handling capabilities, mdl 21B for 3272-like operation, and mdls 21D and 31D for 3272-like operation with extended data stream handling capabilities. The mdls 21C and 31C can operate with extended data stream handling capabilities using either BSC or SNA/SDLC.

The mdl 51C can also attach via a Data Link to the 8100 Information System or to the 8100 or 4331/4361 via a direct- or data link-attached loop.

The flexibility of 3274s enables the user to configure a display sub-system for initial requirements, and later change hardware and functions to meet future needs. Function configurability is attained through Configuration Support options, via Feature and System Diskettes.

One Feature Diskette, two Systems Diskettes, and (except Canada) a Language Diskette are shipped with each 3274. An Encrypt/Decrypt Feature Diskette is also shipped with the Encrypt/Decrypt feature (#3680) on a 3274 mdl 21C, 31C, or 51C. As part of the installation procedure, a customized System Diskette is generated. The generation process is accomplished by the customer keying in system configuration parameters. A unique configuration table is written on the System Diskette along with the necessary control code to accomplish the functions. For example, during subsequent control unit loading or initialization of a mdl 21C, 31C, or 51C, BSC or SNA/SDLC mode of operation is determined by the configuration recorded on the System Diskette used. It is possible to create two different System Diskettes; one to be used for BSC operation and the other to be used when operating SNA/SDLC.

The control unit is initialized with control code and configuration parameters as a result of Power On or by pressing the IML push-button. The load occurs from an integrated diskette drive using the previously customized System Diskette. The loading process starts with the execution of extended tests contained on the diskette.

The character set to be used on attached terminals is specified on the customized IML Diskette during installation procedure. All attached terminals must have the same character set.

Detailed information for initial customizing, for customizing made necessary by changing configurations, and for optionally updating the diskettes, is contained in the "IBM 3270 Information Display System, IBM 3274 Control Unit Planning, Setup and Customizing Guide", GA27-2827.

Katakana Support: The 127-Character (plus space and null) support is an enhancement of previously announced 3270 Japanese Katakana. Katakana terminals will not be 3270 compatible for customers using the NL and EM codes. Customers who do not use the NL and EM codes will be 3274 and 3276 compatible. For detail, see appropriate SRLs.

COMMUNICATIONS

The 3274 mdls 21C, 31C, or 51C communicates with a S/370, 4300 or 9370 Processor using SDLC over duplex or half-duplex communications facilities to a 3704, 3705, or 3725 or via the Communications Adapter on the 4321, 4331 or 9370 (SNA/SDLC), or by BSC to a S/360, S/370, 4300 or 9370 Processor, over duplex or half-duplex communications facilities via (where applicable) a 2701, 2703, or a 3704, 3705, 3725 (see Note 1), or the Communications Subsystem Controller on the 9370 Processor. Communications with a 4331 Processor is also provided via a direct- or data link-attached loop for the mdl 51C.

Communications with a S/370 mdl 115, 125, 135, or 138 can also be via the Integrated Communications Adapter (#4640) and appropriate BSC features on a 3115, 3125, 3135, or 3138.

The mdl 51C communicates with the 8100 Information System, using SDLC, via a data link, a direct- or data link-attached loop, or direct connection.

SDLC is used in the 3274-21C or 31C conforms as a subset (unbalanced normal mode) of both the ISO HDLC and ANSI ADCCP standards. For details of this conformance, see "General Information Manual - IBM Synchronous Data Link Control", GA27-3093.

A 3274 mdl 31C or 51C can be used with X.25 communications facilities by using Configuration Support P (#9116), or by customization with Configuration Support D (#9124) (release level 63.1 or higher). Appropriate hardware features must be installed to support the Configuration Support option being used. See "X.25 Support" under "Control Storage Functions" and the Configuration Support P and D descriptions for details.

Note: The 3725 is not connectable to a S/360.

Performance: For many 3274 mdl 21C, 31C and 51C systems, response time is limited by transmission line speeds. For these cases, applicable line speed upgrades can be translated into immediate response time improvements. However, performance is also data stream dependent. Refer to IBM Aids for performance evaluation information.

Communications Facilities: The 3274 mdls 21C, 31C, or 51C communicates with a 4341, 4361, 4381, 303X, 308X or 3090 processor using SDLC or BSC in half-duplex mode over duplex or half-duplex communication facilities to a 3720.

The 3274 mdl 21C, 31C, or 51C operate in half-duplex point-to-point multipoint mode on half-duplex or duplex facilities, using SDLC or BSC, at transmission speeds of 1200/600 (mdl 51C only), (Canada only > 2000, <) 2400/1200, 4800/2400, 7200/3600 and 9600/4800 bps on nonswitched facilities. In addition, the 3274 mdl 51C operates in half-duplex point-to-point mode using SDLC at transmission speeds of 1200/600, 2400/1200 4800/2400, and 9600/4800 bps on switched facilities. See M2700 pages for facilities.

The 3274 mdl 51C also operates in half-duplex mode at 9600 or 38.4K bps over a direct-attached loop, and at 2400, 4800, or 9600 bps over a data link-attached loop.

Multipoint and point-to-point communications at speeds up to 56K bps are also possible where facilities are available. In addition, communications through a 3705, or to the Local Attachment Interface #4801 on the 4331 or to an 8130/8140 Processor can be via direct connection without the need for communications facilities or modems. All communications at speeds greater than 9600 bps must use SDLC. See M3705, 4331, 8101, 8130 and 8140 pages for details.

Modems: Unless the 3274 mdls 21C, 31C, or 51C will be direct connected, an external Data Circuit-terminating Equipment (DCE) is required when the External Modem Interface (#3701) or CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655 or #5656) is installed.

Modem	Speed (bps)	Line
3863 mdl 1/2	2400/1200	Nonsw or Sw Voice Grade
3864 mdl 1/2	4800/1200	Nonsw or Sw Voice Grade

* Canada only

** Except Canada

Switched network backup (SNBU) operation with Manual Call and Manual or Auto Answer is available on the 3872 mdl 1. 4-wire SNBU operation with Manual Call and Auto Answer is available on the 3863 mdl 1, 3864 mdl 1, and 3865 mdls 1 and 2. For communications capabilities, product utilization and features, see M2700, 3863, 3864, 3865 and 3872 pages.

Direct Connection Attachment: In addition to host attachment via modems or other DCE, attachment can be made by direct connect, without the need for intervening DCE. The direct connect is made by using either the External Modem Interface (#3701) or the V.35 Interface (#1550), the corresponding host interface feature(s), and a connecting cable. Shown below are the hosts that provide direct connection attachment for the 3274. Only the basic features needed by the 3274 direct connect hosts are listed. These features may have prerequisites, therefore the machine pages for those hosts should also be reviewed. Physical planning manuals for the respective direct connect hosts can provide additional information on the connecting cables.

MODELS 21C AND 31C

Communications Adapters (Mdl 21C, 31C, 51C): Communications adapters handle the transmission control protocols (SDLC and BSC). One, and only one can be selected, but one is required on each 21C, 31C or 51C.

Communications Interfaces (Mdl 21C, 31C, and 51C): Communications interfaces connect a mdl 21C, 31C or 51C to the host link. One and only one can be selected, but one is required.

Problem Determination Procedure: Significant function has been designed into these units to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities".

The Network Problem Determination Application (NPDA), a program product, operates with VTAM and TCAM to assist in performing communication network problem determination/isolation and enhances the availability and serviceability of the 3274 for the above environments in both BSC and SDLC attachment modes. See NPDA in the Program Products section.

Display Exception Monitoring Facility (DEMF), a software tool for network problem determination/isolation, enhances the availability and serviceability of the 3274 in BSC mode. See DEMF in the SCP sections for OS/VS1 and OS/VS2.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Physical setup, connection of cables to communication lines/modems and IBM devices incorporating protected customer access areas, switch settings, and check out.
3. Contact CE to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
4. Notify IBM of intent to relocate and follow IBM instructions for relocation.
5. Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
6. Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

7. Receipt at the customer's receiving dock, unpacking, and placement of the 3274.
8. Contacting IBM CE to accomplish the channel connection tasks for the 3274 mdls 21A, 21B, 21D, 31A or 31D.
9. Connection of communication cable to the communications facility for the 3274 mdl 21C or 31C or 51C.
10. Procurement, installation, and maintenance of the loop network when applicable on a 3274 mdl 51C.
11. Performing 3274 customization in accordance with IBM-supplied procedures:
 - For initial installation.
 - When made necessary by changes in configuration.
 - For updating of the control unit diskettes (at customer option).
 - When initializing and updating the keyboard tables using the Keyboard Definition Utility.

Bibliography: See "KWIC Index", G320-1621, or applicable system bibliography:

Note: Use the HONE configurator (CF3270) to assist in configuring the 3274 before entering an order.

BASIC CONFIGURATION

Specify codes are not normally required to order a 3274. The 3-digit country code entered on the DP machines order sheet will be used to select the country variables (power, power cable plug, machine nomenclature) based on the specification most commonly used in that country. If codes are not specified otherwise, the machines are shipped as follows:

- Power (AC, 1-phase):
 - Argentina 220V/50 Hz
 - Australia 240V/50 Hz
 - Brazil 110V/60 Hz
 - Canada 120V/60 Hz (mdls 21C,31C,51C)
 - Canada 208V/60 Hz (mdls 21A,21B,21D,31A,31D)
 - Chile 220V/50 Hz
 - Mexico 120V/60 Hz
 - New Zealand 230V/50 Hz
 - Venezuela 120V/60 Hz
 - All others (Must Specify desired power)
- Power Cable Length: 4.3m (14 ft).
- Power Cable Plug (except Canada and Japan): The 3-digit country code of the DPMO is used to select a power plug which matches the most commonly-used power supply in that country.
- Power Cable Plug (Japan only): Locking plug for voltages under 200V.
- Power Cable Plug (Canada only): Non-locking.
- Communications Cable Length: (Mdl 21C, 31C, 51C) 6.1m (20 ft).

CONFIGURATION SUPPORT

- Configuration Support A: #9110
 - Nomenclature: The following defaults are assumed:
 - Argentina - Spanish Speaking
 - Brazil - Brazilian
 - Canada - English

Japan - English
Mexico - Spanish Speaking
Venezuela - Spanish Speaking
All others - English

SPECIFY

The Specify section can be ignored unless the options provided in the "Basic Configuration" above do not meet your needs.

- **Mandatory Specify:** #2998 - AG-A/PG Country.
- **Power (AC, 1-phase):** If power different than the one provided by "Basic Configuration" default is required, specify one of the following (not all voltages apply to all countries):

(Except Canada>	
50 Hz	60 Hz
100V #2804	100V #2703
110V #2805	110V #2822
200V #2806	120V #2800*
220V #2813	127V #2823
230V #2821	200V #2732
240V #2801	208V #9902
	220V #2803
	240V #2831**

* Includes requirements for 115V
** Includes requirements for 230V <)

(Canada only>	
Mdl	120V 208V 240V
21A,B,D; 31A,D	N/A D(1) #2831(1)
21C,31C	D #9902 #2831
51C	D N/A N/A

(1) = For Waterproof Connector, see "Special Features".
D = Default Option
N/A = Not Available <)

- For Japan only, specify #9891 for non-locking plug for voltages under 200V.
- For Canada only, specify #9890 for locking plug.
- For countries except Canada and Japan, the country code of the DPMO is used to select a power plug which matches the most commonly-used power supply in that country. If an exception to the above is required, a country RPQ may be initiated. For details concerning power plugs, refer to "IBM Information Display System Installation Manual - Physical Planning", (GA27-2787).

Note: If a power supply, not the most common, is specified, and it is incompatible with the power plug commonly supplied, a power cord without a plug will be shipped unless the country RPQ referenced above is initiated.

- **Machine Nomenclature:**

Brazilian	#2933
Canadian French	#2935
English UK	#2927
English US	#2924
Japanese	#2930
Spanish Speaking	#2931

- **Communication Cable:** A 6.1m (20 ft) communication cable is provided as standard with each Communications Interface feature except the Loop Adapter #4850. If the standard 6.1m (20 ft) communication cable is not desired, specify one of the following: #9061 for 3.0m (10 ft), #9062 for 9.1m (30 ft) or #9063 for 12.2m (40 ft) cable.

A 1.8m (6 ft) communication cable (Loop Station Connector (LSC) cable) is provided as standard for mdl 51C attachment

to a direct-attached or data link-attached loop. If standard cable is not desired, specify #9405 for 4.3m (14 ft) cable.

- **Configuration Support:** The Configuration support required for the 3274 must be determined before ordering special features or attaching certain terminals. Refer to the "3274 Control Storage Requirements Tables" for a detailed listing of the functions supported by each option. Field Installation: Yes. (Configuration Support D #9124 is field installation only for mdls 31A, 31C and 31D.) Customer Setup: Yes. Limitations: Certain functions require host software support in order to be utilized. Refer to host programming support descriptions to determine the levels of software required.

Note: When operating a large screen (screen size greater than 1,920 characters) display station that is connected to a 3274 mdl 21B, 21C, 31C, 21D, 31D or 51C in a VM/370 environment, an RPQ is recommended to change the function of the display keyboard Clear key so that it will not place the display in default mode. See RPQ 8K0976, 8K0977, or 8K0978.

- **Configuration Support A (#9110):** This Configuration Support is the default option and is shipped with all 3274s unless (Canada only> Diskette Distribution Alternative RPQ (8K1072), <) Configuration Support C (#9112), D (#9124) or Configuration Support P (#9118) is specified. It need not be specified unless it is being ordered to replace Configuration Support B (no longer available), C or D (#9111, #9112 OR #9124 respectively) in the field. It provides support for all 3270 functions listed in Table 1, plus support for solicitation of summary maintenance statistics from a 3274 mdl 21A, 31A, 21C/SNA, 31C/SNA, 51C/SNA through the use of Network Problem Determination Application (NPDA), and support for base color on attached terminals. It also supports the X.21 Adapter for Nonswitched Networks and 3270 Personal Computer (Control Unit Terminal Mode).
- **Configuration Support B (#9111) (Mdls 21A, 21C, 31A, 31C, 31D, 51C):** Provides support for all 3270 functions included in Configuration Support A (#9110) plus the ability to attach 3278 mdl 5s or a 3180 mdl 1 emulating a mdl 5 and support for the following functions:
 - Pacing of inbound message traffic (mdls 21A, 21C/SNA, 31A, 31C/SNA and 51C/SNA).
 - Automatic Session recovery in both single and multi-domain networks (mdl 21C/SNA, 31C, and 51C/SNA).
 - Host notification of changes in the power on/off status at attached terminals (mdls 21A, 21C/SNA, 31A, 31C, and 51C/SNA).
- **Configuration Support C (#9112) (Mdls 31A, 31C, 31D, 51C):** Provides support for all 3270 functions included in Configuration Support A, plus support for the following additional functions:

- Ability to attach 3278 mdl 5s or a 3180 mdl 1 emulating a mdl 5.
- Pacing of inbound message traffic (mdls 31A, 31C/SNA, and 51C/SNA).
- Host notification of changes in the power on/off status at attached terminals (mdls 21A, 21C/SNA, 31A, 31C/SNA, and 51C/SNA).
- Structured Field and Attribute Processing (SFAP).
- Programmed Symbols (PS) on attached terminals.
- Extended Color on attached terminals.
- Extended Highlighting on attached terminals.
- Decompression of PS Load Data.
- BSC Text Blocking.
- BSC Transparency.
- Integrated Modems.
- X.21 Switched Network Operation (SNA/SDLC mdl 51C only).
- 3274 Entry Assist RPQ.
- 4250 Attachment.
- Alert Function (mdls 31A, 31C/SNA, 51C/SNA).
- Response Time Monitor (mdls 31A, 31C, 31D, 51C).

Notes:

1. The APL/Text Control Function, which is a separate option in Configuration Support A, is included as a basic function of Configuration Support C.
 2. Configuration Support C, unlike Configuration Support A or B, generates a program check (X PROG 470) whenever an EBCDIC data stream contains a device control code(s) that the 3274 does not support. To prevent the program check, users must purge the unsupported code(s) from the data stream.
- Configuration Support D (#9124): (Mdl 31A, 31C, 31D, 51C) Provides support for all 3270 functions included in Configuration Support C plus support for:
 - 3191 Display Station
 - 3192 Display Station
 - 3290 Information Panels Displays
 - 3274 Entry Assist on 3178/3179/3180/3191/3192/3278/3279/3290 Displays
 - The Keyboard Definition Utility for 3179/3180 mdl 1/3191/3192
 - 3180 mdl 1 scrolling support
 - 3179 and 3180 mdl 1 display stations in extended function (native) mode
 - X.25 data transmission services (mdl 31C, 51C with 256K)
 - 3179 mdl G Color Graphics Display Station
 - 3192 mdl G Color Graphics Display Station
 - Intelligent Printer Data Stream (IPDS) Support (release level 65 required)
- Limitations: 1) When 3290s, 3179-Gs and/or 3192-Gs are attached, specify #9301 or #9305 is required to get a microcode load diskette that must be used with Configuration Support D to enable the downstream load of 3290s, 3179-Gs and/or 3192-Gs with operational microcode. See "3290/3179-G/3192-G Support" under "Specify". In addition, a utility diskette is also provided with #9301 and #9305 to enable the customizing of the 3290, 3179-G and 3192-G keyboard and keypad layouts. However the utility diskette provided with the #9305 (Katakana) load diskette is only applicable to the 3179-G and 3192-G. The 3290 Katakana keyboard and keypad layouts cannot be customized. 3193s cannot be attached to the same 3274 Control Unit. 2) When 3193s, 3179-Gs and/or 3192-Gs are attached, specify (Except Katakana, #9311) (Katakana only, #9315) which is required to get a microcode load diskette that must be used with Configuration Support D, release 65 or higher to enable the downstream loading of 3193s, 3179-Gs and/or 3192-Gs with operational microcode. See "3193/3179-G/3192-G Support" under Specify. 3290s cannot be attached to the same 3274 Control Unit. 3) Configuration Support D will NOT support Category B Terminals (i.e., IBM PC/XT370 with 3277 emulation card) in any combination with 3290s, 3270 PCs (Distribution Function Mode), 3179-Gs, 3192-Gs or 3193s. Prerequisites: #3650. For X.25 support, 256K of control storage is required (two #3650s are required). Specify: #9124 for Configuration Support D.
- Configuration Support P (#9116): (Mdl 31C, 51C) This Configuration Support provides functions equivalent to Configuration Support A, but is for X.25 operation only. Prerequisites: (1) #6303. (2) Mdl 51C (128K of control storage), #1800, or #1802 and #3632, or #1802, #3630, and #3631.
 - 3193/3179-G/3192-G Support: This support is specify code (Except Katakana, #9311) (Katakana only, #9315). One of these must be specified to get 3193/3179-G/3192-G microcode load diskettes which must be used with Configuration Support D, release 65 or higher to enable the downstream loading of 3193s, 3179-Gs and/or 3192-Gs with operational microcode. In addition, a utility diskette is also provided with #9311 and #9315 (Katakana 3179-G/3192-G only) to enable the customizing of the 3193, 3179-G and 3192-G keyboard and keypad layouts. Field Installation: Yes. Customer Setup: Yes. Limitations: 3290s cannot be attached to the same 3274 Control Unit.
 - 3290/3179-G/3192-G Support: (Mdl 31A, 31C, 31D, 51C) This support is specify code #9301 or #9305. When 3290s, 3179-Gs

and/or 3192-Gs are attached and Configuration Support D is to be used, one of these must be specified to get a microcode load diskette which must be used with Configuration Support D to enable the downstream loading of 3290s, 3179-Gs and/or 3192-Gs with operational microcode.

In addition, a utility diskette is also provided with #9301 and #9305 (Katakana) to enable the customizing of the 3290, 3179-G and 3192-G keyboard and keypad layouts. However, the utility diskette provided with the #9305 (Katakana) load diskette is only applicable to the 3179-G and 3192-G. The 3290 Katakana keyboard and keypad layouts cannot be customized. Field Installation: Yes. Customer Setup: Yes. Prerequisites: #9124. Specify: #9301 for all languages except Katakana. For Katakana, specify #9305.

Note: Load diskettes originally contained only microcode for the 3290. The 3179-G/3192-G microcode was added. Refer to the diskette label to determine the release level and the load microcode that is actually contained on a particular diskette. Original load diskettes will only support the 3290 and the labels on these diskettes only makes reference to the 3290.

CONTROL STORAGE REQUIREMENT TABLES

(Mdl 21A, 21C, 21D, 51C)

After the desired "Special Features" have been selected, the control storage requirement must be determined by using the appropriate table below. Some combinations of functions and features may exceed the capacity of the control storage in the mdl 21A, 21C, 21D, and 51C without EFS. If the sum of the storage requirements is greater than 65,536, a mdl 31 or 51C with EFS Control Unit is required. The mdl 31s and 51C with EFS can run any combination of functions and features, except as noted under the "Special Consideration - Mdl 31A, 31C, and 51C/DFS" that follows after the tables.

1. Refer to the appropriate part of Table 1 and select the features desired:
 - 3274 mdl 21A, refer to Table 1, Part 1
 - 3274 mdl 21C/or 51C w/o EFS SNA, refer to Table 1, Part 2
 - 3274 mdl 21C/or 51C w/o EFS BSC, refer to Table 1, Part 3
 - 3274 mdl 21D, refer to Table 1, Part 4
2. Determine the total storage requirements for the features selected in Step #1.
3. If the total storage requirement calculated in Step #2 is equal to or less than 65,536, the mdl 21 or 51C without EFS can be used. However, if step #2 storage requirement is greater than 65,536, the mdl 21 Control Unit or mdl 51C without EFS cannot be used and a mdl 31 Control Unit or mdl 51C with EFS is required.

Notes for Table 1 - Parts 1, 2, 3, 4

1. Configuration Support A Consideration Only: If all three keyboard types (Typewriter, Data Entry, and Date Entry/Keypunch-like) are required on display stations attached to the 3274, add 1,000 to the storage requirements in addition to those listed in the table.
2. There is no customizing option nor additional control storage required to support 10 Numeric-only Character Set for Operator Identification Card Reader (#4600) on 3277s (Category B terminals) which are attached to a 3274.
3. If the total storage requirement calculated for Category A plus Category B Terminals exceeds the applicable maximum storage value below, use the applicable maximum storage:

Unit	Maximum Storage Value
3274 mdl 21C/BSC	11,544
3274 mdl 21D	13,144
4. Add the indicated amount for each keyboard type to be used.
5. A 6580 requires two terminal ports when it includes a printer.

TABLE 1 - PART 1

(Except Canada > Special Consideration - Mdl 31A, 31C, 51C/EFS
(SNA/SDLC): When using Configuration Support C (#9112) for use
on either a mdl 31A or a mdl 31C or 51C with EFS (SNA/SDLC), it is
necessary to ensure that the desired combination of features and
functions forms a valid configuration.<)

(Canada only > Special Consideration - Mdl 31A, 31C, 51C/EFS:
When using Configuration Support C (#9112) on a mdl 31A, 31C or a
51C with EFS, it is necessary to ensure that the desired combination
of features and functions forms a valid configuration.<)

Notes for Table 2 - Parts 1, 2, 3

1. Refer to the appropriate table of control storage requirements,
and select the desired features and functions
a. For 3274 mdl 31A, use Table 2, Part 1.

- b. For 3274 mdl 31C or 51C with EFS using SNA protocol, use Table 2, Part 2.
- c. (Canada only) For 3274 mdl 31C or 51C with EFS using BSC protocol, use Table 2, Part 3. <)
2. Determine the total storage requirements for the features and functions selected in step 1.
3. If the total storage requirement exceeds 71,680, one or more features must be forfeited in order to reduce the control storage requirements to 71,680 or less.
4. SCS printer support is required for DCA-LV2 word processing applications. This support also required for 5210 mdls G01, G02 attached to 3274 mdls 31A, 31C SNA, and 51C SNA for applications that utilize the Cut Sheet Feed Attachment (#7860), when operating with two drawers.
5. Configuration Support C #9112 is required for 5210 mdls G01, G02 attached to 3274 mdls 31A, 31C SNA, and 51C SNA for support of word processing applications. This includes those applications which utilize the Cut Sheet Feed Attachment (#7860), when operating with two drawers.

TABLE 2 - PART 1

3274 Model 31A	Stg Reqts
Configuration Support C	50,030
Category B Terminals	4,900
Host-Loadable Printer	
Authorization Matrix	500
Between Bracket Printer Sharing	800
SCS Printer Support (3287 - #9660/#9661)(Note 1)	
(3262, 3268,	
4224, 4234 and 4245	
- basic function)(Note 2)	
(3289 - basic function) (5210 mdl	
G1, G2 basic function - #4, #5)	
(4245 mdls D12 and D20 (supported	
as a 3262 mdl 3)) (4250 - basic	
function)(Note 3)	1,600
Magnetic Reader Control (3278/ 3279-#4999), choose one:	
3275/3277 like 10 Character Set	600
Numeric/Alphameric Char. Sets	1,630
Color Convergence (base or	
extended color)	4,296
Structured Field and Attribute	
Processing (SFAP) (Required for	
Extended Color, Extended High-	
lighting, Programmed Symbols, and	
the Query Function	4,950
Programmed Symbols (PS)	2,700
Decompression of PS Load Data	900
Alert Function	2,544
Response Time Monitor	4,488
(Canada only)	
IBM Personal Computer Attachment	
Support (3278/3279-#5315, #5316/ #5325, #5326)	3,200
<)	
Any Canadian French Keyboard	500

Notes:

1. The SFAP function is also required when the SCS Support for SFAP (#9661) feature is to be used on 3287 mdls 1, 2, 1C or 2C.
2. The SFAP function is also required when the Query function is used with 3262 mdls 3 and 13, 3268 mdl 2, 4224 mdl 201, 202, 2E2, or 2C2, 4234 mdl 1 and 4245 mdls D12 and D20. The Query function allows the application to interrogate the printer to determine what function is supported.
3. For 4250 attachment to 3274 mdl 31A, the SFAP function is also required.

TABLE 2 - PART 2

3274 Model 31C/SNA	Stg Reqts
3274 Model 51C/EFS/SNA	
Configuration Support C	50,580
Category B Terminals	4,900
Host-Loadable Printer	
Authorization Matrix	500
Between Bracket Printer Sharing	800
SCS Printer Support (3287 - #9660/ #9661)(Note 1)

(Canada only> An alternative to feature #9011 is RPQ 8K1071 and RPQ 8K1072. The purpose of these RPQs is to assist the customer with network management by providing new procedures for altering, rapid copying, and means for sending customized 3274 System Diskettes between a customer's central site location and his remote locations. For a full description of these RPQs, refer to the RPQ Description and Price Transmittal. see IBM. <)

SPECIAL FEATURES

NON-COMMUNICATIONS FEATURES

Integrated Diskette Drive Enhancement (#3101): (Mdl 31A, 31C, 31D) Installs the enhanced file that is required to use Configuration Support D. Field Installation: Yes. Field Installation only. All parts removed from purchased machines remain customer property.

Encrypt/Decrypt (#3680): (Mdl 21C, 31C, 51C (SDLC)) Provides the Federal Data Encryption Standard algorithm to encrypt and decrypt data messages under a 56-bit key variable. When used in conjunction with the ACF/VTAM Encrypt/Decrypt feature (#6010, 5735-RC2) or ACF/TCAM, Version 2 (5735-RC3) and either the 3848 and the OS/VS1 and OS/VS2 MVS Cryptographic Unit Support Program Product (5740-XY6), or the OS/VS1 and OS/VS2 MVS Programmed Cryptographic Facility Program Product (5740-XY5), data transmitted over unprotected communications lines can be safeguarded through cryptography. Limitations: (1) SNA/SDLC only. (2) Cannot be installed with #4850 on mdl 51C. (3) Encrypted data streams cannot be sent to a 3290 or 3270 Personal Computer (Distributed Function Mode). (4) Mutually exclusive with X.25. The cryptographic feature cannot be used with X.25 operation. Maximum: One. Field Installation: Yes. Note: A mercury battery, P/N 1743456, or equivalent, is needed. A battery is shipped with this feature. See "Accessories" for an additional or replacement battery. Replacement of a discharged battery is the customer's responsibility. The discharged IBM battery should be returned to IBM.

Integrated Diskette Drive Enhancement (#5101): (Mdl 51C) Installs the enhanced file that is required to use Configuration Support D. Field Installation: Yes. Field Installation only. All parts removed from purchased machines remain customer property.

Power Expansion (#5550): (Mdl 51C) Provides the additional power required for #7801 or the 2400, 4800 and 9600 bps Integrated Modem features (#5640, #5740, #5840, #5842). Maximum: One. Field Installation: Yes.

Response Time Monitor (#6101): (Mdl 31A, 31C, 31D, 51C) Provides the capability for enhanced network management by measuring response times. The Response Time Monitor feature accurately measures and records the transaction time between an inbound host attention (AID) and a user-defined transaction end. Maximum: One. Field Installation: Yes. Prerequisites: Configuration Support C #9112 release level 47 and above or Configuration Support D #9124 release level 61 and above.

(Canada only> Waterproof Power Connector (#8801): (Mdl 21A, 21B, 21D, 31A, 31D) Provides a special waterproof connector instead of the normal locking or non-locking plugs on the power cable. This connector is sometimes required to satisfy local ordinances which require this type of termination in specific locations within an installation. See "IBM information Display System Installation - Physical Planning", GA27-2787, for the mating receptacle which the customer must have installed. Note: This connector is provided for

208V unless 240V feature code < > (Canada only> #2831 < > (Canada only> is also specified. < >)

COMMUNICATIONS ADAPTERS

Common Communication Adapter w/o Business Machine Clock (#6302): (Mdl 21C, 31C, 51C) Required for communications at speeds up to 9600 bps (see "Limitation" below when a terminal Adapter(s) Type B (#7802-#7805) is installed). SNA/SDLC and BSC transmission control protocols are supported. Clocking must be provided by the modem or communications facility. Limitations: (1) #6303 must be ordered/installed in lieu of this feature, if SNA/SDLC protocol is required with a line speed greater than 7200 bps and a Category B Terminal Adapter(s) (#7802-7805) is installed. (2) This feature cannot be ordered/installed with #6303 or CCA with BMC (#6301). Maximum: One. Field Installation: Yes.

High-Performance Comm. Adapter w/o Business Machine Clock (#6303): (Mdl 21C, 31C, 51C) Required for attachment to communications lines at 9600 bps (SNA/SDLC transmission control protocol) when a #7801 (mdl 31C, or 51C with EFS only) is installed, and communication is through either an IBM or non-IBM external modem that provides its own clocking, or other communication facility that provides clocking. It is also required for all attachments with speeds greater than 9600 bps, for 51C attachment to the loops of the 8100 System at speeds up to 38.4K bps, for attachment to X.21 Switched Network, or for attachment to X.25 data transmission services. Limitations: (1) With this feature installed, operation is restricted to SNA/SDLC protocol. IML for BSC protocol is no longer possible. (2) This feature cannot be ordered/ installed with #6301 or #6302. (3) When EMI (#3701) is installed, speed is limited to 9600 bps maximum (up to 14.4K bps when used with a 5866 or 5868 mdl 18). Maximum: One. Field Installation: Yes. Specify: If to be used for X.25 operation, specify #9615. (This specify provides the special X.25 keyboard labels used on 3178s, 3278s or 3279s for X.25).

COMMUNICATIONS INTERFACES

CCITT V.35 Interface (#1550): (Mdl 21C, 31C, 51C) Provides a cable and a CCITT interface for attachment to an external modem or other DCE complying with CCITT Recommendation (1976) V.35, ISO Standard 2593, other relevant CCITT Recommendations, and that provides clocking of up to 56K bps. Attachment to non-IBM DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3705 at speeds up to 57.6K bps. See "Specify" section for communication cable length. Limitations: (1) Cannot be installed with any other Communications Interface feature. (2) BSC is not supported at speeds greater than 9600 bps. Maximum: One. Field Installation: Yes. Prerequisites: (1) #6302 or #6303 for communications up to 9600 bps. (2) #6303 for communications above 9600 bps, or for X.25 operation up to a maximum of 9600 bps. Note: Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

External Modem Interface (#3701): (Mdl 21C, 31C, 51C) Provides a cable and a (Canada only > RS-232-C interface for attachment to an external IBM modem < >) (Except Canada> CCITT interface for attachment to an external IBM modem or PTT-mandatory modem complying with CCITT recommendation (1976) V.24, V.26, ISO Standard 2110, and other relevant CCITT Recommendations < >) that provides clocking of up to 9600 bps. Attachment to non-IBM modem or other DCE is subject to the provisions of the Multiple Supplier Systems Bulletin. May also be used for direct attachment to a 3704, 3705, 3720, 3721, 3725, 3726, 4331, or 8100 Processor at speeds up to 9600 bps (up to 14.4K bps when used with a 5866 or 5868 mdl 18). See "Specify" section for communication cable length. Limitations: Cannot be installed with any other Communications Interface feature. Maximum: One. Field Installation: Yes. Prerequisites: #6301, #6302 or #6303. #6303 is required for X.25 operation.

Loop Adapter (#4850): (Mdl 51C with EFS) Provides the ability to attach to a direct- or data link-attached loop of the 8100 System or

a 4331 Processor. Direct loop attachment supports speeds up to 38.4K bps. Data link loop attachment supports 2400, 4800, and 9600 bps. A direct-attached loop can use a 9.6K or 38.4K Hz carrier; a data link-attached loop uses a 9.6K Hz carrier. Limitations: (1) Cannot be ordered with any other Communications Interface feature. (2) Cannot be ordered with #7801, if it will be used for 8100 attachment. (3) Cannot be ordered with #3680. Maximum: One. Field Installation: Yes. Prerequisites: #6303 and #9112 or #9124. Specify: On initial order or for change by service representative must be specified: #9825 for 9.6K Hz carrier or #9829 for 38.4K Hz carrier. To change specify on an installed machine, contact CE Branch Office. MES number 999999 is to be used for Incident Report (IR) completion data. (All terminals on a loop must use the same carrier frequency.)

X.21 Adapter For Nonswitched Networks (#5655): (Mdl 21C, 31C, 51C) An interface adapter for SDLC data transmission at speeds of 2400, 4800, 9600 or 48K bps on nonswitched communication facilities via a DCE complying with CCITT Recommendation X.21. See "Specify" section for communication cable length. Limitations: (1) Cannot be ordered with any other Communications Interface feature. (2) Does not support BSC transmission control protocol. Maximum: One. Field Installation: Yes. Prerequisites: (1) #6302 or #6303 for communications up to 9600 bps. (2) #6303 for communications at 48K bps, or for X.25 operation up to a maximum of 9600 bps. Note: Depending on the length and content of the data stream, it is possible that an occasional "temporary busy" condition due to 3274 buffering and processing constraints may be experienced at higher line speeds. The condition clears and data transfer resumes when a buffer becomes available.

X.21 Adapter For Switched Networks (#5656): (Mdl 51C w/EFS) An interface adapter for attachment to an X.21 switched network via a DCE complying with CCITT Recommendation X.21. SDLC communications at speeds of 2400, 4800, 9600 and 48K bps are supported. Keyboard decads and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. Limitations: (1) Cannot be ordered with any other Communications Interface feature. (2) Does not support BSC transmission control protocol. Maximum: One. Field Installation: Yes. Prerequisites: (1) #6303. (2) Configuration Support C (#9112) or D (#9124).

TERMINAL ADAPTERS

Terminal Adapter Type A1, A2, A3 (#6901, #6902, #6903): (Mdl 21A, 21B, 21C, 31A, 31C, 31D) One each of these adapters can be installed. Each adapter provides for the attachment of an additional eight Category A terminals. It should be noted that two terminal ports are required to attach a Displaywriter System when it includes a printer. The base control unit, which provides for attachment of eight Category A terminals, can be expanded with these three terminal adapters to a maximum configuration of 32 Category A terminals. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s):

Terminal Adapter Type A1 (Terminals 9-16) - #6901
Terminal Adapter Type A2 (Terminals 17-24) - #6902
Terminal Adapter Type A3 (Terminals 25-32) - #6903

Limitations: #6903 is mutually exclusive with #7804, #7805. Maximum: One of each type terminal adapter. Field Installation: Yes. Prerequisites: #6902 requires #6901; #6903 requires #6902. Note: To attach Category A Terminals via the 3299, refer to RQs 8K1155 and 8K1156.

Terminal Adapter Type B (#7801): (Mdl 51C) Provides for the attachment of four Category B terminals, thus expanding the capability of the control unit up to 12 terminals. Limitations: (1) Cannot be installed with #4850 or any 2400, 4800, or 9600 bps Integrated Modem (#5640, #5740, #5840, #5842). (2) Requires EFS #1800 when IML'd for SNA/SDLC operation. Maximum: One. Field Installation: Yes. Prerequisites: #5550.

Terminal Adapter Type B1 (#7802): (Mdl 21B, 21C/BSC, 21D, 31A, 31C, 31D) Permits the attachment of four Category B terminals and provides for the installation of Terminal Adapter Types B2, B3 and B4 when additional Category B terminals are desired. Maximum: One. Field Installation: Yes.

Terminal Adapter Type B2, B3, B4 (#7803, #7804, #7805): (Mdl 21B, 21C/BSC, 21D, 31A, 31C, 31D) Each of these terminal adapters permits the attachment of four additional Category B terminals. A maximum of one each of these terminal adapters can be installed for a combined total of 12 additional or 16 total Category B terminals attached to a control unit. These terminal adapters must be installed in sequence, making it important to order the correct adapter feature code(s).

Terminal Adapter Type B2 (Terminals 5-8) - #7803
Terminal Adapter Type B3 (Terminals 9-12) - #7804
Terminal Adapter Type B4 (Terminals 13-16) - #7805

Limitations: #7804 and #7805 are mutually exclusive with #6903. Maximum: One of each type terminal adapter. Field Installation: Yes. Prerequisites: #7802.

EXTENDED FUNCTION STORE

Extended Function Store (EFS) - Type D4 (#1800): (Mdl 51C) Provides 65,536 positions of additional control storage. Limitations: Cannot be installed with EFS-Types D1, D2, or D3 (#3630, #3631, #3632) or #1802. Maximum: One. Field Installation: Yes.

EFS - Type D3 (#3631): (Mdl 51C) Provides 32,768 positions of additional control storage. Maximum: One. Field Installation: Yes. Field installation only. Prerequisites: #3630.

Extended Function Store (EFS) - Type C1 (#3650): (Mdl 31A 31C, 31D, 51C) Provides 65,536 positions of additional control storage. Maximum: Two. Field Installation: Yes. (Except Canada > Field installation only.) Prerequisites: Mdl 31A, 31C, 31D - #3101 Integrated Diskette Drive Enhancement. Mdl 51C - #5101 Integrated Diskette Drive Enhancement or RQ 8K1071 and either #1800 Extended Function Store Type D4 or #3632 Extended Function Store Type D2 or #3631 Extended Function Store Type D3.

CONTROL STORAGE FUNCTIONS

APL/Text Control Function: This function, selectable during the customization of a 3274 mdl 21A, 21C, 21D, 31A, 31C, 31D, or 51C expands the character handling capability of the 3274 to accommodate the APL, Text, and graphic plot character sets on 3180 mdl 130 (APL only), 3278s, 3262s (text only), 3268 mdl 2 and 2C, 3279s, 3287 attached via Type A Terminal Adapters (#6901, #6902, #6903), 4224s and 4234. Note: The 3274, with or without this APL/Text control function, does NOT support the 3270 Data Analysis/APL Feature (#1066) on attached 3277s or 3284s, 3286s or 3288s, NOR does it support the Text Print Feature (#7880) on attached 3288s.

3289 Text Print Control Function: This function, selectable during customization of a 3274 mdl 21A, 21C, 21D, 31A, 31C, 31D, or 51C, extends the character handling capability of the 3274 to accommodate the text characters (English US only) for the text print feature (#1130) on attached 3289s.

Copy Function: This function, selectable during the customization of a 3274 mdl 21C/BSC, 21D, 31C/BSC, 31D, or 51C, enables the copying of the screen contents of an attached 3178, 3179, 3180 mdl 1, 3278, or 3279 to an attached 3268, 3287, 3289, 3262, 4224, 4234, 4245 or 5210 through use of the Local Print Key on the display keyboard. This function is provided as basic on the 3274 mdls 21A, 21B, 21C/SNA, 31A and 31C/SNA. The ability to perform host initiated local copies from a 3178, 3278, or 3279, to a 3268, 3287, 3289, 3262, 4224, 4234, 4245 or 5210 attached to a 3274 mdl 21A, 21C/SNA, 31A or 31C/SNA is also provided as basic. In addition, the 3274 mdl 21C/BSC and 31C/BSC supports the 3270 host Copy command as basic.

Local Copy Summary:

	Print Key	Host-Initiated
3274 Mdl		
21A, 31A	Basic	Basic
21B	Basic	Not

21C/BSC, 31C/BSC,	Cust.	Appl.
51C/BSC,	Option	Basic
21C/SNA, 31C/SNA,	Basic	Basic
51C/SNA,		
21D, 31D	Cust.	Not
	Option	Appl.

Host-Loadable Print Authorization Matrix: This function, selectable during the 3274 customization process, provides the capability for the 3274, during subsequent IBM procedures, to receive, from a user-written application program at the host CPU, an updated Printer Authorization Matrix to override the matrix created by the customization operator or by system default.

Between Bracket Printer Sharing Function: This function, selectable during the customization of a 3274 mdl 21A, 21C/SNA, 31A, 31C/SNA, or 51C/SNA enables attached 3268s, 3287s, 3289s, 3262s, 4224s, 4234, 4245s and 5210s to be used as Local Copy output devices for the screen contents of attached 3178s, 3179s, 3180 mdl 1s, 3278s, and 3279s, when the printers are Between Brackets with the host application program. Printers are available for Local Copy operations only when they are not in session with an application program if this option is not selected.

Color Convergence Function: This function, selectable during the customization of any mdl 3274, provides the mechanism through which the operator of a 3279 can perform color convergence for the 3279.

Programmed Symbols (PS) Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, enables the customer to define, store, and access up to six, 190-symbol sets on appropriately featured 3278s and 3279s, 3268 mdl 2C and 3287s. Prerequisites: SFAP.

Decompression Function: This function, selectable during the customization of any mdl 3274 except mdl 1B, decompresses data streams containing compressed Programmed Symbols generated by the Graphical Data Display Manager (GDDM) program product. Its usage is recommended for all 3274 TP host attachments that use GDDM. Prerequisites: SFAP.

Extended Attribute Terminals: This function, selectable during the customization of any mdl 3274 except mdl 1B, establishes an internal control table for each terminal on which Extended Color, Extended highlighting, and Programmed Symbols will be used or when a 4250 will be attached. If more extended attribute terminals are attached to the 3274 than are specified during customization, the excess terminals will execute only base-level function. Prerequisites: SFAP.

SFAP: This function, selectable during customization, provides a new 3270 command and several new orders that extend the functional capabilities of appropriately featured 3268 mdl 2Cs, 3179s, 3180 mdl 1s, 3278s, 3279s, 3287s, 3262s, 4224s, 4234 and 4245s. Data streams sent to these attached terminals can include extended color, extended highlighting, query function or programmed symbols, in any combination. Prerequisites: BSC hosts that utilize this function must transmit in transparent-text mode.

X.21 Switched Network Operation: (Mdl 51C) This function, selectable during customization for SNA/SDLC operation, is required for attachment to the X.21 Switched network. It provides the controls necessary to support the CCITT X.21 switched network protocols.

X.25 Support: (Mdl 31C, 51C) This function, selectable during the customization of a 3274 mdl 31C or 51C, provides for attachment to X.25 data transmission services having an interface which complies with Recommendation X.25 (Geneva 1980) of the International Telegraph and Telephone Consultative Committee (CCITT). IBM conformance to this X.25 interface is defined in "IBM General Information Manual - The X.25 Interface for Attaching IBM SNA nodes to Packet-Switched Data Networks", GA27-3345. Keyboard labels on attached 3178s, 3278s or 3279s keyboards and display screen indicators are provided for operator reference during the calling, data exchange, and disconnecting phases. See "X.25 Keyboard Labels" under "Accessories" for details on the labels re-

quired for selected keyboards on terminals connected to a 3274 attached to a X.25 communications facility. Limitations: Encrypt/Decrypt (#3680) is mutually exclusive with 3274 X.25 capability. The cryptographic feature cannot be used with X.25 operation. Prerequisites: (1) Configuration Support P or D at release level 63.1 or higher. (2) SNA/SDLC protocol. (3) Configuration Support P requires 128K, and Configuration Support D requires 256K of control storage (two #3650) to support X.25. The Communications Interface feature required depends upon the X.25 physical interface provided by the network. (4) One of the following Communications Interfaces: #3701, #5655 or #1550. Note: The maximum line speed supported with any of these Communications Interface features is 9600 bps with X.25. The Communications Interface feature required depends upon the X.25 physical interface provided by the network. (5) #6303.

3274 Entry Assist: This function provides capabilities which facilitate entry and editing of text material. The capabilities include margins, tabbing, word wrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. Entry Assist is supported for the following keyboard languages/character sets: Brazilian, Canadian Bilingual 125-character set RPQ, International, Japanese English, Spanish Speaking, English UK, and English US. (On 3274s with Configuration Support C, 3274 Entry Assist is available via RPQ 8K1147.)

Alert Function: This function, selectable during the customization of a 3274 mdl 31A, and on SNA mdls of the 31C and 51C, reports problem determination data to the host, for recording and display, when NPDA Version 3 is installed in the host.

Response Time Monitor: This function, selectable during the customization of 3274 mdls 31A, 31C, 31D, 51C, provides the capability for enhanced network management by accurately measuring transaction times. Response times are collected in up to four user-defined levels. Response time end-definition is defined by the user and can be one of the following: First Character, Keyboard Usable, or Change Direction/End Bracket (SNA only). The response time information can be displayed at a user-designated display station attached to the 3274. Prerequisites: #6101.

Keyboard Definition Utility: This pre-customizing option is available on 3274s with Configuration Support D release level 63 microcode. The utility is for modifying layouts of keyboards that are used on the 3179s and 3180 mdl 1s. The utility provides the capability to define the layout of up to four keyboard layouts. Prerequisites: Mdl 31X -- #9124 (Release Level 63), #3650, #3101. Mdl 51X -- #9124 (Release Level 63), #3650, #5101 or 8K1071, #1800 or #1802 and #3632, or #1802, #3630, #3631. Note: To redefine an APL layout, the display doing the modification must have an APL character generator.

3270 Personal Computer (Control Unit Terminal Mode): This function allows the 3270 Personal Computer to appear as a single 3178, 3278 or 3279.

(Canada only) IBM Personal Computer Attachment Support: This function, selectable during the customization of any mdl 3274, except mdls 1B and 21X, provides support for attachment of an IBM Personal Computer to a 3278 or 3279. Prerequisites: SFAP. <)

MODEL CONVERSIONS

See table below for field installation of model conversions:

	1	1	21	21
	A/B/D	C	A/B/D	C
FROM MODEL	TO MODEL	-	-	-
1A/B/D	Yes (1)	No	NR	No
1C	No	--	No	NR
21A/B/D	NR	No	Yes (1)	No
21C	No	NR	No	--
31A/D	NR	No	NR	No
31C	No	NR	No	NR
51C	No	No	No	No

MACHINES

FROM MODEL	31 A/D	31 C	51 C
1A/B/D	Yes	No	No
1C	No	Yes	No
21A/B/D	Yes (2)	No	No
21C	No	Yes	No
31A/D	Yes	No	No
31C	No	--	No
51C	No	No	--

NR = Field Installation NOT recommended

Notes:

1. When making mdl conversions, the applicable Control Storage Requirement Table must be used to determine if sufficient control storage is available. Also, when converting mdls, refer to FIVE3270 to evaluate expected performance.
2. The 3274 mdls 21A/B/C/D contain the newer storage technology which facilitates upgrading to mdls 31A/C/D at a reduced cost.

ACCESSORIES

Battery, Mercury: To provide power to sustain the master key of the Encrypt/Decrypt feature #3680 on the 3274 when normal power is

not present. A 4.14 volt mercury battery (P/N 1743456). This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered by DP Supply Order from Mechanicsburg. Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

X.25 Keyboard Labels: Stick-on labels are used on the keyboards of 3178s, 3278s and 3279s attached to a 3274 mdl 31C or 51C using X.25 communications facilities. These labels are normally provided with the 3274 feature #8303 when Specify feature #9615 is specified to indicate that X.25 will be used. If new or additional labels are required, they can be obtained by ordering Form Number GX23-0285. Each Form Number is a sheet containing 16 sets of stick-on labels, enough for 16 keyboards, and the installation procedure for installing the labels.

Keycap Accessory Kits: For Keycap Accessory Kits to be used with the Keyboard Definition Utility, refer to "Accessories" in the M3179 and M3180 pages.

SUPPLIES (NONE)

3274 CONTROL UNIT MODELS 41, 61C

PURPOSE

Provides the capability of attaching 3270 Information Display System displays and printers to System/3, S/360, S/370, 4300, 303X, 3081, 308X, 3090, 9370 processors, and the 8100 Information System. The models 41A, and 41D are for local channel attachment. The models 41C, and 61C are used for communicating in data half-duplex mode via half-duplex or duplex communications facilities.

For S/3 attachment, each of the control units can communicate via Binary Synchronous Communications (BSC) in data half-duplex mode over half-duplex or full-duplex communications facilities with a suitably equipped S/3 model 4, 8, 10, 12, or 15 at speeds up to 9600 bps.

ATTACHABLE TERMINALS

Category A Terminals:

- 3178 mdl C1, C2: Display Station
- 3178 mdl C3, C4: Display Station (see Note 4)
- 3179 mdl 1: Color Display Station
- 3179 mdl G: Color Graphics Display Station
- 3180 mdl 1: Display Station
- 3191 (See M3191 pages for models): Display Station
- 3192 (See M3192 pages for Models): Display Station
- 3193 mdl 1, 2: Display Station (see Note 6)
- 3262 mdl 3, 13: Line Printer
- 3268 mdl 2: Impact Matrix Printer
- 3268 mdl 2C: Color Impact Matrix Printer
- 3270 Personal Computer
- 3278 mdl 1, 2, 3, 4, 5: Display Station
- 3279 (except mdl 2C): Color Display Station
- 3287 mdl 1, 2: Impact Matrix Printer
- 3287 mdl 1C, 2C: Color Impact Matrix Printer
- 3289 mdl 1, 2: Line Printer
- 3290: Information Panel Display
- 4224 mdl 201, 202, 2E2: Impact Matrix Printer (See notes 4 and 5)
- 4224 mdl 2C2: Color Impact Matrix Printer (See notes 4 and 5)
- 4234 mdl 1: Dot Band Printer
- 4245 mdl D12, D20: Line Printer
- 4250: APA Printer (see Notes 1 and 2)
- 5150: Personal Computer (via 3278/79 Emulation Adapter)
- 5160 with XT/370 Option Kit and 3278/79 Emulation Adapter (Control Unit Terminal Mode only): Personal Computer XT/370
- 5170 with AT/370 Option Kit and 3278/79 Emulation Adapter (Control Unit Terminal Mode only): Personal Computer AT/370 (Canada only >)
- 5160 mdl 589 (Control Unit Terminal Mode only): Personal Computer XT/370
- 5170 mdl 599 and mdl 739 (Control Unit Terminal Mode only): Personal Computer AT/370 (<)
- 5210 mdl G1, G2: Printwheel Printer
- 6580 mdl A04, A06, A08, A10, B04, B06, B08, B10; w/#8332 and LP 5608-SR9 (see Note 3): Displaywriter System

Mdl 41A, 41C, 41D and 61C control units have 192K bytes of control storage and support all terminal features.

The basic mdl 41A, 41C and 41D control units allow attachment of 32 Category A terminals.

The basic mdl 61C control unit allows attachment of 16 Category A terminals.

Notes:

1. Attachment to 3274 mdls 41C and 61C requires printer RPQ 7B0980.
2. Because of the high data volumes possible with this printer, it is strongly recommended that the "IBM 3274 Performance

Guidelines, Technical Bulletin", ZZ20-4167, be used IBM be contacted to predict the effect the 4250 has on subsystem performance.

3. Two terminal ports are required to attach a 6580 which includes a printer. Mdl C3, C4 support requires RPQs. See "Prerequisites" section of the M3178 pages for details.
4. All 4224 Printer models support the Intelligent Printer Data Stream (IPDS).
5. When attaching the 4224 to a control unit using Configuration Support D at Release 65.0, contact the NSD representative for support information; refer them to 3274 RETAIN TIP #756.
6. RPQ 8K 1311 should be installed on 3274 mdl 41A.

MODELS 41, 61

Model 41A A41: For local (SNA version) attachment, via a byte multiplexer, selector, or *block multiplexer channel, to a S/370, 30XX processor; or a 4300 Processor via a byte multiplexer or multiplexer channel.

Model 41C C41; 61C C61: For communicating in data half-duplex mode over half-duplex or duplex communications facilities with the following:

- A S/370, 30XX, 4300 or 9370 Processor via 3704, 3705, or 3725 (or via the Communications Adapter feature on the 4321, 4331 or a Telecommunication Subsystem Controller on the 9370), using Synchronous Data Link Control (SDLC/SNA).
- A S/370, 30XX, 4300 or 9370 Processor via (where applicable) 2701, 2703, a 3704, 3705 or 3725, or a Communications Adapter feature on the 4321, 4331 or a Telecommunication Subsystem Controller on the 9370, using Binary Synchronous Communications (BSC).
- S/370 mdls 115, 125, 135 and 138 via Integrated Communications Adapter (ICA) using BSC.
- S/360 mdls 30, 40, 50, 65, 75, and 195 via 2701, 2703, or a 3704 or 3705 using BSC.
- 4331/4361 Processor - The mdl 61C can also attach to a 4331 via a direct- or data link-attached loop using SDLC.
- A 4341, 4361, 4381, 303X, 308X or 3090 processor via 3720 using Synchronous Data Link Control (SDLC/SNA) or BSC.
- 8100 Information System - The mdl 61C can attach using SDLC via a data link or a direct-attached or data link-attached loop.

Model 41D D41: For Local (3272 version) attachment, via a byte multiplexer, selector or *block multiplexer channel, to a virtual storage S/370 processor, or a 4300 processor via a byte multiplexer or block multiplexer channel.

* Attachment to a non-DCC subchannel of a block multiplexer channel or to a selector channel is not recommended due to performance considerations which may yield less than maximum throughput.

Prerequisites:

1. One 3178, 3179, 3180 mdl 1, 3278, or 3279 with keyboard is needed on each 3274 as a diagnostic aid. It must be attached to the first terminal address on the control unit (Port 0). (This display station may be attached via a 3299.)
2. A 3274 mdl 41C requires a Communications Adapter and a Communication Interface for communications. An external Data Circuit-Terminating Equipment (DCE) is required with the External Modem Interface (#3701) or the CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655) unless the 3274 model 41C is to be direct connected. The Data Circuit-Terminating Equipment or direct connected unit to which the 3274 mdl 41C is attached must provide clocking.

- The 3274 mdl 61C requires a Communications Adapter and a Communications Interface for host communications. An external DCE may be required with the External Modem Interface (#3701), and the CCITT V.35 Interface (#1550), and the CCITT X.21 Interface (#5655 and #5656).

Customer Setup (CSU): The 3274 mdls 41C, and 61C are Customer Setup, thereby offering the customer early availability and terminal relocation flexibility. The customer is responsible for attaching CSU units to the 3274. For additional information on CSU, refer to GI section. contact IBM.

HIGHLIGHTS

These units can attach up to 32 (16 on the mdl 61C) displays, and/or printers, unless a 6580, which includes a printer, is to be attached. A 6580 without a printer requires one terminal port (the same as other terminals), but when a 6580 includes a printer, two terminal ports are required to attach. All terminals attached to the controller can be driven at distances up to 610m (2,000 ft) using shielded twisted pair or 1,500m (4,920 ft) using coaxial cable. (3289 attaches with coaxial cable only.)

The 3274 can communicate with a S/360, S/370 or 4300 Processor by local channel attach or remotely via communications facilities. The channel-attached Control Units are mdl 41A for SNA operation with extended data stream handling capabilities, and mdl 41D for 3272-like operation with extended data stream handling capabilities. The mdls 41C and 61C can operate with extended data stream handling capabilities using either BSC or SNA/SDLC.

The mdl 61C can also attach via a Data Link to the 8100 Information System or to the 8100 or 4331/4361 via a direct- or data link-attached Loop.

The flexibility of 3274s enables the user to configure a display sub-system for initial requirements, and later change hardware and functions to meet future needs. Function configurability is attained through Configuration Support options, via feature and System Diskettes.

One Feature Diskette and two System Diskettes, and (except Canada) a Language Diskette are shipped with each 3274. An Encrypt/Decrypt Feature Diskette is also shipped with the Encrypt/Decrypt feature (#3680) on a 3274 mdl 41C, or 61C. As part of the installation procedure, a customized System Diskette is generated. The generation process is accomplished by the customer keying in system configuration parameters. A unique configuration table is written on the System Diskette along with the necessary control code to accomplish the functions. For example, during subsequent control unit loading or initialization of a mdl 41C, or 61C, BSC or SNA/SDLC mode of operation is determined by the configuration recorded on the System Diskette used. It is possible to create two different System Diskettes; one to be used for BSC operation and the other to be used when operating SNA/SDLC.

The control unit is initialized with control code and configuration parameters as a result of Power On or by pressing the IML push-button. The load occurs from an integrated diskette drive using the previously customized System Diskette. The loading process starts with the execution of extended tests contained on the diskette.

The character set to be used on attached terminals is specified on the customized IML Diskette during installation procedure. All attached terminals must have the same character set.

Detailed information for initial customizing, for customizing made necessary by changing configurations, and for optionally updating the diskettes, is contained in the "IBM 3274 Control Unit Customizing Guide", GA23-0065.

Katakana Support: The 127-Character (plus space and null) support is an enhancement of previously announced 3270 Japanese Katakana. Katakana terminals will not be 3270 compatible for customers using the NL and EM codes. Customers who do not use the NL and EM codes will be 3274 and 3276 compatible. For detail, see appropriate SRLs.

COMMUNICATIONS

The 3274 mdls 41C or 61C communicates with a 4341, 4361, 4381, 303X, 308X or 3090 processor using SDLC or BSC in half-duplex mode over duplex or half-duplex communication facilities to a 3720.

The 3274 mdl 41C or 61C communicates with a S/370 or 4300 Processor using SDLC over duplex or half-duplex communications facilities to a 3704, 3705, or 3725 or via the Communications Adapter on the 4321/4331/4361 (SNA/SDLC), or by BSC to a S/360, S/370 or 4300 Processor, over duplex or half-duplex communications facilities via (where applicable) a 2701, 2703, or a 3704, 3705, 3725 (the 3725 is not connectable to the S/360), or the communications Adapter on a 4321 or 4331. Communications with a 4331 processor is also provided via a direct- or data link-attached loop for the mdl 61C.

Communications with a S/370 mdl 115, 125, 135, or 138 can also be via the Integrated Communications Adapter (#4640) and appropriate BSC features on a 3115, 3125, 3135, or 3138.

The mdl 61C communicates with the 8100 Information System, using SDLC, via data link, a direct- or data link-attached loop, or direct connection.

SDLC as used in the 3274 mdl 41C and 61C conforms to a subset (unbalanced normal mode) of both the ISO HDLC and ANSI ADCCP standards. For details of this conformance, see "General Information Manual, IBM Synchronous Data Link Control", GA27-3093.

A 3274 mdl 41C or 61C can be used with X.25 communications facilities by customization with Configuration Support D (release level 63.1 or higher). Appropriate hardware features must be installed to support Configuration Support D operation with X.25. See "X.25 Support" under "Control Storage Functions" and Configuration Support D description for details.

Performance: For many 3274 mdl 41C, and 61C systems, response time is limited by transmission line speeds. For these cases, applicable line speed upgrades can be translated into immediate response time improvements. However, performance is also data stream-dependent. Refer to IBM Aids for performance evaluation information.

Communications Facilities: The 3274 mdl 41C, or 61C operate in half-duplex point-to-point or multipoint mode on half-duplex or duplex facilities, using SDLC or BSC, at transmission speeds of 1200 (61C only with a modem supplied clock), (Canada only >2000, <) 2400/1200, 4800/2400, 7200/3600 and 9600/4800 bps on nonswitched facilities. In addition, the 3274 mdl 61C operates in half-duplex point-to-point mode using SDLC at transmission speeds of 1200 (with a modem supplied clock), 2400/1200, 4800/2400, and 9600/4800 bps on switched facilities. See M2700 pages for facilities.

The 3274 mdl 61C also operates in half-duplex mode at 9600 or 38,400 bps over a direct-attached loop, and at 2400, 4800, or 9600 bps over a data link-attached loop.

Multipoint and point-to-point communications at speeds up to 56K bps are also possible where facilities are available. In addition, communications through a 3705, 3720, 3721, 3725, 3726 or to the Local Attachment Interface #4801 on the 4331 or to an 8130/8140 Processor can be via direct connection without the need for communications facilities or modems. All communications at speeds greater than 9600 bps must use SDLC. See M3705, 3720, 3721, 3725, 3726, 4331, 8101, 8130 and 8140 pages for details.

Modems: Unless the 3274 mdls 41C, or 61C will be direct connected, an external Data Circuit-Terminating Equipment (DCE) is required when the External Modem Interface (#3701) or CCITT V.35 Interface (#1550) or CCITT X.21 Interface (#5655 or #5656) is installed.

Switched network backup (SNBU) operation with Manual Call and Manual or Auto Answer is available on the 3872 mdl 1. 4-wire SNBU operation with Manual Call and Auto Answer is available on the 3863 mdl 1, 3864 mdl 1, and 3865 mdls 1 and 2. For communications capabilities, product utilization and features, see M2700, 3863, 3864, 3865 and 3872 pages.

Direct Connection Attachment: In addition to host attachment via modems or other data circuit-terminating equipment (DCE), attachment can be made by direct connect, without the need for intervening DCE. The direct connect is made by using either the External Modem Interface (#3701) or the V.35 Interface (#1550), the corresponding host interface feature(s), and a connecting cable. Shown below are the hosts that provide direct connection attachment for

3276 CONTROL UNIT DISPLAY STATION

PURPOSE

A cathode-ray tube (CRT) display station used for displaying alphanumeric data, and for entering data into and receiving data from a S/370, a 30XX, a 4300 Processor, a 3790 Communication System, a S/360, an 8100 System or a 9370. The 3276 optionally provides control and multiplexing capabilities to support up to seven 3230 mdl 2s, or 3262 mdl 13s, or 3268 mdl 2s and 2Cs, or 3178s, or 3179s, or 3180 mdl 1s, or 3191 mdl A1X, B1X, (Except LAD>, A3X, B3X, <) or 3192 mdl C1X, C3X, D1X, D3X, or 3278s, or 3279s, or 3287s, or 3289s, or 4224 mdl 2XXs, or 4234 mdl 1s, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, allowing a maximum cluster size of eight displays or printers including the 3276's own display. The 6580 Displaywriter System can connect to 1 or 2 terminal ports (display station, or display station and printer). A keyboard, or a selector light-pen, permit an operator to display and manipulate data on the screen in a flexible and efficient manner. The 3276 meets both general and unique display requirements with its set of basic and optional features.

3276 communicates with a S/370, 4300 Processor or 9370, using Synchronous Data Link Control (SDLC) or Binary Synchronous Communications (BSC) over communications facilities; or with a S/360, S/370, 4300 Processor or 9370, using BSC over communications facilities; or with a 3790 Communication System using SDLC over communications facilities; or with an 8100 System using SDLC via a communication link, or a direct-or data link-attached loop or with a 4331 using SDLC via a direct-or data link-attached loop.

MODELS

Models 1-4: For use with BSC transmission control.

Model 1 001: Displays up to 960 characters ... 12 lines of 80 characters each.

Model 2 002: Displays up to 1,920 characters ... 24 lines of 80 characters each.

Model 3 003: Displays up to 2,560 characters ... 32 lines of 80 characters each.

Model 4 004: Displays up to 3,440 characters ... 43 lines of 80 characters each.

Models 11-14: For use with SNA/SDLC transmission control.

Model 11 011: Displays up to 960 characters ... 12 lines of 80 characters each.

Model 12 012: Displays up to 1,920 characters ... 24 lines of 80 characters each.

Model 13 013: Displays up to 2,560 characters ... 32 lines of 80 characters each.

Model 14 014: Displays up to 3,440 characters ... 43 lines of 80 characters each.

Note: Mdls 1 and 11 have a 480-character mode for existing 480-character programs, and mdls 3, 4, 13 and 14 have a 1,920-character mode to accommodate existing 1,920-character programs.

B06, B08, B10	Displaywriter System
	(66-Line Display)

* For 3178, 3179, 3180 mdl 1, 3278, 3279 model restrictions, see "Attachment Matrix" under "Terminal Adapters" in "Special Features".

** The 3276 supports the 3180 mdl 1 only when the 3180 is emulating a 3278 mdl 2-4. The 3276 does not support the 3180 extended functions or the 27x132 character screen format.

The 3276 does not support Programmed Symbols, Extended Color, or Extended Highlighting on a 3268, 3179, 3278, 3279, 3287, or a 5210.

The 3276 does not support the Intelligent Printer Data Stream (IPDS) Mode of the 4224 mdl 2XX Printer.

For use with 3790 Communication System: The 3791 Controller supports only selected models of the 3276 and the 1,920 character mode. See the 3791 Configurator, (Canada only> GA27-2768, <) (Except Canada> GA19-0111, <) and M3791 pages for additional details.

For use with an 8100 System: See the "8100 System Configurator", GA27-2876, and refer to the M8130/8140, 8101 pages and programming pages for possible support restrictions.

The 6580 Displaywriter System prerequisites for attachment include the 3270 Attached Workstation licensed program (5608-SR9) and the 3274/3276 Attached Workstation Adapter (#8332).

Prerequisites: The 3276 requires an integrated, or external modem, or an X.21 Adapter for Switched Networks, or an X.21 Adapter for Nonswitched Networks for TP attachment, or a loop adapter for 8100 System loop attachment. A keyboard is needed on each 3276 for diagnostic purposes.

Customer Setup (CSU): The 3276 is designated as Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

Displays a character within a 7x14 character matrix in 960, 1,920 and 2,560-character mdls; within a 7x11 character matrix in the 3,440-character mdl. The basic 26-character upper case letters are presented in a 7x9 character matrix for the 960, 1,920 and 2,560-character mdls, and in a 7x8 character matrix for the 3,440-character mdl. Displays a 94-character set: 62 alphanumeric and 32 special characters, not including the Space and Null characters. The display character set may be restricted to upper case characters by the monospace switch. Uses 3270 Field Formatting capability which permits individual fields of data on the screen to

be program-defined with various attributes such as protected/unprotected, alphameric, normal/highlighted intensity, displayable/non-displayable, and selector light-pen detection allowed/disallowed. All terminals attached to the controller can be driven at distances up to 610m (2,000 ft) using shielded twisted pair or 1,500m (4,920 ft) using coaxial cable. (3230 and 3289 attach with coaxial cable only).

The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of a 3178, 3179, 3180 mdl 1, 3191 mdl A1X, B1X, (Except LAD > A3X, B3X, <) 3192 mdl C1X, C3X, D1X, D3X, 3276, 3278, 3279, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, attached to a 3276. (Order RPK 8K0929 or 8K0991 on mdls 1, 3 and 4 using BSC when all the following operating conditions are expected:

- Operator use of the print key for a local copy on a printer that is also used by the host.
- The host does not use general poll.
- The host does not issue specific poll after a printer has completed a host printout.

The printer designation is controlled by a configuration default matrix which is fixed by the relative port positions of displays and printers attached to the 3276. Other printers may be accessed using the IDENT key.

Devices attached to the 3276 are assigned port positions 1-8. Displays are authorized to print only to printers which are attached to higher numbered ports. If the IDENT key is not used, a PRINT operation from a given display will cause printing to take place at the first printer whose port position is higher than the display. The operator may use the IDENT key to print to any printer. (The host can perform copy in a manner compatible with existing 3271/ 3272 support.)

Operator Factors: The 3276 has an anti-glare screen. Indicators are displayed on the bottom row of the screen, outside the data display area, and provide useful operator information. Host display of data on the screen is accomplished without refresh interrupt (i.e., no blinking). The keyboard, which is low in profile, provides a palm rest area, and has separators to help prevent accidental striking of control keys. The operator may select one of several cursor modes.

Cluster Capability: Up to seven 3262s, 3178s, 3179s, 3180 mdl 1s, 3191 mdl A1X, B1X, (Except LAD > A3X, B3X, <) 3192 mdl C1X, C3X, D1X, D3X, (Except Canada > 3230s, 3262s, <) 3278s, 3279s, 3268s, 3287s, 4224 mdl 2XX, 4234 mdl 1s, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, 3289s or a 5210 may be attached. The basic 3276 provides a display and a port for one device: a 3178, 3179, 3180 mdl 1, (Except Canada > 3230, <) 3262, 3268, 3278, 3279, 3287, 4234 mdl 1, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10, 3289 or a 5210. Up to three Terminal Adapters, each controlling up to two devices, can be attached to the 3276. The 3276 allows the attachment of seven additional displays and/or printers for a maximum cluster size of eight including its own display. The 6580 Displaywriter System can connect to one or two terminal ports (display station, or display station and printer) ... see "Special Features".

Editing Functions: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic. All alphameric, special symbol, and cursor move keys have typamatic capability. Double-speed cursor typamatic is attained with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. The cursor select function provides an alternative to the selector light-pen function. Fields of data may be selected by positioning the cursor and then using the cursor select key.

Input Flexibility: A choice of keyboards or the selector light-pen provide input flexibility ... see "Special Features" below. Fields of data can be selected by positioning the cursor and operating the cursor select key, instead of using the selector light-pen. 12 program function (PF) keys are basic with all typewriter keyboards.

Security Functions: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data

entered from the keyboard without displaying the data on the screen. A Security Keylock prevents modification or display of data in the display buffer unless the key is turned to the "on" position. An Address Keylock (optional) controls access to the address switches. These capabilities and the terminal's ability to identify itself to the host program (SNA/SDLC operation only), allow customer-supplied security program routines to control access to data and audit of actions. A Magnetic Slot Reader is available to enter system user identification. An Encrypt/Decrypt feature (optional) protects data transmitted over unsecured communication lines from accidental or intentional disclosure and/or modification (mdls 11-14 in S/370 or 4300 processor attachment only).

Audible Alarm: An alarm, sounded under program control, to alert the operator to a operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next-to-last position on the screen. The operator may adjust the volume of the tone.

Keyboards: One is needed on each 3276 for diagnostic testing. Refer to the Type Catalog section for keyboard layouts.

Communications: The 3276 mdls 11-14, and the 3276 mdls 1-4 with the SDLC/BSC Switch (#6315) communicate with a S/370 or 4300 processor using SDLC transmission over communications facilities (where applicable) to a 3704, 3705, or 3725, or a Communications Adapter (#1601) feature on the 4331. The 3276 mdls 11-14, and the 3276 mdls 1-4 with the SDLC/BSC Switch (#6315) communicate with a 4341, 4361, 4381, 303X, 308X or 3090 processor using SDLC over duplex or half-duplex communication facilities to a 3720. The 3276 mdls 1-4 communicate with a S/360, S/370 or 4300 processor, using BSC transmission over communications facilities (where applicable) to a 2701, 2703, 3704, 3705, 3725 (see note), an Integrated Communications Adapter (3115, 3125, 3135 or 3138), or a Communications Adapter (#1601) feature on the 4331. See M3791 pages for specific models. All mdls of the 3276 can also communicate with a 3704, 3705, or 3725, or a Communications Adapter (#1601) feature on the 4331, at 1200 bps without need for communications facilities or a modem. The 3276 mdls 11-14 communicate with a 4331 Processor using SDLC transmission via a direct or data link attached loop. The 3276 mdls 11-14 communicate with an 8100 System using SDLC transmission via a data link, or a direct or data link attached loop. The 3276 mdls 1-4 with the SDLC/BSC switch (#6315) can communicate with the 8100 System using SDLC transmission via a data link.

Note: The 3725 is not connectable to a S/360.

For TP attachment, each 3276 must be equipped with one of the communications features (#6301 or #6302) and either the External Modem Interface (#3701), an X.21 Adapter for Switched Networks (#5656), or an X.21 Adapter For Nonswitched Networks (#5655), or one of the 1200 bps Integrated Modem features (#5500, #5501 or #5508). In addition, #6315 may be selected on mdls 1-4 (see above).

For loop attachment (3276 mdls 11-14) each 3276 must be equipped with #6302 and #4850.

Communication Facilities: The 3276 operates in data-half-duplex point-to-point or multipoint mode on half-duplex or duplex non-switched communication facilities at speeds of 1200, 2000, 2400, 4800, 7200 or 9600 (SNA/SDLC only) bps. In addition, the 3276 mdls 11-14 operate in data-half-duplex point-to-point mode on the public switched telephone network at speeds of 1200 and 4800 bps and on public switched data networks at speeds of 2400, 4800, and 9600 bps. See the M2700 pages for information on the communication facilities over which this operation can occur. The 3276 mdls 11-14 also operate in half-duplex mode at 9600 bps over a direct attached loop, and at 2400, 4800 or 9600 bps over a data link-attached loop.

Modems: If a Loop Adapter (#4850) (mdls 11-14 only), or an X.21 Adapter for Switched Networks (#5656) (mdls 11-14 only), or an X.21 Adapter for Nonswitched Networks (#5655) (mdls 11-14) is not installed, a 1200 bps Integrated Modem feature or an external IBM modem may be attached to a 3276. External modems require the External Modem Interface (#3701).

Modem	Speed	
(models)	(bps)	Lines

3833-1	2400	Nonswitched voice grade

5868-61/62		Rack mount version of 5866-1/2
5979-L11/12	9600	Limited distance COAM**

* Canada only. ** Except Canada.

Note: 4-wire SNBU is available on 3863, 3864, 3865, 5865 and 5866 modems with feature #7953 installed. 2-wire SNBU is available on 5865 and 5866 modems with feature #7952 installed. See your TCM branch/TP coordinator for country limitations.

Switched network backup operation with Manual Call and Manual or Auto Answer is available on the 3872 mdl 1. For communications capabilities, product utilization and special features, see M2700, 3976, 3863, 3864, 3865, and 3872 pages.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This has been done through the use of problem determination and recovery routines and procedures that are easily understood and used by the operator. See "Customer Responsibilities".

Network Problem Determination Application (NPDA), a program product, operates with VTAM and TCAM to assist in performing

communication network problem determination/ isolation and enhances the availability and serviceability of the 3276 for the above environments in BSC (except when attached to the 4331 via direct or data link-attached loop) and SDLC mode. See NPDA in the Program Products section.

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at customer's receiving dock, unpacking and placement of 3276.
3. Physical setup, connection of cables to communication lines/modems and IBM devices incorporating protected customer access areas, switch settings, and check out.
4. Contacting Customer Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
5. Notifying IBM of intent to relocate and follow IBM instructions for relocation.
6. Use and follow the problem determination procedures and fill out trouble report prior to calling for IBM service.
7. Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

Publications: See "KWIC Index", G320-1621 or specific system bibliography.

SPECIFY

Specify Codes, except for WT power requirements, nomenclatures, and keyboard languages, are not normally required to order a 3276. If codes are not specified, the machine is shipped with the following specifications:

- Power Cable Plug (Japan only): Locking for voltages under 200 volts.
- Power Cable Plug (Canada only): Nonlocking.
- Power Cable Length: 2.8m (9 ft).
- Keyboard Cable Length: 0.9m (3 ft).
- Communication Cable Length: 6.1m (20 ft) for attachment to standalone modem, or to communications facility when an integrated modem is used.
- Loop Station Connector (LSC) cable length: 1.8m (6 ft) for attachment to a direct attached or data link attached loop.

The three digit country code entered on the DPMO will be used to select a power cable plug based on the specification most commonly used in that country. The Character Set Language will be the same as the Keyboard Language. A 3178, 3179, 3180 mdl 1, 3191 mdl A1X, B1X, (Except LAD > A3X, B3X, <) 3192 mdl C1X, C3X, D1X, D3X, 3230, 3262, 3278, 3279, 3268, 3287, 3289, must use the same Character Set Language as the 3276 to which it is attached. The following specify codes must be specified:

- Power (AC, 1-phase): Specify #2998 for an AG-APG country and then select one of the following (except Canada):

50 Hz	60 Hz
100V #2804	100V #2730
110V #2805	110V #2822
200V #2806	120V #2800 *
220V #2813	127V #2823
230V #2821	
240V #2801	

* Includes requirement for 115V.

- Voltage (Canada only): Specify #2800 for 120V/60 Hz.

- Power Cable Plug (except Canada and Japan): If the most commonly used power cable plug in the country is not desired, then a country RPQ may be initiated. For details concerning power plugs, refer to "IBM Information Display System Installation Manual - Physical Planning", (GA27-2787).

Note: If a power supply, not the most common, is specified, and it is incompatible with the power plug commonly supplied, a power cord without a plug will be shipped unless the country RPQ, referenced above, is initiated.

- Power Cable Plug (Japan only): For machines requiring 200V and higher, a country RPQ should be initiated for a power plug.
- Machine Nomenclature: Specify one of the following:

Canadian	English US #2924
French #2935	Japanese #2930
Brazilian #2933	Spanish
English UK #2927	Speaking #2931

- Keyboard Language: For all keyboards, specify one of the following:

Brazilian #2975	International #2950
Canadian/	Japanese
French #2977	English #2955
English #2955	Japanese
EBCDIC #2951	Katakana #2973
English UK #2958	Spanish
English US #2956	Speaking #2969

Notes:

1. Japanese English #2955 applies only to Keyboards #4622, #4623, #2715, #2717 and #2718.
2. Japanese Katakana #2973 applies only to Keyboards #2715, #2716, #2717 and #2718.

Limitations: All 3178s, 3179s, 3180 mdl 1s, 3278s, 3279s, 6580 Displaywriter System mdls A04, A06, A08, A10, B04, B06, B08, B10 in a 3276 cluster must have the same Keyboard Language as the 3276. Only English US language is valid for 87-key EBCDIC Typewriter/Text Keyboard (#4629).

Katakana Support: 127-character (plus space and null) support provided on Keyboards #2715, #2716, #2717 and #2718 is an enhancement of previously announced 3270 Japanese Katakana. This enhancement may not be 3270 compatible for customers using the NL and EM codes. Customers who do not use the NL and EM codes will be 3274 and 3276 compatible. For details see appropriate SRLs.

The remainder of this Specify Section can be ignored unless special circumstances require a deviation from the standard default values.

- Power Cable Length: If the standard 2.8m (9 ft) power cable is not desired, specify #9511 for 1.8m (6 ft) cable or #9513 for a 4.5m (15 ft) cable.
- Power Cable Plug (Japan only): Specify #9891 for a nonlocking plug for voltages under 200 volts.
- Power Cable Plug (Canada only): Specify #9890 for locking plug.
- Keyboard Cable Length: If the standard 0.9m (3 ft) cable is not desired, specify #9399 for 1.8m (6 ft) cable.
- Communication Cable: If the standard 6.1m (20 ft) communication cable is not desired, specify #9061 for 3.0m (10 ft) cable, #9062 for 9.1m (30 ft) cable or #9063 for 12.2m (40 ft) cable.
- Loop Station Connector (LSC) cable: If the standard 1.8m (6 ft) loop station connector cable is not desired, specify #9405 for 4.3m (14 ft) cable.

SPECIAL FEATURES

Non-Communications Features

Address Keylock (#1009): Controls access to the unit address switches (Canada only) (and incidentally transmit level switches) which are located in the Operator Panel Drawer. Maximum: One. Field Installation: Yes.

APL/Text Control (#1067): Provides the control for 3180 mdl 130 (APL only), 3230, 3262 (Text only), 3268, 3276, 3278, 3279, or 3287, with APL/Text feature, 3289 with Text feature 4224 APL Character Set, or 4234 APL/TEXT function. Maximum: One. Field Installation: Yes. Prerequisites: #1068.

Extended Function Base (#1068): Allows the addition of APL/Text Control (#1067), or X.21 Adapter For Switched Networks (#5656) and/or Color Display attachment (#1950) feature. Limitations: Cannot be installed with #6315. Maximum: One. Field Installation: RPQ 8K0900 is required.

APL/Text (#1120): Provides the capability for display of 222/244/255 character APL/Text set including the 94/116/127 character EBCDIC set. Limitations: This feature is only valid when installed with #1067. This feature is EBCDIC only and is NOT compatible with ASCII. Cannot be installed with #3620. Maximum: One. Field Installation: Yes. Prerequisites: #3610. Corequisite: (#4626) or (#4629). (Text Keyboard (#4629) is only available with keyboard language (#2956), or keyboard (#2718).

Note: This feature is available for ordering for field installation until 12/3/82. Then it can no longer be ordered.

Color Display Attachment (#1950): Provides the capability of attaching 3279 mdls 2A, 3A, 2B, 3B, 02X, and 03X. For the number of attached terminals, see Terminal Adapter features (#3255, #3256, #3257). Limitations: (1) This feature is not available for 3276 mdl 1. (2) The 3276 does not support Programmed Symbols, Extended Color, or Extended Highlighting. 3279 mdls 2B and 3B are supported on the 3276 for base color and APL/Text operation. Maximum: One. Field Installation: Yes. Prerequisites: (1) #1068 (2) #1067 for use with 3279 mdls 2B, 3B for APL/Text Operation.

76-Key Jap. Eng./Jap. Kat. T/W KB (#2715): Typewriter-like layout, movable. 12 PF keys are available in the top row of data keys through use of an alternate shift key. The 76-key Japanese English Typewriter Keyboard provides 49 data keys and 27 control keys. Limitations: Keyboards used on 3178s/ 3179s/ 3180s/ 3275s/ 3277s are not interchangeable with keyboards used on 3276s/ 3278s/ 3279s. Maximum: One Keyboard. Field Installation: Yes. Prerequisites: #2955 or #2973. Customer Setup: Yes.

76-Key Jap. Kat. Data Entry KB (#2716): Movable, 4-level shift providing 49 data keys, 10 PF keys and 27 control keys. Limitations: Keyboards used on 3178s/ 3179s/ 3180s/ 3275s/ 3277s are not interchangeable with keyboards used on 3276s/ 3278s/ 3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: #2973. Customer Setup: Yes.

88-Key Jap. Eng./Jap. Kat. T/W KB (#2717): Typewriter-like layout, movable, with 49 data keys, 26 control keys and 12 PF keys (total 24 PF keys). 12 of the PF keys are available in the top row of data keys and are available through the use of the alternate shift key. The Japanese Katakana keyboard provides 4-level shift, 49 data keys and 27 control keys. Limitations: Keyboards used on 3178s/3179s/ 3180s/3275s/ 3277s are not interchangeable with keyboards used on 3276s/ 3278s/ 3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: #2955 or #2973. Customer Setup: Yes.

88-Key Jap. Eng./Jap. Kat. T/W/APL KB (#2718): An 88-key Japanese English/Japanese Katakana Typewriter Keyboard (see #2717) with modified keytops to allow entry of 81 APL specific characters in addition to the non-APL character set (Japanese English or Japanese Katakana per keyboard language specify). An APL On/Off key controls whether the keyboard is in APL or non-APL character set mode. In contrast to #2717, this keyboard has only 12 PF keys (PF1 through through PF12) which are the group of 12 keys to the right of the main keyboard area. Limitations: Keyboards

used on 3178s/ 3179s/ 3180s/ 3275s/ 3277s are not interchangeable with keyboards used on 3276s/ 3278s/ 3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: #3620 and #2955 or #2973. Customer Setup: Yes.

Extended Character Set Adapter (#3610): Provides the additional control and buffering necessary for the extended character set in #1120. Limitations: Cannot be installed with #3620. Maximum: One. Field Installation: No. Prerequisites: #1067. Corequisite: #1120.

Character Set Extension (#3620): Provides the capability for display of 222/244/255 character APL/Text including 94/116/127 character EBCDIC set, and the additional control and buffering necessary for the extended APL/Text character set. Limitations: (1) This feature is only valid when installed with #1067. This feature is EBCDIC only and is NOT compatible with ASCII. (2) Cannot be installed with #1120 or #3610. Maximum: One. Field Installation: Yes. Corequisite: #4626 or #4629 Text Keyboard #4629 is only available with #2956, or #2718.

Encrypt/Decrypt (#3680): Provides a hardware implementation of the Federal Data Encryption Standard algorithm to encrypt and decrypt data messages under a 56-bit key variable. When used in conjunction with the ACF/VTAM Encrypt/Decrypt Feature (Feature #6010, 5735-RC2) and the IBM Programmed Cryptographic Facility Program Product (5740-XY5), data transmitted over unprotected communication lines can be safeguarded through cryptography. Limitations: 3276 mdls 11-14 only. Maximum: One. Field Installation: Yes.

Note: A mercury battery, P/N 1743456 or equivalent, is needed. A battery is shipped with this feature. Replacement of the discharged battery is the customer's responsibility. Discharged battery should be returned to IBM.

75-Key EBCDIC Typewriter KB (#4621): Typewriter-like layout, movable, with 49 data keys and 26 control keys. 12 PF keys are included in the top row of data keys through use of an alternate shift key. Limitations: Keyboards used on 3178s/3179s/3180s/3275s/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: Keyboard Language, see "Specify". Customer Setup: Yes.

75-Key EBCDIC Data Entry KB (#4622): Movable, with 35 data keys, 10 PF keys and 30 control keys. Limitations: Keyboards used on 3178s/3179s/3180s/3275s/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: Keyboard Language, see "Specify". Customer Setup: Yes.

75-Key EBCDIC Data Entry KB (#4623): Key punch layout, movable, with 35 data keys, 10 PF keys and 30 control keys. This is the recommended keyboard for high volume data entry. Limitations: Keyboards used on 3178s/3179s/3180s/3275s/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: Keyboard Language, see "Specify". Customer Setup: Yes.

87-Key EBCDIC Typewriter/APL KB (#4626): An 87-key EBCDIC Typewriter Keyboard (see #4627) with modified keytops to allow entry of 81 APL specific characters in addition to the 94/116 character EBCDIC set. An APL On/Off key controls whether the keyboard is in EBCDIC typewriter or APL mode. In contrast to #4627, this keyboard has only 12 PF keys (PF1 through PF12) which are the group of 12 keys to the right of the main keyboard area. Limitations: Keyboards used on 3178s/3179s/3180s/3275s/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: #3620. Prerequisites: Keyboard Language, see "Specify". Customer Setup: Yes.

87-Key EBCDIC Typewriter KB (#4627): Typewriter-like layout, movable, with 49 alphanumeric data keys, 26 control keys, and 12 PF keys (24 total PF keys). 12 of the PF keys are included in the top row of data keys through the use of an alternate shift key. Limitations: Keyboards used on 3178s/3179s/3180s/3275s/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum:

One keyboard. Field Installation: Yes. Prerequisites: Keyboard Language, see "Specify". Customer Setup: Yes.

87-Key EBCDIC Typewriter/Text KB (#4629): An 87-key EBCDIC Typewriter Keyboard (see #4627) with modified keytops to allow entry of 65 Text specific characters in addition to the 94/116 character EBCDIC set. A Text On/Off key controls whether the keyboard is in EBCDIC typewriter or Text mode. In contrast to #4627, this keyboard has only 12 PF keys (PF 1 through PF 12) which are the group of 12 keys to the right of the main keyboard area. Limitations: Keyboards used on 3178s/3179s/3180s/3275s/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Prerequisites: #3620. Keyboard Language - English US (#2956) only. Customer Setup: Yes. Keyboard Numeric Lock (#4690): Provides keyboards #2715, #2716, #2717, #2718, #4621, #4622, #4623, #4626, #4627, #4629 with the ability to lock the keyboard, if a non-numeric key (other than 0-9, minus, decimal sign, or dup) is operated in a pre-defined numeric-only field. Maximum: One. Field Installation: Yes. Customer Engineering Branch Office for installation. MES number 999999 is to be used for IR (Incident Report) completion data.

Magnetic Reader Control (#4999): Provides the capability of attaching a Magnetic Slot Reader which reads encoded information (numeric only) from a magnetic stripe. Maximum: One. Field Installation: Yes.

SDLC/BSC Switch (#6315): (Mdl 1-4) Provides SNA/SDLC transmission control in addition to BSC. SDLC or BSC can be selected by the operator with a switch on the operator panel. Limitations: Cannot be installed with #1068. Maximum: One. Field Installation: Yes.

Selector Light-Pen (#6360): A hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. The selector light-pen, while not being used, can be placed in a recess of the keyboard, which is used for user's incidental items. Selector light-pen (and cursor select) operations have been expanded to include a new designator character "&". When this designator is used, the Read Modified operation results in the return of both the addresses and the data of all modified fields on the screen. Maximum: One. Field Installation: Yes.

Communications Features

External Modem Interface (#3701): Provides a CCITT interface and cable for attachment of an external IBM modem or PTT mandatory modem complying with CCITT Recommendations (1976) V.24, V.28, ISO Standard 2110 and other relevant CCITT Recommendations. Refer to M2700 pages. Other external non-IBM modems may be attached, subject to the Multiple Supplier Systems Bulletin. Limitations: Cannot be ordered with any other Communications Interface feature. Maximum: One. Field Installation: Yes. Prerequisites: #6301 or #6302. Specify: #9490 for operation on the public switched network (mdls 11-14), or #9491 for operation on nonswitched communications facilities.

Loop Adapter (#4850): (Mdl 11-14) Provides the capability to attach to either a direct or data link attached loop of the IBM 8100 System or a 4332/4361 Processor. Limitations: Cannot be ordered with any other Communications Interface feature. Maximum: One. Field Installation: Yes. Prerequisites: #6302.

1200 bps Integ. Modem, Nonsw (#5500): Provides an integrated modem for operation over nonswitched communications facilities at speeds of 1200/600 bps. No external modem is required. Limitations: Cannot be ordered with any other Communications Interface feature. Maximum: One. Field Installation: Yes. Prerequisites: #6301. Specify: #9651 for use with 4-wire facility or #9652 for use with 2-wire facility (Japan only) > #2943 if used on NTT D-1 service (<).

1200 bps Integ. Modem, Sw., Auto Answer (#5501): (Mdl 11-14) Provides an integrated modem with auto/manual answer capabilities for operation over switched communications facilities at speeds of 1200/600 bps. No external modem is required. Limitations: Cannot be ordered with any other Communications Interface feature. Field Installation: Yes. Prerequisite: #6301.

Note: (Except Canada>This feature includes the PSN line plate which is mandatory for attachment to the public switched telephone network.<)

(Canada only>1200 bps Integ. Modem, Manual Answer (#5502): (Mdl 11-14) Provides an integrated modem for communication with a remote processor at speeds of 1200/600 bps over the public switched telephone network. No external modem is required. Limitations: Cannot be ordered with any other Communications Interface feature. Maximum: One. Field Installation: Yes. Prerequisites: #6301.<)

(Canada only>1200 bps Integ. Modem, Nonsw With SNBU (#5507): Provides an integrated modem at speeds of 1200/600 bps for operation over nonswitched communication facilities, and also provides manual switched network backup capability. No external modem is required. Limitations: Cannot be ordered with any other Communications Interface feature. Specify: (#9651) for communication over 4-wire facility, or (#9652) for communication over 2-wire facility. Maximum: One. Field Installation: Yes. Prerequisites: #6301.<)

1200 bps Integ. Modem, Nonsw With SNBU, Auto Answer (#5508): Provides an integrated modem for operation over nonswitched communications facilities at speeds of 1200/600 bps and also provides auto/manual answer switched network backup capabilities. No external modem is required. Limitations: Cannot be ordered with any other Communications Interface feature. Field Installation: Yes. Prerequisites: #6301. Specify: #9651 for communications over 4-wire facility, or #9652 for communications over 2-wire facility.

Note: (Except Canada>This feature includes the PSN line plate which is mandatory for attachment to the public switched telephone network.<)

(Except Canada>X.21 Adapter For Nonsw Networks (#5655): (Mdl 11-14) Provides an interface and cable for attachment to the X.21 Nonswitched data circuit-terminating equipment (DCE). See "Specify" for length of communication cable, which is supplied. SDLC data transmission at speeds of 2400 bps (#9822), 4800 bps (#9823), and 9600 bps (#9825) are supported. Limitations: Cannot be ordered with any other Communications Interface feature. Maximum: One. Field Installation: Yes. Prerequisites: #6302.<)

(Except Canada>X.21 Adapter For SW Networks (#5656): (Mdl 11-14) Provides an interface for attachment to the X.21 switched network to transmit data at speeds of 2400 bps, 4800 bps, and 9600 bps. The X.21 interface is a recommendation from the CCITT to standardize the interface between the DTE and DCE for synchronous operation, and will be used in place of the V.24/V.28 interface. A keyfront decal and a label on the keyboard will be provided for easy operator reference in using this feature. Limitations: Cannot be ordered with any other Communications Interface feature. Maximum: One Field Installation: Yes. Prerequisites: (1) #1068. (2) #6302.<)

Comm. Feature With Business Machine Clock (#6301): Required for attachment to communications facilities through any 1200 bps Integrated Modem, or #3701 at 1200 bps, to any external modem that does not provide its own clocking. Limitations: Cannot be ordered with #6302. Maximum: One. Field Installation: Yes.

Comm. Feature Without Business Machine Clock (#6302): Required for attachment to communications facilities, at speeds of up to 9600 bps using SDLC, or up to 7200 bps using BSC, through #3701 and any external modem that provides its own clocking, or through #5656, or through #5655 and its data circuit-terminating equipment. It is also required for attachment of the 3276 mdls 11-14 to a direct or data link attached loop of the 8100 System, at a speed of 9600 or 2400 bps respectively. Limitations: Cannot be ordered with #6301. Maximum: One. Field Installation: Yes.

Terminal Adapters

Terminal Adapter No. 1 (#3255): Enables attachment of two terminals (3178s, 3179s, 3180 mdl 1s, 3191 mdl A1X, B1X,(Except LAD> A3X, B3X<) 3192 mdl C1X, C3X, D1X, D3X, (Canada only>3230s,<) 3262s, 3268s, 3278s, 3279s, 3287s, 3289s, 4224 mdl 2XXs, or 4234 mdl 1s, in any combination). Limitations: See "Attachment Matrix" be-

low for permissible 3178 attachments and 3278 and 3279 mdl restrictions. Maximum: One. Field Installation: Yes.

Terminal Adapter No. 2 (#3256): Enables attachment of two terminals (3178s, 3179s, 3180 mdl 1s, 3191 mdl A1X, B1X,(Except LAD> A3X, B3X<) 3192 mdl C1X, C3X, D1X, D3X, (Canada only>3230s,<) 3262s, 3268s, 3278s, 3279s, 3287s, 3289s, 4224 mdl 2XXs, or 4234 mdl 1s, in any combination). Limitations: See "Attachment Matrix" below for permissible 3178 attachments and 3278 and 3279 mdl restrictions. Maximum: One. Field Installation: Yes. Prerequisites: #3255.

Terminal Adapter No. 3 (#3257): Enables attachment of two terminals(3178s, 3179s 3180 mdl 1s, 3191 mdl A1X, B1X,(Except LAD> A3X, B3X<) 3192 mdl C1X, C3X, D1X, D3X, (Canada only>3230s,<) 3262s, 3268s, 3278s, 3279s, 3287s, 3289s, 4224 mdl 2XXs, or 4234 mdl 1s, in any combination). Limitations: See "Attachment Matrix" below for permissible 3178 attachments and 3278 and 3279 mdl restrictions. Maximum: One. Field Installation: Yes. Prerequisites: #3256.

Notes:

- 3276 mdls 1-3 with #6315 in SDLC mode, will support the same 3278 mdls as the 3276 mdls 11-13 respectively.
- A 3276 with #6315 installed, does not support attachment of the 3279.
- 6580 mdls A04, A06, and A10 provide 3278-2 emulation support and 6580 mdls B04, B06, B08, and B10 provide 3278-4 emulation support. Find the appropriate 3278 mdl to determine the 3276 mdl requirements in the above matrix.
- The 3276 provides a display and a port for attaching one terminal: a 3178, 3179, 3180 mdl 1, (Canada only >3230, <) 3262, 3268, 3278, 3279, 3287, 3289, 4224 mdl 2XX, or 4234 mdl 1. The 3276 with the three Terminal Adapters (#3255, #3256, #3257) thus allows a maximum cluster size of eight displays or printers.

* The 3276 supports the 3180 mdl 1 only when the 3180 is emulating a 3278 mdl 2-4. The 3276 does not support the 3180 extended functions or the 27x132 character screen format.

**The 3276 supports the 3191 A1X/B1X, (Except LAD> A3X/B3X<) when the 3191 is emulating a 3278 mdl 2.

*** The 3276 supports the 3192 C1X/C3X/D1X/D3X when the 3192 is emulating a 3278 Model 2.

MODEL CONVERSIONS

ACCESSORIES

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling

System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual - Physical Planning", GA27-2787, and "Coaxial Cable and Associated Manual", GA27-2805.

The following items are available on a purchase only basis. For shipment with machine, order the Feature Number as shown below.

Item	Feature Number	Max Qty
Magnetic Slot Reader	#9441	*
Magnetic Reader Extension Cable:		
6m (20 ft)	#9106	**
12m (40 ft)	#9107	**

* A maximum of one Magnetic Slot Reader may be ordered.

** A maximum of one extension cable may be ordered.

Magnetic Slot Reader (#9441, P/N 4123500): A free-standing Magnetic Slot Reader (MSR) that reads encoded information from a magnetic stripe. It attaches by a 1.5m cable through the Magnetic Reader Control (#4999). The MSR has three lights and a buzzer which provide feedback to the user on the status of the read data. The MSR accommodates a wide range (height and length) of magnetic striped plastic cards such as: ID badges, security operator identification cards, etc. Using the 3275/3277 like 10-numeric character set, the maximum number of data characters that can be read are 7 to 37 characters at 75 bpi or 210 bpi, and 7 to 118 characters at 127 bpi. A minimum of seven characters must be encoded between the start sentinel and end sentinel characters.

The following cable assemblies can be used to extend the Magnetic Slot Reader distance. Limitations: Extension Cables cannot be plugged into other extension cables.

Item	Feature Number	P/N
6m (20 ft)	#9106	4832986
12m (40 ft)	#9107	4832987

A variety of magnetic documents, tags, and labels the MSR can read, may be obtained from NDD, some of which, depending on length, can be encoded by devices such as the IBM 3642 Encoder Printer.

For complete information on the availability of pre-encoded magnetic striped plastic cards, contact a

One of the following MSR/MHS Customer Service Manuals should be ordered when ordering by MES for field installation:

Language	Order Number
English	GA24 - 3663
French	GA11 - 0007
Japanese	NGA24 - 3663
Spanish	GA10 - 8101

Note: All other countries should order English translation.

Note: Magnetic cards coded with the Alternate End of Message character (hexadecimal "C") cannot be read by this reader. SSCP-LU communication for MSR is not supported, when the MSR is attached to a 3276 or a 3278 which is attached to a 3276.

Limitations: Valid for numeric-only data encoded according to the American National Standard entitled "Magnetic Strip Encoding for Credit Cards, ANSI X4.16 - 1973" when the MSR is attached to a 3276 or to a 3278 which is attached to a 3276. Field Installation: Yes. Prerequisites: #4999.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventive maintenance recommended by IBM. Primary maintenance for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking ... for 50 readers, 2 spares ... for 100, 3 ... for 150, 4 ... for 200, 5.

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days.

In countries other than Canada, warranty service for the Magnetic Scanners will be performed by the CE. In Canada, warranty service for the Magnetic Scanners will be performed at the Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form #2110, pack and mail it and the defective Scanner to:

IBM Canada Ltd.
Canadian Distribution Center
Dept. 415
75 Barber Green Road
Don Mills, Ontario M3C 1H7

Optionally, the customer can obtain post-warranty maintenance on a Time and Material basis from CE other than Canada. In Canada, optional IBM maintenance is available on a time and materials basis at the Repair Center. Authorization Form #2110 applies.

Magnetic Reader Extension Cables: These cable assemblies can be used to extend the Magnetic Slot Reader P/N 4123500 distances. Additional Extension Cable lengths other than those listed below are available. See RPQ Reference List. MSR Extension Cables are warranted free from defects of workmanship or materials for 90 days. Limitations: Extension cables cannot be plugged into other extension cables.

Item	Feature Number	P/N
6m (20 ft)	#9106	4832986
12m (40 ft)	#9107	4832987

Magnetic Reader Replacement Assemblies		
Description		P/N
MHS Amplifier Card and Cable Assembly		4832727
MSR Arm and Sensor Head Assembly		4832963
MSR Base and Feedback Assembly		4832973
MSR Amplifier Card and Cable Assembly		4832962
MSR Cover		4832964

The following tables list the number of Magnetic Reader replacement assemblies which the customer may want to consider stocking.

		Magnetic Slot Reader	
Number of MSRs	P/N 4123500	Arm & Sensor Head Assembly	Base and Feedback Assembly
		P/N 4832963	P/N 4832973
50		2	1
100		3	1
150		4	1
200		5	2

		P/N 4832962	4832964
50		2	1
100		3	1
150		4	1
200		5	1

Warranty: Magnetic scanner replacement assemblies are warranted free from defects of workmanship or materials for 90 days.

Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3276 keyboards. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor.

(Canada only) > These accessories should be bulk ordered by P/N on a P&SR from the plant of manufacture. Individual customer requirements should be satisfied from local country stock. <)

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key.)

Legendable Keytops:	P/N
White	5188775
Charcoal Gray	8627192
Light Gray	8542831

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key.)

Blank Keytops:	P/N
White	1853775
Charcoal Gray	1853567
Light Gray	1853563

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled off its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

Battery, Mercury (P/N 1743456): To provide power to sustain the master key of Encrypt/Decrypt (#3680) when normal power is not present. A 4.14 volt non-rechargeable mercury battery. This supply item has a shelf life of one year under normal conditions, and can be expected to provide 3.5 years of normal service. Additional or replacement batteries can be ordered through IBM. Limitations: Can be installed on 3276 mdls 11-14 only. Field Installation: Yes. Prerequisites: #3680. Discharged batteries should be returned to IBM for disposal. Return information is printed on the label of the battery.

Keys (P/N 2577741): The 3276 with Security Keylock (#6340) is shipped with two keys. Additional keys may be purchased only from IBM. Vendor will supply additional keys only to original purchaser. A letter of authorization, with key identification (on customer metal tag), must accompany each order. Allow two to three weeks for delivery.

SUPPLIES (NONE)

3277 DISPLAY STATION

The 3277 Model 1 is no longer available

PURPOSE

A high-performance, cathode-ray tube unit used in clusters with the 3271, 3272, or 3274 Control Unit, or Local Display Adapter (System/3 model 8 or 12), or Display Adapter (System/3 model 15), for displaying alphanumeric data, and for entering data into and retrieving data from a System/3, S/360, or S/370, 30XX Processor, 4300 Processor, 8100 System, or 3790 Communication System. A keyboard or light-pen or both permit an operator to display and manipulate data on the screen in a highly flexible and efficient manner. With its comprehensive and powerful set of standard and optional features, the 3277 Display Station meets both general purpose and unique display requirements.

MODELS

Model 2 002 For use with the 3271 model 2 or 12, 3272 model 2, 3274 model 1A, 1B, 1C, 1D, 21B, 21C/BSC, 21D, 31A, 31C, 31D, or 51C, operator display on System/3 model 4, the Local Display Adapter (#4702 and #4705 on the System/3 Models 8 or 12) to display up to 1,920 characters ... 24 lines of 80 characters each. For use with 3790 or 8100, see below.

Maximum: Up to 32 3277s can be attached to a 3271 or 3272. Up to 16 3277s can be attached to a 3274 mdl 1A, 1B, 1C, 1D, 21B, 21C/BSC, 21D, 31A or 31D. Up to four 3277s can be attached to a 3274 mdl 51C. The maximum is reduced by one on a 3271 or 3272 for each 3284-1,2, or 3286-1,2 or 3287, or 3288-2 Printer attached. The maximum is reduced by one on a 3274 for each 3284-1,2 or 3286-1,2 or 3287 or 3288-2 or 3289 Printer attached. See M3271, 3272 or 3274 pages. Up to 24 3277 mdls 1 or 2 can be attached to the 8101 on a system. This maximum is reduced by one for each 3284, 3286, or 3288 attached to the 8101. See M8101 pages.

Prerequisites: A 3271 mdl 2 or 12, 3272 mdl 2, 3274 with Type B Terminal Adapters, or an 8101 with #1505 or #1506. See M3271, 3272, 3274 or 8101 pages. 3277 Displays attached to the 3791 Controller must have keyboards.

HIGHLIGHTS

The 3277 displays 63 9X12 dot matrix high-quality characters (36 alphameric, 27 special characters, including the space). The 3277 features Data-Field Organization which permits individual fields of data on the screen to be program-defined with various attributes, such as: Protected or unprotected, alphameric or numeric-only, normal intensity, non-displayed, or brightened intensity, and selector light-pen detection - allowed or disallowed.

Editing Features: Typamatic cursor, tab, back-tab, protected data, insert and delete, and extended-erase (erase to end of field, erase all keyboard input data, erase entire screen) are standard features for displays equipped with a keyboard.

Input Flexibility: A choice of keyboards, a selector light-pen, a set of Program Function (PF) keys provide unmatched input flexibility. See "Special Features" below.

Output Flexibility: Information on the screen can be directed to another display or hard copy device under program control.

Security Enhancement Features: An Operator Identification Card Reader (optional) is provided to enter system user identification. This enhances the (programmed) control of the operator's access to data and audits his actions. It may also be used to enter any sequence of characters (pre-recorded on a card) for other purposes, such as transaction control and account identification. A special Non-Displayed Keying Mode (standard) provides for fields of data to be program-defined so they will accept security data entered from the keyboard without displaying the data on the screen. A Security Key lock (optional) provides a lock and key which prevents modification of data on the display if the key is in the "On" position. The data is not visible on the screen.

For Operator Display on System/3 Mdl 4: A 3277 mdl 1 (without keyboard) is required on the System/3 mdl 4. It functions as the operator display for the Communications Control Program (CCP). A 3271 or 3272 is not required. No cable order is required.

For Local Work Stations on System/3 Mdl 4: Up to five 3277s (mdls 1 and 2 intermixed) can be directly attached to the 5404 Processing Unit. A 3271 or 3272 Control Unit is not required. A cable is required. All 3277 "Special Features" apply. See "Specify" below for voltage and cable ordering information.

For Local Display Adapter on System/3 Mdls 8 or 12: Up to 12 3277s (mdls 1 and 2 intermixed) can be directly attached to the Local Display Adapter (#4702) with appropriate subfeatures on the 5408 or 5412. This maximum is reduced by one for each 3284 (mdl 1 or 2), 3286 (mdl 1 or 2), 3287 (mdl 1 or 2) or 3288 (mdl 2) Printer that is attached. A 3271 or 3272 Control Unit is not required. A cable is required. All 3277 "Special Features" apply with the exception of ASCII keyboards and character sets. Specify #9089 for EBCDIC Character Set. See "Specify" for voltage and cable ordering information.

For Operator Console on System/3 Mdl 15: A 3277 mdl 1 is required on the System/3 mdl 15. It functions as an operator console and must be equipped with 78-key Operator Console Keyboard (#4632). For Character Generator Keyboard Language and nomenclature as well as complete ordering instructions for System/3 mdl 15 console, see M5415 pages "Console Ordering Instructions".

For Display Adapter on System/3 Mdl 15: Up to 30 3277s (mdls 1 and 2 intermixed) can be directly attached to the Display Adapter (#4601/#4602) on the 5415. The maximum is reduced by one for each 3284, 3286, 3287, or 3288 printer that is attached. A 3271 and 3272 is not required. A cable order is required. See "Specify" for voltage and cable ordering information. All 3277 special features apply.

For use with 3790 Communication System: For special features that are supported, see M3791 pages. A 3271 or 3272 or 3274 is not required when the 3277 mdl 2 is attached to the 3791. For character set, specify #9089. For power, see "Specify". For cables, see M3791 pages.

For use with 8100 System: For special features that are supported, see the M8100 pages. A 3271 or 3272 is not required when the 3277 mdl 2 is attached to the 8101 with feature #1505 or #1506. For Character Set, specify #9089. For power, see "Specify". For cables, see M8100 pages. Host programs written for the 3270 are not supported by the 8100 System.

Bibliography: See *KWIC Index*, G320-1621, or specific system bibliography.

SPECIFY

- * Power (AC, 1-phase):

50 Hz	60 Hz
100V #2804	100V #2730
110V #2805	115V #9901
123.5V #2811	200V #2732
200V #2806	208V #9902
220V #2813	230V #9904
235V #2814	

For Japan only, specify #9890 for locking plug or #9891 for nonlocking plug for voltages under 200 volts.

- * Cables: See "Accessories" for cable ordering instructions. Refer to 3270 *Installation Manual-Physical Planning*, GA27-2787.

- * Machine Nomenclature: [plant installation only]

English US #2750	Japanese #2930
French #2928	Spanish #2931
German #2929	Italian #2932

- * Character Generator Language: Select one of the following unless the Katakana Character Generator or the Data Analysis - APL Feature (which is in dual-case English US only) is ordered. See "Special Features". If Dual Case Character Set is required, refer to RPO listing:

#2705 French Mono Case
#2709 French Dual Case
#2704 German Mono Case
#2705 Italian Mono Case
#2702 Italian Dual Case
#2714 Spanish Speaking Mono Case
#2705 United States English Mono Case

- * Keyboard Language: When ordering Keyboard #4630, #4631, #4633, or #4636, also specify one of the following:

English US #2956	French #2964
German #2957	Italian #2968
Spanish Speaking #2961	

Maximum: One per 3277. **Limitations:** For Keyboard #4632 when used as Operator Console, specify #2956.

3277 Display Station (cont'd)
SPECIAL FEATURES

Data Analysis - APL Feature (#1066): [3277 mdl 2] Provides dual case EBCDIC, the APL set, and (for output only) 120 TN print train (see Type Catalog, S/370 Printers) characters. 93 TN characters are input and output both, 27 are output only. **Limitations:** Mutually exclusive with #2706. **Field Installation:** Yes. **Prerequisites:** #1066 on 3271 or 3272.

Audible Alarm (#1090): An alarm, sounded under program control, to alert the operator to a special condition during keyboard operation when a character is entered into the next-to-last position on the screen. **Maximum:** One. **Field Installation:** Yes.

Katakana Character Generator (#2706): Provides the ability to display the characters described on the Katakana Keyboard. Will not function on units with #1066 installed. **Limitations:** Mutually exclusive with #1066. **Field Installation:** Yes. **Prerequisites:** #2707 on 3271, 3272, 5408 or 5412.

Katakana Typewriter KB (#2955): Typewriter-like layout, movable, 4-level shift providing 55 Katakana, 36 alphameric, 33 special characters, and 12 PF keys. **Field Installation:** Yes. **Maximum:** One. **Prerequisites:** #2706 ... #2707 on 3271 or 3272. **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

Katakana Data Entry KB (#2973): Movable, 4-level shift providing 55 Katakana, 36 alphameric and 33 special characters. **Field Installation:** Yes. **Maximum:** One. **Prerequisites:** #2706 ... #2707 on 3271 or 3272. **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

66-Key EBCDIC Typewriter KB (#4630): Typewriter-like layout, movable, with 45 alphameric keys and 21 control keys. **Field Installation:** Yes. **Maximum:** One. **Prerequisites:** Keyboard Language. See "Specify". **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

66-Key EBCDIC Data Entry KB (#4631): Movable, with 36 alphameric keys and 30 control keys. **Field Installation:** Yes. **Maximum:** One. **Prerequisites:** Keyboard Language. See "Specify". **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

78-Key Operator Console KB (#4632): Operator-console layout, movable, with 45 alphameric keys, 21 control keys, and 12 PF keys. **Field Installation:** Yes. **Maximum:** One. **Note:** Available only in English US except when used on a 5415 console. See M5415 pages. **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

78-Key EBCDIC Typewriter KB (#4633): 66-key EBCDIC typewriter layout, movable, with 12 additional PF keys. **Field Installation:** Yes. **Maximum:** One. **Prerequisites:** Keyboard Language. See "Specify". **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

66-Key EBCDIC DE KB with Key Punch Layout (#4636): Movable with 36 alphameric keys and 30 control keys. **Field Installation:** Yes. **Maximum:** One. **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

66-Key EBCDIC Typewriter/APL KB (#4637): Movable, with 45 alphameric and 21 control keys. **Field Installation:** Yes. **Maximum:** One. **Prerequisites:** #1066. **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

78-Key EBCDIC Typewriter/APL KB (#4638): Movable with 45 alphameric keys, 21 control keys and 12 program keys. **Field Installation:** Yes. **Maximum:** One. **Prerequisites:** #1066. **Note:** Keyboards or selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

78-Key EBCDIC Fast Cursor Text KB (#4639): With 45 alphanumeric keys, 21 control keys and 12 program keys. The speed of the Cursor and typamatic key operation is approximately twice that of a non-Text keyboard. Includes typamatic Delete and a function similar to typewriter carriage return and 12 program keys. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** #1066 on 3277 mdl2 as well as on a control unit (3271 mdl 2 or 3272 mdl 2). **Note:** Keyboards or

selector light-pens used on 3275/3277 machines are not interchangeable with keyboards used on 3276/3278/3279 machines.

Operator Identification Card Reader (#4600): Provides the capability of reading 53.9mm x 85.7mm (2-1/8 inches x 3-3/8 inches) plastic data processing card with an encoded magnetic stripe. Using the 10-numeric character set, the number of characters that can be read is 1-37 characters at 75 bpi (bits per inch).

#4600 provides 1) the ability to read an operator identification card to allow identification of the display operator, thus enhancing system data security capability and 2) the ability to read the magnetic stripe credit card (53.9mm x 85.7mm).

For complete information on the availability of pre-encoded magnetic striped plastic data processing cards, contact IBM. **Maximum:** One. **Field Installation:** Yes. **Prerequisites:** Any keyboard.

Keyboard Numeric Lock (#4690): Provides the ability to lock the keyboard, if a non-numeric key, other than 0-9, minus, period, or DUP, is depressed in a predefined numeric-only field. **Field Installation:** Yes. Contact local Customer Engineering Branch Office for installation.

Security Key Lock (#6340): A lock and key prevent modification of data on the display if the key is in the "Off" position. Data is not visible on the screen. **Maximum:** One. **Field Installation:** Yes.

Selector Light-Pen (#6350): A hand-held, pen-like device that permits the display operator to select fields of data from a display for computer input. **Maximum:** One. **Field Installation:** Yes.

MODEL CONVERSIONS (None)
ACCESSORIES

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to *IBM Cabling System - Planning and Installation Guide*, GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to *IBM 3270 Installation Manual - Physical Planning*, GA27-2787, and *Coaxial Cable and Associated Manual*, GA27-2805.

Item	Number	Description
Assm	2577672	Cable Assembly In-Door
Bulk	0323921	Coax Wire (Note 1)
P/N	1836418	Connector Kit (Note 1)
Assm	1833108	Cable Assembly Out-Door
Bulk	5252750	Coax Wire (Note 2)
P/N	1836419	Connector Kit (Note 2)
P/N	1833104	Station Protector Kit, Carbon (Note 4)
P/N	2621414	Modification Kit (Note 3)
P/N	1833106	Station Protector Attachment Kit (Note 5)
P/N	5252772	Station Protector Element Carbon (Note 6)
P/N	5252643	Adapter (Note 7)
P/N	1830818	Station Protection Kit, Gas (Note 4)
P/N	5252899	Station Protector Element, Gas (Note 6)

Order the above items via MES from Poughkeepsie. Allow a lead time of 120 days.

Notes:

- Coax wire and one connector kit (includes two connectors #1836446) required for each indoor cable assembly.
- Coax wire and one connector kit (includes two connectors #1836447) required for each outdoor cable assembly.
- Customers replacing 2260 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.

3277 Display Station (cont'd)

4. Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
5. Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
6. Replacement station protector elements.
7. Use to join two #2577672 or two #1833108 cable assemblies together.

Keys (P/N 2577741): The 3277 with Security Keylock #6340 special feature is shipped with two keys. Additional keys may be purchased only from IBM. (Vendor will supply additional keys *only* to original purchaser). Order MES from Kingston. A letter of authorization, with key identification, must accompany each order. Allow two to three weeks for delivery.

3277 Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3277 Display Station keyboards. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor. These accessories may be ordered by P/N via (Canada only+ a DP Supply Order from the Raleigh plant. +)

(Canada only+ These accessories should be bulk ordered by P/N on a P&SR from the plant of manufacture. Individual customer requirements should be satisfied from local country stock. +)

Legendable Keytop: The legendable keytop consists of two parts: A molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key)

Legendable Keytops:	P/N
White	5188775
Charcoal Gray	8627192
Light Gray	8542831

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key)

Blank Keytops:	P/N
White	1853775
Charcoal Gray	1853567
Light Gray	1853563

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

SUPPLIES (None)

3278 DISPLAY STATION MODELS 1 - 5

THERE IS MORE THAN 1 TEXT VERSION FOR THIS PRODUCT

PURPOSE

A cathode-ray tube (CRT) display station used in clusters with the 3274 or the 3276 for displaying alphanumeric data, and for entering data into and retrieving data from a System/3, S/360, S/370, 4300 Processor, 3081 Processor, 3090 Processor, 9370 Processor, 3790 Communication System, 3814 Switching Management System, or 8100 System. A keyboard, selector light-pen, or both, permit an operator to display and manipulate data on the screen in a flexible and efficient manner. With its set of basic and optional features, the 3278 meets both general-purpose and unique display requirements.

MODELS 1 - 5

Model 1 001: For use with 3274 or 3276 to display up to 960 characters --- 12 lines of 80 characters each.

Model 2 002: For use with 3274 or 3276 or to attach directly to the 3082 Processor Controllers, or to attach to the 4331 Processor, via the Standard Display/ Printer Adapter or optional Display/ Printer Adapter Expansion, or to attach to the 3814 model A Switching Management System with the Display/Printer Attachment Feature, or to attach to a 3601, 3602, or 4701 Finance Communication Controller via the Device Cluster Adapter. Displays up to 1,920 characters --- 24 lines of 80 characters each.

Model 3 003: For use with 3274 or 3276 to display up to 2,560 characters --- 32 lines of 80 characters each.

Model 4 004: For use with 3274 or 3276 to display up to 3,440 characters --- 43 lines of 80 characters each.

Model 5 005: For use with 3274 mdls 1A, 1C, 1D, 31A, 31C, 31D, 41A, 41C, 41D, 51C, or 61C to display up to 3,564 characters --- 27 lines of 132 characters each.

For use with a 3790 Communication System: The 3791 Controller only supports the 3278 mdl 2. See the "3791 Configurator", GA19-0111, for additional details. For use with an 8100 System: See the "System Configurator", GA27-2876.

Prerequisites: 3278 needs a 3274, 3276, or 4331 with appropriate Terminal Adapter, or a 3814 Switching Management System with the Display/Printer Attachment Feature. The 3278 mdl 5 requires Configuration Support B #9111, C #9112, D #9124, or T #9113 on the 3274 to which it is attached --- See M3274, 3276, or 4331 pages. When attached to the 3790 Communication System or the 8100 System via the 3276, all 3278s must have a keyboard. When the 3278 mdl 2 is attached to a 3814 mdl A, one of the following keyboards is required: #4627 (preferred), #4621, #4622, or #4623. The following feature is optional: #4690. All other 3278 mdl 2 special features are not supported.

Customer Setup (CSU): The 3278 is designated Customer Setup thereby offering the customer early availability and relocation flexibility. For additional information on CSU, contact IBM.

HIGHLIGHTS

Displays a character within a 7x14 character matrix in 960, 1,920 and 2,560-character mdls; within a 7x12 character matrix in the 3,440 and 3,564-character mdl. The basic 26-character upper case letters are presented in a 7x9 character matrix for the 960, 1,920 and 2,560-character mdls, and in a 7x8 character matrix for the 3,440 and 3,564 character-mdl. Displays a 94-character set: 26 upper case alphabetic, 26 lower case alphabetic, 10 numeric and 32 special characters. A monospace switch provides the capability of switching

to uppercase alphanumeric mode for 3277 compatibility. Uses 3270 field formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as protected/ unprotected, alphanumeric, normal/intensified, displayable/non-displayable, and selector light-pen detection allowed/disallowed.

Extensions to the 3270 data stream supported by appropriate 3274 and 3278 features, provide the following field and character attributes:

- Extended highlighting -- blink, reverse video or underscore.
- Programmed Symbols (PS) -- user-defined symbols.

Special keyboards are provided to allow operator selection of these attributes.

The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of a 3278. When the 3278 is attached to a 3274, the printer designation is controlled by operator use of the IDENT key and by:

1. A printer authorization matrix which is loaded into the 3274 through a user written host application program, or,
2. A customer definable matrix loaded from the system diskette at IML time. For further details, see the "IBM 3270 Information Display System Planning and Setup Guide", GA27-2827.

When the 3278 is attached to a 3276, the printer designation is controlled by operator use of the IDENT key and by a configuration default matrix. This matrix is determined by the relative positions of devices attached to the 3276. (The host can perform a copy in a manner compatible with existing 3271/3272 support.)

Operator Factors: The 3278 has an anti-glare screen. Indicators are displayed in symbols on the bottom row of the screen, outside the data area, and provide useful operator information. Display of data on the screen is accomplished without refresh interrupt (i.e., no blinking, except that transient patterns are displayed when data is being loaded to the PS buffers). The keyboard, which is low in profile, provides a palm rest area and has separators to help prevent accidental striking of control keys. The operator may select one of several cursor modes.

Editing Functions: Cursor move, tab, home key, back tab, insert, delete, extended erase (erase to end-of-field, erase all keyboard input data, and erase entire screen) and cursor select keys are all basic for displays equipped with a keyboard. All alphanumeric, special symbol, and cursor move keys have typamatic capability. Double speed cursor typamatic is attained with a simultaneous depressing of the ALT key and a horizontal cursor positioning key. The cursor select function provides an alternative to the selector light-pen function. Fields of data may be selected by positioning the cursor and then using the cursor select key.

Input Flexibility: A choice of keyboards or the selector light-pen provide input flexibility. A Magnetic Slot Reader (optional) and, for 3278s attached to a 3274, a Magnetic Hand Scanner (optional) provide for the input of magnetically encoded data --- see "Special Features" and "Accessories" below. Fields of data can be selected by positioning the cursor and operating the cursor select key, instead of using the selector light-pen. 12 Program Function (PF) keys are basic with all typewriter keyboards.

When attached to a 3274 with Configuration Support C with Entry Assist RPQ or with Configuration Support D with Entry Assist and with a typewriter or APL keyboard, the display provides capabilities which facilitate operator entry and editing of text material. The capabilities include margins, tabbing, wordwrap, improved cursor positioning, improved character/word delete, cursor position indicator and an audible end-of-line warning tone. Entry Assist is intended for use primarily with a specific set of host editor programs. See M3274 pages for languages supported. Entry Assists supported for mdls 2-5 in mdl 2 mode only. See "Accessories" for 3274 Entry Assist keytop kits.

Security Functions: A special non-displayed input mode provides for fields of data to be program-defined so that they will accept data entered from the keyboard without displaying the data on the screen. A security keylock prevents modification or display of data in the display terminal unless the key is turned to the "on" position. These capabilities and the terminal's ability to identify itself to the host program allow customer-supplied security program routines to control access to data and audit of actions. A Magnetic Slot Reader (optional) and, for 3278s attached to a 3274, a Magnetic Hand Scanner (optional) are available to enter system user identification.

Audible Alarm: An alarm, sounded under program control, to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the next-to-last position on the screen. The operator may adjust the volume of the tone. Maximum: One. Field Installation: Yes.

When attached to a 4331 Processor via the standard Display/ Printer Adapter or optional Display/ Printer Adapter Expansion, functional support varies from that of the 3278-2 attached to a 3274 or 3276. See M4331 pages for details of support.

Keyboards: Refer to Type Catalog for a picture of the keyboard layouts. Keyboards are provided with a standard 0.9m (3 ft) attachment cable. The keyboard language must be specified. See "Specify" for options.

Problem Determination Procedures: Significant function has been designed into this unit to provide greater availability to the customer. This increased availability has been achieved through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided by the Problem Determination Guide manual that will be stored under the keyboard palm rest. Also, see "Customer Responsibilities".

Customer Responsibilities: The customer is responsible for:

1. Adequate site, system and other vendor preparation.
2. Receipt at the customer's receiving dock, unpacking and placement of the 3278.
3. Physical setup, connection of cables in customer access areas, switch settings and check out.
4. Contacting Customer Engineering to make cable connections of IBM CSU units to non-CSU units where customer access areas are not provided.
5. Notifying IBM of intent to relocate and follow IBM instructions for relocation.
6. Use of the following problem determination procedures and fill out trouble report prior to calling for IBM service.
7. Disconnecting, packing and removal to the customer's shipping dock at the time of discontinuance. Appropriate instructions will be provided by IBM.

Publications: See "KWIC Index", G320-1621, or specific system bibliography.

Basic Configuration

Specify codes are not normally required to order a 3278. The 3-digit Country Code entered on the DPMO sheet will be used to select (default) the Country variables (power, power cable plug, machine nomenclature, and keyboard language) based on the specification most commonly used in that country. If not specified otherwise, all mdls of the machine are shipped with the following:

- Power (AC, 1-phase)

Country	Voltage
Argentina	220V/50 Hz
Australia	240V/50 Hz
Brazil	110V/60 Hz

Canada	120V/60 Hz
Chile	220V/50 Hz
Mexico	120V/60 Hz
New Zealand	230V/50 Hz
Venezuela	120V/60 Hz

All others must specify.

- Power Cable Plug (Japan only): Locking plug for voltages under 200 volts.
- Power Cable Plug (Canada only): Nonlocking plug.
- Power Cable Length: 2.8m (9 ft).
- Keyboard Cable Length: 0.9m (3 ft).
- Keyboard Language and Nomenclature: The following defaults are assumed:

Country	Nomenclature	Language
Argentina	Spanish Speaking	Spanish Speaking
Brazil	Brazilian	Brazilian
Canada	English	English US
Japan	English	Specify Device Code
Mexico	Spanish Speaking	Spanish Speaking
Venezuela	Spanish Speaking	Spanish Speaking
All Others	English	English US

SPECIFY

Mandatory Specified

- #2998 - AG-A/PG machine code.
- Other than any mandatory specify code above, the Specify section can be ignored unless the options provided in the "Basic Configuration" above do not meet your needs.
- Power: (AC, 1-phase). If power different than the one provided for "Basic Configuration" default is required, specify one of the following: (Not all voltages apply to all countries.)

(Except Canada>

50 Hz	60 Hz
100V #2804	100V #2730
110V #2805	110V #2822
200V #2806	120V #2800*
220V #2813	127V #2823
230V #2821	
240V #2801	

*Includes requirement for 115V.<)

- Keyboard Language: For all countries, if a keyboard language different than the one provided by "Basic Configuration" default is required, except for #4629, which is available in English US only.

Brazilian	#2975	Int'l	#2950
Canadian/Fr	#2977	Japan Eng.	#2955*
EBCDIC	#2951	Japan Kat.	#2973**
English US	#2956	Span Speak	#2969
English UK	#2958		

* Japanese English #2955 applies only to Keyboards #4622, #4623, #2715, #2717, #2718, #2719, #2708, and #2721.

** Japanese Katakana #2973 applies only to Keyboards #2715, #2716, #2717, #2718, #2719, #2708 and #2721.

Limitations: All 3278s attached to a 3274 or 3276 must have the same keyboard language that is selected during 3274 customization or is specified for the 3278.

- **Katakana Support:** 127-character (plus space and null) support provided on keyboards #2715, #2716, #2717, #2718, #2719, #2708 and #2721 is an enhancement of previously announced 3270 Japanese Katakana. This enhancement may not be 3270 compatible for customers using the NL and EM codes. Customers who do not use the NL and EM codes will be 3274 and 3276 compatible. For details see appropriate SRLs.
 - **(Except Canada and Japan > Power Cable Plug:** If the most commonly used power cable plug in the country is not desired, then a country RPQ may be initiated. For details concerning power plugs, refer to "Information Display System Installation Manual - Physical Planning," GA27-2787.
- Note:** If a power supply, not the most common is specified, and it is incompatible with the power plug commonly supplied, a power cord without a plug will be shipped unless the country RPQ referenced above is initiated. <)
- **Power Cord Plug (Japan only):** For units requiring 200V or higher, a country RPQ should be initiated for a power plug.
 - **Power Cable Plug (Japan only):** Specify #9891 for a nonlocking plug for voltages under 200V.
 - **(Canada only > Power Plug:** Specify #9890 for a locking plug. <)
 - **Keyboard Cable Length:** If the standard 0.9m (3 ft) Keyboard cable is not desired, specify #9399 for a 1.8m (6 ft) cable. Limitations: This feature is not available for Keyboards #2708, #2719, #2721, #4640, #4651, or #4652.
 - **Power Cable Length:** If the standard 2.8m (9 ft) power cable is not desired, specify (Canada only) > #9511 for a 1.8m (6 ft) cable, or < #9513 for a 4.5m (15 ft) cable.
 - **Terminal Cables:** See "Accessories" for ordering instructions. For cable specifications, see "3270 Installation Manual - Physical Planning", GA27-2787.
 - **(Japan only > Character Set Language:** Specify the following if Japanese Katakana is required: #2773 <)
 - **3814 mdl A Attachment:** Specify #9615 to attach 3278 mdl 2 to a 3814 mdl A.

SPECIAL FEATURES

Note: 3274 mdls 21, 31A, 31C or 51C may not support all desired 3278 special features. Before ordering any of the following special features, check the 3274 to assure that adequate storage is available. Not all of the following special features are supported by 3278-2s attached to the 4331 system via the standard Display/Printer Adapter or the Display/Printer Adapter Expansion. See M4331 pages for a list of supported special features.

88-Key Attribute Select Japanese/Japanese Katakana Typewriter Keyboard (#2708): Overlay and Attribute Select keyboards are equipped with PS, highlight and color select function keys. They provide operator selection for data entry, under program control, of PS and highlighting attributes when attached to 3278s equipped with PS features. The desired PS and highlights can be selected by the operator through use of the appropriate PF keys (13-24) in upper case and alternate shift on this keyboard. Except for color marking and annotation on the 12 PF keys on the right hand side of the keyboard, these keyboards appear identical to their equivalent non-Overlay and non-Attribute Select keyboards. Prerequisites: #2955 or #2973. Limitations: Cannot be installed on a 3278 attached to a 3276. Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

76-Key Japanese English/Japanese Katakana Typewriter Keyboard (#2715): Typewriter-like layout, movable. Twelve PF keys are available in the top row of data keys through use of an alternate shift key. This keyboard provides 49 data keys and 27 control keys. Prerequisites: #2955 or #2973. Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

76-Key Japanese Katakana Data Entry Keyboard (#2716): Movable, 4-level shift providing 49 data keys, 10 PF keys and 27 control keys. Prerequisites: #2973. Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

88-Key Japanese English/Japanese Katakana Typewriter Keyboard (#2717): Typewriter-like layout, movable, with 49 data keys, 26 control keys and twelve PF keys (24 total PF keys). Twelve of the PF keys are available in the top row of data keys and are available through the use of the alternate shift key. This keyboard provides 4-level shift, 49 data keys and 27 control keys. Prerequisites: #2955 or #2973. Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

88-Key Japanese English/Japanese Katakana Typewriter/APL Keyboard (#2718): An 88-key Japanese English/Japanese Katakana typewriter keyboard (see #2717) with modified keytops to allow entry of 81 APL specific characters in addition to the basic character set (Japanese English or Japanese Katakana per keyboard language specify). An APL On/Off key controls whether the keyboard is in APL or basic character set mode. In contrast to #2717, this keyboard has only 12 PF keys (PF1 through PF12) which are the group of 12 keys to the right of the main keyboard area. Prerequisites: APL/Text #1120 or #3620 and #2955 or #2973. Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

88-Key Japanese English/Japanese Katakana Typewriter Overlay Keyboard (#2719): This keyboard, without overlay, has the same layout and can be used in the same way as #2708. This keyboard, however, has special narrow keytops to permit use of customer annotated overlays. These overlays are used to show the special font symbols associated with the keys when one of the PS is selected. Six overlays are supplied with each keyboard. Additional overlays can be obtained via MES. See "Accessories". See #2708 for additional details. Prerequisites: #2955 or #2973. Limitations: Cannot be installed on a 3278 attached to a 3276. Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

88-Key Attribute Select Japanese English/Japanese Katakana Typewriter/APL Keyboard (#2721): See #2708 for additional details. Prerequisites: #2955 or #2973. Limitations: Cannot be installed on a 3278 attached to a 3276. Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

Character Set Extension (#3620): Provides the capability for display of 222-character APL/Text character set, including the 94-character EBCDIC set, and for extended character and highlighting capabilities - blink, reverse video or underscore, and the control and buffering necessary for #5790. Maximum: One. Field Installation: Yes. Corequisites: To permit operator interaction with APL/Text or highlighting, one of the following keyboards may be used. See individual descriptions for details of function(s) provided and for limitation or restrictions. Keyboards with APL capability: #2718, #2721, #4626 or #4652. Keyboard with Text Capability: #4629. Keyboards with Highlighting Capability: #2708, #2719, #2721, #4640, #4651, or #4652. Limitations: (1) This feature is only valid on a 3278 attached to a 3276 with APL/Text Control feature #1067, or to a 3274 mdl X1A, X1C, or X1D customized to include the APL/Text control function. This feature is EBCDIC only and is NOT compatible with ASCII. (2) Cannot be installed with ECSA #3610. (3) Cannot be installed with APL/Text #1120.

75-Key EBCDIC Typewriter Keyboard (#4621): Typewriter-like layout, movable, with 49 data keys and 26 control keys. Twelve PF keys are included in the top row of data keys through the use of an alternate shift key. Prerequisites: Keyboard Language, see "Specify". Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

75-Key EBCDIC Data Entry Keyboard (#4622): Movable, with 35 data keys, 10 PF keys and 30 control keys. Prerequisites: Keyboard language, see "Specify". Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

75-Key EBCDIC Data Entry Keyboard (#4623): Keypunch layout, movable, with 35 data keys, 10 PF keys and 30 control keys. Prerequisites: Keyboard Language, see "Specify". Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

87-Key EBCDIC Typewriter/APL Keyboard (#4626): An 87-key EBCDIC typewriter keyboard (see #4627) with modified keytops to allow entry of 81 APL specific characters in addition to the 94-character EBCDIC set. An APL On/Off key controls whether the keyboard is in basic EBCDIC typewriter or APL mode. In contrast to #4627, this keyboard has only 12 PF keys (PF1 through PF12), which are the group of 12 keys to the right of the main keyboard area. Prerequisites: APL/Text (#1120) or #3620. Keyboard language, see "Specify". Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

87-Key EBCDIC Typewriter Keyboard (#4627): Typewriter-like layout, movable, with 49 alphanumeric data keys, 26 control keys, and 12 PF keys (24 total PF keys). Twelve of the PF keys are included in the top row of data keys through the use of an alternate shift key. Prerequisites: Keyboard Language, see "Specify". Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

87-Key EBCDIC Typewriter/Text Keyboard (#4629): An 87-key EBCDIC typewriter keyboard (See #4627) with modified keytops to allow entry of 65 Text specific characters in addition to the 94-character EBCDIC set. A Text On/Off key controls whether the keyboard is in EBCDIC typewriter or Text mode. In contrast to #4627, this keyboard has only 12 PF keys (PF1 through PF12) which are the group of 12 keys to the right of the main keyboard area. Prerequisites: APL/Text (#1120) or #3620 (#2956 only). Limitations: Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes.

87-Key EBCDIC Typewriter Overlay Keyboard (#4640): This keyboard, without the overlay, has the same layout and can be used in the same way as #4651 with the basic 94-character EBCDIC character set. This keyboard, however, has special narrow keytops which permit the use of customer annotated overlays. These overlays are used to show the special font symbols associated with the keys when one of the PS is selected. Six overlays are supplied with each keyboard. Additional overlays can be obtained via MES. See "Accessories". See Attribute Select Typewriter Keyboard for additional details. Limitations: Cannot be installed on a 3278 attached to a 3276. Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes. Prerequisites: Keyboard language, see "Specify".

87-Key EBCDIC Attribute Select Typewriter Keyboard (#4651): Overlay and Attribute Select Keyboards are equipped with PS, highlight and color select function keys. They provide operator selection for data entry, under program control, of PS and highlighting attributes when attached to 3278s equipped with the appropriate features. The desired PS and highlights can be selected by the operator through use of the appropriate PF keys (13-24) in upper case and alternate shift on this Keyboard. Limitations: Cannot be in-

stalled on a 3278 attached to a 3276. Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes. Prerequisites: Keyboard language, see "Specify".

87-Key EBCDIC Attribute Select Typewriter/APL Keyboard (#4652): See #4651 for additional details. Limitations: Cannot be installed on a 3278 attached to a 3276. Keyboards used on 3275/3277s are not interchangeable with keyboards used on 3276s/3278s/3279s. Maximum: One keyboard. Field Installation: Yes. Customer Setup: Yes. Prerequisites: Keyboard language, see "Specify".

Keyboard Numeric Lock (#4690): Provides keyboard #2715, #2716, #2717, #2718, #4621, #4622, #4623, #4626, #4627, #4629 with the ability to lock the keyboard if a non-numeric key (other than 0-9, minus, decimal sign, or dup) is operated in a pre-defined numeric-only field. Maximum: One. Field Installation: Yes. Contact Customer Engineering Branch Office for installation. MES number 999999 is to be used for IR (Incident Report) completion data. Note: The numeric lock function is enabled on keyboards #2719, #2708, #2721, #4640, #4651, and #4652 as an option of 3274 customization, in which case these keyboards will either all have, or all not have, the numeric lock function.

Magnetic Reader Control (#4999): Provides the capability of attaching a Magnetic Hand Scanner (MHS) or Magnetic Slot Reader (MSR) which read encoded information from a magnetic stripe. The MSR can be used when the 3278 is connected to either a 3274 or 3276, but the MHS can only be used when the 3278 is connected to a 3274. (Canada only) Limitations: Cannot be installed with #5315 or #5316. Maximum: One. Field Installation: Yes.

(Canada only) IBM 3278 PC Adapter (#5315, #5316, #5317, #5318, #5321)

Note: Features #5315, #5316, #5317, and #5318 are NO LONGER AVAILABLE.

THIS ENTRY IS FOR INFORMATION PURPOSES ONLY. The IBM 3270 PC Attachment (Feature/Item #5315, #5316) contains material for both the 3278 and the IBM Personal Computer System Unit. It is ordered < > (Canada only) as an option on the IBM Personal Computer System Type 5150. If the 3278 mdl 1-4 serial number is in the range A0000-N9999 or 9V000-9W999, order IBM Personal Computer Option Item #5316. For the 3278 mdl 5 and mdl 1-4 with all other serial numbers (e.g., P0123, 1A425, 71G65), order IBM Personal Computer Option Item #5315. Limitations: (1) Cannot be installed on the 3278 with #4999. (2) For 3274 mdls 1A, 1C, 1D, 31A, 31C, 51C, see Control Storage Function Descriptions and Tables for Control Store Requirements or Special Considerations in the M3274 pages. If only the 3278 portion is required and the 3278 is mdl 1-4 with a serial number in the range A0000-N9999 or 9V000-9W999, or IBM Personal Computer Option Item #5318. If the 3278 is a mdl 5 and any other serial numbers (e.g., P0123, 1A425, 71G65), order IBM Personal Computer Option Item #5317. If only the IBM Personal Computer portion is required, order IBM Personal Computer Option Item #5321. The interconnection cables and User's Guide with the Programming Diskette are included with the IBM Personal Computer Option Item #5321. A User's Guide without the Programming Diskette may be ordered from Mechanicsburg, PA., Form SA230169. Maximum: One. Prerequisites: (A) IBM Personal Computer 5150 mdl X14, X64, or X74 with Color Graphics Monitor Adapter (for 3278 mdls 1-5), or Monochrome Display and Printer Adapter (for 3278 mdls 1-4) or (B) IBM Personal Computer System Unit 5150 with Color Graphics Monitor Adapter (for 3278 mdls 1-5), or the Monochrome Display and Printer Adapter (for 3278 mdls 1-4), Diskette Drive Adapter, one Diskette Drive, and at least 64K total memory; (C) a 3274 or 3276. Only the 3274 can provide file transfer capability. Field Installation: Only. < >

Programmed Symbols (PS) #5790): This feature provides the storage and accessing of six 190-symbol sets whose shapes and codes are customer definable. Symbol sets are loaded under program control and accessed for display through programming or by an operator from the display keyboard. The number of symbols in any one set that can be accessed from the display keyboard is 94 (or 116 for Canadian French or 127 for Japanese Katakana) plus space. Maximum: One. Field Installation: Yes. Limitations: 1) Only available on mdls 2-4. 2) Can only be used with a 3274 having the

MACHINES

PS Control and Structured Field and Attribute Processing options of Configuration Support C or D. 3) If display operator access to PS is required, #4640, #4651, or #4652, #2719, #2708, or #2721 must be ordered. 4) Cannot be installed with PS-2 or PS-4 (#5781, #5782). Prerequisites: #3620 or ECSA #3610. If already installed. (This feature is no longer available on new machines.)

Selector Light-Pen (#6360): A hand-held, pen-like device which permits the operator to select fields of data from a display for input to the host system. The selector light-pen, while not being used, can be placed in a recess of the keyboard, which is provided for user's incidental items. Selector light-pen (and cursor select) operations have been expanded to include a new designator character "&". When this designator is used the Read Modified operation returns both the addresses and the data of all modified fields on the screen. The #6351 selector light-pen has a slightly wider field of view to facilitate operator ease-of-use. Maximum: One. Field Installation: Yes.

MODEL CONVERSIONS

Field installable, except that field conversion of Model 5 with serial numbers(Canada only> A0000 to P0000,<) 8250001 to 8264999 to any other model is not recommended.

ACCESSORIES

The following items are available on a purchase-only basis. For shipment with machine, order the feature number as shown below.

Item	Feature Number	Max Qty
Switch Control Unit	#9181	
Magnetic Hand Scanner	#9440	*
Magnetic Slot Reader	#9441	*
Magnetic Reader Extension Cable --- for use with Magnetic Hand Scanner or Magnetic Slot Reader.		
6m (20 ft)	#9106	**
2m (40 ft)	#9107	**

* A maximum of one magnetic reader or scanner may be ordered.

** A maximum of one extension cable may be ordered.

Cables: IBM shielded twisted pair cable (or equivalent) or coaxial cable is required for product attachment. Cable and associated accessories can be purchased from IBM or a customer-selected source. The customer is responsible for installation and maintenance of the cable and associated accessories.

Twisted pair cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM Cabling System - Planning and Installation Guide", GA27-3361. For pricing and ordering information, refer to the Systems Supplies operation with your country.

Coaxial cable - For proper identification, installation, and application of cable and associated accessories, refer to "IBM 3270 Installation Manual - Physical Planning", GA27-2787, and "Coaxial Cable and Associated Manual", GA27-2805.

	Kit, Gas (Note 4)
P/N 5252899	Station Protector
	Element, Gas (Note 6)

Allow a lead time of 120 days.

Notes:

- Coax wire and one connector kit (includes two connectors P/N #1836446) required for each indoor cable assembly.
- Coax wire and one connector kit (includes two connectors P/N #1836447) required for each outdoor cable assembly.
- Customers replacing 2280 display stations may utilize the existing installed cables by use of this modification kit. One kit required for each cable.
- Must be used with outdoor cable assembly when installed outdoors (either above or below ground level). One kit required for each cable assembly.
- Use to attach outdoor cable to station protector. One kit is required for each cable assembly.
- Replacement station protector elements.
- Use to join two P/N #2577672 or two P/N #1833108 cable assemblies together.

Keyboard Overlay: A keyboard overlay is available on which customer-defined PS can be annotated. An annotated overlay can be placed over the narrow keytops of Overlay keyboards to associate specific keytops with specific symbols.

Keyboard Overlay P/N 1742762
88-Keyboard Overlay P/N 1742781

Keys (P/N 2577741): The 3278, with Security Keylock, is shipped with two keys. Additional keys may be purchased only from IBM. Vendor will supply additional keys only to original purchaser. A letter of authorization, with key identification, must accompany each order. Allow two to three three weeks for delivery.

Magnetic Hand Scanner (P/N 4123495): The Magnetic Hand Scanner (MHS) attaches by a 1.5m coiled cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. It allows the user to read magnetic stripe labels that are attached to shelves, cartons, machines, etc. It can also be used to read magnetic stripe tags which are hand-held or placed on a flat surface. See appropriate unit for prerequisites and possible limitations. The MHS has three lights and an audible buzzer which provide feedback to the user on the status of the scanned data. With proper encoding the MHS can read a stripe in either direction. A magnetic reader attachment feature on the appropriate machine is required to use the Magnetic Hand Scanner.

Ordering Instructions: For delivery with machine, see chart above.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Scanners will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare scanners which the customer may want to consider stocking --- for 50 scanners, 2 spares --- for 100, 3 --- for 150, 4 --- for 200, 5.

Warranty: The Magnetic Scanner Accessories are warranted free from defects in workmanship and materials for 90 days.

In countries other than Canada, warranty service for the Magnetic Scanners will be performed by the CE. In Canada, warranty service for the Magnetic Scanners will be performed at the Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form #2110, pack and mail it and the defective Scanner to:

IBM Canada Ltd.
Canadian Distribution Center
Dept. 415
75 Barber Green Road
Don Mills, Ontario M3C 1H7

Optionally, the customer can obtain post-warranty maintenance on a Time and Material basis from CE other than Canada. In Canada, optional IBM maintenance is available on a time and materials basis at the Repair Center. Authorization Form #2110 applies.

Magnetic Slot Reader: The Magnetic Slot Reader (MSR) attaches by a 1.5m cable to a number of data entry and reporting devices that have an appropriate magnetic adapter feature. These slot readers accommodate a wide range (height and length) of magnetic striped card stock and plastic badges including: Magnetic striped 80-column cards, operator identification badges, large and small credit cards, etc. The MSR has three lights and an audible buzzer which provide feedback to the user on the status of scanned data. Holes in the bottom of the MSR allow optional attachment to an appropriate flat surface. The MSR has a wide opening on one end to facilitate reading of badges or documents. A magnetic reader attachment feature on the appropriate machine is required to use the MSR.

Ordering Instructions: For delivery with machine, see chart above.

Maintenance: High densities of hard particulates may decrease scanner head life. In this environment, customer should consider protecting the media to reduce the frequency of head assembly replacement. Where there are high densities of corrosive gases, more frequent head assembly replacement may be required. There is no regularly scheduled preventative maintenance recommended by IBM. Primary maintenance for the Magnetic Readers will be done by the customer following the problem determination and part replacement procedures.

The following are a recommended number of spare readers which the customer may want to consider stocking --- for 50 readers, 2 spares --- for 100, 3 --- for 150, 4 --- for 200, 5.

Warranty: The Magnetic Reader Accessories are warranted free from defects in workmanship and materials for 90 days.

In countries other than Canada, warranty service for the Magnetic Scanners will be performed by the CE. In Canada, warranty service for the Magnetic Scanners will be performed at the Repair Center. The customer will fill out a Repair Center Machine Repair Authorization Form #2110, pack and mail it and the defective Scanner to:

Magnetic Reader Replacement Assemblies

Description	P/N
MHS Sensor Head Assembly	4832721
MHS Handle and Feedback Assembly	4832701
MHS Amplifier Card and Cable Assembly	4832727
MSR Arm and Sensor Head Assembly	4832963
MSR Base and Feedback Assembly	4832973
MSR Amplifier Card and Cable Assembly	4832962
MSR Cover	4832964

The following tables list the number of Magnetic Reader replacement assemblies which the customer may want to consider stocking.

Magnetic Slot Reader

Number of MSRs	Arm & Sensor Head Asmbly P/N	Base and Feedback Asmbly P/N	Amplfr Card & Cord Asmbly P/N	Cover P/N
4123500	4832963	4832973	4832962	4832964
50	2	1	2	1
100	3	1	3	1
150	4	1	4	1
200	5	2	5	1

Warranty: Magnetic scanner replacement assemblies are warranted free from defects of workmanship or materials for 90 days.

Display Station Keyboard Accessories: The following keyboard accessories allow customers to define and change the messages on single position keytops of the 3278 keyboards. These accessories supply keytops only and do not change any characters or functions of the display station. The accessories consist of legendable keytops, blank keytops for customer engraving and a keytop extractor.

These accessories may be ordered by P/N via (Canada only) a DP Supply Order from the Raleigh plant. <

(Canada only) > These accessories should be bulk ordered by P/N on a P&SR from the plant of manufacture. Individual customer requirements should be satisfied from local country stock. <)

Legendable Keytop: The legendable keytop consists of two parts: a molded key base and a clear plastic cover. The user may define unique keytop messages by writing on a piece of paper, affixing the paper to the keytop base and sliding on the clear plastic cover. The keytop is available in three colors and with top keyboard row contour only. (Example: Clear Key.)

Legendable Keytops:	Part No.
White	5188775
Charcoal Gray	8627192
Light Gray	8542831

Blank Keytop: The blank keytop is for a customer to engrave with desired nomenclature. The keytop comes in three colors and is available with top keyboard row contour only. (Example: Clear Key.)

MACHINES

Blank
Keytops: Part No.

White	1853775
Charcoal Gray	1853567
Light Gray	1853563

Keytop Extractor (P/N 9900373): The keytop extractor is a small tweezer-like device which fits between the keytops. With a firm squeezing grip on a keytop, the keytop can be pulled of its stem. The customers should use the extractor whenever a keytop is to be removed from a keyboard.

Switch Control Unit: Permits switching operational control of a 3278 between two different control units. Customer is responsible for Procurement and installation of this accessory, and also for the replacement of a defective unit.

Warranty: The Switch Control Unit is warranted free from defects in workmanship and materials for 90 days.

Maintenance: There is no regularly scheduled maintenance recommended by IBM, and IBM Maintenance Agreements are not available.

Ordering Instructions: This accessory is ordered by P/N via MES for field installation only. For shipment with machine, by feature code number (see "Accessories"). One of the following P/Ns should be ordered when ordering by MES for field installation.

SUPPLIES (NONE)

3278 DISPLAY CONSOLE MODEL 2A

PURPOSE

A cathode-ray tube (CRT) display and accompanying keyboard that serves as the primary system console for 4300, 3081/3083/3084 Processors.

4300 Usage: The 3278-2A and its appropriate operator control keyboard provides for operator interaction with the processor for both normal operations and maintenance. It is used to effect the major control functions of Power On (4341 and 4381 only), Power Off, Initial Microprogram Load (IML), and Start/Stop. It also serves as the primary console for all operator interaction with the System Control Program. For maintenance and service support, the console displays status of the processor complex and is used for interaction with the processor complex by service and support personnel. It is also used for controlling diagnostic tools.

3081/3083/3084 Usage: The 3278-2A and its appropriate operator control keyboard are used to effect the major control functions of Initial Microprogram Load (IML), Start/Stop, manual mode functions, configuration control, and/or activity monitoring of various elements within the processor complex. An additional device over and above the system console is required for operator dialogue with the System Control Program. The 3278 mdl 2A may be located up to 1.500m from the 3081/3083/3084. An operator console keyboard (#4641) must be ordered for use with a 3081/3083/3084.

MODEL 2A

Model 2A A02

Prerequisites: An available console position on any 4300 processor or 3082 Processor Controller; see M4331, 4341, 4361, 4381 or 3082 pages.

The 3278 mdl 2A requires an operator console keyboard. The 3278 mdl 2A that is used as the primary console on a 4300 Processor must have an operator console keyboard with an operator control panel.

HIGHLIGHTS

Displays characters in a 7x14 matrix (uppercase alphabet is displayed in a 7x9 matrix), arranged in 24 rows of 80 characters each. Rows 1 through 20 are usable by the operator and rows 21 through 24 are used for system status information. A 96 character set is used, which consists of 26 upper case alphabetic, 26 lower case alphabetic, 10 numeric and 32 special characters, plus space and null.

The 3278 mdl 2A is used for manually effecting the stopped state functions of alteration and display of storage, address comparing, and full rate processing versus single instructing processing. The console indicates to the operator both proper operation and malfunctions, should they occur.

The 3278-2A is a prerequisite of and normally installed concurrently with the 4300 and 3081/3083/3084 processors.

Operator Factors: The 3278 has an anti-glare screen. Indicators are displayed in symbols and/or words outside the data area. The keyboard, which is low in profile, provides a palm rest area and has separators to help prevent accidental striking of control keys.

Editing: Cursor move, tab, home, back tab, insert, delete, erase to end-of-field, and erase all input keys are basic to the console keyboard. Alphameric, special symbol and cursor move keys have typamatic capability. 12 Program Function (PF) keys are basic.

Audible Alarm: An alarm sounded under program control to alert the operator to a special condition. This alarm, during keyboard operation, is also sounded when a character is entered into the

next-to-last position on the screen (except when attached to a 4331 Processor). The operator may adjust the volume of the tone.

System Cables: For 4300 series processors, refer to the "IBM 4300 Processor Installation Manual - Physical Planning", GA24-3667. For 3081/3083/3084 Processors, refer to the "IBM System/370 Installation Manual - Physical Planning", GC22-7004.

Problem Determination Procedures: Significant function has been designed into this unit to provide high availability to the customer. This high availability has been achieved through the use of problem determination and recovery procedures that are easily understood and used by the operator. The procedures are provided by the Problem Determination Guide manual that will be stored under keyboard palm rest.

Keyboards: Refer to "Type Catalog" for a picture of the keyboard layouts. Contact your country Special Product Marketing Representative for RPQ keyboard descriptions.

SPECIFY

If specify codes are not specified, the machine is shipped with the following specifications:

- (Canada only > RPQs: Machine has no associated RPQs.
- Voltage: 120V AC, 1-phase, 3-wire, 60 Hz. <)
- Power Cable Plug: (Canada only > Nonlocking. Specify #9890 for a locking plug. <) (Japan only > Locking. Specify #9891 for a nonlocking plug. <) See "Special Features" for Waterproof Connector. (Except Japan > If the most commonly used power cable plug in the country is not desired, then a country RPQ may be initiated. For details concerning power plugs, refer to "IBM Information Display System Installation Manual - Physical Planning" (GA27-2787).
- Note: If a power supply, not the most common, is specified, and it is incompatible with the power plug commonly supplied, a power cord without a plug will be shipped unless the country RPQ referenced above is initiated. <)
- Power Cable length: 2.8m (9ft). If the standard 2.8m (9ft) power cable is not desired, specify (Canada only > #9511 for 1.8m (6ft) cable, or <) #9513 for a 4.5m (15ft) cable.
- Except for keyboard languages, the 3-digit Country Code entered on the DPMO will be used to select the following additional Country variables based on the specification most commonly used in that country. Operator control panel and system function key nomenclature are generated by the keyboard language specify.

Power Cable Plug Machine Nomenclature

- (Japan only > Character Set Language: Specify the following if Japanese Katakana is required: #2773 for Japanese Katakana. <)
- Power (AC, 1-phase): Specify #2998 and then select one of the following:

50 Hz	60 Hz
100V #2804	100V #2730
110V #2805	110V #2822
200V #2806	120V #2800*
220V #2813	127V #2823
230V #2821	
240V #2801	

* Includes requirement for 115V.

- Keyboard Language: When ordering keyboard (#4631, #4632, #4633 or #4634) also specify one of the following:

Brazil/Portuguese #2975
Canadian/French #2977
EBCDIC #2951
English US #2956
International #2950
Japanese English #2955*
Katakana #2973**
Spanish Speaking #2969

* #2955 applies to #2727, #2728, #2729 or #2720 keyboards.

** #2973 applies to #2720 keyboard only.

- Limitations: All 3278 mdl 2As attached to a 4300 processor must have the same keyboard language.

SPECIAL FEATURES

76-Key Jap. Op. Con. KB w/o Chan.-to-Chan. or Power On (#2720): (4331, 4361) Same as #2727 but the operator control panel does not have the Channel-to-Channel control key, or the Channel-to-Channel Disabled Indicator, or the Power On key. Prerequisites: #2955 or #2973. Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

76-Key Jap. Eng. Op. Con. KB With Chan.-to-Chan. (#2727): (4341, 4381) Typewriter-like layout, movable, with 12 PF keys available on the top row through use of the Alternate Shift key. Provides 50 data keys and 26 control keys, and contains an operator control panel with 4 control keys (Power Off, Lamp Test, Power On/IML, Channel-to-Channel) and 6 LED indicators (Basic Check, System, Wait, Power in Process, Power Complete, Channel-to-Channel Disabled). Channel-to-Channel is required for systems having a Channel-to-Channel adapter feature. Prerequisites: #2955. Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

76-Key Jap. Eng. Op. Con. KB w/o Chan.-to-Chan. (#2728): (4341, 4381) Same as #2727 but the operator control panel does not have the Channel-to-Channel control key or the Channel-to-Channel Disabled indicator. Prerequisites: #2955. Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

76-Key Jap. Eng. Op. Console KB (#2729): Same (4341, 4381) Same as #2727 but with no operator control panel. Prerequisites: #2955. Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

75-Key Op. Console KB With Chan.-to-Chan. (#4631): (4341, 4381) Typewriter-like layout, movable, with 12 PF keys available on the top row through use of the Alternate shift key. Provides 49 data keys and 26 control keys, and contains an operator control panel with 4 control keys (Power Off, Lamp Test, Power On/IML, Channel-to-Channel) and 6 LED indicators (Basic Check, System, Wait, Power in Process, Power Complete, I/O Interface Disabled). Channel-to-Channel is required for systems having a Channel-to-Channel adapter feature. Prerequisites: Keyboard Language "Specify". Limitations: Keyboards used on 3278 mdl 2A

are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

75-Key Op. Console KB w/o Chan.-to-Chan. (#4632): (4341, 4381) Same as #4631 but the operator control panel does not have the Channel-to-Channel control key or the Channel-to-Channel Disabled Indicator. Prerequisites: Keyboard Language "Specify". Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

75-Key Operator Console Keyboard (#4633): (4341, 4381) Same as #4631 but with no operator control panel. Prerequisites: Keyboard Language "Specify". Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

75-Key Op. Con. KB w/o Chan.-to-Chan. or Power On (#4634): (4331, 4361) Same as #4631 but the operator control panel does not have the Channel-to-Channel control key, or the Channel-to-Channel Disabled Indicator, or the Power On key. Prerequisites: Keyboard Language "Specify". Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

75-Key Operator Console KB (#4641): (3081, 3083, 3084) Typewriter-like layout, moveable with 12 PF keys available on the top row through the use of the Alternate Shift Key. Provides 49 data keys and 2 control keys, and contains an operator control panel with two (2) control keys (IML, LAMP TEST) and five LED indicators (PC Power in Process, PC Power Complete, PC Power Check, Remote Support Active, IML in Process). Limitations: Keyboards used on 3278 mdl 2A are not interchangeable with keyboards used on 3278 mdls 1-5, nor with keyboards used on 3277 mdls 1-2. Maximum: One keyboard. Field Installation: Yes.

Security Keylock (#6341): A lock and key which prevents modification or display of data in the display terminal when in the "off" position. Maximum: One. Field Installation: Yes. Limitations: For Display Console attaching to 4300 processor only.

(Canada only) Waterproof Power Connector (#8802): Provides a waterproof connector on the power cable to satisfy local ordinances requiring this type termination in specific locations. Limitations: Available only for power cable lengths of 1.8m (6 ft) (#9511), or 4.5m (15 ft) (#9513). Maximum: One. Field Installation: Not recommended.<)

MODEL CONVERSIONS

Not recommended for field installation.

ACCESSORIES

Refer to 3278 mdl 1 "Accessories". Refer to M4300 or 3081 pages for information pertaining to the 4300 Processors Console Table, or the 3081 Processor Console Table.

SUPPLIES (NONE)

3278 DISPLAY STATION MODEL 52**PURPOSE**

A cathode-ray tube (CRT) display station used in clusters with the 3274 mdl 52C for displaying Kanji/Chinese and EBCDIC characters and for entering data into and retrieving data from a host computer. A Keyboard, selector light-pen, or both, permit an operator to display and manipulate data on the screen in a flexible and efficient manner. With its set of basic and optional features, the 3278 mdl 52 meets both general-purpose and unique display requirements. (Japan only: For 4700 Finance Communication System, see M4701 pages.)

Note: Kanji/Chinese is a large character set of ideographic symbols used in the written Japanese/Chinese language and each character is expressed by 2-byte code.

For use with 3274 mdl 52C to display up to 959 Kanji/Chinese characters --- 24 lines of 40 characters each, or up to 1,920 EBCDIC characters --- 24 lines of 80 characters each.

MODEL 52**Model 52 052**

Prerequisites: 3278 mdl 52 requires a 3274 mdl 52C --- see M3274 mdl 52C pages.

Customer Setup (CSU): The 3278 mdl 52 is designated Customer Setup, thereby offering the customer early availability and relocation flexibility. For additional information on CSU refer to the GI section and "IBM 3278 Display Station Model 52 Setup Instruction N," GA18-2060 (for Japan) or T: GA18-2060 (for Taiwan and Hong Kong).

HIGHLIGHTS

- Display a Kanji/Chinese character of dot matrix 16X16 (out of 18X16) and a EBCDIC character of dot matrix 7X12 (out of 9X16). The characters of these two matrix sizes can be mixed on a field basis. A 16X16 dot matrix size character is displayed by using two character positions of a EBCDIC dot matrix. Uses 3270 (field) formatting capability which permits individual fields of data on the screen to be program-defined with various attributes such as Kanji/Chinese or EBCDIC in addition to protected/unprotected, normal/highlighted intensity, displayable/ non-displayable, and selector light-pen detection allowed/disallowed. The display character set may be restricted to upper case alphameric characters by the monospace switch (EBCDIC English US only).
- The operator may initiate a local display-to-printer copy function (i.e., without host intervention) from the keyboard of a 3278 mdl 52. When the 3278 mdl 52 is attached to a 3274 mdl 52C, the printer designation is controlled by operator use of the IDENT key and by:
 1. A printer authorization matrix which is loaded into the 3274 mdl 52C through a user written host application program, or
 2. A customer definable matrix loaded from the System Diskette at IML time.
- 3278 mdl 52 provides the capability to display the characters listed below:

Japan and Hong Kong

Kanji: 7,190 characters of the IBM Defined Graphic Character Set or up to 7,658 (*) characters of the User Defined Graphic Character Set.

EBCDIC Japanese Katakana: 127 (**) characters and one space, including Katakana Alphanumeric and Special symbols.

* IBM offers, with machines, the font image for the IBM Defined Graphic Character Set of 7,190 characters. The User can order the font diskette for the User Defined Graphic Character Set which includes the new characters added by the user. The new characters can be added up to 468 to the 7,190 IBM Defined Graphic Character Set, and also increased up to 3,617 additional characters (total up to 4,085 characters) in place of those in the IBM Defined Graphic character Set. The user designs the font image of a new character added by the user, assigns its code within the code point range allocated by IBM for user's option set, and orders the Font Loading from IBM (NDD).

** 127-character (plus space and null) support is an enhancement of previously announced 3270 Japanese Katakana. This enhancement may not be 3270 compatible for customers using the NL and EM codes. Customers who do not use the NL and EM codes will be 3274 compatible. For details see "IBM 3270 Kanji Information Display System Component Description N," GA18-2058.

Taiwan

Chinese: 7,190 characters of the IBM Defined Graphic Character Set or up to 11,560 (*) characters of the User Defined Graphic Character Set.

EBCDIC (English US) 94 characters and one space, including Alphanumeric and special symbols.
